Did it ever occur to you juniors that a calf has to be broken to do certain things? Just about the same as we break a colt in order to make a good horse out of him. No calf is fit to go to a show unless he knows how to behave and leading is one of the very important points. A calf that does not lead well is too nervous to show off to advantage and the judge gets disgusted and, of course, you are liable not to stand much of a chance. We hope that your calf leads well right now, but, if he does not, give him some more lessons; patience will work wonders with him.

Then, we would suggest that you use a neatly made halter instead of a rope around the neck. The halter is a part of the calf's dress and it looks much better than a rope around the neck and a calf certainly leads better with a halter than any other way. Be sure that the halter is neat and clean and that it fits the calf's head well. A halter made out of big, coarse straps or rope is too clumsy for a delicate head like a dairy calf has.

Teaching to Stand

A calf that will not stand properly when brought before the judge has not been taught all he should know. In other words, it is a part of your business to teach your calf how to pose when being looked at. He should learn to stand well straightened out with each one of his four legs properly supporting a corner of his body. There is no better way to bring out the conformation of a calf than to teach him to stand properly. Standing on three legs while he partially rests the fourth one is bad, especially when the judge is anywhere near. Now, of course, you cannot expect to teach a calf to lead and how to stand all in one lesson. This will take practice before you are satisfied and it will be interesting for you to compare your calf with those of the other juniors when you have them in the ring together. A good exhibitor considers these points very important and he works persistently and patiently to teach the calf these habits.

Then, there should be a place also for you to stand when your calf is standing in the ring. We think it is better for you to stand at the calf's head and just a little to the right. Then you can take hold of the halter just beneath the lower jaw and in this way you can keep his head held up a little which also helps him to take the proper pose.

While this story was being written, we happened to run across this little poem. It is so good and it seems so applicable to every junior who is going to exhibit that we want you all to read it. I am sure that there is a splendid lesson in it for all of us and the boy or girl who ever won anything or who ever did things worth while is the one referred to in these lines:

Thinking

When you think you're beaten, you are,
  When you think you dare not, you don't.
When you'd like to win, but think you can't
  It is a sure thing that you won't.

When you think that you'll lose, you're lost;
  For out in the world you'll find
Success begins with a man's will—
  It's all in the state of your mind.

When you think you're outclassed you are.
  You have got to think big to rise;
You have to feel sure of yourself
  Before you can win a great prize.

Life's battle does not always go
  To the stronger or faster man;
But soon or late the man who wins
  Is the the one who thinks he can.

Give Him a Chance

No matter how interested we are in our fine dairy herds and swine, the faithful horse who supplies the power on a majority of the farms must come in for his share of consideration demanded by all farm stock. Although the farm tractor is occupying a great deal of attention today, it has not yet put the farm horse out of business. So we argue that from the standpoint of good horses on our farms, we cannot afford to sacrifice the kind of consideration which will develop them into the most efficient animals. And the time to begin to do

Alfalfa Hay
We ship direct from producer to the consumer the grades that produce the most milk; also Bran and other feeds.
W. A. FERSON HAY CO.
511 Reliance Bldg., Kansas City, Mo.

this is when they are colts, weaned, and about to go through the first winter.

Every boy on the farm is anxious for the time to come when he can break the colt, and the better the colt the more anxious he becomes. This is quite natural, for everyone enjoys either riding or driving a spirited animal, one of the kind that it really requires a man to drive. On many of the farms there will be colts to winter. What kind of horses they will make has to quite an extent already been determined. If the sire is a pure-bred of some one of the standard draft breeds and the mothers are either pure-breds or good grade draft mares, the chances are that you have the makings of some fine farm animals.

But there remains a very important thing for you to attend to, and the time will soon be at hand when it should be one of your regular chores. That colt will need to be fed generously this winter with the right kind of feed if he is to grow as rapidly as you are expecting him to. This first winter is perhaps the most critical one for him. He should be kept growing, developing muscle and bone, and in order to do this he must get the right kind of feed and plenty of it. Just keep this in mind. There will never come another time during the colt's life when it will be as easy as it will be this winter to get lots of growth. Furthermore, that growth can be secured at less cost, as a general thing, during the first year than at any other time.

Good, clean clover and timothy hay is very palatable to them and is a roughage to promote growth. Alfalfa hay mixed with good timothy hay would also make a very desirable feed. It would probably be much better to feed alfalfa in this way in order to eliminate the possibilities of kidney and bowel disorders which it often causes in horses. Both of these forages furnish a goodly supply of protein. Colts should be given only such amounts as they will eat up readily. Allowing them to gorge themselves is not only expensive but injurious as well. Watch the colt's appetite and regulate his feed accordingly. That will be the best rule you can follow. But in doing this look out for the greedy fellow. He always eats too much.

Of course a good feeder will supply a grain ration as well. If you want something that the colt will relish and that will make a good balanced ration for him, make one out of oats, corn, and bran; 4 parts of oats, 1 part of corn, and 1 part of bran is considered very good. A little oil meal could safely be added to this. A little silage fed occasionally might add variety to the ration, but as a single roughage to be fed continuously for any great length of time should be considered bad practice. Corn ensilage is not a forage for horses. Some one may ask how much of the grain ration should be fed at one time. Anywhere from one-half to one pound of grain per 100 pounds of live weight will give you some idea along this line.

And in addition to all of this there are still some very important things to attend to if you want to make a horse out of your colt this winter. Plenty of good, fresh water and salt are very essential. Both should always be at hand. An animal never should be caused to suffer for the lack of either. Nor is this all. No colt would do well if cooped up in a dirty, poorly ventilated stable. They need plenty of fresh air and don't forget the exercise. Don't be afraid of cold weather. It won't hurt him as long as it is not too stormy. His exercise should be regular, otherwise digestive disorders are liable to set in. Allow them to run out every day, when it is not too stormy or the cold too severe.

And don't forget his daily bath. A daily grooming is a good conditioner. Besides, if you make this a practice, you can teach him some very valuable lessons and stable manners which every horse must learn. And it's easier to do this when he is still young. Look out for lice, too. Colts often become infested with these pests, especially if kept in dirty quarters. And even sometimes with the best of care it happens. If your colt persists in rubbing himself and his hair becomes patchy give him a thorough washing with the proper coal tar disinfectants.

Do everything for his comfort, and remember that you are working with him at the most critical time of his life. If he is stunted through abuse and lack of proper feeding and care, you can just bet your last dollar that when you come to break him you'll not have the horse you might have had. If he is a good draft colt he should weigh from 1,000 to 1,200 lbs. at one year of age.

Junior Letters

Hoard's Dairyman Juniors:—I live on a 160-acre farm. I have one heifer which will freshen this fall. I belong to the junior pig club and have one pig which will weigh 105 pounds. She is about 4 months old. Last year I had a pig and at the end of six months she weighed 210 pounds. I am ten years old I have cut all the wheat and do most all the mowing. We have 100 acres of hay, 10 acres of wheat, 5 acres of barley, and 10 acres of oats. I wish that some of the juniors would write to me. My address is R. F. D. No. 44, Weedsport, N. Y. John H. Corfield.

Hoard's Dairyman Juniors:—All of our cows are freshened now. This year we got fourteen heifers and four bulls. They are all nearly white. This year we were pretty lucky. In my last letter I told you I had sixteen rabbits and one pig, but I sold them all. For my pig I got $30.19 and for my rabbits I got $9.75. With the money I bought some clothes and six guinea pigs. Now I have 29 of them. They are all coming fine and now I bought another pig for five dollars and have ten dollars left.

We are just at cutting our barley now. We will have to stack most of our grain this year because we have our barn just about full of hay.

If any of the juniors want to write to me my address is R. F. D. No. 5, Box 40, Appleton, Wis. Herbert Ziegler.

Hoard's Dairyman Juniors:—We started harvesting four days ago. We have about 135 acres to cut yet. I have two calves about 5 months old. I feed them skimmilk night and morning and they run in the pasture during the day. I paid $25 apiece for them and $5 for feed. We milk six cows and feed the skimmilk to the calves. As the separator does not skim clean the calves get most of the cream. We have a No. 6 separator and I believe that it is too small for the dairy farm. I am eleven years old and will be in the eighth grade next fall.

Nebraska. Wallace Barkhoff.

Hoard's Dairyman Juniors:—I have a garden of my own. The United States Agriculture Seed Department sent some seeds to our school and every child got a package. In each package were beets, lettuce, tomatoes, onions, and sweet corn. I gave mamma the sweet corn. The rest I planted. All the money I make in the garden I put in the bank. I have $2.64 in the bank already.

I hope a lot of juniors write to me.

Helenville, Wis. Stella Norman.

Hoard's Dairyman Juniors:—This is my second letter to the club. I like reading the letters from the juniors. I find many useful things in the paper which help me very much.

It is now haying time around here and we find the crops much lighter than other years, but I guess our hay will run three tons to the acre. The oats are good and I think they will run from two to two and a half tons to the acre. Our mangles are fine and should run from 25 to 27 tons per acre. The corn is good but had quite a few misses which we filled in with sunflowers. We have never tried sunflowers for ensilage before.

I wish there were enough boys around the district interested in farming so we could start a local club. All the boys around seem to be interested in engineering. We have got the goods but not the boys and girls. Our herd sire, Sir Ormsby Colantha Banostine 4th, is a fine animal but we have had no calves from him. We hope to be filling our 34 by 16 ft. silo in a fair time. I have some corn which I intend to show at the fair this year.

I wish some other juniors would write to me and I will answer every letter. Good luck to all.

Ladner, British Columbia. Murray Davie.

Do You Belong to the Juniors Club?

If you are a dairy farm boy between ten and eighteen years of age, and if your father or some member of your family is a subscriber to HOARD'S DAIRYMAN, we want you to join the HOARD'S DAIRYMAN Juniors Club.

The Juniors Club consists of several thousand boys like you, banded together to help each other get more pleasure and profit from farm life, and to have the advantage of associating with other boys who live and work and think as you do.

It costs nothing to join the club—and there are no dues. All you need to do to join is just to fill out the coupon and send it to us. We'll at once enroll you as a member and send you a watch fob, a coat lapel button, and the "Dairy Farm Boy's Creed". Do it now—then you'll soon be a full fledged member of the HOARD'S DAIRYMAN Juniors Club.

Diversified Dairy Farm, 200 acres. Good land, suitable for tractor. Excellent house, large octagon barn, horse barn. Beautiful location. First class business farm and ideal home. $12,000. FRED W. CARD, Sylvania, Pa.

A Dairy Farm of Real Value—An exceptionally productive dairy farm of four hundred thirty-eight (438) acres, located one mile from Chautauqua, N. Y., known the world over as a summer resort and educational center, is offered for sale at $100 per acre, if sold by November 1st. The farm has never been leased, is carrying at present 97 head of pure-bred Holstein-Friesian animals, is beautifully watered, well located and exceptionally fertile. As a matter of good faith, the owner will pay one-half of the railroad fare of anyone from any place, who upon investigation fails to find that this farm has the local reputation of being at least one of the most fertile productive farms in the section. The owner is a manufacturer in Detroit. He has owned the place nearly twenty years. His reason for selling is to transfer his stock operations from New York to Michigan. Terms can be arranged and a discount will be given for cash. The property is free from all kinds of incumberances. Arrangements can be made to buy a portion of the stock. G. E. WILDER, Gemmer Manufacturing Company, Detroit, Michigan. 5-4

100 acres—6 miles from town, good roads, good 10-room house, good 50x60 barn, two smaller barns, outbuildings, black clay loam tiled, 76 acres under cultivation, 20 acres saw timber, balance pasture. Without help, must sell. $125 per acre. MICHIGAN FARM AGENCY, Box 928, East Lansing, Mich. 24-spl

New York Farm Agency, Westfield, New York, sells farms. Old folks die at about 100. Have to quit. Opportunity for young men. Come East! 10-spl

130 acres level, black clay loam, 2½ miles from county seat, gravel road, large 9-room house, 30x60 gambrel and 54x62 gambrel roof barns, granary, tool shed, and all the necessary outbuildings, all buildings painted and in good condition. Good orchard, good fences, well drained, 100 acres under cultivation, 30 acres pasture and timber. This farm is in a high state cultivation and is in every way a No. 1 farm. Price $135 per acre. Write us for farm bargains in southern Michigan. MICHIGAN FARMS AGENCY, Box 928, East Lansing, Michigan. 16-spl

FARMS FOR SALE

Dairy Farm for Sale—One of the best farms in the town of Brunswick, Rensselaer County, N. Y., 6 miles from Troy on State road. Level as a floor, rich, black, loamy soil, and entirely free from stones. Raised 700 barrels potatoes last year. Present income from milk over $120 00 per week. 135 apple trees, 76 pear trees. Splendid 2 story, 12-room house with spacious lawn and shade trees. 9 outbuildings and fine cottage for tenant. 21 cows, bull 4 horses, 6 pigs, poultry. Auto truck and all tools for farm use, together with all crops, for $18,500.00. Other farms in the beautiful Hudson Valley. HUDSON RIVER VALLEY FARM AGENCY, Box No. 643, Hoosick Falls, N. Y. 6-3

153 acres $20,000.00. ½ mile from Jefferson Highway; ½ mile from station. 100 acres good plow land, balance pasture and hay. Well fenced. Black loam soil, clay subsoil, gently rolling. 8-room house with fine basement. Barn 24x26 with two leantos; has granary, garage, wood house, corn crib, hog house, poultry house, fine well, orchard, good grove around buildings. Well located and very good buy. P. C. RECORDS, Castle Rock, Dakota Co., Minn.

Attractive Tennessee Farms for Sale—As my tobacco business in which I have recently engaged is taking practically all of my time and I have no opportunity to give any supervision to my farms, I have concluded to sell them giving possession this fall or January 1st., 1921. I have one especially nice farm of 550 acres on a macadam road, practically all in grass and fenced with woven wire. Well improved with old colonial brick residence in beautiful yard of maple trees, 6 tenant houses, 2 stock barns, concrete silo, 4 tobacco barns, never failing water supply consisting of two springs and a creek, concrete reservoir and water piped to fields. I have another farm of 450 acres, well improved; one of 250 acres fairly well improved; one of 100 acres with poor improvements; also I have 1,100 acres of timber and grazing land. I would prefer selling only half interest in the 550-acre farm if I could form a partnership with an agreeable man who understands the dairy business and raising hogs and sheep. On account of the long growing season milk can be produced very economically here and the market price is 80 cents per gallon. I would be willing for the partnership to pay him a salary as manager. Write me for full particulars if interested. E. B. TRAHERN, Clarksville, Tennessee.

If you wish a farm in the best grass section of the south where alfalfa and all the clovers, including Red White, Alsike, Sweet, Burr, Crimson and Japan grow to perfection, also soy beans, cowpeas, peanuts, velvet beans, corn, oats, wheat, rye, and barley, where we have a creamery making fine butter and paying Elgin for butterfat, and where there is no bovine tuberculosis nor cattle ticks; in a community of northern farmers, write to H. B. GURLER, Macon, Miss. 25*

FARMS WANTED

Farm Lands Wanted—Hundreds of Iowans will buy land in other states this year. Many have bought already. Land prices are steadily rising and Iowans intend to purchase before there is any further advance. Why not sell your land to one of these buyers? Not long ago the Stoutenburg Land Company, Butterfield, Minn., sold three farms in a single day by our plan. Send us a complete description of the land you have for sale, the number of acres, its distance from town and school, what improvements it has, if any; how it is divided into fields, your price, terms, etc., and we will tell you, without obligation on your part, how little it would cost to get in touch with these Iowa buyers. At the same time we will send you our free booklet, "Farm Buyers and Where to Find Them." It will open your eyes. Write today, for the fall land buying season is just beginning. THE DES MOINES REGISTER AND TRIBUNE, Dep't. 130, Des Moines, Iowa.

Wanted—A dairy farm, the owner furnishing stock and machinery, 50-50 or pay interest. Handy with everything. No boozer, no smoker. Address BOX 335, care Hoard's Dairyman.

Married, age 36, 2 children, college trained, no vices, life experience in all kinds of farming and construction work. Salary, $3,000 per year and perquisite. Prefer location in the east. Address BOX 282, care Hoard's Dairyman. 2-spl

Working herdsman open for position October 1, married, no children. Experienced in feeding, testing, recording, ordinary veterinary work, calf raising and mechanical milking. Good dry hand milker. Wisconsin or adjoining states preferred. References exchanged. State full particulars first letter. Address BOX 325, care Hoard's Dairyman. 5-2

Farm Manager with practical experience in all branches of farming, dairying, feeding, breeding, pure-bred stock, milk production, commercial handling of highest class milk and dairy products, fruit and poultry. Married, 31 years old, agricultural college graduate, reared on farm. Progressive, good executive and organizer. At present employed as manager of large estate, pure-bred stock and commercial dairy farm. Highest reference as to character, education, training, practical experience, executive and business ability. Only first class proposition considered. Answer fully in first letter. Address BOX 323, care Hoard's Dairyman. 5-2

Position Wanted—Refined lady, 35 years wishes position as caretaker of summer home; cook or housekeeper. Would go West. Address BOX 331, care Hoard's Dairyman.

Farm manager with energy, push and proven ability, desires position on large, modern farm where results will be appreciated. Experienced in Advanced Registry, pure-bred stock, modern farming and in everything pertaining to the successful management of an up-to-date farm. Married, no family. Excellent references. Address BOX 333, care Hoard's Dairyman. 5-2

Position wanted—Single herdsman with exceptional ability as a practical scientific dairy farmer desires position where A. R. work is first considered. Capable to handle farm also previous experience on own farms. Sold to settle estate. Address BOX 338, care Hoard's Dairyman.

Position Wanted as herdsman or manager of first class Holstein farm, Western Pennsylvania or Eastern Ohio, by man with plenty of experience. Open October 1st, 1920. Address BOX 337, care Hoard's Dairyman.

Farm Manager open for position where first class Guernseys are kept. A. R. work and control of diseases a specialty. First class crop and hog man. Energetic, honest, capable of handling a large proposition. Married, college graduate, 31 years of age, successful experience, best references. Address BOX 340, care Hoard's Dairyman.

Farm Manager and high grade herdsman open for position. Scotchman, married, small family, practical farmer in all branches of up-to-date farming. Have made a specialty of growing alfalfa and soiling crops, running of all the latest farm machinery, handling help to best possible advantage. Thoroughly acquainted care and management of pure-bred dairy cattle, fitting and feeding for show and sale ring, and large milk production. Have made large records including one A. R. O. world's record. References. Address BOX 339, care Hoard's Dairyman.

Have You A Little Spare Time?

Have you a car—or a horse and buggy?

HOARD'S DAIRYMAN would like to offer you a proposition to look after our subscription interests in your community during your spare time.

It would be light, pleasant work among your old neighbors; and we can make it really profitable, too.

Write and tell us about the territory around you and how much you could take care of, and we'll make you a proposition.

Hoard's Dairyman, Fort Atkinson, Wis.

Handling Help on a Big Dairy Farm

HOARD'S DAIRYMAN:—I have read with much interest Mr. Crooker's interview with the manager of a big dairy farm. Let me state that I am no slave driver and I have never had more trouble than could be expected in keeping help. Life is too short to do nothing else but work, and where men are over-worked they may neglect things that should be done, especially where valuable live stock is on the farm.

It is not stated in Mr. Crooker's article just how large this farm is, but I have seen some of these farms that had the work divided that employed enough men to farm a county. They never accomplished anything either in the breeding of live stock or the raising of crops.

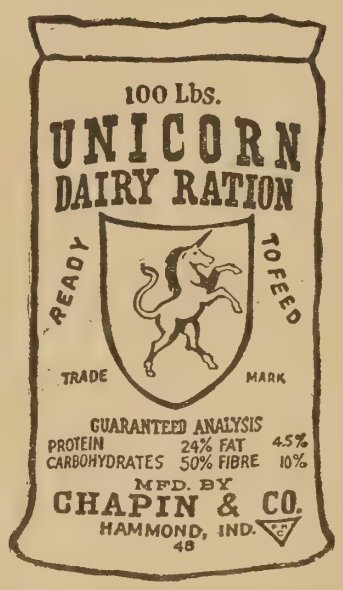
I have had men ask for work who would state that they would work in the barn or would work in the field. I tell them to pass on, for I have been managing a dairy farm for ten years, and I work outside and inside and everywhere else. I would like to know just how the manager of this big dairy farm gets his alfalfa hay in the barn, his grain harvested, and his silos filled. On this farm we employ from six to eight men and it takes all of them to get in the one hundred loads of alfalfa that we haul in every summer. I wouldn't have a man on the farm who thought he was too good to milk a cow or one who would not pitch hay.

I think it is a bad thing for the dairy industry to divide the work. It spoils men. I do not believe that it is possible to have one group of workers, on the same farm, getting up at 5 o'clock and another group getting up at 4 o'clock without a lot of hard feeling. I have seen a lot of these large farms where there are two groups of workers and each always believes that they are the only ones who are doing any work.

Where there are several teamsters they do not have anything to do from five to seven o'clock in the morning, because one man can curry and harness eight or ten horses in two hours. Moreover, the teamsters do not have anything to do on Sunday, which makes the barn workers sore. It has been my experience and observation that where the work is divided all want to be teamsters.

On this farm we start work at five a. m. and quit at six p. m. The men all help milk and they all work outside in the field when necessary. They take turns about getting off on Sunday. I would not have horse men taking life easy every Sunday afternoon while the cowmen worked. That is hardly fair and causes hard feeling.

I believe in giving bonuses to trustworthy men, and want their work to be pleasant.



Illinois. FRANK BYERS.

Search for Visitor Cows

It is related by the New York State College of Agriculture that a testing association has been found in that state in which there are no visitor cows. It was desired to demonstrate the value of cow testing association work at the Farmers' Field days held at the State College. A representative sent to the Tioga Association near Ithaca searched for good and poor cows, but was unable to find any one herd with both high and low producers. There were cows in the association with records of more than 400 lbs. of fat, but in these herds there were none with a lower production than 200 lbs. The poor ones had all been sold through the work of the Babcock tester.

Wisconsin has 2,752 cheese factories, 762 creameries, and 67 condenseries.

You Can't Compete With Machinery

"Better Sires—Better Stock"

We will award a money prize of $1,000 to the county that first eliminates its inferior sires.

This prize will be awarded under rules provided by the Bureau of Animal Industry, United States Department of Agriculture.

Detailed information on request.

Mixing feed on the farm is old fashioned, like threshing with a flail.

The modern time and money saving way is to have it done by machinery on a large scale.

In our mills we mix a ton of Unicorn Dairy Ration in one minute at a power cost of a few cents.

Labor is scarce and high priced. You can use yours more profitably on other work.

Unicorn requires no labor. Ready to feed, you get it as you need it. No worry or work of keeping on hand a supply of many different kinds of feed.

Made of the best feeds. Put together in the right way by men who have learned by experience.

Be wise. You can't compete with machinery. Lower your milk production cost by feeding Unicorn.

CHAPIN & COMPANY, Chicago

Cow Waters Herself

with this wonderful new Libbey Automatic Water Bowl. Animal moves lever, opening water valve, when it starts to drink. Lever swings back, closing valve, when animal stops drinking.

15% More Milk

Milk is 87% water, and cows cannot give their greatest yield unless they have plenty of water constantly within reach. Farmers who use Libbey Bowls report an increase of 15% to 20%, which soon pays for the bowls.

Libbey Automatic Water Bowls

are the most sanitary and successful ever invented. Each bowl controls its own water supply, operated entirely by cow, and may be put at different heights, or in any stall or pen. No float tank required. Cannot overflow; cannot get out of order. Almost no water left in bowl to become stagnant. They save labor and feed and increase milk. Prevent spread of contagious diseases, as each cow has her own bowl and no water can pass from one to another, as with old-style bowls. Very simple and easy to install. Write for circular and prices, also FREE DAILY MILK AND FEED RECORD.

If interested in Stanchions, Stalls, Carriers, etc., ask for free General Catalog.

Neighbors Costly Institutions

(Continued from first page.)

fact, it is dollars to doughnuts that you are just this kind yourself and, that we all are, for America is today leading the pace in this brand of keeping-up-with-Lizzie neighbors. But we don't get the pernicious side of such competitive neighbor business in the country as we would if we lived where social splurge and rivalry holds the boards. For instance, the farmer who set the example of buying a car to bring the city to his threshold conferred eternal blessings and happiness on his country kin. They all went and did likewise and now smooth roads and better standards are paramount in the highways and hedges. But the man in town must impress his neighbor from different motives, so he strains every nerve and his pocketbook to buy a Rolls-Royce which shall equal or beat the one across the way, to the consequent injury, too often, of his health and resources. But up in the country we all own average cars and our standards are all about the same. In other words, we have all developed together of late back on the farms, and together we have installed modern conveniences in our homes and together enjoy the good things of life which in the impossible old days were only for those occasional lucky ones, if you could call them that, whom we greet in 1920 as profiteers.

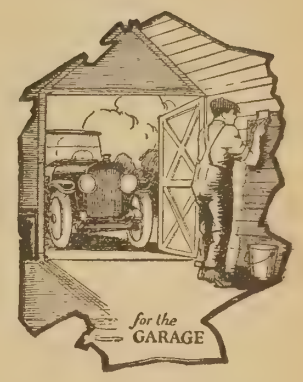
And neighbors started it. We have noted that neighbor who weeded out his scrub herd and substituted improved and costly stock—to be followed on hill and dale by his fellows who observed that these radical methods were good and quite worth imitating. And as this neighbor and that introduced intricate expensive machinery and actually changed his crops to correspond with the paying demand and sent his sons and daughters to agricultural and technical institutions and added broad porches and labor-saving electricity and satisfying additions of all kinds to his old-style farm house, we must surely admit that if such expenditures, on a nation-wide farm scale and of very recent years, are heresy, then let our neighbors of big town and city make the most of them.

Someone has said that if we had no neighbors we could be happy in a house one-half the size of the one we now occupy and with half the things we now consider essential. As far as that goes, we could throw away every standard and improvement which has come to us down the ages—if there were no neighbors to object. We wouldn't be bothered to build better schoolhouses such as the next township boasts, or to keep our roads in the condition for which theirs are famous over in the adjoining county, or to see to it that our particular locality has the name of producing more and better crops to the acre than any other ground. None of these things would be considered worth while or necessary if it weren't for neighbor farms and towns and counties and states. So it is clearly and logically evident that our neighbors are to blame, once and for all, for the prosperity or lack of it which these United States and the world find themselves in today.

Neighbors in the long run are pretty much what we make them, because each and every one of us belong to and make up the breed. The extravagant brick-layer and hod carrier are only complying with and thus multiplying the new standards of their personal little neighbor-circle when they go in not wisely but too well for unimportant adornments and unthrifty ways of ridding themselves of their present unstable earnings. They have but obeyed the standards of pernicious live-for-today neighbors. Such standards we can deplore to a degree, well knowing deep down in our hearts that these same unthinking neighbors of ours are having the one time of their narrow lives in just spending and enjoying the hitherto unattainable.

And when we come down to our own personal cases, and perhaps this holds good for everyone, our neighbors are the ones who make life worth the living and striving, for we have got to live up to them or perish miserably and unrespected in the attempt. It isn't necessary or sensible to try and overawe our little community or personal circle by spending money without rhyme or reason, but we do owe it to the standards set by the substantial ones in our neighborhood to keep up our end and so farm and live that we raise instead of lower the composite whole of our own little section. It it weren't for the good neighbors who live around the next turn and also in Maine and California, we can imagine that American prestige and "pep" would be a figment of some visionist's imagination. Our neighbors here and there have established high standards and it is strictly up to you and me to not only observe them, but to go them one better. Thus we have today our improved and more profitable farms, our pretty, convenient homes, and our altered agricultural standards in general. We owe them all to those neighbors who showed us the desirability and possibility in every one. Back in the country we too have emulated the world in its spendthrift ways, but invariably we have put our funds into lasting and beneficial improvements which never again will be taken from us. Our own progressive neighbors have proved that farming can be both profitable and enjoyable, and we are hastening to follow in their footsteps.

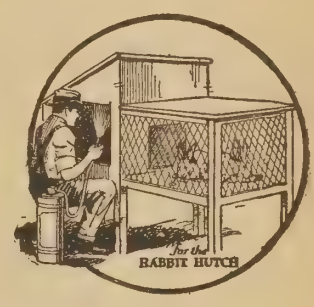
So it is true that neighbors in a way are costly institutions because they induce progress and competition, but the country is going to bow to their universal power awhile longer and so help maintain to the bitter end the best neighborhood traditions. For it pays to be a good neighbor, which means a progressive neighbor today.



You cannot build a reputation on the things you are going to do.—JAS. J. HILL.

CARBOLA

The Disinfecting White Paint



Helps Keep Out Disease, Lice and Mites Gives a Sunny Sweetness to Interiors

An unsanitary building lessens the owner's profits just as an unhealthy body lessens the earning power of a human being. It may take years of hard work to recover the losses caused by a single invasion by contagious disease. A pound of Carbola on the walls of the stable, poultry house, pig pen, or other building is a preventive of disease that is easier to apply than a ton of cure—and costs a few cents where the ton of cure may cost hundreds of dollars. In addition to germ-proof, lice-proof, mite-proof walls and other surfaces, Carbola gives you extra light and sunny-sweet interiors and a general evidence of cleanliness that are worth many times more than the little time it takes to apply this quickly-mixed, smooth-flowing combination of paint and disinfectant. Carbola dries a snow white. The germicide it contains, many times stronger than pure carbolic acid, is a dependable preventive of the start and spread of contagious diseases that affect man or beast. It is non-poisonous and non-caustic and will not harm the smallest chick or stock that licks a painted surface.

Makes It Easier To Do Work That Must Be Done —and makes a better job of it

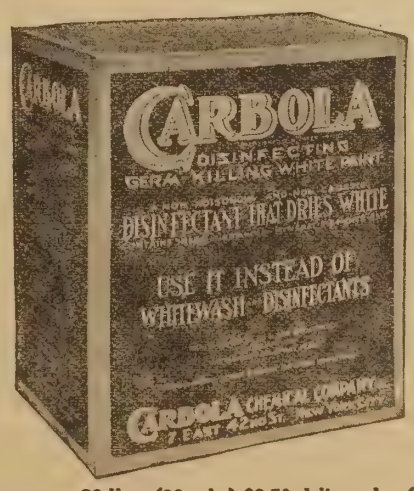
Whitewashing takes time. Then disinfectant on top of whitewash takes more time. Carbola takes less time than whitewashing alone. You simply stir the Carbola powder in water and in less than five minutes you have a smooth-flowing paint and strong disinfectant both ready to apply in one operation. No straining, waiting or bother. Does not spoil if left standing—once mixed, always ready for use. You put it on with brush or sprayer to wood, brick, stone, cement or other surface, or over whitewash. It gives the surface a smooth, neat coating and goes into every crack and crevice, destroying disease germs, mites, fly eggs, etc.—and stays there to prevent the growth of others.

Carbola does not clog the sprayer as whitewash does. It does not peel or flake. The germicide, strong from the first, grows stronger as the paint dries—does not evaporate. It has no disagreeable odor. A gallon (a pound of the powder) covers 200 square feet.

Use Carbola Instead of Whitewash and Disinfectants

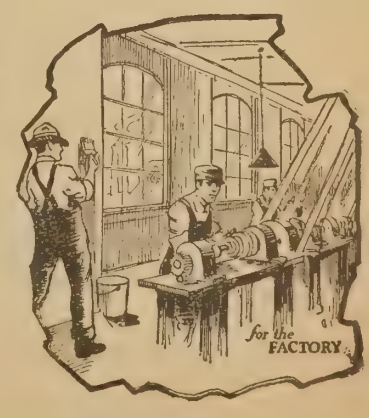
to help save your cows from death by contagious disease and to keep them in the health necessary to get their best production; to help save your pigs from diseases that are so costly and to help them put on weight quicker; to lessen death, sickness and discomfort in your flock and get more grown birds from your chicks and more eggs from healthier and more comfortable hens; to replace dirt and darkness with wholesomeness and light in any building; to save much of the time, labor and expense it means to first whitewash and then disinfect—and to get the better results that Carbola gives.

Used and Endorsed by Leading Agricultural Colleges and Experiment Stations



Where to Use It

In stables
poultry houses
cellars
hog pens
garages
kennels
creameries
rabbit hutches
outbuildings
factories
warehouses



and on tree trunks, fences, etc., and as a lice powder, for which it is unexcelled.

Where to Get It

By ordering Carbola now you will have it when you are ready to use it. Your hardware, seed, drug or paint dealer has Carbola on hand or can get it. If not order direct. Prompt shipment by parcel post or express. Satisfaction guaranteed, or money back.

10 lbs. (10 gals.) $1.25 and postage. 20 lbs. (20 gals.) $2.50 delivered. (50 lbs. 50 gals.) $5.00 delivered
Add 25% for Texas and Rocky Mountain States
Trial package and interesting booklet 30c postpaid
For the convenience of large users Carbola is also packed in barrels holding about 350 lbs. each

EPOCHAL

Epochal Sale Breaks Three World's Records

The Epochal Berkshire Sale at Martinsville, Indiana, on August 4, 1920, broke

(1) The World's Record for the highest average price for Berkshires at public sale with a new record average of $665.30.

(2) The World's Record for the highest price for a Berkshire boar at public auction with a price on the eleven months old boar, Laurel's Epochal, of $6,500.

(3) The World's Record for the highest price for a Berkshire sow at either public or private sale, on the sow, Epochal's American Mayflower 6th, at $3,900.

It was a notable fact that a large part of the buyers at this sale were breeders or farmers going into Berkshires for the first time. The success of the sale was an indication of the increasing popularity of Berkshires in general and of Epochal Berkhires in particular with the practical feeders and farmers.

These are the hogs you should have to go with your dairy cattle.

Write us for prices and descriptions upon other Epochal Berkshires that you will like.

Martinsville, Ind. Preston, Kan. Axial, Colo.

GOSSARD BREEDING ESTATES

Early to Market—Full Weight

51 per cent of all hogs marketed in the United States in 1918 were Duroc-Jerseys.

Duroc-Jersey hogs have proved themselves in championship shows as well as on the market.

Duroc-Jersey hogs raise large families and put on weight quickly. They are hardy, easy feeding animals that mature at an early age, and are uniformly red in color.

Tierra Bella Stock Farm

Public Sale of Registered Chester White Hogs

We have reserved 40 choice Chester Whites, including 16 tried sows and fall gilts bred to Jumbo for fall litters, 10 big type fall boars sired by Pay Streaks Monarch, a good son of the Grand Champion Pay Streak, also 14 spring sows and boars sired by these big type boars. Everything will be registered. Write now for catalogue and plan to be our guest at Mauston, Wisconsin. Sale day August 14th.

V. C. TIEDT - - - - - - - - - - MAUSTON, WIS.

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Return of Heat Period

I have a two-year-old heifer that was bred Jan. 10, 1920. Since then she has been in heat and would have taken bull. Is there such a thing as a cow coming in heat that is carrying calf?

Linden, Ala. W. Y. L.

It is possible for a period of heat to occur after service at a previous period, although the animal may then have conceived; but such cases are comparatively rare. The heifer in question in all probability has failed to conceive and should be bred when next she is in heat. If she does not then conceive treat her as often advised in these columns under head of "failure to breed".

Vaginitis

I have some cows with some kind of disease. Would like to know what it is and a remedy. The uterus is very badly swollen and white discharge from it. The cows seem all right otherwise. We have recently purchased a new bull. Could this disease have been transmitted to the cows from the bull? We have five cows that have it. Their ages are from 2 to 12 years old. They run on pasture.

Amsterdam, Mo. J. V.

We assume that you mean the vagina and not the uterus (womb). The bull may well have communicated infectious granular vaginitis to the cows and it would therefore be wise to flush out his sheath once daily with lukewarm water containing 30 grains of permanganate of potash to the gallon and also do this before and after each service. Once daily also syringe out the vagina of each cow with a like solution and if it does not prove effectual substitute a quarter per cent mixture of lugol's solution and lukewarm water. This solution gradually may be made stronger, if that is found necessary. Write again later if the trouble should persist.

Mammitis

I have a registered Holstein cow 4 years old, with her second calf now 4 months old. This cow has been giving 5 gallons of milk per day. She has been on pasture and in addition been fed about 6 quarts twice a day of feed composed of 1 part bran, 1 part shorts, and 2 parts cow chow. On Thursday morning she gave her usual 2½ gallons of milk and each milking gave considerable less till on Friday night she gave but a pint. Her teats seem to be sore and she flinches when you try to milk her. For some time her milk has been seemingly thick or ropy and when run through separator would leave a thick, heavy sediment. She has no appetite but will nibble at grass and has also eaten a small amount of grain. Have given her salts and oil.

Sheridan, Arkansas. J. W. M.

If pustules have erupted upon the teats the disease is cowpox and it should soon subside. If that is not the case the udder has become infected in some way or another, possibly by the cow standing in stagnant water, or wading in mud or filth, and mammitis is the result. Twice daily bathe the udder with hot water saturated with boric acid and if the teats are sore immerse them for five minutes in this solution. Then wipe dry and rub in a mixture of equal quantities of carbolized oil, camphorated oil and fluid extract of poke root. Internally give twice daily a tablespoonful each of powdered saltpeter and poke root in soft feed or water and reduce to one such dose a day when the trouble abates. So long as the milk is abnormal strip the udder clean every two hours.

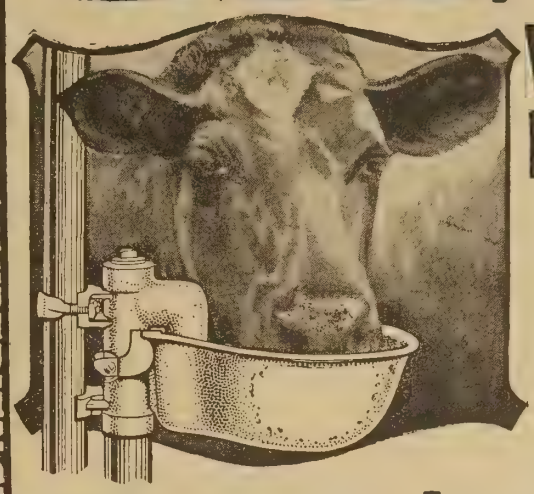
Dimple Queen of Wakpala, Third in Class FF

On February 26, 1920, a three-year-old Guernsey cow, Dimple Queen of Wakpala, was consigned at the Hess-McDonald Dispersion Sale, Pennsylvania, and brought $4000. The purchaser was E. F. Price, New York. On official test in the two and one-half-year-old division, she had produced 9064.2 pounds milk, 508.36 pounds butterfat, in 278 days, and she had been bred to qualify for the double letter class of the Advanced Register. Her credits on the day of the sale were only 122 pounds butterfat behind the standard set by Little Star of Glencairne, the champion cow of the class.

National Board of Farm Organizations to Meet at Columbus, Ohio

The semi-annual conference of the National Board of Farm Organizations will be held at Columbus, Ohio, Sept. 1-3. This was decided at a meeting of the General Board of the National Board of Farm Organizations held at Chicago last week. The farm delegation will meet both presidential candidates, lay before them the condition and needs of agriculture, and from the candidates' lips receive assurances as to the measure of co-operation which may be expected from the next president of the United States. Co-operative marketing legislation, the Federal Farm Loan situation, pending personal credit legislation, packer control, and transportation matters will receive careful consideration. Sectional meeting will be arranged for the grain growers, the live stock interests, and milk producers for intensive work on their marketing problems.

Two Grain Marketing Committees Appointed at Chicago



Four representatives of the grain growing interests of the National Board of Farm Organizations and four representatives of the Farmers' National Grain Dealers' Association were appointed at Chicago last week for the purpose of investigating various plans for co-ordination of grain marketing methods.

This action was taken at a conference on Friday night between the National Board of Farm Organizations and the Farmers' National Grain Dealers' Association, in anticipation of the endorsement given the following day by the meeting held under the auspices of the American Farm Bureau Federation to a plan leading to the formation of a national centralized selling agency and price fixing monopoly of wheat growers. In furtherance of the price fixing plan, J. R. Howard, president of the American Farm Bureau Federation, was authorized to appoint a committee of seventeen to investigate and make definite recommendations, the thought being that by 1922 the plan can be put into operation.

The joint committee of eight will function as an independent committee. Approximately four thousand farmers' grain elevators are owned and controlled by the Farmers' National Grain Dealers' Association and the Farmers' Unions and Equity Societies in affiliation with the National Board of Farm Organizations. This number constitutes more than three-fourths of the farmers' grain elevators of the country. While there is a general feeling on the part of the self-help organizations that grain marketing methods should be improved, there is still a justified belief that co-operative machinery built up with pains-taking care must not be set aside with haste and without reasonable assurance that different methods will accomplish better and safer results. Entire willingness, however, to co-operate with the Howard committee of seventeen in considering any practicable and improved method is guaranteed by the joint committee of eight. C. A. LYMAN, Secretary.

DAIRY, HORSE AND HOG BARN EQUIPMENT

DREW

WATER BOWLS

SIMPLEST and most DURABLE of them all

OUR 22 YEARS EXPERIENCE IS AT YOUR DISPOSAL

DREW-THE LINE OF EXCLUSIVE FEATURES

MORE MILK—LESS LABOR

Study the Following DREW Exclusive Features:

1. **Double Gravity Lock** brought to perfection after years of experimenting for the perfect lock.
2. **Reinforced Castings** that prevent breaking. Side of the bowl fits solidly into a deep groove, **making practically a one-piece construction.**
3. **Brass Valve Construction.** Protected from dirt. Never leaks.
4. **Perfectly rounded, smooth surface inside.**
5. Waterflow valve plate that operates under pressure of the cow's mouth. **No prongs or awkward slits to catch cow's tongue.**
6. Water bowl made of heavy iron, painted gray. **Edges rounded, no sharp points.** 9½ inches in diameter and 4 inches deep.
7. **Double Pipe Strength at the bowl**—impossible to bend, break or dislodge.
8. Supply of water connected either from above or below.
9. Easily and quickly installed—any barn. Can be fastened to wooden posts.

Cows like to drink — day and night. The more they drink the more milk they yield. REMEMBER — Drew Bowls are inexpensive to install and are practically indestructible.

ABORTION IN CATTLE

CAN BE TREATED SUCCESSFULLY AND YOUR COWS MADE PROMPT. REGULAR BREEDERS BY

STERILOID

STOP LOSING CALVES

TREATMENT: If STERILOID is used at the first sign of abortion the cow will go her full time and have a healthy calf. If your cows or heiers do not come in season, or fail to get with calf, use STERILOID. Cows get with calf after only one treatment. Write today for FREE BOOK. It explains the causes and symptoms of Abortion and tells how to treat Abortion, and make your cows regular, healthy breeders with STERILOID. Also contains letters from breeders who have used STERILOID successfully.

GUARANTEE: We will refund money in every case when STERILOID FAILS to make good. PRICE $1.00. Mailed Postpaid, in plain wrapper.

MARTIN REMEDY COMPANY, Dept. A, 398-408 Columbus Ave., New York City. Reference—Colonial Bank.

Dehorning is Cruel

and a bloody job. The easy, quick, humane way to avoid dangerous horns on cattle is to treat calves with

Fleming's Chemical Horn Stop

Apply to calves, 3 to 10 days old and horns never develop. It's a thick paste. Doesn't run or make a bad sore. EASILY APPLIED AND NEVER FAILS. The cost is small — 50 cents a tube — enough for twenty-five calves.

Money refunded if not satisfactory. Order today. Ask for Fleming's Vest Pocket Veterinary Adviser — 192 pages — sent FREE ON REQUEST.

A Real Job for Agricultural Graduates

(Continued from page 192)

ing with so many different families, each one having its virtues and its faults, the tester learns that people may be widely different and have their own faults, and yet be decidedly worth while. He will find people are better than we think they are, if we only go to the trouble to find out all sides of them.

Whether the agricultural college graduate expects to go back to the farm, to take up extension work or teaching, he cannot do better than to take a year of cow testing. The country needs many cow testers and is willing to pay well for them. Think it over, college men. What are you going to do next year? Here's a big job for you that will do you more good than anything else you can do, and in which you can do a world of good. Talk it over with your dairy instructor.

A Mayor's View of the Breeder

It is rather unusual for a mayor of a large city to have a comprehensive understanding of the requirements of a breeder and of the dairy industry, but at the annual convention of the Holstein-Friesian Association of America held in St. Paul in June, Mayor L. C. Hodgson gave a splendid address and showed that he had given more than passing interest to the problems of the breeder and the relation which the dairy industry bears to the welfare of the nation and what should be done to bring about more satisfactory conditions and larger returns to the dairy farmer. We make the following quotations from his address:

"The cow is the best symbol of our needs today. She is a worker and a producer. She does not regard life as an ornament merely. She does not scorn labor. She does not waste time in useless debate, in agitation. While children starve she doesn't write essays about it, tainted with discontent. She earns her right to tranquility by her willing work. She wants to pay her way. She is creative. She takes the raw material and turns it into that which shall serve the needs of the world. She accepts no favors without making return. She does her day's duty before taking her rest. But she is also the symbol of absolute justice. She demands her rights, and she has the royal power of enforcing her rights. Deal with her unjustly and she measures your penalty to the fraction of a cent. Withhold from her what she requires and she in turn withholds from you the contribution that equally measures your parsimony.

"One thing I think you should do, and that is to discourage the idea that successful breeding is a soft snap and a lazy man's job. Too many folks who read about the fancy prices paid for blooded stock get the idea that all you have to do is to sit with your feet on a mahogany desk and throw dollars at the cat. There is no business on earth demanding for its best success more of intelligence, earnestness, hard work, and unselfish service than yours does.

"The greatest need of America today is the creation of new wealth. But how are we to create it? Agricultural possibilities are not likely to be greatly increased in the immediate future. Mining is largely a local industry. Manufacturing will expand, but its wealth will increase slowly. Because of existing conditions I believe it safe to say that the one field in which there is no limitation to the possibilities of the creation of new wealth is the field of dairy and live stock activities. Under the most enthusiastic development and the expenditure of every possible energy, the dairy industry could not, within a quarter of a century, be boosted to a point where the production would exceed the demand. The field, therefore, is tremendous.

"The essential need in this industry is the development of the thoroughbred, the creation of the milk strain through breeding. This task has hardly been started yet. I feel safe in saying that more than 88 per cent of the milking cows of the country today represent an economic waste. It is hard to estimate with any degree of accuracy because all dairy figures are loosely made as yet; but, speaking approximately, I believe that if every scrub cow in this country were replaced by a pure-bred cow, there would be an increased production of from eight to ten billion dollars a year. This staggering figure brings some realization of the opportunity ahead, and of the need of stimulating the pure-bred game.

"But there is another side to the opportunity. The world needs food; milk is the best of all foods, the most essential. Take away from the world everything that originates with the cow, and a bill of fare would be so thin that men who love joyful existence would take rough-on-rats.

"The war has left the world impoverished for food. America must feed the world as never before. Whatever increases the food supply is a boon to mankind. Milk is not only the best food, but it is the cheapest. Charge for milk on the basis of its food value as compared with meat, and it will cost thirty-five cents a quart. Yet, as a writer recently pointed out, folks never complain if an automobile is sold at 100 per cent profit, but kick if milk is sold at five per cent profit. One-fourth of the children of America never have milk, and this means that we stand a terrible chance of a generation of weaklings, marked with the streaks of starvation.

"As you deliberate on how to encourage your industry and increase your production, you are making, in a sense, decisions on the fate of mankind; you are touching the hopes and aspirations of the world; dealing in the lives of children; outlining new possibilities for the homes of America; and planning a future for this nation built upon happiness and wholesomeness.

"No system devised will be without fault. I feel convinced that there is greater danger in too great restriction than in too little. After all the safest limitations in any business are the limitations of freedom. They are the limitations which permit the play of individual genius and initiative; which release the energies of the builder and the thinker; which fitly recognize the sacredness of difference between man and man; and under which men have the choice of using the method most native to their talent and inclination. Our rules and systems should be liberal and so devised as to guarantee chiefly that every established standard shall be just what it pretends to be; that every record stands for just what it is; that the achievement of animal and breeder be above misconception and open to the scrutiny of the world."

Before you junk or trade in an old machine, look it over carefully. At present prices, perhaps the parts you can use for repairs on your new machine will be worth more than the entire old machine itself will bring.

A little care, a little thought, and a little extra work, and America's forests may be made self-perpetuating; but they must have more than stumps to start with.

MERIDALE JERSEYS

After thirty-one years of constructive breeding, the opportunity is offered to the thoughtful breeder to secure, at buyers' prices, representatives of the blood lines which have made Meridale famous.

Dairying Thirty Years Ago

Notes from the Issue of Hoard's Dairyman for August 29th, 1890

"What are men thinking about when they talk about the 'depressed condition of dairying' when August butter is worth 22 cents and July cheese is worth over 8 cents per pound. There is no better farming done, as a regular business than that, in all this country.

"The man who makes a spasmodic attempt to accomplish a given object and loses his head because he does not quite succeed, or sees lions in the way that he did not expect to meet, will "never set the river afire".

O. Moffet of Iowa had the following to say concerning "Breeding for Sex":

"When I embarked in a Jersey dairy, and realized the advantage of raising a larger per cent of females, and having heard that the formula was to serve the cow in the early stage of the heat and have the bull wrought up to a high state of excitement, I worked on this program as faithfully as I could. And what was the result of my first year's experience? Why, of twelve calves, nine were bulls. From this I became disgusted, voted the science of the thing a humbug, and for the next season I went in on the let-her-rip system. And, strange as it may seem, of sixteen calves, but one was a male. Then for the next year, from the same bull, I had about twice as many heifers. Then I changed bulls, and for the next several years I was so fortunate as to have about twice as many females as males. And, curiously enough, again I now have another bull who for the first season has produced so far nothing but females."

A woman correspondent wrote to "impress upon the 'powers that be' the vital importance of appointing "really good judges upon the different breeds of cattle for the fall exhibitions in 1890". She said: "I do not think any one realizes the dissatisfaction, discomfort, and misery that must be suffered, not only by exhibitors, but by all the officers connected with the exhibition when judges are appointed who are manifestly unfit for the position; and sometimes the best breeders are deterred from exhibiting because they do not wish their cattle to be judged by men who are partly, or wholly, incompetent. I, as a sufferer, can speak from experience."

The following were the dairy markets for August 25th:

ELGIN, Ill., Aug. 25—Market, 23½ @24. Butter. Call board sales, 105 tubs at 24c; 197 tubs at 23½. Floor sales, 50 tubs at 23½c; 217 tubs at 24c. Aug. 18, 1890, butter sold at 22½c. Aug. 25, 1889, butter sold at 19c; Aug. 27, 1888, sold at 22¼c; Aug. 29, 1887, sold at 23@25c.

FOND DU LAC, Wis., Aug. 25—The offerings on the Fond du Lac Dairy board today were 1,000 Cheddars and 1,500 boxes flats, and buyers paid 7¾@8c for Cheddars; 8½@ 9c for flats.

An extra file and one or two whetstones are mighty handy to have around when the tools get dull.

Fifteen Teams in Junior Judging Contests at National

As the closing day for entries for state teams of boys and girls for junior judging contests rolls around, entries from fifteen states are filed and three or four other states are asking for a few days' grace as they need more time to make arrangements to send a team before making entry.

Teams are entered so far from the following states: Delaware, Idaho, Illinois, Indiana, Iowa, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nebraska, Ohio, Pennsylvania, and South Dakota.

The Dairy Show management has made hotel reservations for forty-five boys and girls who will be guests of the show, at the Y. M. C. A. Hotel and the Y. W. C. A. Hotel, respectively, and if any of the parents or friends of the boys or girls are coming along, reservations can be made for them. These hotels are as comfortable as any in town, so far as comforts go, and some of the luxuries may be found at both. They are both scrupulously clean, central of location, and handy for elevated and surface cars to the show buildings. The boys and girls will be looked after in every respect.

The boys and girls fortunate enough to be sent to this show's contests will derive a benefit that will be life-lasting, and will get inspiration that will be bound to have an influence in the shaping of a successful career. The men of vision in the several states who are making it possible that these boys and girls can participate in this event, and the parents and relatives of the children can all well afford to come to the show to see just what it means to the dairy industry, and perhaps get as much out of it as the young people.

The show dates are October 7th to 16th, and the big day for the boys and girls is Friday, October 8th. Sunday, October 10th, they will see some of Chicago's big industries, and hear men of national standing speak on religious and agricultural topics.—NATIONAL DAIRY SHOW.

Have you talked with your neighbors about subscribing for Hoard's Dairyman? Why not do it now? Make up as large a club of subscribers as you can and send them in.

OAKS FARM GUERNSEYS

COHASSET, MASSACHUSETTS

MODENA'S BOND BEAUTY NO. 42716 A. R.

10,596 lbs. milk, 551.78 lbs. fat, Class "C" 6,559 lbs. milk, 322.08 lbs. fat 145 days in "A"
We are offering Modena's bull calf dropped Feb. 3, 1920, sired by Moonlight King of A. D. F. (A. R.), a son of Imp. Daisy Moon 3rd with an A. R. record of 18,019 lbs. milk, 928 lbs. fat. Write for extended pedigree and price.
Also offering some choice IMPORTED FEMALES, all ages. Herd tested by United States Bureau of Animal Industry since 1913.
C. W. BARRON, Prop. **(Address) W. S. KERR, Manager.**

Do You Want A Bull Calf Sired by Anton's King Confidence?

His dam, Ma Chere Confidence 55851, A. R. 5727, has a record in Class C, of 764.65 lbs. of butterfat in one year.

Anton's King Confidence 43517

At the present time, we are offering several very desirable young animals that will be ready for service this fall. They are all out of A. R. dams or two-year-olds, that are now on test.

The strong May Rose breeding on the sire's side (A. K. C. traces five times to May Rose 2nd) combined with Starlight's Excelsior and Yeksa traces on the dam's side make these young bulls representative of the best blood in Guernsey circles.

Their conformation is of the very best—straight tops, long, deep barrels, and good width, all linked firmly with refinement and dairy temperament. Write for complete information.

HOARD'S DAIRYMAN FARM, FORT ATKINSON, WIS.

Wern Farm Guernseys

I am offering for sale 20 head of choice Grade Guernsey springers coming with first and second calf. Also have two bulls highly bred along May Rose lines just ready for service, that I will sell. For full particulars, write, wire, or come and see the stock.
Wern Farm, Waukesha, Wis.

Herd Bull For Sale

5 years old, well bred, a sure breeder and a dandy individual. His 3 nearest dams average 617 lbs. fat. All records made under 5 years old.

Also young Bulls from 2 to 15 months old from cows with and without records. Prices from $100.00 up.
Grover Kull, Mariondale Farm, - Genoa Jct., Wisconsin

Tratt Guernsey Herd

Herd headed by Bob Rilma's Monogram whose dam and grandam have A. R. records averaging 887.5 lbs. fat.
Bull calves for sale by him out of cows with good A. R. records.
Write for pedigrees and prices.
RALPH TRATT, WHITEWATER, WIS.

Sequel's Glenwood of Linwood 41767

Sire, Imp. Clara's Sequel 29414, sire of 30 A. R. daughters averaging 500 lbs. fat. Dam, Ideal of Alfalfa Farms 40750. She has three A. R. records: 452 lbs. class G, 740 lbs. class A, 690 lbs. class AA.
I am offering the following bulls by the above sire. Their dams have large records and are sired by Langwater Frenchman, Langwater Frederick, and Governor of the Chene:
Eugene of Linwood 7 months, dam 752 lbs. class AA class leader
Edgar of Linwood 11 months, dam 540 lbs. class B
Edward of Linwood 11 months, dam 421 lbs. class G
Emery of Linwood 11 months, dam 514 lbs. class A
Edwin of Linwood 10 months, dam approximately 590 lbs. fat class FF
Elmer of Linwood 8 months, dam 435 lbs. class G
Ernest of Linwood 8 months, dam 566 lbs. class B
Sale List **Homer F. Rundell, Livingston, Wis.**

HERE'S YOUR OPPORTUNITY---BULLS

Middle aged, serviceable age and younger. Well bred and good individuals. Prices reasonable, breeding considered.
Harry Leppla, Sec'y., Fox River Valley Guernsey Breeders' Association Appleton, Wis.

Alsike Clover

The increasingly frequent failure of red clover has resulted in increased use of alsike clover, and on a great many farms in the Ohio Valley and lake region the farmers now use a mixture of red and alsike where formerly they used only red clover. This is done in order to insure a stand of some sort, the alsike making a stand upon those areas in the valley which had become more or less sour or run down. Besides having a wide use as a mixture with red clover on sour or run down land, alsike is the crop par excellence for low, wet ground. In southern Indiana along the Patokah river bottoms there are fields which have made three cuttings in the same season in which the seed was sown. while usually alsike makes only one cutting. On rich, low land, it grows rapidly and continuously. In the south the use of alsike is recommended for all low lands. The fact that alsike clover will endure growing in water for long periods was shown experimentally by the department when it grew pots of alsike clover submerged to about 3 inches above the edge of the pot for an entire year. The clover in these pots grew more thriftily and made a larger mass of growth than the clover in the check pots.

During the past year some very interesting experiments have been made in New Jersey on the use of alsike clover as a winter cover crop. The seed was sown in August alongside of plots of crimson clover and hairy vetch. This spring it was found that the alsike clover was the only crop having a complete stand.

There is some reason to believe that important strains of alsike clover are to be found in northern Europe, and this field will occupy the attention of this office as soon as funds are available.—C. V. Piper and A. J. Pieters, United States Department of Agriculture.

HOLSTEINS

Backed by Year Records

Bull born May 23, 1919. Extra well marked, square and well shaped. A splendid individual and bred in the best of blood lines. His dam, *Lothian Ruth Pietertje Korndyke No. 315679* A. R. O., at 1 year, 11 months, 28 days, milk, 7 days, 408.5, butter 17.378; milk, 30 days, 1,726.1, butter 72.818; milk, 7 days, 8 months from calving, 261.9, butter 12.502; milk, 365 days, 15,288, butter, 365 days, 688.072. Sire of calf *Sir Ona Clothilde De Kol No. 241466*. His sire is backed by the best of yearly backing over 1,000 lbs. butter and over 25,000 lbs. of milk. This young bull is all right every way.

We have his first sons for sale.
LAWRENCE PAUMIER, - - (Stark Co.) - - Louisville, Ohio

Facts in BLACK & WHITE

Value of a Purebred Holstein Bull

Do you realize in what a short time you can transform the character of your herd by the use of a purebred Holstein bull?

Each well chosen sire should give at least 50 per cent of his character to the next generation so that the direct descendants of the fourth generation retain only a little over six per cent of the original blood and nearly 94 per cent is of your own choosing. No man has any excuse for milking unprofitable cows when he can easily get into the all-yea milking class of Holsteins.

Send for Free Illustrated Booklets.

YOUR CHOICE OF 30 YOUNG BULLS OUT OF YEARLY RECORD COWS

FROM AN ACCREDITED HERD—325 FEMALES

OUR HERD SIRES

KING OF THE ORMSBYS

KING OF THE ORMSBYS is sired by Sir Pietertje Ormsby Mercedes (twelve 1000-lb. daughters) and out of Spring Brook Bess Burke 2d, the world's largest dairy cow and the only cow in the World with three 7-day records above 35 lbs. butter in connection with three year records each above 1000 lbs. Her best records are 38.22 lbs. in 7 days and 1290.93 lbs. in a year.

SIR INKA PRILLY SEGIS is a 30-lb. son of King Segis. He has 84 young daughters at Winterthur; 30 have freshened and 10 of these made above 20 lbs. at first freshening. At their second freshening they are coming back with from 25 to 28 lbs. 17 of his daughters have completed semi-official records, and 12 of these averaged 757.73 lbs. butter and 19,172.30 lbs. milk at an average age of 3 y. 6 m.

SIR INKA PRILLY SEGIS

KING OF THE SADIE VALES is sired by King Korndyke Sadie Vale (the only bull with a 40-lb. dam, a 40-lb. sister, and a 40-lb. daughter) and out of a 38-lb. "Sadie Vale" cow. Both his sire and dam are out of 41-lb. cows. The five nearest dams of King of the Sadie Vale each weighed over a ton and produced over 100 lbs. of milk a day. His three nearest dams average 40.19 lbs. butter in 7 days and 159.51 lbs. in 30 days.

JOHANNA KING SEGIS is out of a 40-lb. cow and sired by a yearly record son of King Segis. The dam of Johanna King Segis was the first cow to make 541 lbs. butter in 120 days and the second to make 40 lbs. in 7 days. Johanna King Segis now has 8 daughters with semi-official records and these average over 700 lbs. butter and 18,000 lbs. milk. All his daughters born at Winterthur will be given an opportunity to make semi-official records.

THE SECRETARY, 406 MARKET BANK BUILDING, MINNEAPOLIS, MINN.

Just the Sire For Some Small Breeder

LINCOLN KAREN ORMSBY
Born February 2, 1916

He is an excellent individual, straight as an arrow and full of style. He is a full brother to Miss Karen Ormsby Mercedes, a two-year-old heifer that sold in the last Minnesota State Sale for $2,025. She is now making great yearly tests. He is a three-fourths brother to Ruby Karen Mercedes, the State Champion junior four-year-old with 35 lbs. butter in 7 days.

HIS SIRE

is SIR PIETERTJE ORMSBY MERCEDES 22D, one of the leading sons of SIR PIETERTJE ORMSBY MERCEDES, the sire of more 1,000-lb. cows than any other sire in the world. The dam of "22D" is Riverview Fytje De Kol Ormsby, the first 1,000-lb. cow in Minnesota. In a year she made 1,070 lbs. butter from over 26,000 lbs. milk. She is by the 30-lb. sire, Duchess Korndyke De Kol.

HIS DAM

is JOHNSTON LINCOLN KAREN, 28.08 lbs. butter in 7 days and 110.31 lbs. in 30 days. She is the dam of Ruby Karen Mercedes, the state champion 4-year-old of Minnesota with 35 lbs. butter in 7 days. She is sired by King Karen, a son of Alma Prince Jewel. Her dam is by Alma Prince Jewel and from San Toy, a 25-lb. cow.

PRICE $1000

He is guaranteed sound in every way and to be an active server. Will sell subject to 60 to 90 days retest. Very gentle.

E. C. SCHROEDER FARMS,

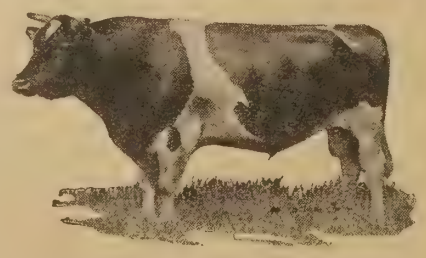
Moorhead *(A Federal Accredited Herd)* **Minnesota.**

Minnesota Holsteins

Miss Korndyke Akkrummer Ormsby 30-lb. 4-year-old. 39.67 lbs. butter at full age. Owned and developed by J. B. Irwin.

For Your Next Herd Sire

get a son of Sir Ormsby Banostine Champion, son of Duchess Skylark Ormsby, world record cow. We have some good ones for sale from dams with good 7-day and year records.



Woodlake & Clover Farms,
John B. Irwin, Station F,
Minneapolis, Minnesota.
"The Home o the Ormsbys."

Use A Son of "Piebe"

from one of our good year record cows to head your herd. He will bring what you want—better individuality and increased production.

Piebe Laura Ollie Homestead King is, as you know, the phenomenal present day sire with 7 daughters that average over 20,000 lbs. milk in a year as 2-year-olds. He is a show bull as well, and his sons are as good.

We have one or two left that are almost of serviceable age. Write or wire today if you are interested.

MINNESOTA HOLSTEIN CO., V. S. Culver, Sec'y & Mgr., Austin, Minn.

If You Went Into a Grocery Store

and laid the price of a dried up loaf of bread on the counter you would expect to get a dried up loaf of bread. Yet, a fellow came here the other day and laid down the price of a dried up bull. We haven't any dried up bulls for sale so he went home without one. If you want a good bull calf, any age, better write for the circular today.

FLECKS FARMS, Faribault, Minn.

6 Good Cows For Sale

THE MINNESOTA KIND

They are all by a 36-lb. sire, are bred to a son of King Korndyke Colantha Ormsby, and are due to freshen this fall and winter. They are from 3 to 5 years old and absolutely straight and right. Lack of barn room forces us to sell. Write or come and see them.

E. J. Brosious, - Stillwater, Minn.

Mankato Holstein Farms

OUR HERD BULLS

King Colantha Ormsby Bess, a Sir Pietertje Bess Burke Combination. Nine dams average over 1,000 lbs.

A son of Ormsby Korndyke Lad. Nine daughters over 1,000 lbs. butter, eleven over 22,000 lbs. of milk.

A son of Sir Pietertje Ormsby Mercedes 14th, that great transmitting show sire.

(A Federal Accredited Herd)

MARLOW & RANDALL, MANKATO, MINN.

Grandsons of

Duchess Skylark Ormsby and of S. P. O. M. 38th.

for sale. These youngsters are from A. R. O. dams that are now making good yearly records. Write today for further information.

POPLAR HOLLOW STOCK FARM,

Write for price, picture and pedigree of this great 4-year-old show bull.

A Federal Accredited Herd.

Empire Stock Farm

William Schmidt, Prop. St. Peter, Minn.

FOR SALE!

Segis Pontiac Black Hawk

BORN FEBRUARY 7, 1918

A son of a 29-lb. sire and from a 24-lb. cow. A grandson of the "marvel of all sires", KING SEGIS PONTIAC COUNT. The daughters of the latter hold more World's records, (6) in the regular divisions than those of any other two sires. He already has (6) daughters with year butter records above 1,000 lbs. and is the only sire to have all daughters with year milk records above 20,000 lbs. Write us for pedigree and price.

Lake Meadow Farm, - Wayzata, Minn.

Pure-bred Holstein Females

In order to make room for fall calves, we are offering a choice lot of heifers from three months to two years old, some bred to freshen this fall and winter, in excellent condition, well grown and good individuals. Popular A. R. O. breeding and sold on a money back guarantee, priced reasonable for quick sale.

Blumecrest Farm, Maple Lake, Wright Co., Minn.

BULLS—Two of Them.

Ready for service. One light and one medium in color. One sired by our DUTCHLAND CREAMELLE COLANTHA LAD, from a good daughter of SIR WINANA BEETS SEGIS. The other sired by SIR WINANA BEETS SEGIS from a daughter of SEGIS JOHANNA GRAHAMHOLM. Both cows are on yearly test now and are making good records. Don't buy a bull until you have seen and studied the pedigrees, pictures and prices on these youngsters. They are good ones.

GRAHAMHOLM FARMS,
H. R. Searles, Mgr. Rochester, Minn.

Ready For Service

Iowana Pontiac Homestead 267584, a son of OAK DE KOL OLLIE HOMESTEAD 85529, and therefore a brother to Piebe Laura Ollie Homestead King, (5 20,000-pound two-year-old daughters). His dam, Iowana Aaggie Pontiac Fayne, is a daughter of SIR JOHANNA FAYNE 42147, (8 20,000-pound daughters) has a record of 22.9 pounds in seven days as a four-year-old and is now doing well on yearly test. Her dam is a great foundation cow with over 750 pounds butter in a year. Buy him now as he will undoubtedly be worth more money when his dam finishes her year. Price $750; send for pedigree and photo.

Our herd is under Federal Supervision.

IOWANA FARMS, - DAVENPORT, IOWA

Do You Want

A 30-lb.—1000-lb. Ormsby Bull?

If you want one of that kind—and a real individual, write for our sale catalog. We are moving our herd to California and rather than take these bull calves we are offering them at sacrifice prices.

They are sons of Sir Ormsby Skylark, the sire of Duchess Skylark Ormsby, and they're from cows with records of from 27 to 40 lbs. that either have or are making good yearly records. (Several of those dams have over 30 lbs. and will finish the year well above 1,000 lbs.)

Better write today for that sale catalog.

FOR SALE AND EXCHANGE

25 head of Holstein cows, 23 of which are high grade and 2 are registered. Also herd bull, a grandson of K. S. P. A., the fifty thousand dollar bull. This bull is from a 27-lb. cow. Most of these cows bred to this bull. All young cows and well marked, good heavy producers. Price $200 per head if the herd is bought together. Will take two good teams of draft mares or mules as a partial payment. Might consider a good automobile as a partial payment.

G. A. HIGGINBOTHAM, ROSSVILLE, KANSAS.

FISK

Red-Top Tires for Small Cars

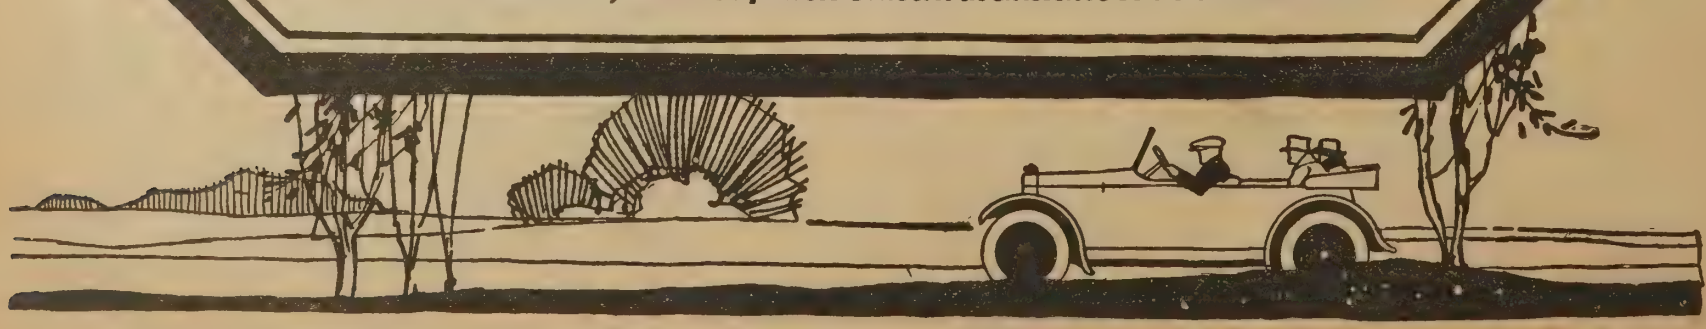
WE have specialized in a tire for small cars—The Fisk Red-Top. It is pre-eminently a tire designed for hard service under all conditions.

Its success is due primarily to two things: extra size and extra strength.

For size, compare it with any other tire on the market. As an instance, you will find the Fisk Red-Top 30x3½ is larger than the so-called standardized oversize tires.

To get the extra strength an extra ply of fabric is built into the Fisk Red-Top. The tread is also extra heavy. This means both side walls and tread stand up under the most severe usage.

In every section of the country small car owners are getting from Red-Top Tires greater mileage, greater ease in riding and with the least attention of any tire that is made.



The Fisk Red-Top Tire in its present construction was put on the market early in 1918. It was not offered to our trade until we felt sure that our facilities for production would be equal to the demand—yet the demand was so great that for fifteen months after we were unable to catch up with orders.

With our present greatly enlarged equipment, however, we are now ready to supply Fisk Red-Tops promptly. You will find wonderful satisfaction in this tire especially designed for your small car.

Next time—BUY FISK
from your dealer

Like all Fisk Tires, Fisk Red-Tops are backed by the Fisk Ideal, "to be the best concern in the world to work for, and the squarest concern in existence to do business with."

USE MORE MILK

J. C. McDOWELL

AT the close of the great World War, Paderewski sadly remarked that in all Poland there were no children under seven years of age. Why? How could that be? Had the cruel Central Powers murdered all the little Polish children? No, not directly. The children were not killed by bullets but according to the physicians they died of undernourishment. In other words, they slowly starved to death for lack of proper food, and the food they needed most was milk.

Paderewski was speaking of war-time conditions and Poland is far, far away, but how about our own children in this great, glorious land of America, this land of untold weatlh, this land of the free and home of the brave? Certainly our children get enough to eat and of the right kind. Do they? Don't be too sure. Facts are stubborn things and here they are:

The Office of Information of the United States Department of Agriculture says that one-fifth or 20 per cent of all the school children in the United States are undernourished, not from a lack of food, but from a lack of the right kind of food. In studying this subject, home demonstration agents have weighed and measured thousands of children. Of the 85 boys weighed at the Windsor fair in Connecticut, 43 were under weight and of the 92 girls weighed, 55 were under weight. On weighing and measuring 400 children in one Missouri County it was found that 50 per cent of those between the age of 5 and 10 were under weight, and that 90 per cent of the girls between the ages of 10 and 18 were under weight. In New York City a decrease of 25 per cent in milk consumption for 1917 and 1918, as compared with 1914, was accompanied by an increase of 16 per cent in undernourished children.

Yet milk, even at the present prices, is the cheapest of all animal products. An acre of land will produce more food in the form of milk, a ton of hay or a bushel of grain will produce more food in the form of milk, and a dollar will buy more food in the form of milk, than in the form of any other animal product, and children that have an abundance of pure, rich, fresh, whole milk are never undernourished.

Why don't people use more milk? Certainly not because it lacks food value, because as a food it ranks high. Not because it is high priced because, relatively, milk is never high in price. Not because it is scarce, because milk supplies can readily be increased to meet any demand. No, the true reason why this excellent food is used so sparingly is because milk is underadvertised. Automobile manufacturers advertise autos, milliners advertise hats, and grocers let it be known that they are out after business.

About the time a certain breakfast food was placed on the market, a professor in the Ohio State University saw a street car advertisement that told of the wonderful food value of this breakfast food, of its ready preparation for the table, and its palatability and deliciousness were set forth in glowing terms. The written advertisement was accompanied by a beautiful picture in attractive colors. The professor at once had a desire to try the new dish. He did so, but did not care much for it. The next day he saw the advertisement again, and again he tried the breakfast food. Soon he learned to like it. One day he gave some of it to his dog. The dog wouldn't touch it and never did learn to like it. In telling the story afterward, the professor remarked that the difference between him and the dog was that he could read and the dog couldn't. It pays to advertise.

FOR GROWTH AND HEALTH EAT MILK

Milk is not merely a pleasing drink; it is nourishing food. It is rich in body-building substances, such as protein, lime, and phosphorus, and it is rich in energy-producing substances, such as sugars and fats. The newborn calf has wabbly legs. Milk puts lime into its bones, protein into its blood and muscles, and the fats and sugars warm its body and give it strength to run and play. After drinking milk for a few days, the calf ceases to be a wabbly calf and become a strong, healthy, graceful, beautiful animal, the kind that delights the eye of the owner and adds much to the pleasures and profits of dairying.

At no price at which milk is ordinarily sold, is it nearly as expensive as other animal foods of recognized value. In digestible protein, one quart of milk is equal to:

7 ounces of sirloin steak, 6 ounces of round steak, 4.3 eggs, or 6.8 ounces of fowl.

In the production of energy, one quart of milk is equal to:

11.3 ounces of sirloin steak, 14.9 ounces of round steak, 9 eggs, or 14.5 ounces of fowl.

On an average whole milk contains about 4 per cent butterfat, 2.6 per cent casein, 0.7 per cent albumen, 5 per cent sugar, 0.7 per cent ash, and 87 per cent water. Altogether, whole milk contains about 13 per cent solids and all of the solids are highly digestible. Though milk is a liquid, it contains a lower percentage of water than the edible portions of many fruits and vegetables. It contains a lower percentage of water than the edible portion of strawberries, cranberries, peaches, lemons, water melons, asparagus, string beans, cabbage, celery, cucumbers, or lettuce. While foods cannot be compared wholly on the basis of their nutritive elements, milk is the one food devised by nature for the growth and development of the young. A quart of milk a day is a fair allowance for the growing child.

What shall I say of dairy substitutes? Perhaps it would be best to leave my thoughts unexpressed, but this much I will say, that as for me and my family we are using, and while I am able to earn a living wage we will continue to use pure, fresh, wholesome, genuine dairy products.

Last year the people of the United States used 3.5 lbs. of cheese per capita. In Denmark the people use 3½ times as much. Last year the people of the United States used 14.4 lbs. of butter per capita. In Australia they used almost twice as much. Each day the people of the United States use one pint of whole milk per capita. In Sweden and Denmark they use 1½ times as much. The people of the United States should use more dairy products.

You can run almost as far, you can climb almost as high, you can work almost as long on a quart of milk as on a pound of beef. For body building, milk and meat are nearly equal dollar for dollar at present prices, but for energy, strength, and power to do work one dollar spent for milk brings greater returns than two dollars spent for meat.

The dairy farmer should get a fair price for milk, cream, butter, cheese, for every product of the dairy; but he should get it through legitimate advertising and not through strikes. He should get it through greater consumption and not through under production. He should increase his income through bigger and better sales but he should not add to his income by unfair prices.

Let us consider the guarantee of 10 per cent plus the cost of production. If it encourages high production costs, that plan gets us nowhere. On the other hand, we have the opportunity and the moral right to get our 10 per cent plus through economical production, and through the efficient marketing of a high-grade product. Let us teach the true food value of milk, make the people want it, make them feel that they must have it, and they will pay the price that will make production possible. Let us co-operate, not in restraint of trade but to facilitate trade. Let our motto be co-operation, not coercion. Such a plan is fair to producer and consumer alike, and it is good business.

Milk campaigns, conducted in many

Subscription Rates

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

Miss Jessie Plays

I've just come out for a minute to sit on the
porch an' rest,
Away from th' singin' and dancin'—a sort of
an awkward guest.
It's a wonderful night for a party—th' farm's
in a silver sea,
Th' moon peeks around from th' silo an'
winkin' a bit at me.
A moon that was meant for courtin'—a moon
that is big and round,
And out in th' wheat field yonder there's nev-
er a breath er sound.

Then—all of a sudden, her playin'—her hands
on th' shiny keys,
A hush from th' Bay Creek fellers, keyed low,
like a summer breeze
And out on th' still air, softly—th' song that
she used t' sing,
I can't recollect what she called it—th' name of
th' purty thing,
But I turn an' I watch those fingers; th' fig-
ure against th' light
Th' sway of th' girlish body, and hair that th'
lamp makes bright.

And, oh, but I feel so clumsy—so far from
my dreams come true.
Miss Jessie, an' me—it's funny—it's best that
she never knew.
I wait till it's almost over, then start fer th'
path an' town,
When, quick as th' sweep of th' moonlight,
comes a swish of a party gown
And, there she is, smilin' at me—an' me with
my eyes a-swim,
While someone is sayin', soft like: "I'm wait-
in' for you, Jim."

"Any trout in the stream on your place, sir?"

"Mebbe—can't tell till you try."

"Do you mind if I fish a while?"

"Go as far as you like, but the last chap from the city that did it there, left so many of his patent lures and hooks and flies along the bank, that I was afraid to let the cows out to pasture until we cleaned 'em up."

Dairying Thirty Years Ago

Notes From the Issue of Hoard's Dairyman for September 5, 1890

An English correspondent had complained of the quality of butter found in England and, apropos the exportation of butter from this country, the following editorial statement was made:

"What we need is to have an ocean refrigerator steamer load, or more, every week depart from our shores of that which is not over a week old when it starts, and made in the highest and best style of the art. If we could get it started right, and in reliable hands, it would do us more good than a world's fair to advertise our goods."

The issues of 1890 were so filled with articles from the leading dairymen of this country that the editor was moved to the following "declaration":

"We may be pardoned for taking just a little pride in the fact that so much of our reading space is occupied by our strong correspondents. Very little of the matter in type this week was ever in type before, in other papers. It is a fact, and we are humbly thankful for it, that the best dairy thought of America seeks expression through these columns. Another thing that we are more proud of, if possible, is that the humblest dairyman and dairy woman seeking light about the practical things he or she has to use and handle every day, come with the same freedom of the loftiest and most learned, and seem to know and feel that they will be as welcome and that we will do the best we know for them, as quickly as we would for the scholarly kings and queens among mankind. Anything that we know about the business, from the cow to the cash she earns, is all on the same true democratic platform,—is all as simple, and all as intricate or as grand, as any part of it, and it, together with all our correspondents tell of dairy truth, is the common property of the Dairyman family. One of the big vital truths of this life is that we can't help others to grow without helping ourselves in the same direction. The truth we part with is always out on big interest that insures to ourselves."

James C. Stone of Kansas wrote in favor of fall dropped calves: "When a man rears calves in the summer time they are very often neglected. Twice a day they are called up, and as a rule get a supply of sour milk. I would prefer them raised through the winter; they can be protected from the sun and from the flies, and be ready to eat grass when the summer comes. I would have the cow begin her working season from October onward."

The Wisconsin State Fair for 1890 was advertised. Extra inducements of $3,591 were offered in special premiums. A one hundred dollar top buggy was given for the best single loaf of fruit cake. Railroad companies offered excursion rates of one fare for round trip. Freight charges were made for only one way, except with race horses. Among the "special attractions" were listed bicycle races, balloon races, and chariot races. The "phenomenal family" was advertised to be present and to comprise of 15 children, six pairs of twins and one pair of triplets. One walking race was listed for draft horses and a special premium was given for a race in which horses were to be driven by ladies.

He was milking, and while he lifted his eyes elsewhere, a grasshopper jumped into the pail.

When he saw the commotion in the milk, he exclaimed: "Well, by gum! If here ain't one of them darned germs!"—The Country Gentleman.

A New

De Laval

Cream Separator

Quickly pays for itself in these times of high butterfat prices and scarcity of labor. It does so doubly quick if your present separator is too small, half-worn-out, or you have none at all.

The De Laval Separator skims cleaner, is easier to turn and wash, and lasts longer—that is why there are more De Lavals in use than all other makes combined.

The De Laval is the World's Standard Separator.

A De Laval purchased now will pay for itself before Spring.

See the nearest De Laval local agent at once, or write the nearest De Laval office below for any information desired.

DAIRY BUILDINGS AND COWS GRAZING ON GRAIN PASTURE IN WINTER

MILK HOUSE AND DELIVERY WAGONS

A BROTHERHOOD OF DAIRYMEN

M. E. BEMIS, ARIZONA

TWENTY-ONE years ago Joseph Geare, Sr., brought his family to the Salt River Valley. The family consisted of his wife and seven sons. With that vision which sometimes is given to the pioneer, he felt that there was here in this fertile valley a wonderful future. He frequently told his sons that some day Phoenix would be a big city. Then it was only a little village of 5,544.

He went out on what is now North Central Avenue, something over two miles from the village, away out in the country then. He purchased about 130 acres of land that was in sagebrush and mesquite. Little by little he cleared this off with the help of his sons who were all small then, the youngest only a baby. Shortly after he had cleared a small amount and commenced farming he began to gather a few cows and made butter which he peddled from house to house in the village.

Today, one of the few things that the Geare Brothers have to regret is that their father could not live to see the realization of his dreams. However, he lived to make a beginning. He lived to get his boys educated and started off right. He lived to inculcate in them a respect for good, honest toil, and by teaching and example he was able to make dairymen of five of his seven sons.

Little by little the dairy grew. Ever watchful of modern improvements and ever ready to make use of any new methods, the dairy grew not only in number of cows but in standard of excellence. For fifteen years this has been one of the leading retail milk dairies of the valley. Today it is the only dairy furnishing the city of Phoenix with Grade A milk. Keeping pace with the growth of the city and the demands for better milk, they have kept up with the city in advance methods and are even perhaps a little ahead in some respects, although the city has gained in population more than 160% in the last ten years.

At the present time they still retain the home place with the exception of five acres and are leasing about 135 acres in addition. They are milking 110 to 125 high grade Holstein cows. These cows are exceptionally good stock. So far they have not paid very much attention to registered stock, although they have a few head. They have kept registered bulls constantly, and have now two from A. R. O. Holstein-Friesian dams. One of these carries 25 per cent of the blood of Duchess Skylark Ormsby and 25 per cent of the blood of Johanna Rue. Their policy has been to raise the heifer calves of the very best cows and to buy good cows, culling whenever a poor cow develops. It is a rare thing to find a herd of cows that show the individuality and the type that are shown by the cows in the Geare Bros. herd.

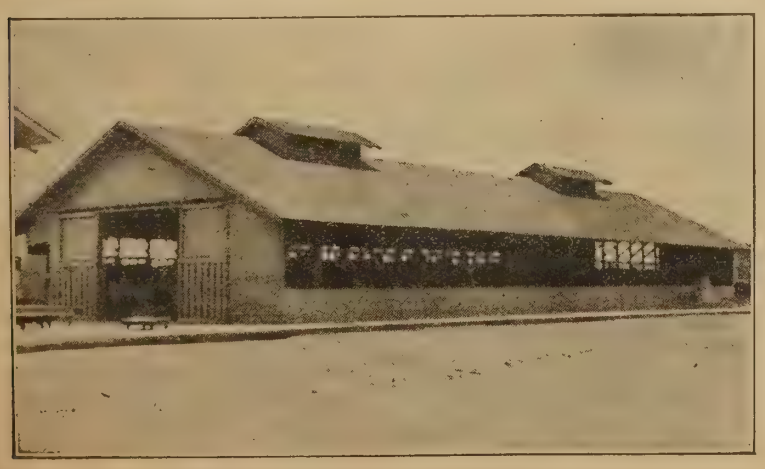
After the death of the father it became apparent to the brothers that in order to carry on the work and develop the dairy it would be necessary to divide up the responsibilities. Two of the older brothers had left home and were in business for themselves, the five younger brothers, at the earnest behest of the mother, decided to form a partnership and the work was divided up, so that each might have a share of the supervision of important details. James, the eldest of the five, was assigned the general superintendency of the dairy. This includes the barns, cows, and the milk house. John became foreman of the farm; at present he is dividing his time somewhat, giving part of it to the assistance of James in the dairy work and Thomas has taken over certain work on the farm, such as superintending the plowing and putting up the hay, filling silos, etc. The younger brother, Edward, has been in school and during the past year has been in the College of Agriculture at Tucson and will probably return to complete the course. To Hubert Geare fell the task of the general superintendency of all operations, keeping the books and acting as purchasing agent and, in general, looking after all financial details.

It might be said in passing, that several of the brothers were in the service and it seemed at one time as though the entire dairy would have to be abandoned owing to the impossibility of giving the different divisions the care they had in the past. Since the return of the brothers the work has again been divided up, as I have just indicated.

At the present time they employ four milkers, three drivers, four regular ranch hands, and from five to ten at irregular times.

The general policy of the herd management is to pasture to some extent in the winter. Grain is used largely for winter pasture, this is supplemented with silage. There is a battery of three 110-ton silos. The pasture and the silage fed during the winter is supplemented with chopped alfalfa hay. This is fed in a self-feeder, cafeteria style. In the summer green alfalfa is fed very largely. At present it takes about two acres a day, sometimes a little less, sometimes a little more, to feed the herd, according to the condition of the alfalfa at the time of cutting. Occasionally this proves a little too much so that there is always a little that is cured for hay, which makes enough to keep the horses supplied.

The cows are kept during the day in a shaded corral about one-fourth mile from the main barns. Water is supplied in a large concrete tank. This water comes from the cooler in the milk house. Here there are racks for feeding the green alfalfa and they are also fed the chopped hay in the winter. They are stabled only at milking time. At the present time the hours of milking are two o'clock in the afternoon and three o'clock in the morning. After each cow is milked the milk is carried at once to the milk house, which is separated from the barn only by a concrete walk 15 feet long. The milker does not enter the milk room, only an outside room of the milk house. The milk then goes at once to the cooler where it is cooled by a combined cold water and brine cooler to a temperature of 40 degrees. They have their own refrigerating plant and cooling room, which is kept always at a temperature of 40 degrees. During the summer season it is necessary to operate the refrigerating plant fifteen to eighteen hours daily. They are fortunate in being able to run this machine by electrical power. They also operate the separator, which provides the cream for the retail trade, by electrical power, a special dynamo for the separator being provided.



All milk returned by the drivers is immediately warmed to the required temperature and separated; the cream being sold to one of the city creameries for buttermaking. A part of the morning's milk is skimmed for cream for the retail trade.

They have a milking barn with a cement floor and cement mangers. The silage and whatever mill feed that is fed is given the cows at milking time in the mangers. The barn is very carefully scrubbed twice daily so that it is scrupulously clean and free from all odors. No manure is allowed to accumulate around the barns, this being hauled away and spread on the land where it will do some good and will not be a menace to sanitary conditions.

Of course it is needless to say that all the modern appliances such as steam bottle washers, steam sterilizers, sanitary milk stools and buckets are part of the equipment of this up-to-date dairy farm.

The general farm procedure has been such as to increase the productivity. At the present time there are about 50 acres of the home place in alfalfa, 50 acres in long staple cotton, and about 30 acres in corn. This was land which was in grain last winter. The time for planting corn in the Salt River Valley is in July. A part of the

DAIRY BARN USED FOR MILKING ONLY

THE BATTERY OF SILOS

Is a Farm Water System a Good Investment

A Discussion of the Various Types of Water Supply Systems and Their Adaptability—A. G. Tyler, University of Minnesota

THE successful man, whether he be a farmer, business man, contractor, or engaged in any other line, is the man who carefully examines every proposition before he invests his money.

In order to be a paying proposition every investment should return each year to the investor certain things which may be money, additional comforts, added conveniences, good health, or other valuable considerations. Whenever a purchase is contemplated, regardless of whether it be an automobile or a rattle for the baby, it should eventually pay for itself or else it is not a good investment.

A water system for the farm is no exception and the investigation should be just as thorough as though the money such a system will cost was to be invested in bonds or business.

Before starting our investigation let us understand what we mean by a water system and pick, if we can, an average set of conditions. A water system may be defined as an arrangement of pumps, pipes, tanks, etc., which makes running water always available where most wanted.

As to conditions: A recent investigation in the state of Minnesota has shown that the average family consists of 5.89 persons. This family has a well which is about 90 feet from the house and has a depth of 35½ feet down to water. About one-half have rain water cisterns while the other half use well water for all purposes. Suppose then we take a set of conditions similar to these and see how they work out. Family of 6, well 90 feet from house and 35 feet deep, well water used exclusively. The water consumption per day depends almost entirely upon the ease with which it is obtained and disposed of. For instance, cities and towns provided with water works and sewerage systems frequently show a per capita consumption of 100 gallons per day while desert travelers have to be content with a gallon or less. Under the conditions stated above, the average daily consumption would probably be about 8 gallons per person or 48 gallons for all. Water weighs 8⅓ lbs. per gallon and the average water pail holds about 10 quarts or 2½ gallons. It is practically impossible to carry 10 quarts of water in a ten-quart pail so the average pailful would probably be about 2 gallons. This will require 24 trips to and from the well each day. Each pailful of water will weigh approximately 17 lbs.; then 17 lbs. multiplied by 24 (trips per day) will amount to 408 lbs. of water to be pumped and carried every day (summer and winter). This will amount in the course of a year to about 75 tons.

Another way of looking at this proposition is the amount of time consumed. Each trip will probably take at least five minutes, then 24 (trips per day) times 5 minutes equals 24 times 5 divided by 60, gives 2 hours per day. Father and brother will probably take two pails when they carry water so we will divide the time by two, that is, allow one hour per day for pumping and carrying water. One hour a day for 365 days equals the nice little item of 36½ ten-hour days spent in carrying water. Reducing this to a money value, assuming that one dollar a day is fair compensation, we have $36.50 a year as the cost of getting water from the well to the house. Now $36.50 is the interest on $608.33 for one year at 6%.

Still another way of looking at the proposition is the distance traveled. Since the well is 90 feet from the house it means 180 feet per trip or at least 2,160 feet per day. Then 2,160 times 365 divided by 5,280 equals 149.3 or nearly 150 miles per year. How much would you charge your neighbor if he asked you to walk 75 miles through snow and on icy paths with two empty pails, then walk back again through the boiling sun with two pails of water? Isn't this exactly what you or some member of your family does every year? It is also a fact which escapes most people that the women folks on the farm carry a large proportion of the water.

So far nothing has been said about the water needs of the stock. It is a fact which is seldom thoroughly realized that milk contains about 87% water. If a cow gives ten quarts of milk twice a day she must take into her body at least 20x87% or 17.4 quarts of water each day for milk alone. Besides this, she must have a certain amount of water to maintain her health. Now, if there is a lack of water or if the water is ice cold, the cow is not going to drink as much as she should which will result in a decreased milk supply. This decrease may under certain conditions amount to as much as 10 lbs. per day or even more from each cow. Not to exaggerate, suppose we assume a loss of 2½ lbs. a day per cow, then for 10 cows, the loss will be 25 lbs. per day. At the rate of $3.00 per hundred weight this loss will amount to 75c a day. Figuring the average winter as 90 days, this loss will amount to 90 times 75c or $67.50 a year, which may be considered as the interest on $1,125 for one year at 6%.

The modern bath room is possible only when running water is available. It is rather difficult to place a value on the conveniences of a bath room but it is a fact that a person once accustomed to these things will never willingly go without them.

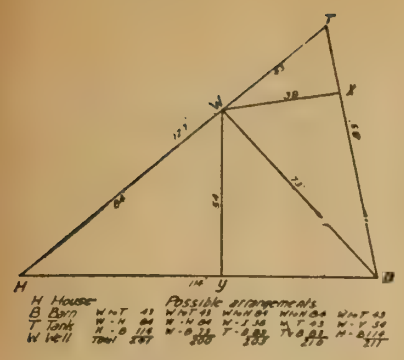
From a sanitary standpoint water is an absolute necessity. All types of sewage systems are dependent on water for their operation, whether they be septic tanks, regular sewers, or chemical closets. It is an established fact that typhoid fever is more prevalent in rural districts than in cities or towns that have sewerage systems. Typhoid is a water born disease and by far the largest number of cases are caused by drinking polluted water. Well water may be polluted in many ways, one of which is by seepage from an open privy vault. To avoid conditions like this a sewage system may be installed providing running water is available. It is extremely probable that no case of typhoid fever or similar disease ever costs less than $100 and $100 will go a long way toward the cost of a water system.

These few instances seem to show that, as an investment, a water system is a good thing. Furthermore, they seem to indicate that, purely as a business proposition, it is advisable to borrow the money if necessary to pay for a water system, since the saving made will much more than pay the interest and depreciation on the investment.

The question as to which of the many available systems is the best may now be taken up. In the first place there is no such thing as a best system for the one that might prove very satisfactory under one set of conditions would fail utterly under another. The ideal system is of course the one which will deliver fresh cold water in any reasonable quantity whereever you want it and whenever you want it. In general, the easiest to install, the most economical to operate, the most reliable and the cheapest system is the best system.

If the country is rolling and a high spring is available the water may be piped directly to the house. If there is a swift stream near, hydraulic rams may be employed to good advantage. If the water has to be pumped from a well, windmills, electric motors, or gasoline engines may pump direct or through the medium of compressed air.

All systems of whatever kind depend upon a certain amount of pressure which may be due to gravity or may be produced by artificial means.



Elevated Tanks

Elevated tanks of wood and steel are frequently used and give very good results in some respects. The pressure is practically constant and the danger of interruption through accidents to the pump is comparatively slight as the tank generally has a capacity large enough to last for at least a day or two. In flat country these tanks are built on wooden or steel towers of sufficient height to produce the desired pressure. It is well to remember that every foot of height will produce a pressure of 43-100 lbs. The most serious objection to such tanks is that the water is warm in summer and is apt to freeze in winter. They are also fairly expensive to install and maintain.

Concrete Tanks

If there is a hill conveniently near a concrete tank may be buried somewhere on its slope at a point higher than the highest fixture in the house and be used for storage purposes. If properly built and covered there is no danger of leaks at any time and the water is warmer in winter and cooler in summer. Or if there is a knoll a little higher than the first floor of the house, the tank may be built on top of the ground and banked up so as to prevent freezing in winter. If the last method is adopted the tank may be covered with sawdust or other insulating material. Another method is to use comparatively thin reinforced concrete slabs and then cover the whole with earth. The latter method has many good points, not the least of which is permanence.

With any type of enclosed tank it

The possibility of saving pipe and trench digging is shown in the above arrangement with well midway between the tank and the house.

is well to remember that an air vent must be installed somewhere so that air can get into and out of the tank. A quarter inch pipe rising a few inches above the ground and then bent over will do very nicely. Concrete tanks of this kind do not need to be reinforced as the pressure of the earth will counteract the liquid pressure inside. Good materials and good workmanship are the best guarantees of a good job. A little hydrated lime may be added to the concrete to make it water proof but this is not necessary as a cement and water wash will answer all purposes. An overflow should be provided and a hole in the bottom for draining the tank is very convenient at times.

Other points which should be noted in connection with tanks of this sort

CONCRETE STORAGE TANK PROTECTED FROM HEAT AND FROST
Above shows the installation where hill is available and below where the rise is not sufficient to let tank into the ground.

are: don't build the tank on soft ground, if built on filled ground be sure that the earth is thoroughly settled; the tank bottom should slope slightly toward the outlet so as to provide for complete drainage if necessary. There is a more or less prevalent idea that a tank of this sort must have two pipes connecting it with the well and the house, one delivering the water to the tank and the other delivering it to the house from the tank. An arrangement of this sort is practically never necessary and is seldom advisable. The matter of expense alone should be enough to prevent such an arrangement. The relative location of the house, hill, barn, and well will, to a certain extent, govern the course of the pipes. This will be particularly true if one can forsee future buildings. A little thought and study will sometimes save the cost of a good many feet of pipe and of the trench to put it in. The accompanying small drawings show two different settings with four possible arrangements of piping in each. The same result is accomplished in each case, that is, running water in house and barn but with considerable difference in cost for pipe and trench.

One of the most common mistakes made by the average person is the installation of pipes which are too small for the work they have to do. The inside of ordinary wrought iron pipe is comparatively rough and when water runs or is forced through such a pipe considerable friction is developed. For instance, suppose the water from a spring flowing 5 gallons per minute is conducted through 1,000 feet of ¾-inch pipe, a head of 100 feet or a pressure of 43 lbs. per square inch will be necessary to maintain the flow. A 1½-inch pipe under the same conditions would require a head of only 4 feet or a pressure of less than 2 lbs. The capacity of pipes varies as the square of the diameter, that is, a 2-inch pipe will deliver four times as much water as a one-inch pipe. The additional cost of the larger pipe does not, in most cases, amount to very much. It may be laid in the same size trench and with the same labor. The amount of time saved in waiting for a given dish or tank to fill will quickly pay for the extra pipe cost. Galvanized pipe is much more desirable for underground work than the ordinary black pipe.

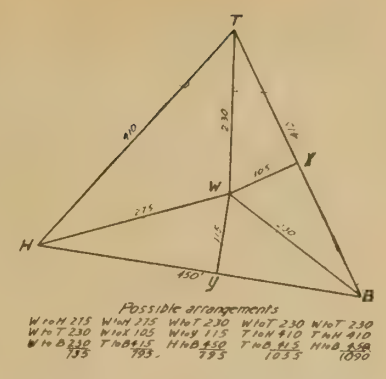
The size of the tank will of course depend entirely upon the water consumption. Suppose, for example, we want to take care of the needs of the average family as previously mentioned. The first point to remember is that the daily consumption will jump surprisingly when the water no longer has to be carried in pails. If a bath room is installed each person will use not far from 50 gallons a day or 300 gallons in all. If the stock is to be watered from this tank it will have to be made still larger. Suppose, for instance, there are 4 horses, 10 head of cattle, 8 hogs, and 15 sheep. Allowing 10 gallons per horse, 12 gallons per cow, 2 gallons per hog, 1½ gallons per sheep, 200 gallons additional will be needed. In addition to this some allowance should be made for possible leaks, sprinkling and other contingencies not readily forseen, say 100 gallons in all. This brings the total daily requirements up to 600 gallons. It is very desirable that the tank be large enough to hold not less than two days' supply or 1,200 gallons. There are 7½ gallons in a cubic foot, thus if we divide 1,200 by 7½ gallons we get the number of cubic feet in the tank, or in this case 160. A tank having the inside dimensions of 3½ feet x 6 ft. x 8 ft. will hold this quantity of water and allow an inch or so of space between the cover and the surface of the water. It is a good idea to remember that the cheapest tank to build is the one whose dimensions are as nearly equal as may be; for instance, a tank 6x6x6 feet holds the same as a tank 2x9x12 feet but the latter will require considerable more labor and material to build. In spite of the fact that a cubical tank is cheaper to build, a comparatively shallow rectangular tank is frequently cheaper in the long run. For instance, if the tank is a deep one it will require deep trenches to and from it; again, if it is wide, thicker concrete slabs will be needed for the cover.

Attic Tanks

A tank of some sort, generally galvanized iron, may be located in the attic of the house and be reasonably free from danger of freezing, but leaks in such tanks or overflows are apt to cause unpleasant consequences. Few houses are built with framework heavy enough to carry such tanks unless the necessity has been forseen and provision made for it. Water tanks located in the house should be well made and should always be provided with a drip pan and drain to take care of the sweat or condensation. Circular tanks are better than rectangular ones, they are more self supporting.

Steel Pressure Tanks

Still another method is to place a steel tank in the basement or bury it in some place and pump water and air into it. This water is later forced out by means of the compressed air. These tanks must be water and air tight and should be so at a pressure at least twice as great as the pressure to be used. If the tank is put in the ground it should have one or more coats of some good asphalt paint to prevent rust. To guard against the danger of freezing, the tank should be placed against the frost line and the pipes leading to and from it should be well insulated. A wooden box packed with straw or sawdust will serve the purpose very nicely.



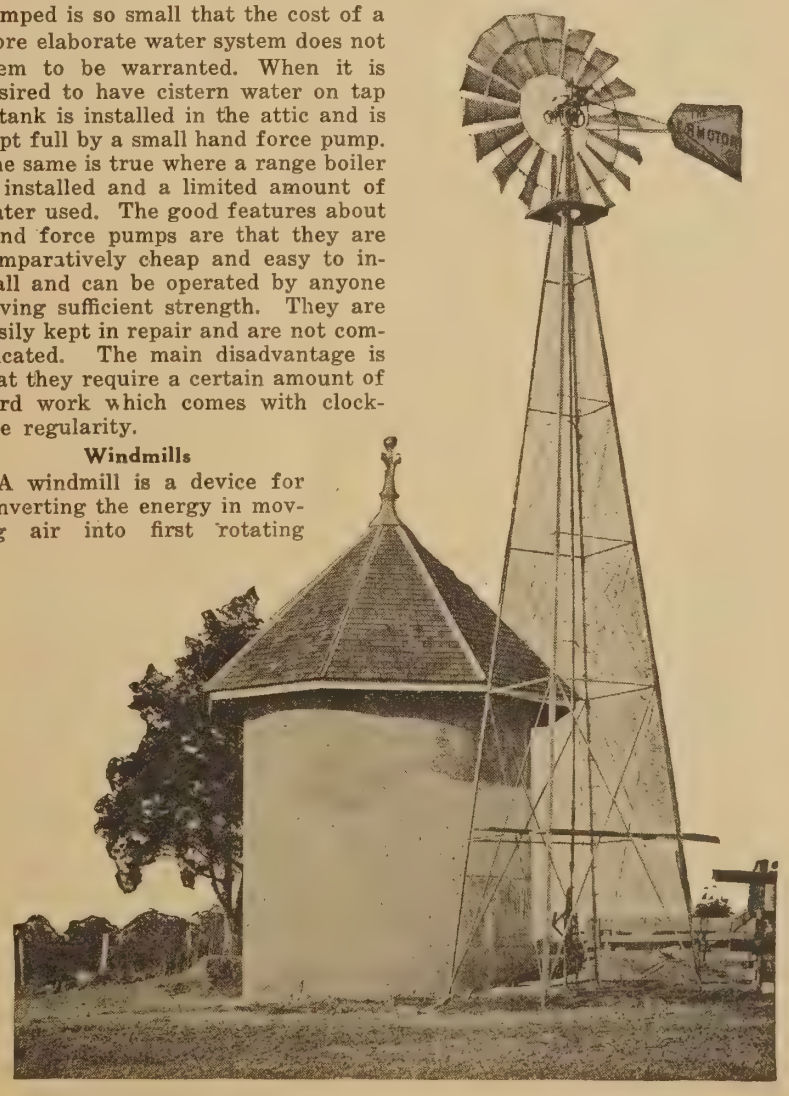
There are quite a number of different methods of pumping water in more or less common use. Some of which are: Hand force pumps, hydraulic rams, hydro-pneumatic systems, air lifts, and pneumatic pumps. The power may be provided in several ways; for instance, hand power, windmill, gravity (as in hydraulic rams), steam, gasoline, or hot air engines and electric or water motors.

Hand Force Pumps

Hand force pumps are generally used when the amount of water to be pumped is so small that the cost of a more elaborate water system does not seem to be warranted. When it is desired to have cistern water on tap a tank is installed in the attic and is kept full by a small hand force pump. The same is true where a range boiler is installed and a limited amount of water used. The good features about hand force pumps are that they are comparatively cheap and easy to install and can be operated by anyone having sufficient strength. They are easily kept in repair and are not complicated. The main disadvantage is that they require a certain amount of hard work which comes with clock-like regularity.

Windmills

A windmill is a device for converting the energy in moving air into first rotating



Another arrangement where the well is in the center of a triangle with the tank, house, and barn at the corners of triangle.

motion and then into reciprocating motion, which may be and is connected directly to the well pump. This pump may be and generally is of the force type. An elevated tank of some sort, sometimes built in the mill tower, is used for obtaining the desired pressure. As with water systems in general, there is no best windmill. Some are high speed and others low speed. Some are designed to operate in a very slight breeze and others require quite a blow. Some are designed for deep wells and heavy duty and others for shallow wells and light duty. Before installing a windmill the particular conditions prevailing should be gone over and the mill installed which most nearly meets them all. After a windmill is in place the cost of operation is practically nothing. They form a very good and cheap means of power and are particularly adaptable to situations that require intermittent service. Such a situation is generally found in connection with the farm water supply. The one thing to remember is that since the wind cannot be controlled there should be a sufficiently large water storage capacity to care for the farm requirements for a certain length of time.

Windmills are best located on high

CONCRETE WATER STORAGE TANK AND WINDMILL ON THE FARM OF GEORGE RYAN, INDIANA

Rye for Winter Cover Crops

CLARENCE M. BAKER, OHIO

COVER crops perform two distinct functions in the soil—they prevent the loss of plant food through leaching by winter rains and thaws and they also are valuable in increasing the organic content of the soil. From a practical standpoint the farmer may never know how much plant food is leached from the soil during the fall and winter; he may never realize how much valuable plant food is taken out of the soil when the ground is bare, but he can easily see the advantage of a growing cover crop and know that when it is turned under more humus will be provided.

Some interesting data are presented by the Cornell Experiment Station, in which records were made from concrete tanks filled with soil, the soil forming plots upon which cropping experiments were conducted. A crop of wheat growing in one tank as compared with un-cropped soil in another tank, resulted in a saving of 48 lbs. of nitrogen per acre during the 7-months' period. In actual practice very little land is allowed to go this long without a crop, but it gives an idea of a serious loss from leaching.

It has been generally advocated that the stubble from crops grown in rotation will generally keep up the organic matter of the soil. In some sections this statement is truer than others. Where there is plenty of limestone in the soil and clover is grown frequently in a 3-year rotation, for instance, there is much more chance for the organic content of the soil to be increased; but in longer rotations where timothy is included—a crop which leaves but little stubble—and where the corn is ensiled, there, of course, is little crop residue to form organic matter. In these cases it is necessary to provide for cover crops, and in short it might be stated that the farmer who provides for liberal cover crops may forget about preventing leaching by the introduction of any new methods to increase soil humus.

Fortunately we do not need to experiment long, or be forced to select certain crops for cover crop work. It may be simmered down to one point and that is that rye is quite dependable for this work. To carry it a little further—a mixture of rye and vetch has been found satisfactory under Ohio conditions—the vetch forming a leguminous crop which is beneficial to the soil, of course, while the rye is quite satisfactory to form a heavy covering.

Rye thrives exceedingly well under many conditions, even under adverse circumstances. It can be seeded late—even after the corn is harvested and without much soil preparation, it will grow quickly and in our experience it can be depended upon to furnish in addition to its cover crop value excellent pasture for hogs or young cattle. Pigs will eat rye during the winter months, while in the spring it is, of course, the first green crop that attains any size for early pasturing. It may be pastured just as soon as the ground is solid enough in the spring to allow live stock in the fields and unless it is grazed heavily it will still produce a ton or a ton and a half of green material to be turned under for the next crop. Rye as a cover crop, we believe, has greatest advantage where corn follows corn in the rotation; but it is quite adaptable to plow under for any other crop.

In some sections rye has an advantage as a cover crop in that if it is not producing an even stand—timothy sometimes makes a good stand, but never produces sufficient material or attains a good growth by the time it is necessary to plow the land in the spring. Hairy vetch is the richest of all the common legumes in nitrogen and when it can be introduced in the soil, it will increase the nitrogen content accordingly.

For seeding rye, it is generally best to wait until the corn is cut, or the last cultivation of the corn may be made with a one-horse drill, in which the rye is sown at this time. However, it is generally easier to harvest the corn and then put in the rye with the combination of a tractor drawn disc and drill. This disc disposes of the cornstalks effectively and prepares a better seed bed for the rye than simply drilling alone. The matter of fertilization should not be neglected, for rye will respond wonderfully to an application of commercial fertilizers, or 200 to 300 lbs. of acid phosphate per acre. If manure is spread on the ground in the winter, turned under it will quickly produce a good cash crop and it is often more satisfactory than wheat as a grain crop. Rye, under Ohio conditions, usually yields more than wheat and as a rule brings a price somewhat equal to an acre of wheat. It is excellent as a nurse crop for young grasses and the grain is valuable for swine when ground. If there is any danger of losing the wheat crop, rye will easily substitute as a grain crop.

Where vetch is adaptable, a mixture of the two, makes a little better cover crop than rye alone. A good mixture per acre is 60 lbs. of rye and 20 to 30 lbs. of hairy vetch. In this connection it will be well to mention that if other crops are not satisfactory—the clovers frequently failing or never the growth of rye will prevent it from flooding or washing off, while the fertility of the manure is held in the soil quite available for other crops when it is turned under.

Kansas Holsteins Make Tour

A collective exhibit of animals which will be shown at numerous western fairs and expositions is the commendable means taken by the Holstein-Friesian Association of Kansas to further the state's dairy and breed interests. Twenty-four of the best Holsteins in Kansas constitute the exhibit. The animals were selected from the herds owned by members of the association by Professor J. B. Fitch of the Kansas State Agricultural College. Every show ring class at the fairs where this exhibit is shown will have at least one Kansas entry.

The exhibit was shipped from Topeka, August 12, making its first stop at the Missouri State Fair, Sedalia. Other fairs and shows at which the animals will be exhibited will include the Iowa State Fair, Nebraska State Fair, both the Kansas Free Fair and State Fair, the Dairy Cattle Congress at Waterloo, Iowa, and the National Dairy Show. The exhibit is in charge of C. J. Huggins of the dairy department of the state agricultural college; and Frank Chestnut.

Following are the Kansas breeders whose animals appear in the exhibit: W. R. Stubbs, George B. Appleman, B. R. Cosney, United States Disciplinary Barracks, C. W. McCoy, J. P. Mast, J. B. Carpenter, W. H. Mott, and the Kansas State Agricultural College.

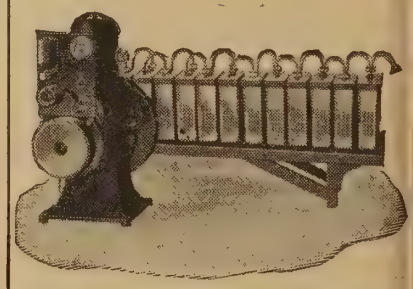
Kansas. FRANK M. CHASE.

KEEP DISEASE OUT OF MILK

Disease germs multiply rapidly in milk. The old-style open pail makes it easy for flies, dirt and impurities to fall into the milk while you are milking. This may mean sickness in your family. The new Non-Spill Sanitary Dairy Pail strains the milk as it goes into the pail, and keeps out contaminating substances. It also prevents spills if it is kicked over. It carries out the splendid sanitary principles of the United States Food Administration.

Sickness in your family, with only one visit of a doctor, costs more than a Non-Spill Sanitary Dairy Pail. A fine-mesh brass sieve, protected by a non-splash rim, keeps out dirt and impurities. All seams are smoothly soldered, leaving no crevices in which germs can lodge. It is built of heavy charcoal tin plate and will stand the kicks and knocks.

There are no hidden or unreachable parts. All parts can be taken out, scalded and washed *clean.* This Non-Spill Pail protects the health of your family and actually saves money for you. It is an investment, not a luxury.



Your local dealer sells it or will get it for you. It's a Schlueter metal product.

Dealers: Write for our special proposition. Your customers will want Non-Spill Sanitary Dairy Pails.

Vive La France Sets High Mark for Persistency

Former Jersey Breed Champion Misses Year's Record by a Fraction, but Passes Persistency Record of all Other Cows

Vive La France sets a new record for persistency for all breeds by producing 15,271.8 pounds milk, 1,039.29 pounds fat in her fourth official year's test. In her four tests she has produced a total of 3,596.85 pounds fat, which exceeds the first four made by Tilly Alcartra by 577 pounds fat, and those made by Sophie 19th of Hood Farm by 843 pounds. With four yearly records averaging 900 pounds fat Vive La France has outdistanced these two leading contenders for persistency honors by a wide margin. Her four records to date are:

Lbs. milk	Lbs. fat	Age Yrs.	Mos.
9,210.4	633.29	2	
12,744.8	892.63	3	2
14,925.7	1031.64	4	7
15,271.8	1039.29	5	11
52,152.7	3596.85		

It was on completing her second record that Vive La France first became a prominent character in the Jersey world, as her record of 892 pounds fat was a new high record for a junior three-year-old Jersey. Her next record won her two championships as the senior four-year-old breed champion and also as world's champion Jersey, which honor she held for almost a year. Vive's latest record comes within eight-tenths of a pound of regaining for her the Jersey world's championship which is now held by Plain Mary, with 1,040.08 pounds fat to her credit.

It was not until she had been on test for seven months that the possibility of making a world's record by Vive was considered. There is little doubt about her ability to beat this record had she been accorded, during the entire year, the treatment prospective record-breakers receive, and had she not been exhibited at the Pacific International Exposition last November where she won.

During the year twenty-six supervisions of Vive La France's test were made. Twenty-two supervisors, coming from four states, made these tests.

In making new production records, Vive La France has not been neglecting her duty as a reproducer. She has carried a calf an average of 194 days during each of her four records and will have had five calves before reaching the age of seven years.

Pickard Brothers of Oregon are the breeders and owners of Vive La France. She is a daughter of the Gold Medal Bull, Golden Glow's Chief, the sire of forty R. of M. daughters, whose ten best daughters average 738 pounds fat. Her dam is Sugar-in-the-Barrel and, although never officially tested, she was a very heavy producer. Including Vive La France, Sugar-in-the-Barrel has four daughters in the R. of M., two of them being full sisters to Vive.

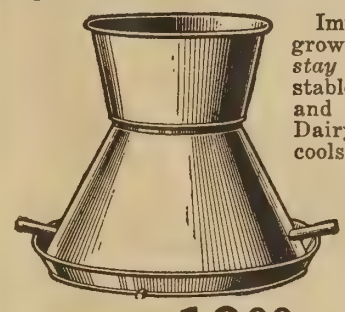
One of the daughters of Golden Glow's Chief is Old Man's Darling 2nd, the junior four-year-old Jersey champion with a record of 14,631 pounds milk, 983.6 pounds fat. Vive was bred to her son, Darling's Gallant Boy, and the result of this mating will undoubtedly be a valuable addition to the Pickard herd, which now numbers about forty head of females.

Vive La France's last test is her first as a mature cow and what future records may be forthcoming time only will tell. But if past performances may be taken as a criterion every other bovine striving for long-distance honors had better do a little bit better than they heretofore have been doing, or Vive La France will hold all the honors for herself.

AMERICAN JERSEY CATTLE CLUB.

VIVE LA FRANCE, NEW LONG DISTANCE CHAMPION COW

Rhode Island Ayrshire Breeders' Field Day



Over one hundred breeders and friends took part in the first field day of the Rhode Island Ayrshire Club held at Lippitt Farm, Rhode Island, on Thursday, August 5, 1920, as the guest of R. L. Knight, owner of Lippitt Farm.

The visitors inspected the Ayrshire herd and were then royally entertained at noon to a regular Rhode Island clam bake. After the bake, the visitors were given an opportunity to pass on the merits of the cattle from a judging standpoint. The herd was in splendid show shape expecting to leave on the show circuit within a few days following this outing. A meeting presided over by President Geo. Pettee was held on the lawn. Among the prominent speakers were Dr. Howard Edwards of the Rhode Island College; J. J. Dunn, secretary of state board of agriculture; Dr. E. A. Crossman of Bureau of Animal Industry; J. G. Galvin of the New England Homestead; F. C. Warner, Southern District Manager of the New England Milk Producers' Association, and Dr. T. E. Maloney, veterinarian and sanitary milk expert for the city of Fall River.

Vermont. J. G. WATSON.

There was once a brindle named "Bossie"
Who boasted a pedigree flossy,
But she wouldn't produce
Enough lacteal juice,
So now this cow's grave is quite mossy.

Weigh the Feed-Weigh the Milk!

UNION GRAINS was the first ready-mixed, balanced dairy ration ever offered—and it's always been known as the biggest producer that ever came out of a feed bag.

Big Dairies use it. The Hershey Chocolate Company's big herd of 2,000 cows have eaten it for years and the Hershey Company urges all the farmers whose milk it buys to use it. They want more milk. They want it produced as cheaply as possible. So they buy an average of four carloads of Union Grains every month. And they're the kind of people who know whether it pays or not!

Seventeen years of experience in mixing dairy feed goes into every bag. It's a work of real experts. You can't be sure that your own mixtures are the best you can do until you have tried Union Grains.

Write for a Union Grains Cost Sheet and know what dairy feed actually is costing you.

We also make Ubiko Stock Feed, Ubiko Pig Meal, Ubiko Buttermilk Egg Mash, Growing Mash, and Scratch Feed. 8

What We Found Out

The Quaker Oats Co. Gentlemen—I must say to you frankly that in my letter to you concerning feeding of Holstein-Friesian cows on my Arden Farms. I overlooked the most important factor, which I wished to bring out. I do not believe in a high protein ration. After the experience I have had, it is my judgment that breeders do not place enough importance upon the maintenance part of the ration of a cow. To secure a maximum yearly production means that a cow must be kept in good physical condition, nothing must be done to tear down the structure. It is my judgment that too much protein is injurious. There is good chance for argument as to just how much protein a cow should have, but I do not wish to engage in a discussion of the fine points, but I believe that a small amount of protein is better than too much, if one expects to have cows go on year after year and maintain their good health and produce their maximum of butter and milk. We mix most of our feed ourselves with the exception of SCHUMACHER FEED and BIG "Q" DAIRY RATION, with which we have been very successful. Yours very sincerely,
ARDEN FARMS, St. Paul, Minn. (Signed) J. M. HACKNEY

SCHUMACHER FEED AND BIG "Q" DAIRY RATION

Wherever SCHUMACHER FEED and BIG "Q" DAIRY RATION are used you will find a herd that produces to the satisfaction of the owner. Holsteins—Jerseys—Guernseys—cows of every breed alike testify to the value of these result-producing feeds. 36 of the World's Champion Dairy Cows have made their wonderful records with the aid of these feeds.

Fed in combination they make an ideal ration—one which you can readily regulate as to amount of protein and carbohydrate content to suit the needs of each individual cow. Their palatability, high digestibility, variety and bulk, induce cows to eat *heartily* and produce *heavily*. With SCHUMACHER FEED as the maintenance part and BIG "Q" as the protein part, you have a ration that will give you maximum long time milk production and ideal health conditions in your herd. A few weeks trial will convince you. Order from your dealer. If he can't supply you, be sure to write us.

Sweet Clover Is Earning Its Way

R. KENNEY, Kansas College of Agriculture

TOO many farmers have started to grow sweet clover without realizing the necessity of handling the crop correctly if they are to be satisfied with results. We do not handle sheep as we do cattle and there are certain problems peculiar to sheep husbandry that are not known in handling cattle. There is as great a difference in the proper handling of sweet clover as compared with alfalfa. Many have tried sweet clover for a year or two and have given it up. Failure to appreciate certain peculiarities of the crop before planting it has caused this dissatisfaction. This has in some localities held back the popularity which sweet clover merits when rightly handled.

This quick growing legume is gradually increasing in acreage in Kansas, Nebraska, and similar localities where cattle are pastured on the rolling uplands of native grass and cultivated crops are grown on the creek and river bottom portions of the same farms. In all such localities alfalfa is greatly in demand as a hay crop. All available land that can easily be made to grow alfalfa is seeded to that crop. There remain many fields of irregular size and shape that present difficulties of many kinds for the alfalfa grower, yet he wants more hay, more pasture, more cash crop, and his fertility is decreasing from constant cropping. It is such conditions that sweet clover, for the time being, seems best adapted to fit. Five of the counties with the largest acreage of alfalfa to their credit in Kansas, are also the counties with the largest acreage of sweet clover in that state.

MOWING A SWEET CLOVER CROP IN SEPTEMBER

In addition to its use on cultivated lands, sweet clover has a distinct value in the native pasture section, on the eastern border of the plains, that is possessed by no other plant that has been tried there. Many level hill tops and wide level areas between lime rock outcrops in the pastures were broken out years ago, planted to corn or kafir for a few years and are now growing up in weeds every year. Row crops do not pay, native grass will not come back, but sweet clover broadcasted in early spring will grow there fine. Nothing else except weeds will grow and a ten- or twenty-acre patch of this sort furnishes weed seeds that blow for miles over the grass land that might otherwise be more easily kept free from weeds.

There are many thin, native pastures where sweet clover may be broadcasted on the unprepared ground in late winter and the land made to produce a large amount of feed. Experience has shown that frequently a good stand is obtained in this manner the first season. On the other hand a good stand may not be obtained for a year or two and seed must be scattered each year until the crop will reseed itself. The owner of such thin pasture must consider that he has the poorest possible seed bed in which to start such a crop, in most cases, and he must exercise a little perseverance. It is remarkable that even repeated efforts are able to secure a stand under such conditions. Once established it will continue for years provided it be pastured so that it will be able to reseed each year.

With the ripening of a sweet clover seed crop in August, some growers have suddenly found that a crop on good soil is too rank and coarse to be readily handled with the ordinary grain binder. The branches are bent and rubbed so much that most of the seed shatters off. If the owner of such a crop had realized last spring that this would happen he could have prevented much of this loss by mowing when it was a foot or so high and leaving the mowed stuff lay on the ground. He might also have pastured the crop until the middle of June with either hogs, cattle, horses, or sheep. The seed crop would then have been of a suitable size to handle with a binder. With boxes beneath to catch shattered seed, none will be lost and a profitable cash crop is harvested successfully.

Sweet clover pasture is a profitable crop. In 1919 the Dairy and Agronomy Departments of the Kansas Experiment Station at Manhattan pastured 3.8 acres of sweet clover completely off. On May 7 six large Holstein cows were turned in and kept there continuously for 40 days. As the season then became very dry and the sweet clover made a slow growth three cows were removed at the end of that time. On August 5 one cow was returned. From this time to October 1, when the experiment was discontinued, four cows were kept on the pasture. While on pasture they remained there day and night.

The only feed they received aside from this pasture was a grain ration composed of corn chop, bran, and oil meal, fed in the proportion of one pound of grain to each four pounds of milk produced per day. The total amount of milk produced was 19,393 pounds containing 680.5 pounds of butterfat. The cows consumed 4,602 pounds of grain. Figuring the milk produced at 20c per gallon and the grain fed $50 a ton, one acre of pasture produced $88.46 worth of milk. On the butterfat basis, with butterfat at 40c per pound, one acre pro-

duced $40.85 of fat exclusive of the skimmilk.

The total number of days of pasture obtained by all cows in the lot amounted to 618 days, an average of 154.5 days for four cows. At this rate the pasture of 3.8 acres kept four cows for approximately five months, or one acre of sweet clover pasture kept one cow for five months. During the time the cows were on the pasture, no trouble was experienced with bloat. Weather conditions were not always favorable. On thirteen days during this experiment it rained either part of the day or the entire day. The average weights of the cows before turning on the pasture was 1,284 pounds and at the close of the work they weighed 1,304 pounds.

The least exasperating of all troubles in growing sweet clover is a failure to get a stand. We simply take it as a bit of hard luck and resolve to try again, wondering meanwhile what was wrong. Such failures are, more often, we think, the result of our own carelessness.

A lot of sweet clover seed that is apparently as fine as can be produced may contain 98 per cent of hard seeds. These have seed coats that will not absorb water. They are worthless for planting unless run through a scarifying machine which grinds and cracks the impervious layer. The high percentage of such seed in what was sown has caused many of the failures. A few years ago it was believed that these seeds were cracked by a winter's freezing and thawing and that most of them would grow.

Experiments at the Kansas Agricultural College on several lots of sweet clover containing a high per cent of such hard seeds have shown that the winter's freezing and thawing have no such effect. Part of this seed was buried in the surface layer of soil in an open field all winter and there were as many hard seeds left in the spring as there were in the fall. Part of the seed was soaked in moist blotters and frozen and thawed 60 times in sluccession. Not a single seed was made capable of growing. The ground in an open field does not freeze and thaw nearly so often as this in an average winter. It must be remembered that if one pound of the 15 or 20 usually sown is not hard seed but is capable of growing, the 200,000 seeds in one pound when spread over an acre will give about five seeds to the square foot. This is enough to give the good stands obtained by men who say their experience is that winter freezing makes more seed grow. These facts must not be taken as an argument against winter and early spring seeding.

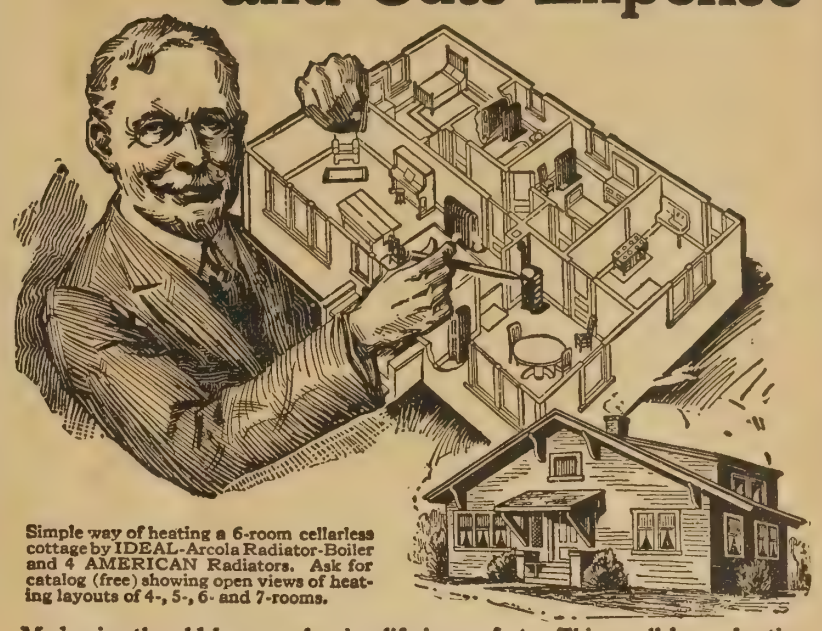
Seed threshed in an ordinary clover or alfalfa huller is subjected to more or less scarifying in the machine, and careful tests show that more of such seed will grow than of seed threshed in a grain thresher. A Kansas farmer with 18 years' experience in growing and harvesting seed states that in his opinion machine threshed seed that germinates promptly above 55 per cent is better than the average. This must be considered in sowing seed from sections that do not have hullers. Hand threshed or flailed seed frequently may germinate less than 15 per cent and a poor stand is apt to result.

The beginner in growing sweet clover should plan to use the first summer's crop, from spring seeding, for hay. The second year's growth is too coarse for the best quality of hay and there is too much danger of killing the stand by mowing it. When cutting hay from the first season's growth only one cutting should be made in the season. This should be about frost time in the fall, if one wishes a maximum hay crop and desires at the same time to grow as strong roots as possible for the next year's start. From 1 to 3 tons of hay is a normal yield. Such fall cut hay will usually be as leafy and fine stemmed as a first cutting of alfalfa hay. Mid-September usually is a good season for curing and it can be cut close to the ground for the crown for next year's growth is then already formed about an inch below the surface. Of course a fair stubble is desirable for a winter cover but the live portion of the plant is protected by a soil cover as well.

Although many men are successful in mowing two crops of hay during the second year's growth, this is the most dangerous operation in handling the crop. The beginner almost invariably kills it then. Some men have mowed as high as 10 or 12 inches and still it died. No one can say what is the safe height of stubble for the thickness of stand and vigor of plants vary greatly. For these reasons it is safest to pasture off the second year's growth entirely or else pasture until about the middle of June and then let the crop grow up for seed. A 2-foot or higher growth may be pastured down successfully with a full stand remaining, while mowing the same growth would in many cases kill 95 per cent of it. A profitable season's return on the land can be obtained by pasturing into June, and the seed crop then is clear profit.

When the average man thinks of harvesting a sweet clover seed crop, he pictures a field of coarse heavy stuff 6 to 8 feet high. Such a growth is ruinous to the machine used to cut it. Furthermore there is so much seed shattered in handling it that a ten-bushel crop may materialize into two bushels when finally threshed and sacked. Such a crop, unless an accidental pick up, is the result of poor judgment and very unprofitable management.

The crop that comes on after spring pasturing will be short enough to be readily harvested with the grain binder. It is fine stemmed. The fine stems are full of seed from top to bottom and will as readily give a maximum yield as will the unpastured crop. This fine stemmed crop is handled easily and is a far more desirable method of producing seed. Even with it one can easily lose most of the seed unless a shallow box is slung beneath the end of the platform canvas, and another beneath the packers and bundle carrier to catch such seed as shatters. These boxes must be emptied frequently for in many cases they carry three-fourths of the seed crop.



Nevada Bull Associations

Dairy farmers in the Virgin River Valley in Nevada purchased a considerable number of pure-bred Holstein cows and heifers at a dispersal sale two years ago. Realizing the need of breeding these animals to pure-bred sires, farmers have cast about for an economical means of handling bulls. There has now been formed the Clark Holstein County Bull Association consisting at present of three blocks with a pure-bred sire in each. All these are from high producing families and it is expected that a noticeable improvement will be brought about in the production of the herds in this locality through this bull club.

Nevada. E. M. DOBBS.

Sings a nameless poet: The old hen sat in a leafless tree and said, "Nobody cares for me. My food is what I find about, I hunt for it till I'm frazzled out. My owner says I do not play, and that I ought to sing and lay. I wish he had to sit out here and live on pickin's all the year. I'll bet a half a cent, by jing, he wouldn't lay from now till spring."

This Heat Beats Winter and Cuts Expense

Simple way of heating a 6-room cellarless cottage by IDEAL-Arcola Radiator-Boiler and 4 AMERICAN Radiators. Ask for catalog (free) showing open views of heating layouts of 4-, 5-, 6- and 7-rooms.

Modernize the old home and enjoy life in comfort. This small house heating outfit is built on the same principle as the big plants for residences. The IDEAL-Arcola is inexpensive, safe, easy to run, clean, economical with fuel and will last and heat your home for generations. It will heat all rooms evenly no matter how hard the blizzard blows—never wears out or needs repairs.

IDEAL-Arcola Radiator-Boiler Farm Home Heating Outfits

Any dealer will furnish in sizes to suit rooms and climatic conditions.

For Soft Coal	No. 1-B	Size IDEAL-Arcola with 100 sq. ft. of Radiation	$142
	" 2-B	" " " " 150 " " "	176
	" 3-B	" " " " 200 " " "	212
	" 4-B	" " " " 250 " " "	251
	" 5-B	" " " " 300 " " "	290
For Hard Coal	No. 1-A	Size IDEAL-Arcola with 135 sq. ft. of Radiation	$163
	" 2-A	" " " " 200 " " "	206
	" 3-A	" " " " 265 " " "	251

Prices include Expansion Tank and Drain Valve. Prices do not include labor, pipe and fittings used in installation and which are supplied by the local dealer at extra charge. Radiation is of regular 38-in. height 3-column AMERICAN Peerless, in sizes as needed to suit your rooms. Outfits shipped complete f. o. b. our nearest warehouse, at Boston, Providence, Worcester, Springfield (Mass.), Albany, New York, Philadelphia, Harrisburg, Pittsburgh, Baltimore, Washington, Richmond, Buffalo, Cincinnati, Indianapolis, Birmingham, Detroit, Chicago, Milwaukee, Minneapolis, St. Paul, Des Moines, of St. Louis.

Shipped complete for immediate installation

The beauty of the IDEAL-Arcola method is that no cellar is needed. Everything is on one floor. The Arcola is placed in any room that has a chimney connection. No running to cellar. Same water is used over and over again for years. No fire risk.

Buy now at present attractive prices for outfits complete!

IDEAL-Arcola outfits consist of the boiler and radiators to heat various size houses. Write us your requirements! Unlike stoves, there are no coal-gas leaks into the living-rooms. The IDEAL-Arcola delivers the soft, radiant warmth of hot water—not the dry burnt-out atmosphere of stove heating. There is no fire risk to building—no danger to children—fire lasts for hours! The Arcola burns hard or soft coal.

The outfit consists of an IDEAL-Arcola Radiator-Boiler and 4, 5, or 6 AMERICAN Raditors and Special Expansion Tank—everything except labor, pipe and fittings, which any local dealer will supply. See prices below for various sizes of outfits.

Catalog showing open views of houses, with the IDEAL-Arcola Boiler in position will be mailed (free). Write today

Sold by all dealers. No exclusive agents.

Butter Standards

HOARD'S DAIRYMAN:—The setting of a suitable standard for butter is not simple. Sixteen per cent moisture say some, eighty per cent butterfat declare others. That the moisture content is the more easily determined and apparatus for its measurements have become as numerous as practical, is a common argument in favor of 16 per cent moisture standard. On the other hand, since butterfat is that part of the butter which gives it value, it is logical to reason that any butter standard should be based on percentage of butterfat. But is the matter so easily adjusted? Is it so simple?

There are several viewpoints which should be borne in mind when a set standard is considered. These are:

1. The consuming public.
2. The producer.
3. The manufacturer.
4. Those interested in the maintenance of an equitable standard, i. e., the internal revenue department at present.
5. The standards of the world, in particular those countries where we compete with our surplus butter.

Naturally the consumer wants just as much for his money as he can obtain. Could he get butter containing 100 per cent butterfat, he would have the greatest value for his money. While the casein might have a greater food value, that is not what he buys. He buys food value, 'tis true, but it is not calories he is buying. It is a relish for his bread or hot biscuit, a stimulating, appetite producing, flavoring substance; a lubricant, a something no other fat can give him. Then, again, he may like no salt or he may desire several degrees of saltiness. In the matter of water, he does not want to pay for water, yet water he must have. Without water, or with a water content less than 12 per cent, he is not liable to get that waxy, spreadable butter he wants. A water content between 12 and 15 per cent would satisfy him. Twelve would be better than sixteen. He'd get more for his money.

Generally speaking the American public has been educated to want a relatively high salt content, three or four per cent, so that for all practical purposes the consumer's pound of butter would analyze about as follows:

Salted		Unsalted	
Butterfat	84%	Butterfat	87%
Casein	1%	Casein	1%
Water	12%	Water	12%
Salt	3%		

The casein content is quite variable (the more so in recent years). By increasing the casein content the consumer would get more food value for his money, but not the food he sets out to purchase. One per cent is about the minimum since the presence of casein has a decided influence on the flavor of butter.

It may readily be seen that should the above standard be enforced both as to fat and moisture standard the consumer would get better value for his money. But would he? It is the writer's opinion he would profit very little, if any, since it would add to the cost of production by just that additional butterfat required, and the consumer would pay just that much more for the pound.

The producer, on the other hand, may believe that the more butter he can make from a pound of butterfat the better he is served. He believes, as a patron of co-operative or other creamery, that if a large overrun is obtained he will, without question, get more for his butterfat. His idea, if he be familiar with the facts of manufacture, would be that butter should have the following composition:

Salted		Unsalted	
Water	15.9%	Water	15.9%
Salt	4.5%	Casein	2.5%
Casein	2.5%	Butterfat	81.6%
Butterfat	77.1%		

With such a composition of salted butter the overrun would be nearly 30 per cent. Such an overrun would take care of all the incidental and other expenses of manufacture. Then look what would be paid for his butterfat. But would he? Not exactly! He would increase the supply of butter when compared with the consumer's standard, and he would get proportionately less. The deduction that can be drawn is that it is not butter that gives the value to butter but the "supply" and "demand" for the "butterfat", its most valuable constituent. Hence, so far as consumer and producer are concerned, the butterfat is the true measure of values and a common ground in the making of any standard. As a matter of fact, while both consumer and producer should be considered, their standards could be varied a good deal without injury to either, but a variable standard is out of the question.

With the manufacturer it is distinctly different. He is confronted with modern tools in a modern way. What he wants is a standard which will be workable. "Can I conform to such a standard, and make the best possible quality of butter, in texture and flavor?" is the question that he faces. Further, he wants a basis of equitable and fair competition. It is this last need which has kept this question alive.

The ruling of the Internal Revenue Department is that butter containing 16 per cent or over of moisture is adulterated, and the manufacturer of such butter must pay a fine and take out a costly license whether he wants to or not. This ruling has become a source of annoyance to honest manufacturers. Some judges have ruled to the contrary, giving a decided uncertainty to the manufacturer which only a fixed standard will remedy. But the chief difficulty is that such a ruling does not, because it is based on water content, meet the other and I believe the greater need, a *basis of equitable and fair competition.* Now, one manufacturer may have a legal overrun of thirty per cent or over, while another more careful of quality and the reputation of butter in respect to other fat competition may get ten per cent less. Such a condition is intolerable and detrimental to true advance in butter manufacture.

As sixteen per cent moisture is the most suitable from the standard of moisture because it forces, for safety's sake, the manufacturer of butter between 14 and 15 per cent moisture, so the butterfat standard should give an equal margin of safety. The writer's conception of the best butter is a composition about as follows:

Salted		Saltless	
Water	15.5 %	Water	15.5 %
Salt	3.75%	Salt	0.0%
Casein	.75%	Casein	.75%
Butterfat	80.0%	Butterfat	84.0%

To allow a margin of safety a standard for salted butter of 80 per cent butterfat and 16 per cent water would be advisable. Under such a standard an overrun of 25 per cent could not be exceeded. Moisture could be determined in the usual way. Only when overrun exceeds 25 per cent need a test for butterfat be taken as a check on the accuracy of test of cream samples. But chief of all, emphasis would then be placed on quality alone and not quality and quantity as is now the case. Such a stimulus would be given to quality as has not been given in the last two decades, surely an end worth striving for.

But what about the enforcement of such a standard. Certainly it should not be in the hands of the Internal Revenue Department. But whoever has it in charge will have a relatively easy matter in proving a case. All it would be necessary to do besides an analysis of suspected churnings would be an examination of the books of suspected companies where an overrun exceeding 25 would be sufficient corroborative evidence to warrant action. There would be no legal quibbles as to what is "normal" and "abnormal" butter. Penalties should be quite different, though equally effective as a means of maintaining the standard. A certain definiteness, long needed, would be obtained and quality with accompanying increased demand and higher prices would prevail.

Minnesota. JOHN BOWER.

Don't Be a Quitter

It's the way a man sticks to a thing that marks him as a success or failure. Many a fellow has won out at the eleventh hour just because he would not let go. Don't be a quitter.—Farrington.

Washington, D. C., Weekly News

[SPECIAL TO HOARD'S DAIRYMAN]

Washington, August 23—Dr. W. C. Fowler, health officer of the District of Columbia, who has assumed the role of arbitrator in the Washington milk price situation, is out this week with a second appeal to the Maryland-Virginia Milk Producers' Federation, not to put any increase into effect September 1. Two weeks ago he made a similar appeal. This followed his broadside attack on the farmers for throwing milk on the ground, to keep up prices, which he later on withdrew and publicly stated was not substantiated by the facts. The basis of the recent appeals, which are couched in different language than his first announcements, is that he learns that there is no shortage of milk and because of this there can be no reason for a price advance at this time. The reason for the present supply of milk is an unusually wet season, so that pastures and soiling crops are in unusually good condition. Thus far no reply has been returned to the letters, and Manager McLaughlin of the Producers' Association is busy sawing wood and securing the remaining signatures needed to put the new sale contract into effect here. It is hard to understand the reason for the continued activity of Dr. Fowler in this matter, as he admits in a letter over his own signature that he has no facts on the cost of milk production here. Further than this he is an official appointed by the district commissioners, who in turn are appointed by the President and confirmed by the Senate—that is, not responsible to the people of the district but to Congress for their activities. It would seem then that there should be here one place at least in which the farmers might expect fair treatment, instead of continued agitation in favor of the consumer as against the producer.

⚜

The bulletin issued this week by the Secretary of the National Dairy Union, stating that there was to be issued in the near future a bulletin dealing with the various government publications which make plain the recent discoveries relative to the vitamines and their vital influence on the value of butter and other dairy products in the diet, and those government publications in which these discoveries are "forgotten", has aroused some interest in the various departments. The National Dairy Union bulletin just issued uses quotations from a Wisconsin Station Bulletin to make plain the recent scientific developments in this subject, and by inference it would seem that perhaps similar vigorous and emphatic statements could not be found in any recent government publications. In reference to this it should be said that there has been a great rush of Department of Agriculture publications recently, and difficulty in getting paper and congestion in the editorial and printing offices have delayed some very good bulletins of special dairy interest which will soon be issued. But aside from this there are other government departments besides the Department of Agriculture which issue literature dealing with food topics. Some of these have been telling the whole facts about the value of butter and dairy products, and some seem to have been misinformed. The National Dairy Union representative here promises some statements on this in the near future.

⚜

"Peanut milk" is one of the newer milk substitutes which is coming to attention. This substance is an emulsion of peanut oil and peanut cake, and is said by investigators and laboratory workers who have succeeded in preparing this emulsion in a palatable and stable state, to be a substitute for the real cow's milk, both in looks and composition, carrying a higher percentage of ash and fairly equal percentages of protein and fat. The question of vitamines has not been made the subject of any statements as yet in this connection—once more the vital element seems to be forgotten. Investigators at McGill University are responsible for the recent publications in reference to this product.

⚜

The advertised convention of the Institute of Independent Margarine Manufacturers was held at Chicago, instead of at the Hotel Traymore, Atlantic City, as announced. According to published reports, a high class program of papers and discussions on trade subjects was given. The Dyer Bill, H. R. 13593, one of the two bills pending in Congress to remove the color tax, was up for some discussion, Myrick D. Harding of Armour & Co. was one of the principal speakers, giving an address on the method of handling the animal fats used in oleomargarine manufactur

⚜

The U. S. Bureau of Markets reports butter market conditions improved with steadier prices and upward tendencies, held down only by the presence in storage of large quantities of the recent Danish shipments which are offered freely with every price increase which promises a profit. The Bureau also reports offers of Australian and New Zealand stock on the Pacific Coast for delivery late in September, and at prices below current offerings. Production is holding up remarkably well, owing probably to generally wet and cool weather. Cheese prices are low. Cold storage movement is normal but the stocks are far below the stocks held last year at this time.

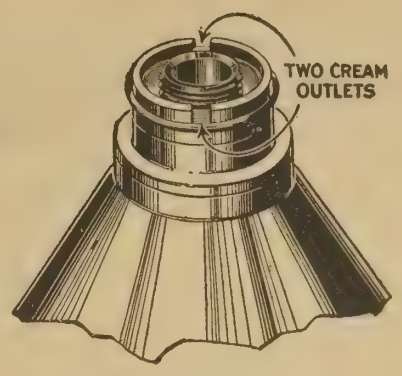
$6,640 Dollars for Guernseys in Southern Fair Circuit

An extremely important step for the introduction and expansion of the Guernsey breed has been taken by several fairs in the South. Six thousand six hundred forty dollars will be offered in a circuit beginning with the Tennessee State Fair, and ending with the South Carolina State Fair. The Maryland State Fair and the Virginia State Fair will offer an additional $2300. County fairs in South Carolina offer premiums which in previous years have brought Guernsey exhibits rivaling those in leading Guernsey states.

The American Guernsey Cattle Club is supporting these fairs by giving $200 of the premiums offered in the Tri-State Fair, the Southeastern Fair, and the South Carolina State Fair. The Southeastern Guernsey Breeders' Association, which was born at the time of the Southeastern Fair in 1919, will offer through the American Guernsey Cattle Club $300 of the premium money at the Southeastern Fair and $200 of the premium money at the South Carolina State Fair. In addition they will give 25 per cent of the premium money at the Alabama State Fair and the Mississippi-Alabama Fair.

The Alabama State Fair and the Mississippi-Alabama Fair have never before offered a classification for Guernsey cattle. In 1919 the Tri-State Fair offered $800 in Guernseys, the Southeastern Fair offered $600, and the South Carolina State Fair offered $450.

Admittedly the South is today one of the most fertile fields for Guernsey expansion. Carload after carload of Guernseys are shipped from the North into Southern states from Texas to Maryland, and the desire for stock has only increased. Records of transfers indicate that during the period from May 1, 1919, to May 1, 1920, almost 400 registered Guernsey bulls were purchased by breeders living in the eleven states of the extreme South.



AMERICAN GUERNSEY CATTLE CLUB.

Be systematic—the thought, the plan, the energy, the success of your day is measured in value by your application of each—of system—GEORGE MATTHEW ADAMS.

No Cream Screw in the Primrose

Adjusting the cream screw in a cream separator is like trying to regulate a fine watch—a mighty delicate piece of business. A slight turn of a cream screw results in a great difference in the density of the cream because it works on the small volume of cream.

The **Primrose Separator** has no cream screw. The richness of the cream is controlled by a screw in the skimmilk outlet. And because the volume of the skimmilk is eight times greater than the average volume of cream, the cream density regulation of the Primrose is proportionately easier to make than the cream-screw adjustment. Two wide open cream outlets, unobstructed by a cream screw, permit a free flow of cream from the **Primrose.**

This is only one of a number of Primrose efficiency features that your nearby International dealer will be glad to show you and explain to you more fully.

EDITORIAL COMMENT

FOR the first six months of 1920, the United States Bureau of Markets reports a total production of 345,111,726 lbs. butter, 101,054,628 lbs. cheese, and 1,326,943,495 lbs. condensed milk. For concerns reporting for both 1919 and 1920, this represents a decrease of six per cent in butter production, a decrease of one per cent in cheese production, and an increase of 54 per cent in condensed milk production. If these three products are totaled on the basis of their whole milk equivalent, the production of these three dairy products show an increase of six per cent for the first six months of this year as compared with the same period last year.

OPPOSITE SIDES OF COUNTER

Milo D. Campbell, president of the National Milk Producers' Association, has the faculty of expressing himself cogently and uniquely. In discussing the subject of farmers and labor working together in a political party he said: "It has been asked whether there were likelihood of a working or political alliance of farmers and labor. The problem is not easy to answer. Their sympathies are alike, but their position is upon opposite sides of the counter. One is buying, the other selling. Their common interest would be in shortening the distance between them. The farmer would profit with high priced food and low priced labor while the laboring man would profit with low priced food and high priced labor."

There is opportunity to get the farmers' products into the hands of the laborer more directly and with less expense. Improvement in our marketing, in other words, is highly desirable and possible. This is the common ground upon which the laborer and farmer may meet and work effectively for bringing about an improved marketing system. The farmer, however, will never have a deep interest in cheap foods and short hours for labor, while the laboring man will never be interested in high prices for foods and in shortening the farmer's work day. There will always be this difference between these two groups of citizens and the best that can be done for each is to permit the law of supply and demand to operate and to prevent any person or groups of persons from defeating its natural operation. If this is done, the price of foods and the price of labor will establish themselves in about the proper relation.

ENSILE CORN EARLIER

We believe there has been a tendency among a number of dairy farmers to ensile their corn at too ripe a stage. In our observation of the contents of a number of silos, we have noticed moldy spots and the silage had the appearance of being too dry and the kernels of the corn too hard. This condition of the silage indicated to us that the corn had been ensiled when it was too ripe. If a large quantity of water had been used during the ensiling process, the silage would have been of better quality, but we doubt whether the cows eating it would have received the same nutriment from it as they would from silage ensiled from corn not so far advanced in maturity. It should be borne in mind that when kernels of corn become too hard and there is not enough moisture in the stalks of the corn to thoroughly moisten the kernels, quite a large per cent of the grain passes through the animal undigested. Losses by improper fermentation follow and mold develops.

We believe that farmers who have found mold in their silage and whole kernels of corn in the droppings of the cows will find it advantageous to ensile their corn when the most advanced ears are well dented and the least developed are in the boiling stage. To wait until every ear is dented means that the corn is practically ripe. We do not believe that from the time the corn is at the proper stage for ensiling to the time when it is ripe, ready for the shock, the nourishment taken from the soil is equal to the losses due to improper fermentation, lack of palatability, and lower digestibility.

COST OF PRODUCTION

More interest is shown at the present time in the cost of producing various farm products than at any period that we can recall. The shortage of labor and its high cost, the advancement in farm lands and commodities of all kinds has caused the farmer to consider seriously better methods of farming and the cost of producing his products.

There are certain combinations of farming which work well together and it is quite frequently desirable to raise some crop which may not in itself return a reasonable profit, but its effect upon the land, its availability as a feed or a ready market makes it advisable to grow such a crop. Barley might be considered such a crop. We use it at the rate of three pecks per acre for seeding fields to alfalfa. We find the grain a good feed for both hogs and cattle and the straw is good bedding.

In planning the crops of the farm, various factors must be taken into consideration—the effect they will have upon the land, how well they work into the system of rotation, the labor, the various uses to which the crop may be devoted, its by-products, etc. No one, without detailed study, can plan the best system of cropping for a farm, but it is highly desirable that the United States Department of Agriculture secure information giving the cost of producing various kinds of crops. This information will assist every farmer in planning his farm operations.

Efficient farmers should eliminate low paying farm products as much as possible and they cannot do this intelligently unless they have an understanding of the cost of producing various kinds of crops. The United States Department of Agriculture has found that an acre of hay on an average farm costs the labor of one man and one horse for a ten-hour day to cut, cure, and harvest it; oats, wheat, and barley 1½ days of man labor and 3 of horse; corn for the silo 3 man days and 5½ days for the horse; onions, sold in bunches, require about 93 days of man work and 10 days for the horse. A dairy cow takes 18 days of man time each year and 2 days of horse time.

Such information as this not only permits the farmer to plan his cropping system so that it will yield him the largest returns, but it will also assist him to do his work with the minimum amount of labor, and under present conditions this is important. These facts also direct the attention of the farmer to his own activities and lead him to study his own operations more effectively.

CHEESE FEDERATION

The Wisconsin Cheese Producers' Federation, which was organized at Plymouth in 1914, under the leadership of Mr. Henry Krumrey, is attempting to further this form of organization among the cheese sections of Wisconsin. The purpose of the Wisconsin Cheese Producers' Federation is to cure and market the cheese for the factories that are its members.

It has always seemed desirable to us that the farmer should do something besides preparing his products for market; that he should attempt to market them to the best advantage. If he permits individuals and corporations to set the prices of his products and to handle them, and makes no preparation for storage and selling his products, he is not likely to get full market price for them. During the season of highest production of cheese, the market price is likely to decline and this has given the speculator an opportunity to buy cheese and store it. In many instances he makes large profits.

There is no reason why the farmer should not arrange for curing and selling his cheese. It is not healthy for a great industry, like the cheese industry of Wisconsin, to have it controlled by men who do not produce it. The farmer is about the only manufacturer who permits the other fellow to control the selling of his products.

The Wisconsin Farm Bureau Federation is interesting itself in a plan which will further the activities of the Wisconsin Cheese Producers' Federation, as it sees the necessity of developing ways and means for the producers to cure and to sell their cheese. The Wisconsin Cheese Producers' Federation at Plymouth was organized in 1914 and handled that year over six million pounds of cheese valued at $877,501. In 1919, it handled over fourteen million pounds of cheese valued at $4,318,956.91. It has had substantial growth and it has paid the farmers who are members of the federation the Plymouth Board price for cheese and, in addition, it has built a warehouse and storage which is worth $70,000. Forty-two thousand dollars has been paid out in dividends and deferred payments and more than $38,000 remains in the treasury, making in all $150,000. This is no small sum accruing to the members of the federation through their co-operative efforts, but to us it is not the largest factor to be considered in the forming of these federations.

It seems to us that it is only good business on the part of the farmers that they should put forth effort to prepare their products for market and that they should be prepared to sell them to the firms which offer the best market. There is no reason why the packers or any other set of men should have the organization for handling the dairy farmer's products and leave the farmer helpless in this part of his business. The packers prepare their products and deliver them to agencies which will distribute them to the consumer. If it is logical, right, and profitable for them to conduct their business in this manner, why isn't it showing business sagacity on the part of the farmers to follow this example?

FARMERS PROFIT BY CO-OPERATION

No one who has given the matter any consideration doubts the value of farmers co-operating in preparing and marketing their products. The farmer cannot expect to work individually against organized effort. He must of necessity adopt the same business methods in the conduct of his work as are adopted by other enterprises.

Co-operation is not something to be picked up and used, to be adopted. It must be acquired by education, by experience. It is unfortunate at the present time that co-operation is so little understood, but we hope that through the directing influence of the farm bureau and the county agent farmers can be taught how to co-operate, and obtain the advantages that come if it is done intelligently and upon the right basis.

To co-operate for the purpose of monopolizing any particular farm product or to force the price beyond market value is to court failure. Co-operation should be backed with the desire to prepare the farmer's products for market in the most economical way, to grade the products, brand them if necessary, and to try to have them pass from their hands into the hands of the consumer as directly and economically as possible. When co-operative agencies are well established, the speculation in food products can be reduced to a minimum, which will be of an advantage to both the producer and consumer. In the handling of food products every agency which does not contribute some service should be eliminated.

The United States Department of Agriculture estimates that the co-operative movement among farmers saved its members last year about $5,434,000. County agricultural agents acting in co-operation with farm bureaus, state colleges of agriculture, and the United States Department of Agriculture are given the credit for much of this co-operative progress. It is not the work of the farm bureaus or the county agents or the Department of Agriculture to be the active forces in directing these co-operative organizations, but rather to assist the farmers of the community to organize upon the proper basis and to determine the form of local

organizations desirable and to secure expert assistance when needed. Farm co-operative organizations have failed because men have not been chosen who are well informed in the various lines of work. A person may be well informed upon the ways and means of handling the soil and the selection of crops in order that an increased production may be obtained, but would have little or no conception of marketing these products. To be successful in co-operation, it is necessary for those in charge of the organization to thoroughly understand the principles which govern business, how co-operative organizations are formed, and that it is necessary to choose experts well informed in the subjects which they are to handle.

It is not enough for the farmer to have a desire to co-operate with his neighbor, although this is essential, but this desire must be accompanied by an understanding of the forces necessary to operate co-operative business successfully and profitably.

Wild Parsnips Poisonous

I write to inquire if wild parsnips are dangerous for sheep. I find they eat them without hesitation, but am informed they are dangerous in the early spring.

Watertown, N. Y. E. R. B.

Wild parsnip is a weed believed to have escaped from cultivation. It is quite common about gardens and old dwellings in some districts. Its appearance is similar to that of the cultivated variety. The root is poisonous, however, and should be exterminated. Apply a small handful of salt to the root after the top is cut in hot, dry weather. It will not long survive close cultivation. We do not know that wild parsnip is more poisonous to sheep than to other animals, but we would take every precaution to see that the weed is cleaned out of a pasture.

Solution for Teat Cups

Will you inform me what is the best solution for immersing the teat cups and tubes of a milking machine, between milkings?

Bridgehampton, N. Y. H. F. H.

A very satisfactory solution for cleansing teat cups and rubber tubing on milking machines can be made from chloride of lime.

In making up a solution, add the contents of a 12-ounce can of chloride of lime to one gallon of water. From this stock solution add one pint to 30 gallons of water in which immerse the teat cups and tubes. Twice each week add one pint from the stock solution, as the solution weakens rather rapidly. The addition of salt to make a strong brine keeps the solution from freezing in winter, but does not increase the value of the solution as a cleanser.

At the South Dakota Experiment Station, where they have been very successful with milking machines, a cleansing solution is made by adding one and one-half pounds of hydrated or powdered lime to 100 pounds of water.

Straightening Silo

My silo leans badly, it is 14x30 feet 2-piece staves of Oregon fir. Can I straighten it up without taking it down? It has a roof on it. Not only does it lean but the staves seem to have something of a twist.

Auburndale, Wis. H. M. J.

It is frequently a very difficult matter to straighten up a silo that has been blown to one side or that has settled out of place. This holds particularly true if it has been permitted to stand in this condition for a considerable length of time and the staves themselves have become warped and twisted. We have known of cases where a cable has been attached to the top of the silo and by the use of pulleys or a capstan they have been raised to a perpendicular and then restayed with guy wires. Another method is to use long timbers placed under the leaning side and by use of common jacks the silo is pushed back to a perpendicular.

If this method fails to accomplish the purpose or if, as is likely in some cases, the staves separate and cannot be drawn together with the hoops, then it will be necessary to take down the silo and rebuild it after replacing the staves that are most badly warped and twisted. If there are only a few open cracks in the silo, these can be temporarily fixed by covering them with heavy roofing paper which will keep out the air and last for a considerable length of time.

This difficulty has been met by many owners of stave silos. It would be a valuable contribution to our general knowledge if readers having had experience would write us.

Salt for Hay and Silage

I have frequently heard discussions on the use of salt in preparing silage, shredded stover and hay. I have never seen it used, and wish to ask if it is ever used to any extent, and with what results. What effect will the salt have upon the fermentation of silage?

Kirkwood, Mo. J. R. R.

The use of salt in preserving silage, shredded stover, and hay has been discussed a great deal and there are some men who feel that it is a desirable practice. It is not in universal use, however, and we doubt whether it has any great efficiency. Indeed, it is our opinion that if sufficient salt were used to really do the work it is supposed to do, the feed would be oversupplied with salt and detrimental to the stock.

Where corn is properly ensiled, it does not need any preservative agent and the same may be said of shredded stover and hay. The only occasion where salt might be used would be to increase the palatability of inferior feed. This, we believe, can be better accomplished by the addition of diluted molasses at the time of feeding. Unless the salt was in considerable quantity, it would have practically no effect upon the silage fermentation.

Price of Fat in Cream

Will you inform me as to the following: How much butterfat in one gallon of 22 per cent cream? How much will be received per pound fat for 22 per cent cream at $1.32 per gallon? How much will be received per pound fat for each additional 5c per gallon?

Mosinee, Wis. B. McA.

A gallon of cream containing 22 per cent butterfat weighs 8.4278 pounds and contains 1.854 pounds of butterfat. When such cream is sold for $1.32 per gallon, 71.2c is received per pound for fat. For each five cents more received per gallon for such cream, the price per pound of fat is increased 2.69c. For example, a price of $1.37 per gallon gives a return of 73.897c per pound for fat, while a price of $1.42 gives a return of 76.594c.

Plowing Under Straw

Kindly let us know the fertilizing value of a ton of oat or barley straw. Does it contain more plant food than barnyard manure? When is the best time to spread this straw, right after threshing or is it better to let it decay? Would there be any difficulty in plowing it under? We use an ordinary walking plow.

Norway, Mich. A. F.

A ton of mixed barnyard manure will contain about the same amount of fertilizing constituents as will a ton of oat or barley straw. However, the fertility elements in the manure are more readily available and will show, in general, better results.

Unless the amount of straw on hand is very largely in excess of needs, we would prefer to make use of liberal quantities of it for bedding as it will handle easier in this manner and it will also help to make the fertilizing elements in the straw more readily available for plant growth. However, straw may be spread right after threshing and this is preferable to allowing it to stay in the stack and rot down. When allowed to decay in the stack too large a part of the fertility and humus value of the straw is lost. If the straw is spread on stubble, it will plow under very well, if it is allowed to weather down. This holds particularly true if allowed to stand over winter.

Indeed, there may be a decided advantage in spreading straw lightly over clover or alfalfa fields as well as winter grain. This will help to give protection against the alternate freezing and thawing which does damage to these crops. If spread on hay land it might be desirable to rake up the straw in the spring, but a considerable portion of it will have been broken up and have become incorporated in the soil. The rest may be either used for bedding or spread on the fields or put in the barnyards for the cows to tramp.

Concrete Silo Not Round

Last summer I built a concrete silo. We started it round, 14 feet in diameter. We built it 45 feet high and used steel forms 2½ feet wide. The wall was 7 inches thick. When we got up about 10 feet high, our forms began to bend in on two sides and out on the other two sides so when up about 22 feet the dimensions were 13 feet,3 inches one way and 14 feet, 9 inches the other way. From there on we slowly got it more round again. We filled it last fall with corn just ripe enough for the silo. Filled it in ten hours, packed it well while filling. Three weeks later, it had settled about 10 feet. In opening up for feeding we found it spoiled a little on top, and on the sides it stayed moldy until within about 15 feet from the bottom. The mold was from 2 inches to 1 foot thick. I have a concrete silo on my other farm of the same dimensions, but after feeding down about 2 feet we have no moldy ensilage on the sides. The walls are straight on that silo.

The question is, does the crooked wall of this new silo have anything to do with the spoiling of the ensilage? If so, in what way can the inside be straightened or would it be cheaper to tear it down and rebuild?

Waupun, Wis. J. G.

This seems rather unusual and uncalled for even though the silo is not regular in shape due to the trouble which was had with the forms while building. I presume it is possible that the narrowing of the silo where the walls took on an elliptical outline might have prevented uniform settlement of the silage. That, however, is not indicated from the statements made. There must have been some other condition not clearly brought out in the inquiry.

However, to bring the interior of the silo to truly cylindrical form would probably not be difficult. It would be cheaper to put a shell of monolithic concrete from bottom to top inside on the basis of the uniform diameter of 13 feet.

Preparatory to doing this the interior wall surface should be washed down thoroughly and preferably roughened by nicking it all over with a stone pick, in this way exposing a large area of clean surface to assist bond between old and new concrete. Being on the inside of the silo no reinforcement would be needed for this inner shell, if the concrete were placed at correct consistency, which should be what is described by the word "quaky" or "jellylike". A 1:2:3 mixture should be used and the coarse aggregate should not exceed 1 inch in coarsest dimension.

Illinois. H. Colin Campbell.

Whitewash Recipes

We wish you would send us a recipe for making a good barn whitewash.

Marshfield, Mo. P. C.

The following whitewash formulas have been suggested:

1. Take a half bushel of unslaked lime and slake it with boiling water, covering during the process to keep in steam. Strain the liquid through a fine sieve or strainer, and add to it a peck of salt previously dissolved in warm water, 3 lbs. of ground rice boiled to a thin paste and stirred in while hot, one-half pound of Spanish whiting and 1 pound of clean glue previously dissolved by soaking in cold water, and then hang over a slow fire in a small pot hung in a larger one filled with water. Add 5 gallons of hot water to the mixture, stir well; let it stand a few days covered from dirt. It should be applied hot, for which purpose it can be kept in a kettle or a portable furnace. Coloring matter may be added as desired. When a less durable whitewash will answer, the above may be modified by leaving out the whiting and glue and omitting the boiling. It need not be applied hot and may be applied with a spray pump.

2. Slake 25 lbs. fresh lime in sufficient water to make a paste, sprinkle in 15 lbs. of flowers of sulphur, add 30 gallons of water, and boil for an hour. Then add enough water to make 50 gallons and apply with a spray pump, using a Bordeaux nozzle. This is in some favor as a disinfectant.

3. Take 20 lbs. of unslaked lime, 3 lbs. of common salt, and 1 lb. of alum. Slake the lime with boiling water until of the consistency of thin cream. To increase the antiseptic properties of the wash, add one-half pint of crude carbolic acid to each bucketful.

4. To half a bucketful of unslacked lime add two handfuls of common salt, and soft soap at the rate of 1 lb. to 15 gallons of the wash. Slake slowly, stirring all the time. This quantity makes two bucketfuls of very adhesive wash, which is not affected by rain.

5. Slake lime with water, and add sufficient skimmilk to bring it to the consistency of thin cream. To each gallon add 1 oz. of salt and 2 ozs. of brown sugar dissolved in water. The germicidal value of Nos. 4 and 5 may be increased by adding one-fourth pound of chloride of lime to every 30 gallons of wash.

6. Slake quick lime with enough water to make a thick paste. While it is slaking add a pint of melted lard or other grease and a cupful of salt to a bushel of lime. Add enough water to bring the solution to the consistency of thin cream and strain through a piece of burlap. For chicken house or barn where milk is not made it is advisable to add four ounces of some coal tar disinfectant to every gallon of the mixture.

Like putting a new hardwood floor in your bedroom, with *Sherwin-Williams* Floorlac

MANY hard and soft wood floors have lost their original beauty. Such floors can be restored with FLOORLAC, *the all around varnish stain* which will give them the appearance and color of hardwood and a beautiful, durable varnish sheen, with one operation. Sherwin-Williams Floorlac is equally effective on woodwork and furniture. The colors are permanent; the varnish long wearing and waterproof. Floorlac beautifies and protects every surface on which it is applied.

With Floorlac you can obtain the popular shades of light, golden or dark oak, light or dark mahogany and other attractive effects.

***Sherwin-Williams* Varnishes**
All the water in the world won't harm them: Mar-Not for floors, Scar-Not for woodwork, Rexpar for outdoors—pale, long wearing, Varnishes, which don't scratch white or mar from hot liquids.

***Sherwin-Williams* Flat-Tone**
is a refined flat oil paint for walls and ceilings. Applies easily without brush marks. Rich variety of plain tints and multi-color harmonies; light-diffusing, permanent, sanitary and easy to clean.

***S-W* Old Dutch Enamel**
is the highest grade long-life enamel for woodwork and furniture. Made in gloss or dull finish, French Gray, Ivory White, and a Pure White of permanent beauty and quality.

SHERWIN-WILLIAMS PRODUCTS

Go to the Sherwin-Williams Dealer in your town. If he cannot supply all your needs with S-W Products, write us for booklets, etc., on your requirements. Address—
The Sherwin-Williams Co., 606 Canal Road, N.W., Cleveland, O.

Paints and Varnishes
Wood Preservatives
Insecticides, Disinfectants and Cattle Dips

S-W Fly Spray protects cattle and horses from flies. Apply with spray or sponge.

The Dairy Cattle Congress—What It Offers to Breeders

The coming of the dairy show season again brings the breeder of dairy cattle face to face with the problem as to whether to plan on exhibiting his herd. This decision must be made by answering two questions; one, whether the exhibition of a show herd will return, through the winning of premium money, advertising, and acquaintanceship, sufficient to warrant taking out such a herd; the other, "What do I owe to those institutions which are being fostered and carried on for the express purpose of advertising this greatest of all classes of live stock which I am engaged in breeding and which is so fundamentally essential to the welfare of the nation."

The 1920 Dairy Cattle Congress to be held again at Waterloo, Iowa, September 21—October 3, will be one of the greatest dairy shows and conventions ever staged. The Dairy Cattle Congress holds a prominent position in that part of the country which must be the greatest field for the future development of the dairy industry. It is in this section that the farmers have the great asset of a rich, highly productive soil. The radical rise in farm values during the past two years has brought the farmers in this section face to face with a different situation in making their investment a paying one and the dairy cow is considered the solution of this problem.

Today in the seven states, counting Iowa and the six surrounding her, we have approximately 5,000,000 cows kept for milk purposes by approximately 500,000 farmers, a very small percentage of which have ever made any attempt toward the development of breeding of either a pure-bred or a high grade herd of any one of the great dairy breeds. Here in the center of this section, which without a doubt furnishes the future demand for registered cattle of the different dairy breeds, is situated the Dairy Cattle Congress. It is at this show that these thousands of present and future dairymen assemble for further inspiration and to get a fair comparison of the different breeds.

There are many advantages to be received from showing in addition to advertising. One learns by comparison. In reading our dairy and breed journals the breeders learn of many of the great herds whose cattle are in strong demand. It is only by meeting these breeders and seeing their herds that the new breeder can make certain of the accepted and most popular type of his preferred breed. The possibility which such a show as the Dairy Cattle Congress offers of coming in contact with one's fellow breeders is of too great importance to be overlooked. It is in meeting other breeders that you catch the inspiration which has made possible the greatest achievements along lines of breeding and development. It is this personal contact with men interested in the same subject that has made possible the rapid advances in the development of the dairy breeds of cattle.

The Dairy Cattle Congress has been each year increasing its premiums until with the 1920 increase it totals approximately $12,000 for dairy breeds of cattle alone. This is a premium list greater than has ever been offered west of the Mississippi by any show of its kind and should command the most loyal support on the part of the breeders. This premium list is divided so as to make it absolutely fair and impartial for the big and small breeder alike. The purpose of the Dairy Cattle Congress is to foster and develop new breeders. The plans for the 1920 show, with the loyal support the breeders of the country have each year given, should combine to make it the greatest event of its kind in the Central West.

E. S. ESTEL, Secretary.

Condensed Milk Market Weaker

Prices paid producers for raw milk continued to advance during July with an average increase amounting to 18 cents per hundredweight. In New England, Middle Atlantic, and South Atlantic sections prices as high as $3.44 to $3.76 per hundredweight were paid for milk testing 3.5 per cent butterfat, while in other sections prices ranged as low as $2.45 to $2.50 per hundredweight. Production has declined to some extent on account of the flush of the season nearing an end.

Total stocks and unsold stocks of condensed milk in the hands of manufacturers continued to show accumulations July 1, largely due to the slow movement and inability of manufacturers to dispose of their bulk goods. An outstanding feature during June was the large increase of unfilled orders, largely on account of the fact that manufacturers had oversold themselves on low-cost goods and were not willing to fill orders with their present stocks, which have cost them more than prices named in contracts which they now hold. Comparing market conditions July 1, 1920, with July 1, 1919, total stocks and unfilled orders in the hands of manufacturers had increased 27.24 and 838.26 per cent, respectively, while unsold stocks decreased 39.32 per cent.

The evaporated milk situation, from a standpoint of stocks, was not most satisfactory to manufacturers. Total stocks in the hands of manufacturers were increased 4,038,307 pounds July 1, 1920, while accumulations of unsold stocks amounted to nearly 30,000,000 pounds and unfilled orders had decreased approximately 23,000,000 pounds. Comparing the situation a year ago, total stocks July 1, 1920, were 51.99 per cent more than last year and unfilled orders were 52.19 per cent less.

Export business is reported quiet, with only a few inquiries and a little "Eastern relief" business to some of the European countries. Firms with regular export business were practically the only ones moving goods out of this country. Exports during June of condensed milk, which amounted to 27,723,269 lbs., were nearly 5,000,000 pounds less than May, and England, Cuba, and Germany received the largest part of these shipments. Exports of evaporated milk during June exceeded those of May by 3,384,281 pounds, with considerable quantities going to the Straits Settlement, Philippine Islands, and British India.

Trading in condensed and evaporated milk is reported inactive, and in some respects the market may be considered weaker. Asking prices for well-known brands of condensed milk have been maintained at $10.50, but some unadvertised brands are selling as low as $9.75 by dealers who are compelled to make a quick turnover. The weakest feature of the market has been the marked decline of prices made in sweetened condensed bulk goods. Because of accumulations dealers are moving stocks at 14½ to 15½ cents per pound and some lots are reported sold as low as 13½ cents. Evaporated milk is selling mostly at $6.50 to $7, with some unadvertised brands sold down to $6. This price, however, does not allow for much profit and is near the cost of production.

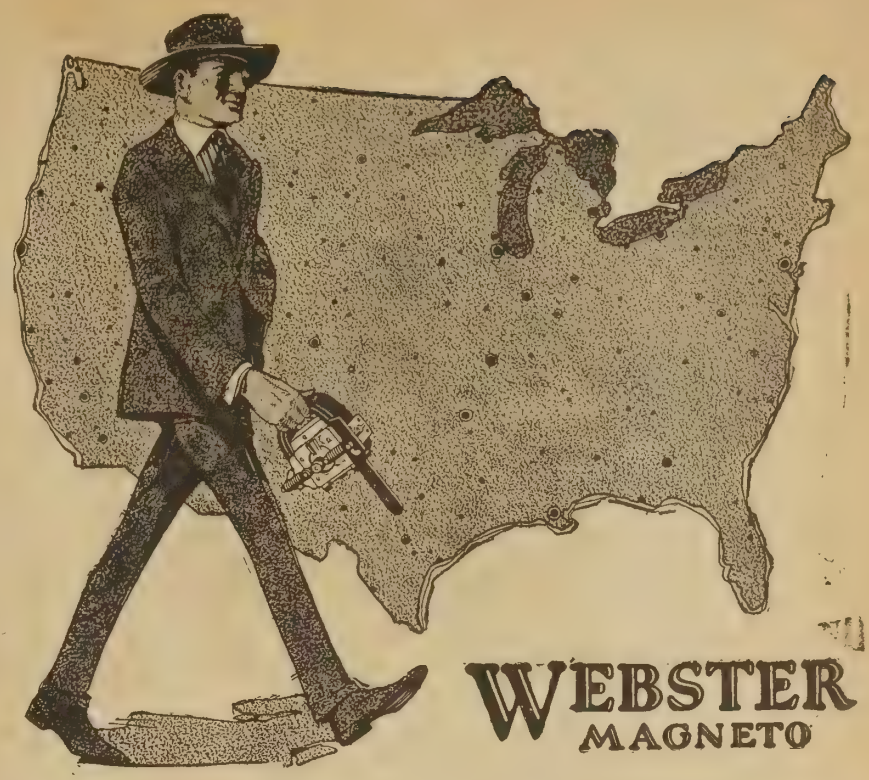
Men are born to succeed not to fail.
—THOREAU.

A Summer Dairy Show in Oregon

HOARD'S DAIRYMAN:—A dairy cattle show was held in Marshfield, Oregon, on July 3, 4, and 5 in connection with a patriotic celebration extending over the three days. It was the first cattle show ever held there and attracted much attention from visitors to the city.

There were over sixty cattle on exhibition, mostly Jerseys and Holsteins, and the quality was exceptionally fine. Some of the prize winners will be exhibited at the state fair in Salem and at the Pacific International at Portland.

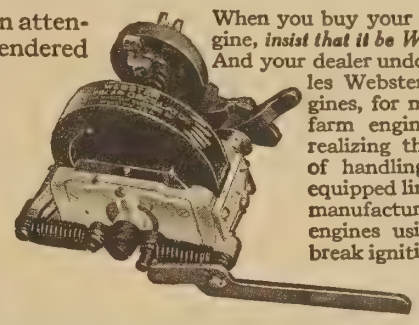
The grand champion Jersey bull was St. Mawes Tisha Waltz owned by Finley Shroeder. The grand champion Holstein was Matador Segis Walker 6th owned by L. J. Simpson. This bull was a prize winner at the National Dairy Show at Columbus. In his present form as a senior three-year-old he weighs about 2,300 pounds.



An interesting feature of the show was a judging contest by a group of boys under the leadership of E. R. Peterson, county leader of boys' and girls' clubs. A parade of the prize winning animals on the last day of the show was an eye opener to the many people, as few had any idea there were so many good cattle in the country. The show was held under the auspices of the Chamber of Commerce and it is planned to make it an annual event. Marshfield is on Coos Bay and in the center of one of the finest dairy sections on the Pacific coast. Dairying is its leading industry and the interest in registered cattle is increasing. Several carloads of Jerseys have been brought in and a recently organized county Holstein breeders' association is planning on bringing in one or two car loads of Holsteins. C. C. Farr, county agent, and J. L. Smith, bank agriculturist, have been authorized to select the animals and make the purchase. It is expected these cattle will arrive before the opening of the county fair in September.

E. B. FITTS.

Oregon College of Agriculture.



PORTION OF THE LIVE STOCK PARADE AT THE MARSHFIELD, OREGON, SUMMER DAIRY SHOW. THE BULL IN THE LEAD IS MATADOR SEGIS WALKER 6TH, GRAND CHAMPION OF THE SHOW

Service Men and Stations Dot the Country — —

WEBSTER interest in Webster magnetos never ceases. Long after the manufacturer has sold his engines to the dealer, long after your dealer has supplied you. *Webster service men and Service Stations are still "on the job".*

Partly through the keen attention and helpful aid rendered by these men and the 46 Webster Service Stations, the 600,000 Webster Magnetos now in use are daily doing their part in adding to the Webster reputation for *continuous, dependable ignition service—always—under all conditions.*

When you buy your next farm engine, *insist that it be Webster-equipped.* And your dealer undoubtedly handles Webster-equipped engines, for more and more farm engine dealers are realizing the advisability of handling a Webster-equipped line. 85% of the manufacturers of farm engines using make-and-break ignition now supply the Webster as standard equipment.

WEBSTER ELECTRIC COMPANY
RACINE, WISCONSIN, U. S. A.

Waukesha County Holstein Breeders Meet

Aitken Brothers, owners of one of Wisconsin's foremost breeding establishments, were hosts at the recent summer meeting of the Waukesha County Holstein Breeders' Association. Meadow Lane Farm, because of its location, modern equipment, and good Holsteins, proved an ideal place for such a meeting. Before the day was done there was not one of the four or five hundred people present but would have voted Aitken Brothers and Fred Klussendorf, the farm manager, ideal hosts.

The meeting was called for 10:30 a. m. and the remainder of the forenoon given over to a boys' judging contest, Professor R. S. Hulce of the State University and County Agent J. E. Stallard in charge. Fifteen boys lined up for the contest. Before the actual judging was commenced Professor Hulce gave a short demonstration, using for purposes of illustration Aitken Brothers' Cande De Kol Westview, a former state fair winner. Four cows from the Meadow Lane herd made up the class to be judged and when the cards were finally turned in Harold Carr stood first, winning the pure-bred bull calf offered by Aitken Brothers. Second, third, and fourth places were won by Elmer McCarthy, B. Peacock, Jr., and Stewart Howell, respectively.

After dinner the program opened with a short address by J. L. Thomas, field secretary for the Wisconsin Dairy Council. Mr. Thomas explained the purpose of the Council and the very great need which exists for the advertising of dairy products in order to develop the potential market that exists for them. He spoke at some length upon the food value of these products and the present low consumption per capita.

Mrs. Nellie Kedzie Jones, of the Home Economics Department of the State University, gave an excellent address on the farm home and the home agents that are now doing a work among the women similar in many respects to that of the county agents among the farmers. She outlined the work of these agents in home improvement, and appealed to the men present for better homes and home conveniences on their farms.

S. E. Taylor of the Griffith Motion Picture Corporation was the one speaker of the day who was not closely connected with farm or dairy work. Mr. Taylor is, however, allied with one of the greatest industries of this country and during the course of his talk showed what advertising had done for that industry and what it could do for the dairy business and the dairy farmer. Proper advertising would not only result in a better market and better prices, but in better homes and more contented workers in the business. It would indirectly help to popularize dairy farming.

The State Holstein Association was represented by L. L. Oldham, secretary, who briefly outlined the work the association is doing and plans to do in the future. He suggested community testing to the county association as one means of increasing the number of offically tested cows in the county. He also urged the importance of selecting and using good farm names. This costs but little and may be of a very considerable advertising value.

Modern Farm Houses

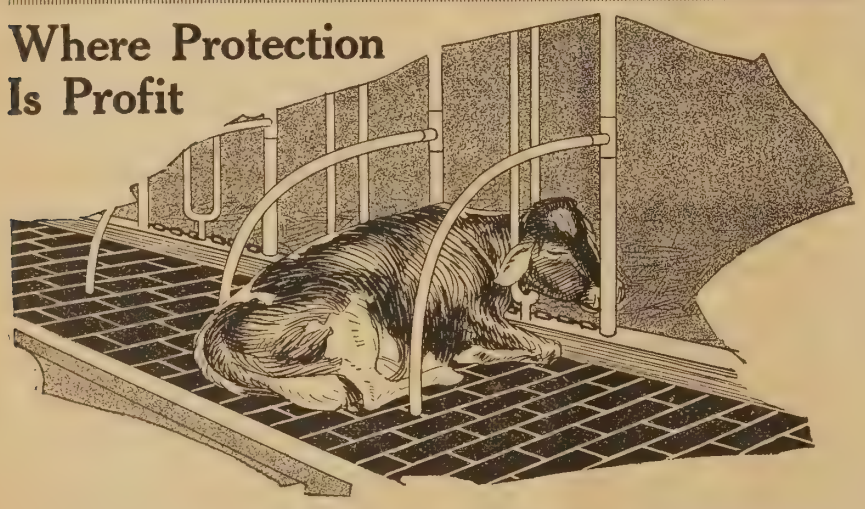
HOARD'S DAIRYMAN:—A hundred years ago machinery helped but little on the farm. Men drudged from early morn till late at night and accomplished little as measured by the standards of today. A hundred years ago the men were busy, more than busy, in the fields and women did the chores. In that day farm women were skillful with the spinning wheel, the knitting needles, and the loom. They fed the pigs; they husked the corn; they milked the cows. They fed the calves; they raked the hay; they churned the butter. Those were the days of quilting parties, husking bees, and milkmaids. Yes, and they were days of drudgery. The stories of those days sound well in rhyme, but they were not so pleasing in reality. Since then the world, even the farm world, has greatly changed.

Machinery came and milkmaids disappeared. Machinery came and women left the fields. Machinery came and with it lightened labor on the farm and in the barn; but machinery has done little for farm women in the home. Machinery and modern equipment could do as much for women as for men, and at much less expense.

The furnace, refrigerator, kitchen cabinet, fireless cooker, vacuum cleaner, power washing machine, mangle, electric lights, and running water in kitchen and bathroom would lighten women's work as much as all the various kinds of machinery and equipment have lightened the outdoor work upon the farm.

Farmers, let me tell you something. You owe it to your wives and daughters to get them all these things. City women have such comforts and conveniences, and they cost about as much within the city as upon the farm. For installation the cost is comparatively light and the upkeep is not high. It costs you more to purchase and support your auto than to fully equip your home.

A salaried man said to his brother, who lives on a large, rich farm: "I have a modern house; you have an auto. I have what most appeals to me. You have what most appeals to you."



For a moment the farmer seemed lost in thought. Then he said: "I, too, will have a modern house."

He will. The movement is started. It will grow. That day is not far distant when every wide-awake, up-to-date, progressive farmer will be dissatisfied until he fully equips his home.

J. C. MCDOWELL.

Where Protection Is Profit

TAKE a good look at this picture, a frequent and natural position of the cow in her stall. Notice the udder—right down on the floor.

Whether this is safe or dangerous depends entirely upon the floor. If it is cold and hard, it is almost certain that the udder will be chilled, resulting at least in lowered milk production and very probably in inflammation and garget. That is the risk you take every time your cow lies down, especially in winter. Bedding is little protection, for bedding frequently gets pushed aside.

There is only one *sure* protection—a floor of Circle A Cork Brick, because cork brick are non-conductors of heat and are always warm—winter or summer. Bedding or no bedding, the udder does not chill on a cork brick floor. It is humanity to the cow and good business for you to insure against disease and interrupted milk production with Circle A Cork Brick—*the warm stall floor.*

You will be interested in the 28-page book, "Better Stall Floors", which contains information that will be valuable to you in your business. Write for a copy — there is no charge for it.

Armstrong Cork & Insulation Company 112 Twenty-fourth Street, PITTSBURGH, PA.

Is a Farm Water System a Good Investment?

(Continued from page 232)

ground where the wind can get at them from all quarters. The tower should be high enough so that the wheel is well above adjacent buildings and trees. It is not absolutely necessary that the windmill be placed directly over the well but such a location is to be preferred. If the well is on low ground the difficulty may be overcome by building the tower a little higher. Windmills may now be had that are equipped with various automatic devices such that they require a minimum of attention. They are automatically started and stopped as the water in the storage tank lowers or rises above certain points. They are automatically oiled and require only to have the oil reservoirs filled at infrequent intervals. Windmills may be used with practically any kind of pump but ordinarily they are connected to what is known as the double action force pump.

Hydraulic Rams

The hydraulic ram may be defined as a device which utilizes the kinetic energy of water or, in other words, the energy of falling water to raise a part of itself to a point higher than the supply. A ram consists of essentially five parts; a drive pipe, a delivery pipe, an air chamber, and two valves, a clack valve (so-called from the noise it makes), and a foot valve. A third valve called a sniffing valve is sometimes employed. In operation the ram is located somewhere below the source of supply in such a way that the drive pipe connecting the ram with the supply is about 50 feet long. The head or vertical distance of the supply above the ram may be anything over 18 inches, but it is not advisable to use a fall of more than 15 feet with the ordinary ram.

If it is necessary to have a drive pipe longer than 50 feet a standpipe or other means of equalizing the head and reducing pipe friction should be employed. This stand-pipe should be placed about 50 feet from the ram and any head desired can be obtained by locating an overflow at the required height. The delivery pipe is generally about half as big in diameter as the drive pipe. That is, if the drive pipe is two inches the delivery pipe will be about 1 inch. Both the drive and delivery pipes should be as straight as possible and have as few elbows as the conditions will permit. The joints must be absolutely tight if the ram is to work at its best. The air chamber is used in rams to absorb the shock caused by the sudden stopping of the moving column of water in the drive pipe, and also to cause the delivery to be steady instead of intermittent. If the source of supply happens to be a body of comparatively still water there will be very little air in the water. The result will be that in time the air in the air chamber will be absorbed by the water and the ram will stop. If the source of supply is a rapid stream there will be considerable air in the water and the last mentioned trouble will not take place.

Some rams are equipped with what is called a sniffing valve. This is a small valve located on the upper side of the ram body in such a way that at each pulsation of the ram a small amount of air is drawn in and added to the supply in the air chamber, which is in this way kept at the proper amount. If the air chamber becomes full of water the only thing to do is to drain the ram and let the air back in where it belongs. The valve in between the air chamber and the ram body (in certain makes of rams) is simply a check valve of some sort, either of the ball or flap variety.

The most important single feature about hydraulic rams is the escape or clack valve. This is ordinarily a cast iron disk held in place by a vertical rod or valve stem in such a way that when the water starts flowing through the drive pipe it escapes around this clack valve. When the current becomes strong enough this valve is forced up onto its seat stopping the current of water very suddenly. The momentum of the moving body of water in the drive pipe causes the check valve to open and a certain amount of water is forced into the air chamber until the pressure is equal on both sides of the check valve. When the check valve drops back in place the air expands and forces a part of the water in the air chamber out through the delivery pipe. In the meantime the pressure in the body of the ram has been reduced first by escape of some of the contained water and second by the backward surge which takes place at every pulsation. When the pressure is low enough the clack valve drops back into its first position and the process is repeated at the rate of about 40 or 50 beats per minute depending on the head. The clack valve is about the only part that wears and in consequence is sometimes made of bronze or other metal that will wear better than cast iron. In other rams the valve seat or valve or both are covered with rubber to prevent the usual noise which is associated with the working of hydraulic rams.

When the conditions are such that they can be used, hydraulic rams are probably the cheapest and most satisfactory way of pumping water. Except in the larger sizes the quantity of water delivered is not great but it is very constant. A stream of water no larger than a lead pencil will fill a fairly large tank in the course of twenty-four hours. The amount of water that will be delivered by a ram depends on size of ram, amount of head, and height to which water is to be raised. The horizontal length of pipes has some bearing on the amount of water delivered but usually this distance is not great enough to cause any particular trouble.

The amount of water that will be delivered by any ram may be closely estimated by the following rule: One-seventh of all the water flowing to the ram may be delivered to a height equal to 5 times the head. For instance, assuming that 21 gallons of water are flowing to the ram each minute from a height of 10 feet then 3 gallons can be delivered to a height of 50 feet each minute. This rule of course is not absolutely true in all cases but it is close enough for practical purposes.

Hydraulic rams require very little attention and will work under conditions that would discourage almost any other kind of a pump. The first cost is small, repair bills are small and infrequent, and there is no operating expense. Two distinct types of hydraulic rams are on the market, the single acting and the double acting. The single acting ram delivers a part of the driving water while the double acting ram may use creek water for power and deliver spring water to the house or elsewhere. In any case the water must be higher than the ram, that is, the ram will not act as a suction pump.

Steam and Steam Engines

The requirements of a farm water system are such that steam and steam engines are not particularly adaptable. In the first place they require constant attention and an outfit which will cost considerably more than any but the large systems will warrant. If, however, there is an engine and boiler being used for some other purposes such as running a mill or creamery for instance, the steam may be used to operate a direct acting steam pump or power may be taken from the engine to operate a pump jack. In

other words, it is practically never advisable to install a steam pumping outfit for the average farm water supply system, but if the power is available by all means use it.

Gasoline Engines

Gasoline engines are used quite extensively for pumping where there is considerable water required. They are better suited to conditions where there is a comparatively large storage tank so that the engine may be run continuously for a time and then stand idle until the storage tank is empty. Such engines are usually belted directly to a pump jack or to a small centrifugal pump, if conditions will permit of its use, or to some sort of a suction or deep well pump as may be required. Such engines are subject to the same criticism as steam engines, that is, they require more or less attention and are not entirely automatic. They may be so installed that the engine will be stopped when the water in the tank reaches a certain height but it is rather difficult to automatically start them when the water gets low. Gasoline engines, especially those with a water jacket, must be kept where they will not freeze or else the water jacket must be drained when the engines stand for some time during cold weather.

Hot Air Engines

Hot air engines were formerly used to some extent for pumping water but their use is now limited. They are generally used in connection with a pump jack. Such engines have the same objectionable features as steam and gasoline engines and the additional ones of being rather large and unwieldy for the required power and not very efficient in the use of fuel.

Electric Motors

Where electric power is available, either from a power line or from an individual plant, an electric motor is one of the best means available at present for operating a farm water system. They may be placed in practically any location so long as they are kept out of the wet. It is a comparatively simple matter to install them in such a way that they will act automatically when the pressure reaches certain high or low points. No power is consumed except when the pump is in actual operation. They may be belted or otherwise connected to a pump jack, a reciprocating double or single acting pump, or to a centrifugal pump. They may be used also to operate an air compressor when some sort of an air lift or pneumatic pump is employed. The electric motor is probably the best and cheapest device for operating a small water system that has yet been evolved, regardless of whether the power is obtained from outside sources or is generated on the farm.

Water Motors

Water motors are used to some extent where water under pressure is available. For instance, well water under pressure may be made to operate a water motor which in turn will pump soft water to an overhead tank. Where only a limited amount of water is to be pumped such an arrangement is perfectly satisfactory, but if a large quantity of water is wanted it will generally prove to be cheaper to install a separate system.

Hydro-Pneumatic Systems

The word hydro-pneumatic means literally, water-air, so that such systems are really water-air systems. Regardless of the kind of power used and the various details of construction and operation the basic principle is the same in all such systems, that is, both water and air are forced into an air tight tank. The air naturally rises to the top of the tank and becomes compressed as more water and air are pumped in. The delivery line from the pump may enter the tank in any place either above or below the water line but the discharge from the tank must always be taken from below the water line. When a faucet is opened anywhere on the discharge line the air in the tank expands and forces water out of the opening. In most of the systems the pressure is automatically regulated so that the only thing necessary is to see that the tank contains the proper amount of air.

Most of the pumps used in connection with these systems have some sort of an air valve which automatically draws in a certain amount of air at each stroke. When this is the case a slight adjustment of this air valve from time to time is all that is necessary to maintain the proper proportions of air and water. The question might naturally come up as to why it is necessary to continually pump air when only water is drawn from the tank. The explanation is that when air and water are in contact under pressure a certain amount of air is absorbed by the water. The best illustration of this is the fact that the water in all streams and lakes contains air. If it did not, the fish in these streams and lakes would promptly die of suffocation. It is well to remember that even in the open there is a pressure of nearly 15 lbs. per square inch on the water and every other existing thing at sea level.

Lift

So far nothing has been said about the water supply, it has simply been assumed that it was within easy reach. If, however, the water has to be taken from a deep well another very important factor enters which must be taken care of, namely, the lift. For instance, if the water level in a well is 40 feet below the ground surface it is obvious that it will be impossible to handle it with the ordinary so-called suction pump located at the top of the well. Under the best possible conditions water cannot be raised more than 34 feet by this means. At this altitude (about 1,000 feet above sea level) very few concerns will guarantee that their pumps will operate successfully when the lift exceeds 22 feet. Because of this fact it becomes necessary to either lower the pump to within 22 feet of the water level or to bring the water up to within 22 feet of the pump. An electrically operated pump may be lowered in a dug well or in an excavation around a driven or bored well with comparatively little trouble if the water level is not too far down, say not more than 30 feet below the ground level. It is seldom advisable to attempt to raise the water up to where a "suction" pump can handle it since two separate and distinct pumping outfits will be required. As a general thing it will prove more satisfactory to install some sort of a deep well pump. These outfits may be had in several different forms, some one of which can be made to fit almost any given set of conditions.

Pneumatic Pump

In drilled wells where the casing is four inches in inside diameter or over, a pneumatic pump may be used to good advantage. Pumps of this type will lift water well over a hundred feet. The actual pump parts are enclosed in a metal cylinder which is lowered into the well until it is ten or fifteen feet below the water level. These pumps are operated by compressed air and may be made entirely automatic. The air compressor and tank may be housed in any convenient place even out of doors if desired, without danger of freezing, since the tank contains air only. With the pneumatic system, as many pumps

No More Wet, Tired, Sore Feet— If You Wear "Steel-Leathers"

The Light, Comfortable, Work-Shoe

Save $20 to $30 Shoe Money

Try Them 10 Days FREE

2 to 3 Years' Wear in Every Pair

Every time you buy a pair of ordinary, all-leather work-shoes, you are paying 3 to 6 times as much as you should, for the wear you get—throwing away $20 to $30. With prices way up and quality way down, that's truer today than ever. You can actually **SAVE $20 TO $30** of shoe money if you'll learn for yourself what more than a million men like yourself have learned to their comfort, health and profit.

Outwear 3 to 6 Pair Leather Shoes

When we say that one pair of "Steel-Leathers" outwears 3 to 6 pairs of ordinary all-leather work-shoes, we mean exactly what we say—aren't exaggerating one bit—simply giving you the plain facts as thousands of "Steel-Leather" wearers during the last 15 years have given them to us—just as any one of them would tell you himself if you asked him. We say "Steel-Leathers" are the most wonderful work-shoes ever made because they **LAST 2 to 3 YEARS.** Thousands of our customers claim even more for them. Here's what J. M. Lester of Louisiana says: **"I AM STILL WEARING A PAIR OF 'STEEL-LEATHERS' THAT I BOUGHT OF YOU 4 YEARS AGO."** Thousands of others have written us that they simply can't wear out their "Steel-Leathers." Compare their experience with your own experience with all-leather work-shoes —then make up your mind to stop wasting your shoe money and **ACCEPT OUR WONDERFUL FREE TRIAL OFFER.**

Light—Springy—Comfortable

Don't think because the soles are of steel that "Steel-Leathers" are heavy and uncomfortable. **THEY ACTUALLY WEIGH LESS THAN MOST LEATHER WORK-SHOES AND ARE MORE COMFORTABLE.** Require no breaking in—never chafe or pinch. Remember these are not our claims but the statements of thousands of wearers who were doubtful just as you perhaps are. But they investigated just as we are asking you to investigate and try them **without risking one penny.**

N. M. Ruthstein
President

Here's what W. S. Pease of Alabama says: **"I WISH EVERY MAN WHO LIKES A GOOD COMFORTABLE WORK-SHOE MIGHT HAVE A PAIR OF YOUR 'STEEL-LEATHERS'."** Thousands of others say the same and wouldn't go back to all leather work-shoes. "Steel-Leathers" look and fit better than the best shoes made. Uppers are of the highest grade soft leather, tough as rawhide, soles of thin, special processed steel, shaped over foot-form lasts so as to fit any foot. Cushioned inside with thick, soft hair felt-insole so foot can not touch steel sole. **"STEEL LEATHERS" MUST MAKE GOOD ON YOUR FEET OR YOU DON'T KEEP THEM.**

STEEL SOLE SHOE CO.
N. M. RUTHSTEIN, Pres.
Dept. 52, RACINE, WIS.

Absolutely Waterproof. Save Your Feet and Health

"Steel-Leathers" are the only shoes that stay water tight forever. Wear them any time, anywhere; winter or summer, for ordinary use or for rough work, in the mud, slush, snow, rain; in the field, in the barnyard—makes no difference—**FEET ARE ALWAYS DRY**—and a dry foot means a warm foot in winter—a cool foot in summer. Won't sweat, swell or "parboil" your feet, as rubbers or rubber boots do. They put an end to wet, sore, tired feet. Prevent colds, sore throat, pneumonia, rheumatism, lumbago, sciatica, chilblains, swollen joints and hundreds of dollars in doctor's bills. The steel soles support the arches so the longest day in roughest going or weather, becomes a pleasure. Sanitary too—can be cleaned of all foot or barn-yard odors. Simply wash out inside—dry and they are again sweet and fresh as new.

Economical

"Steel-Leathers" not only out-wear 3 to 6 pairs of all leather shoes, saving you from $20 to $30 in shoe money, but **COST LESS.** Besides this, they make unnecessary the buying of rubbers or rubber boots. They never become run down at the heels. Never become hard or twisted out of shape. Think what this means in the morning after a "yesterday" tramping through the wet. **Require no repairs;** 50 rivets for 40 cents will keep them in good shape for years. Stand up under hardest use in sand, gravel, sharp rocks. Hedge thorns or nails won't tear or snag them and hurt your foot. Can you say half as much for the work-shoes you wear?

Try Them FREE

If "Steel-Leathers" are all we claim for them, you want a pair—need them—and need them every day, and **WE'RE WILLING TO PROVE TO YOU THAT THEY ARE ALL AND MORE THAN WE HAVE CLAIMED.** We are willing to make "Steel-Leathers" prove it to you in your home—**on your feet.** Don't spend another cent for shoes until you get our **FREE BOOK.** It gives you full information as to sizes and styles—tells in detail how they are made. Send postal or use coupon but don't delay—do it today.

National Grange Notes

Washington, August 15—Committees have been named for the work of the 54th annual session of The National Grange which is to be held at Boston, Mass., November 10, 1920. The chairman of the more important committees are the following State Masters: Agriculture, John A. McSparran, Pennsylvania; Co-operation, L. J. Taber, Ohio; Education, C. E. Spence, Oregon; Foreign Relations, G. W. Dixon, South Dakota; Forestry and Conservation, Herman Ihde, Wisconsin; Highways, W. H. Havens, New Jersey; Home Economics, Mrs. Cora E. Ketcham, Michigan; Insurance, William Bouck, Washington; Peace, Mrs. Pearl Stillwell, Wyoming; Postal Improvement, John Morris, Colorado; Pure Foods, S. B. Steere, Rhode Island; Taxation, T. C. Atkeson, West Virginia; Transportation, C. C. Raine, Missouri.

⚜

The Washington office of The National Grange is in receipt of advices from the Canadian Dominion government to the effect that that government has relinquished all control over the 1920 wheat crop. This information will set at rest a variety of statements which have been made as to the guaranteed price which Canadian wheat growers were to receive this season.

⚜

Daniel Willard, recognized spokesman for the railroad executives, in a statement before the Senate Committee on Reconstruction and Production, holding sessions in New York City on August 13, said that the railroads of the United States will soon be in position to provide for themselves and ask no help from outside agencies. In this statement, and in the progress which the railroads have made to work themselves out from under serious labor troubles and freight congestion, during the past three months, is found the full justification for the position to which the Grange has steadfastly adhered. This position was and is, that the railroads should be returned to their owners under conditions which offer the freest possible exercise of individual and competitive initiative and energy, such as marked the phenomenal development of the railroads in the past, subject only to such regulation as fully protects the public interest.

⚜

Secretary of Agriculture Meredith has acted promptly and forcefully in the matter of commission rates charged by Chicago Live Stock Commission men in handling cars containing cattle from more than one owner. After a hearing he characterized the rates as "unjust, unreasonable, discriminatory, and unfair." By his ruling he has established a schedule, fixing a basis of charges which are not prohibitive. The appeal to the secretary was under provisions of the Food Control Act still in effect, and was brought by the American Society of Equity.

⚜

The repeal of the "excess profits tax" advocated in high political circles just at this time, directs attention to taxation matters. It is understood in Washington that the House Ways and Means committee will take up a revision of tax and revenue laws as soon as Congress meets in December. While political leaders seem to agree that the excess profits tax should be repealed, it is interesting to note that wherever Grange action is taken and reported to the Washington office, the Granges are found to be almost unanimously opposed to such repeal. This is a subject which will receive careful attention at the coming session of The National Grange. It is urged that subordinate Granges make a careful study of the subject, analyzing the effect of the excess profits tax and the proposed substitutes, as applied to the business of the farm, and by resolutions and discussions formulate their opinions, and communicate them to the press, to State Masters, and to the Washington Representative. A. M. LOOMIS, Secretary.

Upstairs Downstairs and in

My LADY'S *Chamber*

STAIRCASES in which beauty is the first consideration, for the bedrooms built-in dressing tables that are a part of the house itself, mantels that carry out the architectural type of the house—these are items of Curtis Woodwork. Like the doors we build, and the china closets, the windows, the wall paneling, the cupboards, the bookcases, and all the interior woodwork which, built into a home, make it livable and lovable, they are all part of the Curtis plan to place beautiful homes within the reach of all who would build.

For over fifty years Curtis Woodwork has been known as good woodwork—honest craftsmanship. But we began to see our business as something more than a mill making a good product. We believed we could help America toward a happier type of architectural expression.

With the cooperation of Trowbridge and Ackerman, New York architects, we are able to offer home-builders portfolios of Better Built Homes, in four different architectural types—Colonial, English, Western, and Southern. Each portfolio contains illustrations of exteriors, interiors, and floor plans, with complete descriptions of 32 homes. These houses range from 3-room cottages to 8-room homes. Curtis Woodwork and built-in furniture for these homes was designed by the same architects that designed the houses, to insure harmony of expression.

The designs and sizes of Curtis Woodwork being standardized, the lowered cost of production has brought the price of beautiful woodwork lower than it has ever been before.

Curtis Woodwork is sold through lumber dealers. Curtis dealers have the complete catalog to show. They can obtain free for prospective builders our portfolios of "Better Built Homes." Specify whether you want Volume VI (32 homes of 3, 4, and 5 rooms); Volume VII (32 homes of 6, 7, and 8 rooms), or Volume VIII (32 houses suitable for farm use).

If there is no Curtis dealer in your town, send 25 cents with the coupon checked for the portfolio you want. (50 cents if in Canada.)

Pendroy, C-532
A charming 5-room house of Western expression, with the same plan as the Colonial house shown here.

Seed Importation Act

Previous to the enactment of the Seed Importation Act, the United States furnished a ready market for low grade forage plant seeds of such poor quality on account of the presence of weed seeds, dirt, chaff, and dead seeds that they were of no agricultural value.

While the present Act prevents this class of seeds being imported and sold in this country, no good seed is kept out, as the importer may reclean in bond seeds which do not comply with the Act when imported, the refuse and screenings being disposed of under direction of the Department of Agriculture.

While the greatest value of this legislation is that few lots of low grade seed are offered for entry, its practical importance has been particularly evident during the past season of high prices.

In the ten months prior to April 30, 1920, sixty-four and one-half million pounds of forage plant seeds, subject to the Seed Importation Act, were permitted entry into the United States. During the same period, four and one-half million pounds were prohibited entry, being either adulterated or unfit for seeding purposes within the meaning of the Seed Importation Act. Of these four and one-half million pounds prohibited entry, three million pounds were recleaned and later permitted entry, one-half million pounds destroyed or exported, and one million pounds are still undisposed of.—By E. B. BROWN, U. S. Department of Agriculture.

Iowa Holstein Calf Clubs

During the past year three new calf clubs have been organized in Iowa with pure-bred Holstein heifers. Early in June the Kossuth County Holstein Breeders' Association organized the first club. Twenty-four pure-bred heifers were distributed. The calves will be shown at the Kossuth County Fair this fall.

The second new club of the year was formed in Fayette County. A second club in this county has been organized with about sixteen heifers. These heifers, in addition to those in the first Fayette County Club, will be exhibited at the county fair. In Dyersville and Dubuque County thirteen Holstein heifers have been distributed in the club.

Iowa. J. P. EVES.

ESSEX MOTORS DETROIT USA

See How Essex Proved Economy

A Nation-Wide Demonstration No Motorist Can Overlook

Connecticut —With 12 cars over Mohawk Trail and Hoosick Mountains and 12 over a coast route—many owner driven—216 miles average distance per car, 18.7 miles per gallon were shown. One car with 35,000 miles service averaged 21.2 miles per gallon.

Nebraska—A Hastings, Neb., woman drove her Essex from Lincoln to Hastings, 109 miles, averaging 28 miles per gallon.

California—Four women drove from Los Angeles to San Francisco and return averaging 22.3 miles per gallon. A San Francisco Essex made the round trip, 846 miles, in 33 hours with 23 miles per gallon. Hood and radiator sealed.

San Antonio, Tex.—In a 166 mile run to Austin and return, Essex averaged 25.5 miles per gallon.

Sacramento, Calif. —Defeated 19 entries and took Tallac Cup for highest gasoline, oil and water mileage in Sacramento Dealers reliability run.

Baltimore, Md.—Essex sedan, on original tires with 15,000 miles service, traveled 221 miles over Maryland hills, averaging 23 miles per gallon.

Florida—On a measured gallon an Essex covered 23 miles and without change or adjustment of any kind showed speed of 68 miles per hour.

49 Cars Average 18.9 Miles Per Gallon—Records cover every kind of test at a speed of from 5 to 72 miles per hour.

Los Angeles, Calif.—To San Francisco over 828 mile route of steep grades and frequently far from water supplies Essex which had previously gone 28,000 miles and under U. S. Marine observation made trip sealed in high gear with sealed hood and sealed radiator. Average 22.8 miles per. gal. gasoline.

Also Broke World's Dirt Track Record—1261 Miles

Made at Dallas, Texas, by a Car That Had Already Gone 12,000 Miles

From the mere standpoint of gasoline mileage, Essex in its nation-wide tests showed a performance worthy of cars which possess that advantage as their principal quality.

Records were kept on 49 cars. They averaged 18.9 miles to the gallon.

But bear in mind this was not done by taking advantage of every device possible to increase gasoline mileage. Under conditions of that sort, Essex showed as high as 37 miles to the gallon. However men don't drive that way. How obviously unfair it would be, therefore, to offer such carefully economized fuel mileage tests as typical of all Essex cars.

In the Essex tests, conditions and performances adverse to gasoline economy obtained.

These cars were being driven at speeds from 5 to 72 miles per hour. They were reeling off thousands of miles over all sorts of roads in inter-city runs that set new time marks. They were making new hill-climb, acceleration and endurance records.

Many were owner cars—owner driven. Women piloted some.

Some of the Essex cars used had already traveled upwards of 30,000 to 35,000 miles.

So you must not view Essex economy merely by its gasoline consumption. You must also consider its endurance and reliability.

If there were nothing more striking about the Essex than its gasoline mileage, it would be a worthy subject of our advertising. But important and impressive as that fact is, does not its other qualities take first rank in your consideration?

Essex Motors, Detroit, U. S. A.

Is a Farm Water System a Good Investment?

(Continued from page 245)

as are necessary may be operated from one air chamber and with one air compressor. For instance, there may be a pump in the well or spring, another one in a stream or lake, and a third one in the cistern. There is also on the market a shallow water pneumatic pump which will work in as little as eight inches of water. This is an important factor when the supply is taken from a shallow spring or creek. Very little water is stored and consequently there is very little water to get warm or stale. The pump starts automatically when a faucet is opened and stops when the faucet is closed. The makers of these pumps claim that the operating cost is considerably lower than in other types and that there are practically no moving parts to wear out.

The Air Lift

The air lift is particularly adapted to deep wells where a comparatively large and constant supply of water is required. These conditions are not found on the majority of farms and consequently comparatively few air lifts are seen. With this apparatus the distance from the lowest water level to the bottom of the well should be at least as great as the vertical distance from the water level to the point of delivery. In operation, two pipes are lowered into a drilled well, the smaller one being the air pipe and the larger one the water pipe. The air pipe enters the water pipe as near the bottom as may be. The water pipe is open at its lower end so that the water level is the same inside as out. When air is admitted to the bottom of the water pipe it rises in the shape of bubbles, each bubble carrying a certain amount of water up with it. The air lift may be used in practically any kind of water and the presence of considerable sand or other foreign material will not affect its operation.

Water Suitable for Drinking Purposes

Pure water is a chemical compound of two gases, hydrogen and oxygen, in the proportions of two parts of hydrogen to one part of oxygen. Water is never found pure in nature, that is, there is always at least a trace of some element or elements in it. These foreign elements, compounds, or whatever they may be, may make the water more palatable than when it is absolutely pure or they may make it unfit for human consumption. For instance, distilled water, which is as nearly pure as we can make it, tastes "flat" just as food tastes "flat" when the seasoning is left out. If the water contains such things as calcium (lime), iron, salt, etc., in solution it is said to be "hard", "mineral", "salty", etc., and may or may not be fit to drink. Water may have a very offensive odor or taste or both and still be fit to drink or it may be perfectly odorless, tasteles, colorless, etc., and be very dangerous to health if taken internally.

Water falls from the clouds where it has been held in the form of vapor. It is to all intents and purposes distilled water and consequently pure. As it falls to the earth it gathers some impurities from the smoke and dust which are nearly always present in the air. The peculiar "flat" taste previously mentioned may be noted in rain water. If the water falls to the ground it is apt to come in contact with decayed organic matter and become polluted, as we call it. If it sinks into porous soil the chances are that the majority of the harmful ingredients such as germs, bacteria, etc., will be rubbed off by contact with the soil, that is, the water is filtered. If the earth formation happens to be mostly of rock such as limestone, for instance, there may be and generally are cracks or fissures which will allow the water to flow for long distances under ground without being filtered. The result is that water at any one place may have entered the earth's crust at some point miles away and that point may be near a slaughter house, barnyard, swamp, or even a place where human waste material has been dumped.

Since we cannot trace the course of water underground we can never be absolutely sure that any particular water is wholesome but we do have every reason to believe that unless we take certain precautions the water is very apt to be unwholesome. Some of these precautions are as follows:

Do not drink water from lakes or streams unless you know beyond doubt that it is fit to drink.

Do not drink water from shallow wells if there is any other available. Such water is very apt to be surface water and as such it is very apt to be contaminated.

If you are using water from a dug well see that the well has a good tight concrete cover, one that will keep out filth and vermin of all kinds.

Don't think that water is good because it is cold, clear, and sparkling for it may be loaded with typhoid or other disease germs.

Water may be slightly muddy, alkaline, or mineral and still be fit to drink.

Don't locate your well in such a way that rain water will drain toward it from the barnyard or outbuildings.

Remember that, generally speaking, the best water is that which has traveled the longest distance through the filtering material. Such water is most often found in the sand or gravel which lies below a stratum of rock or clay.

If there is any doubt about the purity of your drinking water have an analysis made of it. The state board of health is prepared to make such an analysis at a purely nominal cost. Until such doubt is removed all drinking water should be boiled.

To emphasize the importance of a tight well or spring cover let it be stated here that practically all of the cases of well water pollution that have been investigated have been found to be due to foreign matter getting into the well or spring from the top.

Do not believe the milking machine agent who says his machine only needs to be cleaned twice a week. Every milking machine to be sanitary must be washed each day. This does not take long, and there is no more reason for not washing your milking machine than there is your milk pails or strainer.—F. C. M. P. A. Bulletin.

Copyright 1926, by The Goodyear Tire & Rubber Co

"The use of a truck on Goodyear Cord Tires has increased my land value by bringing my farm closer to town. Power machines, assisted by this pneumatic-tired truck, offset my labor shortage. The Goodyear Cords on my truck have traveled about 10,000 miles to date. Solids can't go into the soft fields; pneumatics go through easily —haul 450 crates to 40 by team. Hard to sell a second-hand truck on solids here."—Glenmore Green, Farmer, Fort Valley, Georgia

EXTENSIVE rural experience, like that related above, has confirmed the tendency of farm land prices to increase when Goodyear Cord Tires are used to cover long or difficult hauling routes.

Fertile acreages, ten to twenty-five miles from the nearest town, have become more profitable and hence more saleable due to improved transportation on these able and rugged pneumatics.

What formerly was a tedious and jarring haul by either team or motor truck, has become a brisk, smooth trip due to the grip, cushioning and spryness of the big Goodyear Cord Tires.

These virtues frequently enable short cuts to market, bring more markets within easy-hauling range and pave the way for the safe, punctual transit of perishables and shrinkables.

The huge strength of Goodyear Cord construction, developed with the manufacturing care that protects our good name, makes possible the utmost utility and economy of this type of pneumatic tire.

Detailed information, concerning the manifold advantages of pneumatic-tired trucks and general farm motorization, will be sent on request by The Goodyear Tire & Rubber Company, Akron, Ohio, or Los Angeles, California.

CORD TIRES

Care and Use of Milking Machines

E. M. L. BLANCHER, NEW YORK

MANY dairymen are finding it advisable or necessary to install milking machines, as farm labor is so difficult to secure. There are now several satisfactory types of machines to be had. The kind chosen will depend somewhat on the individual needs of the dairyman.

The New York State Experiment Station at Geneva has made an exhaustive test of various machines and has published a bulletin on the details of the care and use of various machines. The experts doing this work have worked with many dairymen who use the machines and who are working for low count bacteria tests in their milk.

They find that one man will trip on one detail of care of the machine, while another will stumble on some other detail. When users find the particular points they must pay attention to with their own machine it is possible to get as big bonuses for low count bacteria tests as hand milking will produce, or very nearly.

The farmer who expects to get good results from the use of the machines must arrange to have a plentiful and handy supply of water, both cold and hot. This may, of course, be brought from the house. But it will be much more businesslike and satisfactory if a sterilizing outfit with boiler is arranged in a milk house near the barn. This will be practically necessary if low count bacteria tests are desired. Some purchasers of such milk place a sterilizing plant on the farm free if used at least three to six months. But for the smaller dairy, where the owner has to furnish all equipment, there are several simple heaters or boilers, which the state experiment station will advise as to home construction and operation. One can be arranged at little expense to the owner.

It is essential that each unit of any type of machine be flushed out thoroughly at once after its use on the last cow and before the engine is shut down, drawing at least a pail of cold water through each unit and its tubes. This applies to each and every milking. Some careful users find it advisable to also use a pailful of comfortably hot water after the cold water each milking.

The tubes and teat cups are then immersed in a sterilizing solution in a big stone jar until time to use again, when each unit is to be flushed out again with cold water before using.

But every third day, or oftener if it seems necessary, a thorough washing with hot, soapy water will be necessary. For this operation three big pails of water will be necessary to be renewed a few times if there are a number of units. The first should be cold, the second as hot as the hand can bear, with a liberal amount of a good soapy powder, and the third a little hotter, but not boiling, nor so hot as to injure the rubber.

This operation is necessary because even the best types of machines have joints and the inner surfaces have pores which are bound to fill with grease which hot, soapy water, frequently applied, will remove. An important principle in cleaning all milk utensils is that the first cleaning be done with cold water to remove all loose milk which heat would coagulate and fix firmly to the surfaces. Bacteria thrive in grease, in moist places, and warmth greatly assists in their growth. Therefore, cleanliness and dryness are desirable.

Before immersing the teat cups and tubes in the solution between milkings and before the washing operation, all outside loose material, like straw, manure, or other dirt should be removed. This material will spoil the strength of most of the sterilizing solutions used for soaking the tubes between milkings, and surely we want none in wash water to be drawn into tubes.

Put the teat cups in the pail of cold water first and let the machine draw this through into the pail; then with the hot, soapy water, drawing that all through and then in the hot, clear water. Empty the metal receiving pail each time, rinsing this around with a brush, or this may be scalded by itself later. It should always be turned bottom side up on a rack, not on a plain surface which would exclude the air, as it must drain and dry. The head or pail top is to be cleansed with a brush, scalded, and at once tipped over a rack to drain and dry, as thorough drying kills bacteria. The same treatment should be applied to all cans which come from the station.

Clean all the units in like manner. Then put the rubber parts into a sterilizing solution where bacteria will not develop. If you have clean running water not above 58 degrees Fahrenheit the tubes may be attached to taps and the cold water allowed to run through them instead of immersing them in a solution. Many dairymen use this method through cold weather and then adopt the solution in May, as the weather and the water warm up. Keep the tubes on the tap until the next milking, letting the waste water run into a receiver for use in watering stock, etc. This is really the simplest way, as no flushing is necessary before using.

When running the second and third pails of hot water through the machine souse the tubes and units up and down so as to allow both air and water to surge through the tubes. The contractions and expansions caused by this will aid in releasing the milk, grease, and bacteria from the small pores in the rubber.

If a solution is used a big stone crock, at least a 25-gallon size, is necessary. A smaller container will double the tubes up too sharply and all the air will not be forced out and replaced by solution, thus encouraging bacterial growth. This one item, if disregarded, can cause a lot of trouble.

If the pulsater type is used it is well to remove the stop cocks so that the milk passages in the pail top can dry, being careful not to get water on the piston springs, or in the air passages. In the pipe line type of machine, the suction trap should be cleaned frequently, also the stanchion hose occasionally, say once in from a week to three weeks. Good milk can perhaps be produced for a time if this is omitted, but no bonuses. And in time serious trouble will result, as a green slime accumulates in the trap.

The teat cups and tubes should be cleaned thoroughly with a brush and hot, soapy water once a week. It is better when the joints are separated for this cleaning to polish and dry the metal parts. These joints should be cleaned often enough so that there is no noticeable deposits in them. After this cleaning, all air lines and passages must be dried before putting together, in the inflation type of machine. In other types rubber parts may be soaked for a time in a strong sterilizing solution, before assembling.

If care is used and washings are thorough and frequent a simple salt solution is often satisfactory, strong enough so that salt is always to be seen in crystals in the bottom of the jar. A strong hypochlorite solution may be used, using only good choride of lime to make it. The package must not be oozing moisture, inside or out, nor should it be lumpy or caked, as such old goods are worthless. In opening chloride of lime always tilt the can away from the face and body to prevent injury in case there is an explosion or burst of gas.

The stock solution of hypochlorite is made of a 12-oz. can of good chloride of lime dissolved in a gallon crock of water. First rub the lime to a paste with a little water and gradually add more and stir well. Then a pint of this clear solution (don't use the sediment in the bottom) to 25 gallons of the strong brine solution mentioned, added every week or every two weeks, in cool weather, twice a week in warm weather, will greatly increase its efficiency.

This solution can be used as long as it keeps fresh and sweet, a few days or many weeks, depending on the care of the user in keeping things clean.

There are reasons for all the procedures mentioned, as the experiment station has proven, and it is better to be careful and thorough than to lose many dollars in rejected milk.

FOUR OF THE FIVE SIRES PURCHASED FOR USE IN THE JERSEY BULL ASSOCIATION OF DEARBORN COUNTY, INDIANA

All are grandsons of the gold medal sire, Spermfield Owl, and were secured from Moose Hill Farm, Massachusetts. Spermfield Owl's Temisia, whose record is 15,000 lbs. milk, 875 lbs. fat, is grandam of two and great grandam of two. The average production of the three dams whose records are completed is over 500 lbs. fat.

These four bulls, with a fifth similarly bred, will be used on a total of 257 cows owned among 60 members of the association. By interchanging sires each two years it is hoped that uniform high producing Jersey herds may be built up in the community.

Tying Corn Shocks

HOARD'S DAIRYMAN:—The handling of corn shocks seems like a commonplace thing to talk about but the number of them that one sees going down after a few weeks is pretty big on our farms. I am unable to make a satisfactory shock myself always but I do not have much of this work to do. Today I worked with a farmer who has from 40 to 60 acres to cut and shock each year and I am going to tell you just how he goes at the job.

This is for fodder cut with a corn binder and tied in bundles of course. He takes three bundles and stands them in the shape of a tripod. Two handfuls of stalk tops from one bundle in the tripod are put around the top of the other two and tied. That makes the horse or saddle for the rest of the shock. Then a layer of bundles is put up fairly straight and solid around this tripod. Then this is tied with a stalk. Then the shock is finished and tied with binder twine for the winter keeping.

When tying, this farmer takes a half inch rope about 20 feet long and with two men each goes on opposite sides of a shock, crosses the rope and then pulls up tight. This is where many of us have quit but then the two cross the rope again and go back to the first side and pull the top tighter than ever. It is easy to do with a double hold. Then the shock is tied by one while the other holds the rope. A ball of twine is sometimes tied to the shocker's belt with a string and then there is no looking for the twine ball.

Tie close to the top and tie tight. Then if the shocks are to stand long go around the field a few weeks later and cut the strings and tie again. There is slack to use after this time and no string is carried at all.

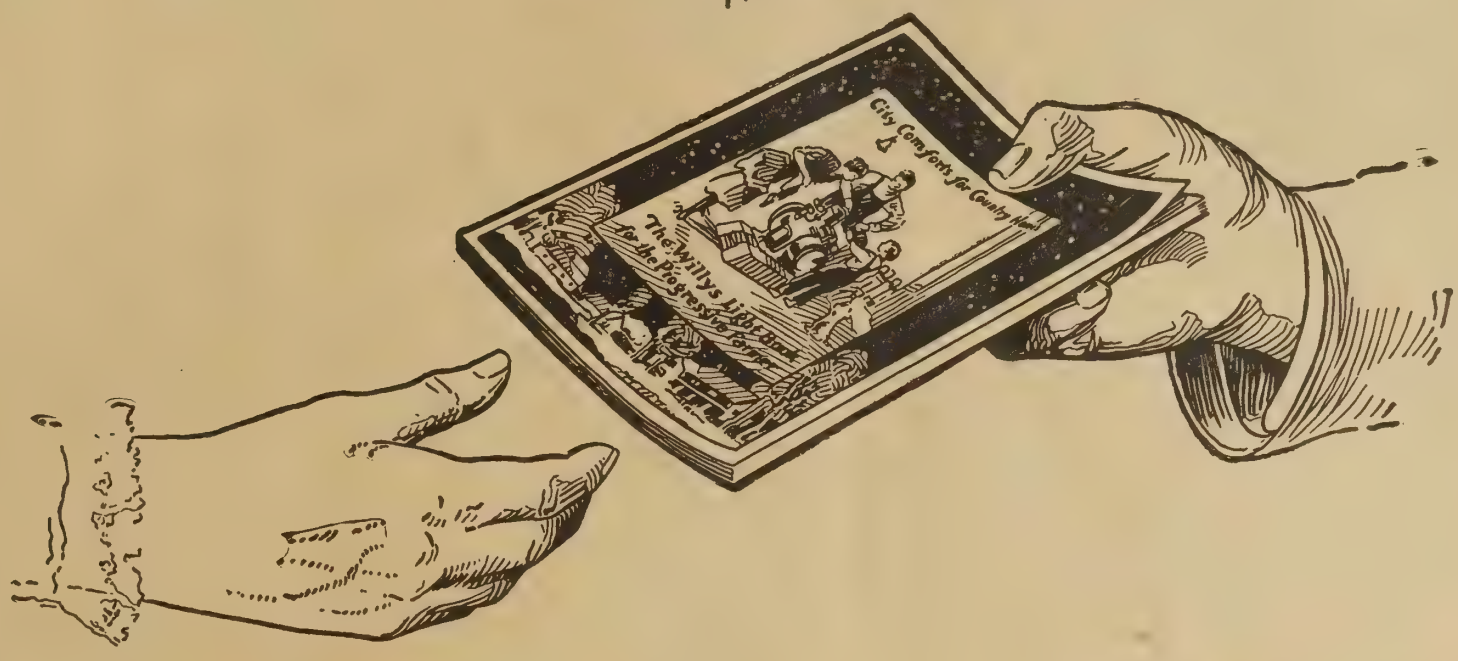
Ohio. EARL ROGERS.

Confidence

What can defeat a strong man who believes in himself and cannot be ridiculed, talked down, or written down?

Self-reliance is the best capital in the world.

Self-depreciation is a crime.



If others can do such wonderful things, why can't I?

He can who thinks he can.

—ORISON SWETT MARDEN.

Willys LIGHT

Power and Light
with the Quiet Knight★

This Book of Farm Wonders FREE

YOU will sit and read it with rapt attention to the very last page, so interesting to farmers and their wives is the story between its covers.

Its thrilling contents provide but a short half hour's reading. Within that brief space, however, there will be born to you a new idea of home comfort and relief from work, such as you little dreamed of.

As you read you can see the vision of a new home filled with all the comforts and conveniences of a modern city dwelling; a wife made happier by relief from toil, boys and girls content to remain on the farm.

More than a vision, this actual condition can be yours, as this book explains. You can have this same better home, happier wife and more contented family. These are the things you have earned and deserve. And the book tells you how to get them.

Cow-Proof!

THE craftiest old cow in your herd can't work this combination — two latches that must be squeezed at once, like the handles of a pair of pliers. It's easy for a human hand, but absolutely proof against horns. That's just one outstanding feature of this new

PORTER

"Dependable Since Sixty-Eight"

steel stanchion, Fig. 15—a swinging single-chain-hung stanchion that holds the cow safely but gives her all the freedom and comfort of the open field.

¶ It has no sharp edges or square corners to chafe or injure the cow; no cracks or recesses to become clogged with soured feed; made of smooth tubular steel, with all joints closely fitted.

¶ You'll find it a pleasure to work in a barn equipped with Porter Stanchions. The ease and speed with which the cows can be tied and released will soon save the cost of the stanchions. You can snap them shut as rapidly as you can walk down the stall row, and open them nearly as fast.

¶ ***There's a Porter dealer near you who sells Porter products because he believes in them. Let us tell you his name and send you the Porter Catalog.***

J. E. Porter Corporation

Separator Loses $2.20 Per Day

C. P. Chrysler, tester in the Leon Valley testing association in Wisconsin gives the following clear illustration of the heavy losses which may be sustained through inefficient separating.

Last spring one dairyman who rents his farm said he was disappointed at the showing made by his herd at the local creamery where the butterfat average was 170 lbs. per cow per year. He was satisfied there was something wrong and suggested that the man that tests cows stop there on his next trip. This I did as soon as I was assured of a year's membership.

After milking the first evening a visit to the milk room revealed an improperly placed pulley and a speed test showed the separator making 36 revolutions per minute where the requirement was 48.

Believing that the skimmilk bottle would not be equal to its task the following morning the charge was drawn in a regular 10 per cent bottle which after the last whirl the dividers struck off at .9 of one per cent, a loss of $2.20 per day on a herd of 26 cows. The renter said the separator was run with the same pulleys the previous year and no doubt the total loss of butterfat on this farm has amounted to over $400 per annum.

A total of 15 leaky separators have been found during the ten months since October 1. The tests of these machines ranged from .06 to 2.2 per cent. Of course in a case like the latter instance, it was very plain that this particular machine was doing inefficient service from the presence of cream on the skimmilk. But because the owner could not locate the trouble he continued using it for several days until the tester came.

In another instance some foreign matter lodged in the cream screw partly obstructing the flow of cream. The owner remarked that he was not getting as much cream as usual but continued separating. A sample of the skimmilk this time showed that the owner had paid $2.65 in one day for neglecting to clean the separator that morning.

The most common causes of inefficient separators are:

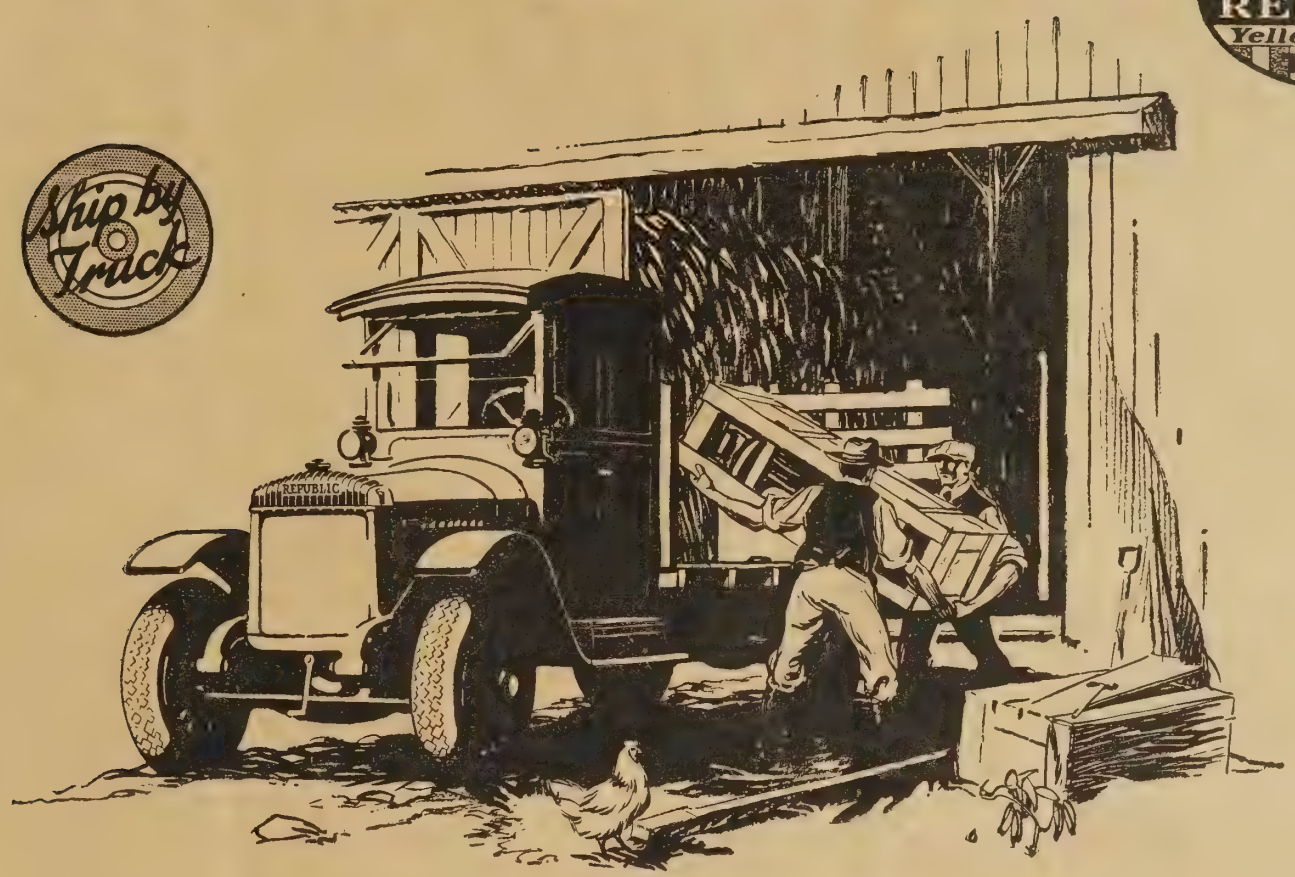
1. Worn or cracked discs. 2. Wobbling bowls. 3. Low speed. 4. Parts unsoldered. 5. Dirty machines.

Southwest Jersey Cattle Breeders' Association Appoints Fieldman

Indications of increased activity on the part of the Southwest Jersey Cattle Breeders' Association is shown through the appointment of Mr. F. W. Atkeson as fieldman for that association. The new fieldman, who also assumes the duties of Secretary and Treasurer of the Association, is a real live-wire booster, whose enthusiasm for the Jersey knows no bounds.

Mr. Atkeson gained considerable of his Jersey experience in working with several of Missouri's leading herds. He also spent some of his time with herds in Wisconsin. He studied at the University of Missouri and graduated from there in 1918. Following his graduation he accepted a position as instructor in dairy husbandry at the Kansas State Agricultural College, where he had charge of all official testing in the state.

It was while connected with the Kansas Agricultural College that he was elected as Secretary of the Kansas Jersey Cattle Club, and it was largely through his efforts that that club has been so successful during the past year. The Kansas Club was one of the first of the local Jersey associations to publish a monthly bulletin. Mr. Atkeson was the editor of this publication, and he now intends issuing a similar bulletin through his new position as fieldman.



Mr. Atkeson is now located at Kansas City, Missouri, where he maintains an office at Twenty-third and Washington streets.—AMERICAN JERSEY CATTLE CLUB.

F. W. ATKESON

REPUBLIC TRUCKS

Republic owners have distinct advantages in performance and service. The first is assured by dependable, standardized construction. The second is made positive by the maintenance of two thousand fully equipped Service Stations and seven National Parts Depots. Superior performance and superior service, combined, give Republic Trucks undisputed leadership throughout the World.

Lowe's

Before husking do that painting

By *that* painting, we mean any painting *that* needs to be done.

When it gets to be this time of year most of us kind of like to put off things until next Spring. If you do that with your painting, it's going to cost you more to paint, just as sure as corn grows on a cob. Cost more, because you will have to use *more* paint; and because paint itself may then be costing more.

If you can't get the time this Fall to do your painting, then be wise enough to buy the paint at once, that you will need for next Spring.

And while you are thinking of paint, drop us a postal for a valuable piece of advice called—"Figure Your Paint Costs with a Brush—Not a Pencil." It will show you how to save money on both your paint and your painting.

Remember that Lowe Brothers' Barn Paint is always sold by the one best dealer in each town.

Association Notes

Porter County, Indiana:—A few of the farmers are feeding silage and grain and their herds have shown an increase in production. Preparations for fairs are under way. Feed prices in July were: Ground corn, $56 per ton; bran, $60; corn and cob meal, $50; ground oats, $42; cottonseed meal, $78; oil meal, $82; alfalfa hay, $32; clover hay, $32; corn silage, $8; Unicorn, $68; gluten, $72. Milk sold for $3.20 per cwt. Sour cream sold for 53c and sweet cream for 70c.

Nelson County, Kentucky:—July was the first month for this association and consequently not much could be done during that time. The work showed, however, that the dairymen in this county are very anxious to make good progress. Milk production has been somewhat curtailed of late, owing to the dried pastures and the high prices of feeds. Bran, hominy meal, and cottonseed meal have been selling for $74 to $80 per ton.

Scandinavia, Wisconsin:—S. A. Simonson owns the high herd for the year ending July 31, 1920. This herd averaged 8,947 lbs. milk containing 334.6 lbs. butterfat. The profit above feed cost was $127.46. K. B. Knutson & Son own the second highest herd with an average production of 6,271 lbs. milk containing 321.9 lbs. fat and a profit above feed cost of $134.09. The next three herds were those of L. O. Berg, O. L. Bestul, and O. A. Twetan, producing an average of 314.4 lbs., 307.9 lbs., and 301.6 lbs. fat respectively. The high cow for the year was a pure-bred Guernsey owned by Carl T. Knutson, which produced 456.9 lbs. butterfat in 7,660 lbs. milk.

Empire, Wisconsin:—Present price of butterfat prohibits economical feeding of grain. Silage and alfalfa hay are being used, however, with profit. Several cows were sold to the butcher and more pure-breds purchased. There is only one grade bull in the association and we are "after his hide". The condensery paid 75c per pound for fat, the creamery paid 65c, and the cheese factory 58c. Milk retails for 12 to 17c per quart, butter for 60c per pound, and cheese for 22c per pound. Bran is rated at $60 per ton; middlings, $65; oil meal, $90; corn meal, $80.

West Bend, Wisconsin:—One barn was equipped with new iron stanchions in July. Several members have opened their silos again on account of shortage of pasture. One member ensiled green alfalfa and dry cornstalks early in the spring and is finding it of profit to him now. July market milk sold for $2.80 per cwt. The creamery paid 68c per pound for fat, and the cheese factory paid 62c. Milk retails for 12c per quart and cheese for 24c per pound. Pasture is rated at $3.50; clover hay, $35 per ton; alfalfa, $40; silage, $7.

Racine and Kenosha, Wisconsin:—Of the 29 members in the association, 21 are using pure-bred sires, 18 are using milking machines, and there are 32 silos. Owing to flies and short pasture the cows are not producing well at present, but members are confident of an increase in production very soon. Milk testing 3.5% sells for $3.30 per cwt. and 4c per point above. Feed prices are: Bran, $58 per ton; oil meal, $68; Unicorn, $82; ground oats, $66; mixed clover, $28; alfalfa, $32.

West Branch, Pennsylvania:—The members of this association are becoming interested in scientific feeding and are planning to buy several carloads of high protein feeds so as to make up their own balanced rations and feed according to production. Better quarters are also being considered. One of the members recently fitted out his entire barn with modern stable equipment. The Accredited Herd plan for the eradication of tuberculosis is also being discussed.

Rome, Pennsylvania:—July market milk testing 3% sold for $2.95 per cwt. The creamery paid 56½c per pound for fat. Milk retails for 10c per quart and butter for 60c per pound. Hay is bought for $20 per ton; soiling crop and silage, $6; corn stover, $8; pasture, $3 per cow per month; corn meal, $4.10 per cwt.; gluten, $3.75; cottonseed meal, $4.15; linseed meal, $3.95; wheat bran, $3.25.

Bourbon County, Kansas:—In the 27 herds tested in this association, 22 use registered bulls. Five members are using high grade Holstein bulls, but are replacing with pure-breds. In July, market milk testing 3.5% to 4% sold for $2.80 per cwt. The condensery paid 80c per pound for fat and the creamery paid 55c per pound. Milk retails for 15c per quart, butter for 50c per pound, and cheese for 40c per pound. Feed prices are: Alfalfa, $30 per ton; bran, $2.50 per cwt.; corn chop, $3.50; oil meal, $5; cottonseed meal, $4; oats, $2.

Monadnock, New Hampshire:—During July 28 cows from five herds were on semi-official tests. Three profitable

and three unprofitable cows were sold. The 103 cows tested averaged 652 lbs. milk containing 31.8 lbs. fat, a product worth $34.10 from a total feed cost of $6.06, leaving a profit of $28.04 per head above feed cost for the month. It cost on an average of 93c per cwt. to produce milk, 19c per pound to make butterfat, with $5.63 return for each dollar expended for feed. Feed prices are: Bran, $66 per ton; gluten feed, $80; cottonseed meal, $78; oil meal, $77; ground oats, $82; corn meal, $73; brown middlings, $72; Stock Feed, $78; Larro feed, $84; hay, $25.

Whitewater, Wisconsin:—Milk testing 3.5% sold for $3.20 per cwt. in July, 4c being paid for each point above. The condensery paid 91c per pound for fat and the creamery paid 80c. Milk retails for 14c per quart, butter for 65c per pound, and cheese for 30c per pound. Hay sold at $36 per ton; bran, $45; oil meal, $66; corn and cob meal, $55; gluten, $67.

Arkansas Valley, Colorado:—A milking machine has been installed at the Lingle and Maxwell Ranch at McClave. There are a number of silos being built. One member sold his herd at $132 per head. Another member has purchased ten head of good milk stock. There are a number of men who are desirous of putting herds on their farms if they can get good men to take charge. A dairy breeders' organization was formed July 26th. The creamery paid $3.05 per cwt. for milk. Alfalfa is rated at $15 per ton; silage, $8; bran, $2.10 per cwt.; cottonseed meal, $3.25; shorts, $2.60; oats, $2.15; barley, $1.85; maize, $1.95.

Douglas County, Colorado:—Six unprofitable cows were sold in July. Eighteen pure-bred Shorthorns were purchased and six Shorthorn cows were sold. The creamery paid 75c to 85c per pound for fat and milk retailed for 10c to 13c per quart. Feeds are rated as follows: Alfalfa, $18 to $25 per ton; bran, $2.75 to $3.30 per cwt.; cottonseed meal, $4.85 to $6; linseed meal, $4.85 to $6; oats, $4 to $4.40; barley, $4.20 to $4.65; chop, $4.

Tri-County, Iowa:—With the exception of a few herds that were fed silage during hot weather, the cows of this association averaged a 50% decrease in milk production. The best herd average was that of the herd of Wm. Edwards, 23.4 lbs. milk daily, with an average test of 4.34% fat per head. These cows received 20 lbs. silage, 3 lbs. Schumacher, and 1 lb. oil meal daily besides pasturage.

Wood County No. 2, Wisconsin:—The production of milk has shown quite a decided decrease, but the average test is somewhat higher than last month. Several unprofitable cows have been disposed of and some good cows and heifers have changed hands within the association, as well as a few pure-bred sires. Very desirable prices have been obtained on the principal concentrates, and it is the plan of this association to hold a picnic in connection with the McMillan—Marshfield Association for the purpose of ordering feed, as well as having an appropriate program.

Coquille—Myrtle Point, Oregon:—Five unprofitable cows were discarded. The Jersey Breeders' Association held an auction sale. Dairymen of this section received 52c for sweet cream. Twenty-five cows produced over 55 lbs. of butterfat during June.

Nestucca, Oregon:—Ten unprofitable cows were sold for beef. Four cows were purchased. Dairymen of this section received 67 to 70c per pound from the cheese factory for butterfat. Local feed prices are: millrun, $65 per ton; barley, $100; oil meal, $105. Twenty-nine cows produced over 55 lbs. of butterfat during June.

Smith—Umpqua, Oregon:—Twenty-two cows produced over 60 lbs. of fat during June, and 24 heifers in 14 different herds produced over 35 lbs. fat in the same month. During May the dairymen received 57c per pound for fat from the creamery.

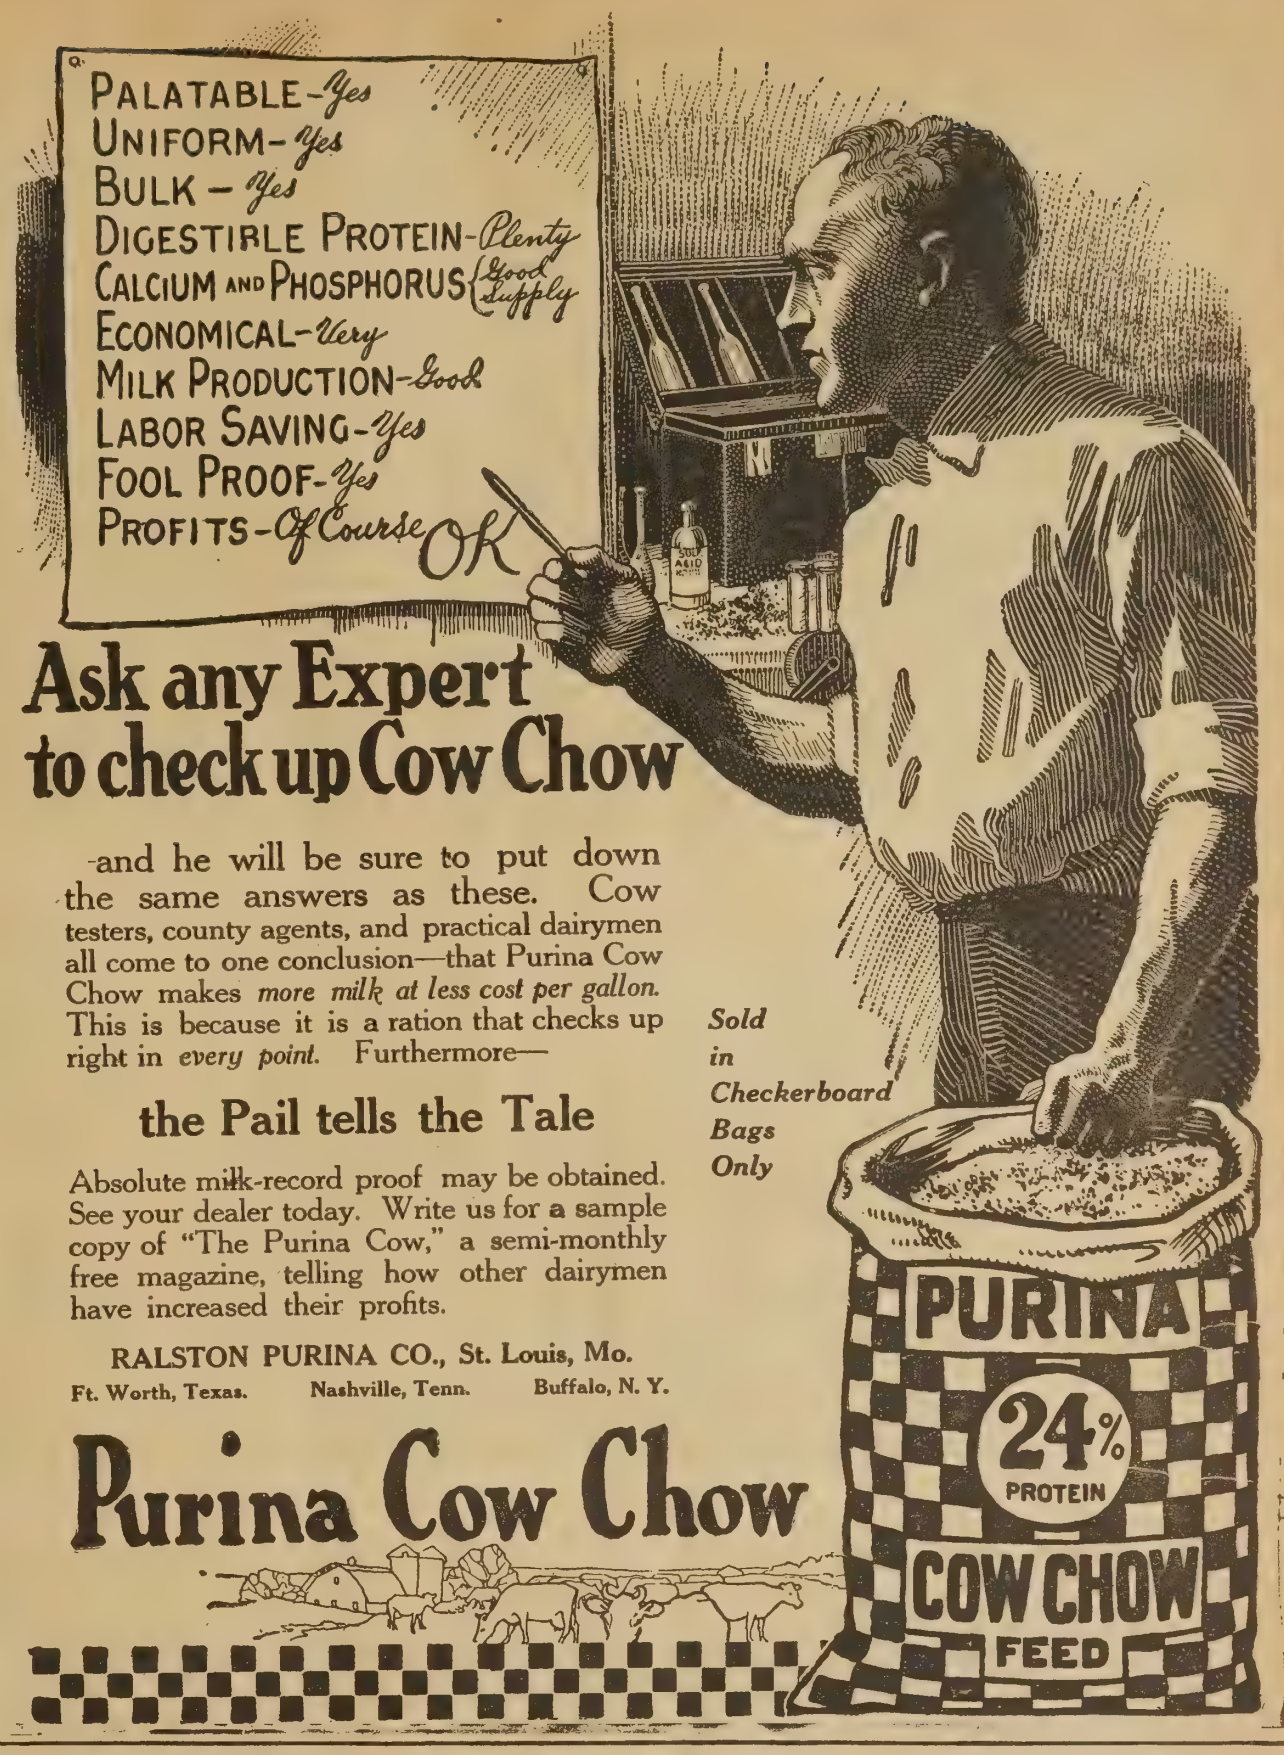
Rogue River, Oregon:—Local feed prices are: Oats, $74.50 per ton; millrun, $55; barley, $77.60; cocoanut meal, $64. Dairymen received $3.60 per cwt. for milk and 56 to 58c for sweet cream and 51 to 53c for sour cream during June.

Coos Bay, Oregon:—The cheese factory paid 64c per pound for fat, and city trade paid 70c per pound for fat and 15c each per cwt. milk. Milk sold in lumber camp for 32c per gallon. Sweet cream sold for 54c. Feed prices are: Pasture, $2 for tillable land; untillable and hill, $1; green feed, 1½c per pound. Twenty-five cows produced over 55 lbs. fat during June.

Brandon, Oregon:—Nineteen cows were sold for beef during June. Two pure-bred Guernsey heifers have arrived from the Isle of Guernsey. Two fine pure-bred Jerseys have also been purchased. There are now 38 farmers being benefited by this association. Dairymen of this section received $3 per cwt. for milk, the required test being 4% and 5c being paid for each point over. The condensery paid $3 per cwt. for butterfat in milk. The creamery paid 51 to 54c per pound for fat. Nineteen cows produced over 60 lbs. fat.

Coquille—Myrtle Point No. 2, Oregon:—Several unprofitable cows were sold in June. Two separators were found defective in skimming. A number of registered Jerseys, heifers and cows, were bought by the members of this association during the month. Twenty-eight cows produced over 60 lbs. butterfat.

Sauk County Jersey Meeting



The Sauk County (Wisconsin) Jersey Breeders' Association set a new record for getting together when it held its third annual picnic Tuesday, August 3, on the farm of its secretary, Dr. W. L. Bible. The excellent herd of Dr. Bible was inspected by the party. The members of the association together with their families and neighbors declared it a holiday and improved the opportunity to renew acquaintance and further the interest of the Jersey breed. The attendance was near 600.

The meeting was called to order by President Ed. A. McGilvia, who called upon Hon. W. L. Houser, president of the Wisconsin Live Stock Breeders' Association, to speak on the live stock interests of Wisconsin. He dealt particularly with the importance of making farm life attractive to the younger folks, thereby keeping them interested to the degree that the allurement of the city will not rob the farm of the excellent boys and girls who are so vitally needed in this important work. The speaker emphasized the fact that no better medium for this offered itself than that of organized clubs. The next number was an address by W. H. Clark, who spoke on the Jersey interests of Wisconsin and dealt with the feeding and breeding and care of Jerseys.

Junior Stock Exposition

"Boys and girls who stick to the farms are going to have their inning. Some of the biggest factors in promoting the live stock industry of the state are the endeavors which are being made to interest boys and girls in farming, to teach them the dignity, the importance, the opportunities, and the methods of agriculture." In this way Walter L. Houser, president of the Wisconsin Live Stock Breeders' Association, expresses the spirit of live stock interests of the state that are lining up behind the Junior Live Stock Exposition to be held October 18-22 at Madison. Backed by a committee composed of representatives of state and national breed associations, this year's exposition promises to overshadow last year's show, the standards of which are indicated by the fact that the grand champion at the exposition stood second only to the grand champion at the International Stock Show in Chicago.

More than $4,000 in prizes will be awarded in addition to a number of special awards which are being offered by farmer organizations, commercial enterprises, and other groups and individuals. Five classes of live stock, including baby beeves, dairy calves, colts, pigs, and lambs fed and fitted by Wisconsin boys and girls between the ages of 10 and 18 will be judged by stock men of state wide reputation.

Junior Letters

Hoard's Dairyman Juniors:—Hello! I suppose you don't think I am a junior any more but you bet I am. My brother and I are renting a farm on shares. We raise corn and barley and oats. We each have a bicycle. I paid $22 for mine and my brother paid $30 for his. One evening my overall caught in the chain and I tipped on the hard road. The bicyle fell on top of me and the seat struck me right on my hip. I could hardly walk for a day.

I graduated from the eighth grade this year and we had graduation exercises at the county court house, where they had moving pictures.

I wish some of the juniors would write to me. I will be only too glad to answer any letters I receive. My address is R. 1, Hayward, Minn. James G. Hansen.

Hoard's Dairyman Juniors:—I have Single Comb Brown Leghorn chickens. There are 16 roosters and 19 pullets. We have 17 head of cattle and 3 horses. I feed my chickens sour milk in the morning and cracked corn and wheat with it. And then corn and wheat for dinner and supper and quite often try bran mash. My mother lets all of her chickens have dry bran mash all the time. They have free access to it but she doesn't feed much whole grain. We are making hay at present. The crops in this locality are looking very good considering the late spring. Winter grains are already cut; some folks have stacked theirs, some are even threshing.

Reedsburg, Wis. Marguerite E. Hahn.

Hoard's Dairyman Juniors:—Hello, juniors. I am a new member. I have been wanting to be a junior. I hope this letter will not reach Mr. Wastebasket.

Last year I had a pig given to me by my father. My two brothers joined a corn club so my father said he would give me the pig. When it was born it was a very small pig. At first father thought he would kill it. But it thrived good and so it was given to me. It was fed ground barley and whey. When it was time to be sold it weighed 153 pounds. The money received for it was $29.45. But I agreed to give my father the $4.45 for the feed so that left me $25 and I had helped my neighbors make hay and there I received one dollar and I bought six War Savings Stamps with it. All together I have eleven War Saving Stamps.

Wisconsin. Theodore Lehmann, Jr.

Hoard's Dairyman Juniors:—My pure-bred heifer is fine. She is of the Walker family. Is bred to our herd sire who is of the Ormsby family and expect to get a good calf.

We have moved from where we used to live. We have a four-year lease on the corrals and barns of an old dairy place. It is fallen down pretty much and we have had to build up a lot. We have no silo but are going to build one pretty soon. We could not do without one with our test cows.

I have 22 rabbits now. We certainly have had some good Sunday dinners off of them. One doe got loose when 6 weeks old and ran wild 6 months. She is now the biggest and best doe I have. I feed concentrates in the morning, bread and milk to the young ones, carrots or something to the others at noon, and good alfalfa hay at night. I have not had very good luck. I have lost 14 in two years.

We have a pure-bred heifer which we were offered $1,500 for but refused. She is 10 months old. She weighs about 825 lbs. We are going to show her at the fairs.

I would like to know how much the average bull calf averages at 5 or 6 months in weight. We have two at 5 and 6 months old that weigh 625 lbs. each.

I will close with good luck to the juniors.
California. Cecil Stalder.

Hoard's Dairyman Juniors:—I live on a farm of 80 acres. We have two horses, eight head of cattle, five cows, two calves, and one bull, all registered. We have about 100 buff Leghorn hens and about 45 chickens. We had bad luck this year, as the rats have got a good many. I have 20 chickens myself. I am very proud of them. There is to be a plowing match to be held tomorrow. Also a tractor demonstration of all kinds of tractors. There have been several severe storms lately. I wish some of the juniors would write me. My address is Oakland City, Ind. Charles Farmer.

Hoard's Dairyman Juniors:—I have been trying my luck raising chickens. I started with 50 eggs this spring. They were from full blooded Regal White Wyandottes. I only hatched 29 chicks but some died in the shell and some eggs got broke. I fed them a prepared chick feed until they were about 5 or 6 weeks old; then I fed them a home-made mash in the morning and scratch grains at noon and night. They had free range. I just lost 4, two of which died with the gaps and one was missing and the other was snapped by our dog. I am going to sell my cockerels and keep my pullets. I also have some rabbits. My doe has 8 young ones which are about 7 weeks old. They are weaned now. I am expecting another litter soon.

We have one dog; his name is Buster.

If any juniors want to write me my address is R. 2, Equality, Ill.
Robert Blackman.

Hoard's Dairyman Juniors:—We live on a farm of 157 acres and have eight horses, eleven cows, and two calves. We have 20 hogs and pigs. One sow and one shoat are mine and my brothers and sisters. They are Durocs. I had some Ancona chickens but a weasel killed them all one night.

I also have a truck patch with corn, potatoes, peanuts, onions, sweet potatoes, beans, and cabbage and melons. We have about twenty-five acres of hay which is partly made, 34 acres of corn, and 24 acres of oats. We cut the wheat that was on the place but it wasn't much good.

I milk two cows and like to milk. Our cows' names are Brindle, Guernsey, Nig, White, Boss, Bess, Polly, Kate, Black, Pink, and Nancy. Our horses are Tops, which is 25 years old, Molly, Nannie, Bell, Minn, Nell, Prince and May.

My address is R. 1, Smithville, Ohio.
Leslie Switzer.

Hoard's Dairyman Juniors:—I have been reading the junior letters and find them very interesting. I like to read the letters of Jimmy Greene and Bob Ramsay.

I passed the sixth grade this year with one of the highest averages in the township. I live on a 160-acre farm in Columbia County. We are engaged in the dairy business. We have two Holsteins, one Durham, one Jersey, and one Guernsey, all full bloods.

Catawissa, Pa. Wm. Luther Wilson Bitter.

Hoard's Dairyman Juniors:—I received the watch fob, coat lapel button, and the dairy farm boys' creed. I am very much pleased with them. I like to read the junior department in the Hoard's Dairyman, also the junior letters of which some are very interesting. I also like the stories of Jimmy Greene and Bob Ramsay.

We have sixteen milk cows of which I milk 4 to 6 cows night and morning. We also have 4 heifers, one bull, and a calf. All of the cows are grade Guernseys, also the heifers and the calf. The bull is a pure-bred Guernsey. The calf is a week and a half old.

I am very much interested in poultry and have seven White Leghorn chicks of my own about six weeks old. My father's flock consists of 31 hens and also about sixty young chicks from 7 to 2 weeks old.

We live on a 68-acre farm one and three-fourths miles north of the city of Oconomowoc of Waukesha County in the state of Wisconsin. Our farm has a lake shore of about six feet on Lac Labelle lake. We have a large marsh and two springs on our farm. This year we had the barn, silo, and chicken house whitewashed. We have an orchard of about fifteen trees. This year we planted twelve more apple trees in our orchard.

We get about 200 lbs. of milk and we take it to the condensery. We have electricity in our house and barn. We are going to concrete our cow stable and put in modern stanchions.

I am twelve years old. I finished the common rural school work in the school my father did. My brother and I sent illustrated note books to the Waukesha Dairy Show. My brother sent a cattle notebook and won first prize. I sent a poultry notebook and won fourth prize. They were judged as to the best put up notebook.

I wish good luck to the juniors and wish some would write to me. My address is R. 3, Oconomowoc, Wis.
Gerald Spaulding.

Do You Belong to the Juniors Club?

If you are a dairy farm boy between ten and eighteen years of age, and if your father or some member of your family is a subscriber to HOARD'S DAIRYMAN, we want you to join the HOARD'S DAIRYMAN Juniors Club.

The Juniors Club consists of several thousand boys like you, banded together to help each other get more pleasure and profit from farm life, and to have the advantage of associating with other boys who live and work and think as you do.

It costs nothing to join the club—and there are no dues. All you need to do to join is just to fill out the coupon and send it to us. We'll at once enroll you as a member and send you a watch fob, a coat lapel button, and the "Dairy Farm Boy's Creed". Do it now—then you'll soon be a full fledged member of the HOARD'S DAIRYMAN Juniors Club.

COUPON

HOARD'S DAIRYMAN Juniors,
Fort Atkinson, Wisconsin.

I want to join your Juniors Club. My father's name is _____.

I am _____ years old and like _____ (name breed) cows best. Send me the watch fob, button, and creed and enroll me as a member.

Approach of Milling Months Lessens Feed Demand

Conditions Forecast Plentiful Supplies of Feedstuffs During Fall and Winter

The more active demand for mill feeds during the week ending August 14, largely because of the desire of the market to anticipate its requirements before the freight rate increase becomes effective, had the effect of advancing the price only to the extent of the additional freight. The tendency of other feeds, apparently not needed at this time, was lower and as milling will be in full swing next month, the trade, according to reports from various sections, is still maintaining a "watchful waiting" policy.

Pasturage conditions with few exceptions are reported as ideal and because of the continued light consumption and prevailing conditions an abundance of feeding stuffs is generally expected this fall and winter.

Feed "to arrive" is obtainable at a considerable discount under spot prices prevailing in most of the markets.

Prices in General Decline

Wheat mill feeds.—Prices in most markets declined. Prices for feeds to be forwarded before August 26 were steadier but no interest was shown in future shipment stuff. Spot prices are unchanged to $2 lower on bran. Supplies are fairly good and heavy offerings are expected shortly because of increased output of flour mills. The demand—which was better during the early part of the week than it has been for some time, especially for red dog and flour middlings—dwindled to practically nothing during the last few days.

Cottonseed meal.—The demand remains poor. Forty-one per cent meal was offered at $64.50 per ton delivered Philadelphia by jobbers in eastern territory. Prevailing price on old-crop meal in southern markets is lower than last week. Large stocks are reported as still in the hands of dealers and a few mills. Volume of business is small. Hulls are practically off the market. Texas offers 43 per cent meal for September shipment at around $55 f. o. b. Texas common points. Middle-western markets report a fair inquiry for transit meal. Chicago and middle-western markets report conditions as dull and that mixed car-lot shippers reduced prices.

Gluten Feed Demand Normal

Gluten feed.—Present demand for gluten feed is about normal. The larger manufacturers report that little difficulty is experienced in securing cars for making shipment. The Cincinnati market reports a good inquiry for gluten feeds by dairy interests. The price as quoted by the largest manufacturers is unchanged from last week. The movement is good.

Hominy feed.—The price of hominy feed advanced slightly on account of the strength in cash corn. The demand was spotted and mostly for immediate shipment with guaranty that goods will be in transit before the advance in freight rates. As with other feeds sold on this condition, shippers guarantee to assume additional freight charges if shipping is delayed. Southern markets report stocks as light while middle-western and eastern markets have adequate supplies on hand.

Alfalfa meal.—Northwestern and middle-western markets report liberal offerings from Idaho and Washington alfalfa meal mills. Because of the slow demand for mixed feeds, feed mixers are not buying so heavily as usual at this time of the year. Colorado mills quote No. 1 meal at $35 delivered Kansas City. Stocks are fair and the movement good.

Linseed meal.—Several markets report quotations from $2 to $2.50 per ton lower than last week. There was a fair inquiry for prompt shipment but as the majority of buyers seem to expect lower prices, inquiries for later shipment did not result in many sales. Stocks are good and the demand has shown considerable abatement. Mills report the car situation as fair and improving.

Rye Middlings Weak

Other feeds.—Rye middlings display a weak tendency on heavier receipts, and sales in the Richmond, Va., section were reported as low at $56 per ton. Copra cake is in good supply in Pacific Coast markets and is quoted on a basis around $40. Beet pulp stocks are rather light. Imported material is offered around $57 f. o. b. New York sacked for October delivery. Irish dried brewers grains due New York are quoted at $58. None of the markets report a shortage of feeds and supplies appear adequate to meet the demand.—U. S. Bureau of Markets.

MOLINE

The Universal Tractor

3-2 Plow Capacity

It is the correct farm power unit, doing all belt and field work, *including cultivation,* with one man.

Engineering and manufacturing development of the Moline Tractor and Moline Tractor Plows enable us to announce a 3-2 Plow for use with the Moline Tractor.

3 plows for ordinary conditions which prevail in most sections of the country.

2 plows for extreme conditions and unfavorable seasons.

An average saving of 4.7 horses per farm, and a total average saving of $1,408.16 per year, is reported by yearly Moline tractor performance records received from owners to date. We will be glad to give anyone interested the opportunity to personally inspect these records.

The Moline is unique in the tractor field—made so by our patent protection.

If desired you can use the "drag behind" or horse drawn implements you now have with the Moline Tractor the same as with other types of tractors.

MOLINE PLOW COMPANY, MOLINE, ILLINOIS

No Guess Work About the Plant Food Value of Straw

Chemical analysis is the most positive way known to determine the elements that make up any substance—only by this method has it been possible to know the plant food contained in straw—guess work is eliminated entirely.

STRAW contains the essential elements necessary to produce big crops. Chemical analysis shows that straw contains approximately 10 lbs. of nitrogen, 12 to 16 lbs. of potash and from 6 to 7 lbs. of phosphoric acid. In plant food value, straw equals an average ton of barnyard manure — you can't afford to waste it.

Start this year to spread your surplus straw, and turn it under so that its valuable plant food elements can be released. It will result in bigger crops and bigger profits.

It is neither a hard job nor does it require extra help to spread straw with the

JOHN DEERE SPREADER
With Straw Spreading Attachment

Both manure and straw can be spread perfectly with this machine. One man can put on the straw spreading attachment, load the spreader and spread the straw as heavy or light as desired with no extra help.

The operation is simple — set the feed lever, throw the machine in gear, and drive the horses—no forking required—the feed is automatic.

In 30 minutes time one man can take off the attachment preparatory to manure spreading.

Bear this in mind, the John Deere as a manure spreader has advantages you can not get in the ordinary spreader because the beater is mounted on the axle, a patented feature.

Its box is low down—extremely easy to load, and the drive wheels are high—a distinct advantage. Its beater is on the axle together with the beater drive and main working parts —they can't get out of line to cause binding, heavy draft and breakage.

Another thing, the John Deere is the simplest spreader built—this is one of the important reasons why it gives longer service, costs less to keep in repair, and gives greater satisfaction.

You can't invest in a farm implement that will pay for itself more quickly than a John Deere Spreader with straw spreading attachment. See your John Deere dealer at once about this equipment.

This Free Booklet Will Interest You

It tells all about spreading manure and straw, written by Dr. W. E. Taylor, a practical farmer who has spent years in experimenting. He tells you facts that may be worth many dollars to you. The booklet also fully illustrates and describes the John Deere Manure Spreader and straw spreading attachment. To get this book, drop a card to John Deere, Moline, Illinois and ask for **Booklet SS-714.**

"You Save Money"
says the Good Judge

And get more genuine chewing satisfaction, when you use this class of tobacco.

This is because the full, rich, real tobacco taste lasts so long, you don't need a fresh chew nearly as often.

And a small chew gives more real satisfaction than a big chew of the ordinary kind ever did.

Any man who uses the Real Tobacco Chew will tell you that.

Put up in two styles

W-B CUT is a long fine-cut tobacco
RIGHT CUT is a short-cut tobacco

Weyman-Bruton Company, 1107 Broadway, New York City

When Writing to Advertisers, Mention Hoard's Dairyman

A Brotherhood of Dairymen

(Continued from page 231)

rented land is in alfalfa and Sudan grass, largely for hay. The cotton, as one would have a right to expect on land which had been built up by dairy cows and careful management, is as good as any I have seen in the Salt River Valley. Quite a large proportion of the alfalfa on the home place is new-seeded, that is, seeded last fall. This is being cut over at present, (the latter part of June) the third time for this season. One of the men on the place is a middle aged man who has worked on the farm for many years, a man of careful judgment. He tells me that each cutting would have a tonnage of a ton and one-half if made into hay. Some of this, of course, has been made into hay as it is impossible to so regulate the cutting as to always have an area just right to cut. Consequently when it is getting ahead of the cows it is necessary to catch up by cutting a considerable amount and putting it in hay, getting over the field quickly so as to begin on another field which is just coming on.

The experience of the Geare Brothers is somewhat rare. They are among a very few who have persistently and consistently followed the dairy industry through the various vicissitudes and changes incident to dairy farming in a new country. They have been only moderately lured away by the attraction of cotton farming. Throughout the Valley there are many dairy farms that have been converted into cotton farms by the tempting prices of the long staple cotton, but so far the boys are holding to their early teachings and to an inherited love for the dairy cow. The cotton they are growing is a side issue. The number of dairy cows has not been cut down in consequence; for better methods, the silo and careful management, have resulted in increased crop production which permits the growing of the cotton as a side line. I would not be surprised if they make a bale or more of cotton to the acre but I shall not expect them to abandon the dairy and put all their land in cotton, even though there were a promise of a bale or more to the acre for the entire farm.

I do not know that they have grown rich in the dairy business but they have made many improvements and if they had made no money aside from the enhanced value of the land they would have done well.

Twenty years ago I suppose the elder Geare bought the land for less than $50 an acre. The village of Phoenix was then nearly two miles away. Little by little the city line has been extended until now it is less than one-half mile away and building lots in the district next to them are selling for $900 each. Possibly the day is not far distant when they will be crowded out by the approaching city limits, but until the growing demands of the city require it, I predict that they will keep on making money on this $1,000-an-acre land in the same careful way, a way made possible by the division of the responsibilities.

Use More Milk

(Continued from first page.)

states, have resulted in an increased consumption of milk and milk products. In most cities where a complete campaign was put on the consumption of milk has been increased from 10 to 20 per cent. Such campaigns can help dairymen by encouraging the greater use of milk. They can help creameries and cheese factories by increasing the demand for milk products. They can help city milk plants by advertising the remarkable food value of milk and cream. Best of all, they can exert a tremendous influence toward furnishing mothers, babies, and little children an abundant supply of the most nourishing food in all this world, pure, fresh, whole milk.

Dairy Cattle Congress Judging Contest

The third annual Collegiate Dairy Judging Contest held in connection with the Dairy Cattle Congress promises to be much larger than the previous contests. Due to the fact that it is held under a different system than the other contests it holds a unique position. The cattle are judged by one man and the oral reasons are heard and graded by him.

This year the management is fortunate in securing Professor J. A. McLean of the University of British Columbia as judge. He is thoroughly competent and an experienced judge of dairy cattle.

The greatest and most vital power in influencing life is personality. It is greater than law, instruction or example.—Lyman Abbott.

"Here's Where I Learned How to Make My Cows Produce"

That has been the beginning of larger milk profits for thousands of dairymen—the day they learned about Larro and the Larro "more milk" guarantee. There is no chance or uncertainty when you are feeding Larro—because the Larro guarantee reproduced below means just what it says, you get more milk or you get your money back.

A Balanced Feed—Based Upon a Knowledge of the Cow

That's why you get more milk — because Larro isn't a one-sided ration but a nutritious, balanced feed. Larro comes to you as a scientific mixture of just these ingredients—cottonseed meal, corn gluten feed, linseed oil meal, dried beet pulp, standard wheat bran, standard wheat middlings and a little salt—all compounded upon a definite knowledge of the needs of the cow.

This "More Milk" Guarantee Has Stood Back of Larro for Seven Years

This is the same guarantee of more milk which has stood back of Larro for seven years. To the man who is not yet a Larro user it is an absolute promise of better results from his cows—to the veteran Larro user it is a double assurance that Larro today is the same as it was in the beginning—that its quality will never be changed.

If your local dealer does not carry Larro get in touch with us at once.

Farms in Wisconsin. Send for new free list. Liberal terms. LOEB-HAMMEL REALTY CO., (Not Inc.) Medford, Wis. 7-4

FARMS FOR SALE

Owing to other business I offer for sale farm of about 225 acres situated six miles from Ithaca, N. Y., and the New York State Agricultural College on macadam road. This farm has three good houses, fine modern cow barn with stanchions for 30 head, horse barn, calf barn, tool barn, two silos, hog house and hen house. 30 acres of woods and pasture, balance all workable with tractor. Three acres of Winter Wheat which will turn about 40 bushels to the acre. There are 36 acres of oats for harvest, 20 acres of barley, 25 acres of corn, 5 acres of buckwheat, 1½ acres of potatoes, and 100 bearing apple trees. All can be purchased for $22,500.00 if taken at once. Stock and tools may be purchased at a corresponding low price if desired. This is a bargain as the value of the crops alone will bring at least one quarter of the price asked. The buildings can not be produced today for the price. This is a business proposition and one that will turn immediate gross income of at least $10,000 a year. This property can be divided into three farms with full equipment of buildings. If you are interested come at once as you can see what the farm will produce while the grain is standing. Farm is located in village with good schools, churches, and stores. Is well watered and running water into the large house and could be put into the other houses at a very nominal charge. R. E. TREMAN, care Treman King & Co., Ithaca, New York. 7-3

For Sale—240 acres of the best land in Wisconsin. All level plow land, black soil with clay subsoil, every foot corn land. In Southwestern Wisconsin. 25 years time at 5 per cent. Address BOX 341, care Hoard's Dairyman. 7-2

For Sale—208 acres, dairy and grain farm near Rochester, N. Y. Nine-room house, barn, 50 cattle, milk gathered daily, silo, water. Price $100.00 acre. E. L. EASTON, Barnard, N. Y.

For Sale—New York state dairy farms in New York city milk zone. Good soil. 3 per cent milk, $3.65; 4 per cent milk, $4.05. Lists. C. E. KESEBERG, Sheboygan, Wisconsin.

Are you looking for good farm land? We are offering real bargains in Aitkin County, "The County of Land Opportunity". This big railroad wants new settlers and for that reason can offer you a real bargain in a farm for a small down payment and on easy terms. Position wanted by experienced dairyman. Butter making, pasteurizing, separating, testing, care of boiler and dairy machinery. Address BOX 345, care Hoard's Dairyman.

Skagit County Fair

HOARD'S DAIRYMAN:—Due largely to the increase in the number of Guernseys and Jerseys on exhibition, the dairy cattle show at the Skagit County Fair at Lynden, Wash., August 9 to 12, was of twice its usual size and of considerably greater merit. There were 120 head in the show, 44 Holsteins, 34 Jerseys, 27 Guernseys, and 15 Ayrshires. W. T. McDonald, live stock commissioner of British Columbia, who placed the awards, said that it was by far the best exhibit in the three years he has judged there. Thomas G. Lockhart, a Holstein breeder and one of the exhibitors, was superintendent of the cattle department and largely responsible for the big increase in the exhibits. After last fall's fair, which was held early in October, he induced the directors to move the date up to August in order to avoid the cold and rainy weather, succeeded in having the prizes doubled, both in number and amount, and put in considerable time this summer doing personal work among breeders of all kinds of dairy animals.

There were five exhibitors of Guernseys, J. M. Pratt, Vander Griend Brothers, J. M. Miller, Johnson Brothers, and A. J. Sinnes. The aged bull class in which Vander Griend Brothers' four-year-old Sir Golden Prince was placed first and was later made champion of the breed, was one of the most interesting of the entire show. The Vander Griend Brothers won five out of nine firsts, as well as champion bull and female, the latter on their two-year-old Muriel of Chicona.

There were four exhibitors of Jerseys, H. Coy, Peter Meenderinck, H. Ruley, and F. G. Partington. The two-year-old bull, Campanille's Mohican, owned by Mr. Coy, which had no competition in his class, defeated the aged bull owned by Mr. Meenderinck in the championship class, and was made champion of the breed and grand champion of the dairy show, by Judge McDonald, winning a silver cup offered by the Carnation Milk Products Company, Mr. Meenderinck's four-year-old May's Pride of Lynden was made champion female.

Competition was keener among the Holstein breeders, of whom there were more than 12, including R. E. Waugh, Van Woerden & Acheson, Youngquist Brothers, T. G. Lockhart & Sons, and Galacher & Sons. Peter Omdal, one of the younger breeders and a new exhibitor, showed four head and won, in addition to the minor prizes, first prize in the aged cow class on Allie Hengerveld, 12-year-old, the championship of the breed and grand championship of the show, with the Carnation company's silver cup for females. Youngquist Brothers' La Conner Pontiac Segis easily won first in the aged bull class, but was defeated for champion by Lockhart & Sons' Ondinus Newman Cornucopia, a well grown two-year-old.

A. H. Carvosso of Belingham showed all but one of the 15 Ayrshires on the grounds and won all the prizes except second on senior yearling bull.

Washington. G. N. ANGELL.

A Word from Georgia

HOARD'S DAIRYMAN:—Quite often when we are in town, we hear some fellow running down the dairy business in this section. They say the climate is too hot and the feed is not of the quality to produce milk to perfection. And they have forty-one complaints of things that is, and things that ain't, to make dairying a bad proposition. But don't you listen to them guys. They ain't so everlasting wise. Visit their farms and do a little fishin' and find out what their methods are. That's what I did with Mr. Parr, and I came home feeling mighty good.

He'd bought a bunch of high bred cows, also some blooded Poland sows and he let them rough it in the woods. He did not feed them any grain, expected them to live on pasture, in the main. Once a week he gave the cows a little salt. They weren't doing any better than any scrub, "And there," said he, "is just the rub. It's surely not my fault. I like the cow that can get around and make her way on what she's found. I don't like this pampered stock, you see. You take a piney woods rooter sow. She'll always raise more pigs somehow. These Polands must be held down by their pedigree."

His calves were runted. His pigs were stunted, though all were pedigreed. Their hair was rough. Their bones showed through to let you know they needed feed. The water in the dirty tank was not fresh and it was too low for the calves to reach it.

He slipped his hand through my arm. "You're some dairy crank but on MY farm you don't need to try to preach it. I've tried your pure-bred stuff and I'm sure I've had enough of it. I'm going to quit. They are twice as hard to raise and feed is so scarce these days, I can't make out on it."

I came back home and I saw here, the tank full of water, cool and clear. The cows were lying in the shade. My boy was whistling a merry tune. He'd be at the milking pretty soon. We knew our cows had paid. I saw my silo, tall and red. I saw the grain bins in the shed, I felt my bank book in my pocket. "I guess dairying's all right," I muttered. "These cranks don't know when their bread is buttered. I hate to hear them knock it."

It does take work to produce good yields and A. R. cows, but he who squeals at a little extra effort won't succeed in any business it's agreed. It's not the climate or the kind of breed. It's lack of care and lack of feed, that brings failure here. If good cows, good care, and good attention don't pay you well, I'll just mention, that I think it's mighty queer. North or South, East or West, the man and his methods are the best things for us to study. Now, ain't that so? Don't blame the business and fear to undertake it. You'll find it will be just what you make it. If you have it in you, you'll make it go.

A GEORGIA CRACKER.

Dairy For Sale

A one-half interest in the only dairy in town of 2700 people. Modern barn and a new house. Poor health and lack of help reason for selling. An unlimited market at good prices.

ORVILLE LEE & SON, SAC CITY, IOWA.

Have You A Little Spare Time?

Have you a car—or a horse and buggy?

HOARD'S DAIRYMAN would like to offer you a proposition to look after our subscription interests in your community during your spare time.

It would be light, pleasant work among your old neighbors; and we can make it really profitable, too.

Write and tell us about the territory around you and how much you could take care of, and we'll make you a proposition.

Hoard's Dairyman, Fort Atkinson, Wis.

Farm Hands Enough

to do all the work, including the necessary "cleaning-up," may be hard to get, but here is help that more than cuts in half the time and labor needed to first whitewash and then disinfect. It's a better-than-whitewash paint and disinfectant combined, put on in one easy operation instead of two, and with better results.

CARBOLA
The Disinfecting White Paint

is a white paint in powder form combined with a disinfectant neither poisonous nor caustic, but many times stronger than pure carbolic acid. It is turned into smooth-spreading liquid paint simply by mixing with water—no waiting or straining. Can be applied to wood, brick, stone or cement, or over whitewash with a brush or spray pump. It will not clog the sprayer, or blister, flake or peel off. One gallon—one pound of the powder—covers 200 square feet. Mixed today and applied whenever convenient—on a rainy day.

Carbola kills lice, mites, fly-eggs, etc., and helps prevent the germs of contagious diseases—roup, canker, mange, glanders, white diarrhea, contagious abortion, etc.—from getting a start and spreading through flocks and herds. It is harmless to the smallest chick or stock that licks a painted surface. It makes it easier to do work that must be done and it works day and night—a constant protection for your profits.

Use It Instead of Whitewash and Disinfectants

to paint health and sunshine into the dark corners of poultry houses, stables, pig pens, cellars, garages, warehouses, factories, out-buildings, etc. Used regularly by Experiment Stations, Agricultural Colleges, and by thousands of poultry, dairy and breeding farms, because it gives good results and saves time, labor and money. Get some today—have it on hand when wanted. It doesn't spoil.

Your hardware, seed, drug or paint dealer has Carbola or can get it. If not—order direct. Prompt shipment and satisfaction guaranteed or your money back.

10 lbs. (10 gals.) $1.25 and postage 20 lbs. (20 gals.) $2.50 delivered

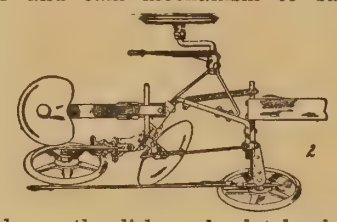
Inventions and Appliances of Interest to Agriculture

Plow

The plows here are not raised and lowered in the ordinary way, but when the tractor driver pulls a wire to release the stop, the plows roll up out of the ground; and when he again

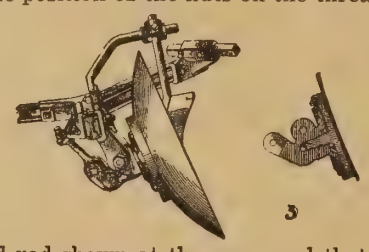


pulls the wire, they roll down again. The plows are up at the right of the figure and down at the left.

(International Harvester Co., Chicago, Ill. U. S. Patent 1,319,483.)

Single Disk Plow

This invention relates to a single disk plow supported by a land wheel, a front wheel, and a rear trailing furrow wheel. The latter wheel has a lever and cam mechanism to raise

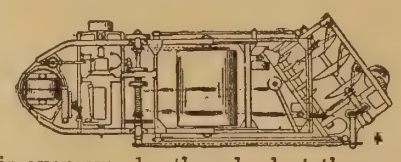


and lower the disk, and a latch which limits its lateral motion to keep the plow in line.

(Moline Plow Co., Moline, Ill. U. S. Patent 1,318,978.)

Disk Adjustment

The special features of the disk shown here are: that it can be set at different angles quickly by changing the position of the nuts on the thread-

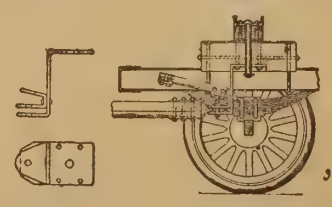


ed rod shown at the rear; and that it rotates with little friction on ball bearings.

(B. F. Avery & Sons, Louisville, Ky. U. S. Patent 1,311,773.)

Agricultural Machine

This machine consists of disks drawn by a tractor and rotated by power from the tractor. The front disks turn the upper soil and the rear disks, the deep soil; the side thrust



is overcome by the wheel at the rear of the disk frame.

(Cleveland Tractor Co., Cleveland, Ohio. U. S. Patent 1,316,990.)

Trailer Hitch

It is undesirable to connect a trailer to the rear axle of a truck because it may pull the axle out of line; it is desirable, however, to connect the trailer at the level of the axle. The Z shaped hitch shown here meets both requirements; it is bolted above to the bunk base of the truck and is braced

at the sides by bars bolted to the frame.

(Pacific Car & Foundry Co., Seattle, Wash. U. S. Patent 1,322,112.)

Canada. C. J. LYNDE.

When Cows Freshen

They may ABORT; may RETAIN the AFTER-BIRTH; May FAIL TO BREED

Hood Farm Antiseptic Breeding Powder is the best remedy for these troubles.

The best cows frequently have **Milk Fever.** Hood Farm Milk Fever Outfit never fails to cure milk fever.

All cows are subject to **Garget.** Hood Farm Garget Remedy will save the udder and the cow.

Calves may have **Infectious Diarrhoea** or White Scours soon after birth. **Jermkil** kills the germ before the germ kills the calf.

Calves often have **Scours** caused by indigestion. Hood Farm Calf Scour Remedy, and Digestive Powder will save the calves.

It is Safe and Wise

To have the above named Remedies on hand. Order today before your cows begin to freshen.

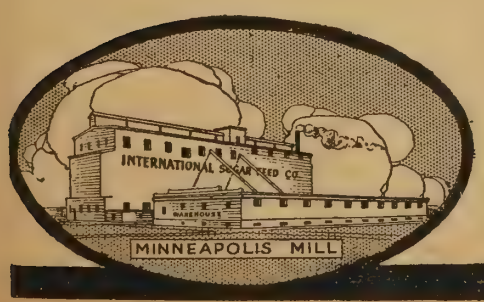
A Year 'round Feed *for* A Year 'round Yield *and* A Year 'round Profit

Dairy cows fed International Special Dairy Feed never weary of well doing. From the time the pasture is green and luxuriant until it shrivels and declines; when the grain is in the granary and the corn is in the silo—and later when the grip of winter makes milk production depend to a *greater* degree upon your judgment in feeding, International Special Dairy Feed keeps your herd in better condition, makes *more milk*, and delivers *greater profits* to you.



International Special Dairy Feed

Stabilizes Milk Production

There is no good reason why milk production should drop when cows are taken off grass. Balance up the usual roughage with a proper ration of International Special Dairy Feed and production will remain at its height. Cows that have been fed International Special through the summer months will have little tendency to "fall off." They have been built up in body even while their milk making mechanism has has been fed to capacity. Milk production has been *stabilized.*

International Special Dairy Feed is a year 'round feed. It is a scientific blend of carefully selected materials. It is *guaranteed* to increase milk flows. This guarantee is backed by a responsible organization composed of men who know feeds and feeding. Actual results have been back of International Feeds for years. When you begin feeding International Special Dairy Feed you begin to accept bigger milk returns. You may be sure of that.

Order a trial ton today. Feed it. Watch results. If your dealer hasn't International write us. We'll see that you are supplied.

Why Build a Silo?

Not only will the silo save 40 per cent of the corn crop from waste and deterioration, but it puts it in better condition for feeding purposes. One acre of corn preserved in the form of silage has a feeding value equivalent to that of 1½ to 2 acres preserved in the form of shock corn. In seasons where the grain fails to develop the ratio in favor of silage may run as high as one to five.

Silage has no equal in reducing feed costs. During the last few years all feeding tests with beef and dairy cattle have shown that where silage is used as a major portion of the ration, beef and milk are produced most cheaply. During the winter of 1917—1918, the Kansas Experiment Station fed one lot of baby beeves corn, linseed meal, and alfalfa hay. Another lot was fed corn, linseed meal, alfalfa hay, and silage. In the latter lot the cost of gains was $1.20 a hundred cheaper than in the former and it sold on the market at 25c a hundred more.

During the last ten years, due largely to the expense of winter maintenance of the cow herd, the number of beef cattle on Kansas farms has decreased 50 per cent. In view of this fact it is significant that the Kansas Experiment Station kept mature cows in good breeding condition during the winter of 1917—1918 on a ration chiefly of silage and wheat straw at a cost of five cents a day.

The dairyman has used silage longer than the cattle feeder though it is equally valuable for both. In a report of the cow testing associations of Minnesota covering records of 5,500 cows it is shown that the cows receiving silage produced 1,275 pounds more milk per cow and 51 pounds more butterfat than did those not fed silage.

In a farm management contest conducted by the Wisconsin Agricultural College records of the business were secured on 531 average farms for two successive years. The 390 farms which had silos made an average net profit of $875.00 per farm, while the 141 without silos made an average net profit of $535.00 per farm per year. It is pointed out that the difference, or $340.00 per farm, is enough to pay for a good silo once a year.

Silage alone is not a balanced ration. For the best results it should be supplemented with a small amount of clover, alfalfa, cowpea hay, or linseed or cottonseed meal. This is particularly important in the case of calves and young stock. Silage and alfalfa hay make the cheapest ration obtainable for feeding a dairy cow. One giving less than a gallon and a half of milk daily needs nothing else.

The general advantages of the silo and silage may be summarized as follows:

1. The silo reduces the amount of labor required to feed live stock during the winter, also in preparing the ground for next year's crop.
2. More live stock may be carried on a given acreage when crops are fed in the form of silage.
3. Silage insures the utilization of practically the whole corn or sorghum plant. Feeding in any other forms results in the loss of from 20 to 40 per cent of the plant.
4. The silo is an economical means of storing feed. A cubic foot of hay contains approximately four pounds of dry matter while a cubic foot of silage contains 10 pounds.
5. The silo preserves the succulence of the plant ensiled and this has a beneficial effect upon the digestive organs.
6. The silo preserves the palatability of the plant ensiled and the animal will consume more roughage than when fed in any other form thus resulting in a saving of other feeds.
7. The use of silage lessens the costs and adds finish in fattening cattle.
8. Silage insures a succulent feed for any season of the year.
9. Silage eliminates the bother of cornstalks in handling manure.
10. Manure is more easily preserved and less plant food is lost when crops are fed in the form of silage.—Kansas College of Agriculture.

Hog Cholera Serum

Arrangements have been made whereby the Veterinary Department of the Wisconsin College of Agriculture, Madison, can supply double-tested hog cholera serum and virus at the very low price of one cent per cubic centimeter (c. c.). According to the law any farmer of Wisconsin may secure the serum, but only a legally qualified veterinarian is permitted to use the virus.

With prospects for a substantial advance in the price of hogs by fall, it takes no argument to convince the owner of swine, especially in neighborhoods where hog cholera threatens, that he cannot afford to take the risk with his pigs, but should insure them by vaccinating with reliable hog cholera serum.—Wisconsin College of Agriculture.

Have you talked with your neighbors about subscribing for Hoard's Dairyman? Why not do it now? Make up as large a club of subscribers as you can and send them in.

MERIDALE JERSEYS

ANNUAL SALE

September 17, 1920

The sale list includes seventy head—about half of which were bred at Meridale Farms; the other half were imported. Progeny of every one of the famous herd sires at Meridale Farms is listed in the offering.

Jap blood is strongly represented. One of The Japs Gold Medal Daughters will be sold—Japs Mertha Lass 329714, with a yearly record of 15326 lbs. milk, 945 lbs. butter. A son of The Jap is likewise included.

After thirty-one years of constructive breedings, we feel very confident that the cattle thus offered will please the thoughtful buyer who demands correct type, robust health, and heavy production.

DELCHESTER FARMS
Edgemont, Del. Co., Penn. - Thomas W. Clark, Supt.

New York Dairy News

More Herds at State Fair:—Commissioner Fitts is enthusiastic about the way in which county organizations are preparing to send county dairy herds to compete for the total of $1,600 in prizes offered. He says that almost twice as many herds as competing last year are entered. It is believed that Holstein county exhibits will be especially strong, due to the interest which has been awakened by special prizes amounting to $850, and the Guernsey county herd entries will not be far behind.

Dairy Improvement Handicapped:—Many cow testing associations in this state that badly want the service will be unable to get it this year on account of the great scarcity of testers. In Cortland County alone six calls for cow testing associations are unfilled because licensed testers cannot be located. Association members that have been able to secure testers are well satisfied with the results.

Investigating Raise in Milk Price:—The federal grand jury which will re-convene in Jamestown the first of the week will be presented with evidence received in the investigation into the recent boost in the price of milk made by dairy companies, Assistant Federal Attorney John T. Walsh announced in Buffalo, Saturday. The investigation followed a raise of 1 cent a quart for milk by dairymen in western New York Aug. 1st.

Cheese Higher in Watertown:—Cheese prices advanced one-half cent over last week's quotation on the Watertown produce exchange, Saturday, going to 24½ cents. The market was steady with sales totaling 6,460 boxes. The local price was below the New York market, where from 25 to 26 cents prevailed.

New York. E. M. L. BLANCHER.

Foot Rot

Tell us where we can secure the best information with regard to treating hoof rot. There seems to be quite a little of it in this vicinity this year.

Bethel, Wis. R. W. C.

The following information relative to the treatment of foot rot is that given by the United States Department of Agriculture:

"In the earlier stages of the disease, before pus burrows beneath the horn, a thorough cleansing and an application of a carbolic acid solution—1 ounce to a pint of water—clean stabling, and laxative feed will usually remedy the evil. Cresol compound is an excellent remedy at this stage. It should be applied, in its pure or undiluted state, to the suppurating and putrefying tissue between the claws. It is best applied by means of a cotton swab on a thin stick. Care must be taken to keep it from contact with the skin about the coronary band or heels. If deep sloughing has taken place the carbolic solution should be used, and a wad of oakum or cotton smeared with pine tar should be secured firmly in the cleft. This can be done by taking a strip of strong cloth, 2 inches wide, passing the middle between the claws, then tying the ends after winding them in opposite directions above the hoof. Sometimes warm poulticing with flaxseed or bran is necessary to relieve excessive fever and pain. If the pus burrows under the horn, its channel must be followed by paring away the horn until the bottom is reached.

When writing advertisers please mention Hoard's Dairyman.

Guernsey Calves For Sale

BULL CALF—SEVEN MONTHS OLD

Sired by Mixter King, a royally bred bull who is a grandson of Dolly Dimples' May King of Langwater; through the proven sire Langwater Demonstrator. Dolly Dimples' May King of Langwater is the sire of Langwater Nancy, who sold for $7,500 and who is the dam of Florham Leader, who sold for $25,000.

BULL CALF—FOUR MONTHS OLD

Sired by our senior herd sire, Imp. Gracey's Prize King. Our herd sire is a regular show bull, who is by Governor's King's Prize, by Governor of the Vanquidor, by Governor of the Chene, one of the greatest bulls of the breed. He is out of Imp. Gracey of the Padins, now owned by J. L. Austin, Newtown Square, on test at the present time, and making a good record. This bull calf is out of Imp. Godetta of Padins de Bas II, who in turn was sired by Polly's Pride, who took the King's Prize in 1915, who in turn was sired by Billy's France II, by Billy's France I. This calf has good conformation.

Both the above calves are of the best of Guernsey breeding, and any breeder will not make a mistake in adding this blood to his herd. We will furnish full pedigrees to anyone interested.

The bulls are of the highest class from extra good dams and proven sires. One is a son of Langwater Warrior, senior sire at Langwater Farms.

The Females are as high class a collection as have been offered at Auction. They include daughters of such sires as, Ne Plus Ultra, King of Chilmark, Lavernas Ultra May King, Langwater Raritan, Langwater Peerless, Langwater Royal 2d, Uncle Jim, Rutila's Patient King, Ladysmith's Cherub, May King's Vrangue of Ingleside, Irene's King of the May, Meadowlea, etc.

On the dam's side the breeding is equally good, sisters to such noted cows as Prospect Rose des Huoards and Queen Celia being listed.

The daughter of Ne Plus Ultra is out of a Langwater Peerless dam; second dam by Gov. of the Chene; third dam the famous foundation cow Butter Queen. This wonderfully bred young heifer will be bred before Sale day to Herdlea Sensation, the last son of Follyland Nancy. The resulting calf will have an unequalled pedigree from every standpoint.

Dairy Cattle Congress

The new epoch in dairying begun during the past year makes the eleventh annual Dairy Cattle Congress of increased importance to the wonderful industry it represents. The revelations of the food value of dairy products and their vital relationship to the future citizenship of the nation are important factors bringing in the new era. The discoveries of Dr. E. V. McCollum and his associates are as startling to dairymen as to the general public and have been a means of starting a unification of all branches of the industry.

Economic conditions resulting from the war have brought pure-bred dairy cattle into their true place. The management of the Congress have this fact in mind in planning the 1920 exhibition. Mississippi Valley farmers realize the necessity of permanent agriculture and are in the market for all breeds of dairy cattle. The exhibitor at the Congress, therefore, not only has an opportunity to compete for the liberal prizes offered, but comes in direct contact with the buyers of the Middle West.

The dairy products exhibit will be of more than usual interest. It will be conducted by the Iowa State Dairy Association. An important part of the 1920 Congress is the exhibit of dairy farm and barn equipment. Machinery Hall contains 24,000 square feet of exhibit space, while the total floor space for this exhibit on the grounds is 62,000. Indications are that every foot of this space will be taken. The showing of milking machines will be larger than in 1919, as will the exhibits of many other dairy farm and barn equipments.

Iowa. J. P. EVES.

"QUALITY THRU CO-OPERATION"

Two Pounds More Milk Per Cow A Day — With a Pure-Bred Sire

A daughter of your cow when sired by a pure-bred bull should average at least two pounds more milk per day than the dam.

And we offer several well bred Holstein sires which will carry some of the most productive blood into your herd.

Here is one — Matador Segis Walker Hartog, E. T. No. 1061. Born 4/27/19, a son of Matador Segis Walker who has 28 A. R. O. daughters. 25 average twenty pounds of butter from 400 lbs. of milk at two years of age and 3 average 30.3 pounds butter from 531.20 pounds milk at 3 years of age.

His dam, Hazelwood Aaggie Hartog has a record of 24.95 pounds of butter from 495.5 pounds of milk in 7 days. She is one of the foundation cows in our herd and is a beautifully marked show type animal.

The youngster is nine-tenths white, well marked and is ready for service. Can be seen at Oconomowoc, Wis. Price $750.00.

Write for photograph and Special Pedigree of this bull.

Head Your Herd With a Bull!

Get a son of King Superba out of one of our good cows. King Superba's offspring won first and second in get-of-sire and calf herd at the Wisconsin State Fair, 1918. His four daughters sold in the Waukesha Sale, Nov. 1919, averaged $959. King Superba's dam was the first cow to be strictly officially tested for the entire year. She produced 1231 lbs. butter, 26,433 lbs. milk as a four-year-old. She has twice produced over 33 lbs. butter in 7 days. If you wish to combine individuality and production, head your herd with a Son of King Superba. We now offer a number of his choice sons, serviceable age and younger, out of dams with records up to 24 lbs. Several of the dams are on yearly test. Don't wait. Come and see them now. **BAIRD BROTHERS, WAUKESHA, WISCONSIN.**

One of the sons of King Superba. They are all excellent individuals.

Young Bulls $200 to $500

A Son of this Cow for Sale

Born December 25, 1919

GLEN CANARY ORMSBY MERCEDES

Butter 365 days at 5 yrs.	722.60
Butter 7 days	27.94
Butter 365 days at 2 yrs.	550.86
Butter 7 days	20.71

She is a full sister to Glen Canary De Kol 2d, the junior four-year-old that last year made 1,323 lbs. butter for the year. She is sired by Sir Pietertje Ormsby Mercedes, the greatest sire of yearly producers and show ring winners in the world. Her dam is Glen Canary De Kol, former world's champion with 34.59 lbs. butter in 7 days and 139 lbs. in 30 days. She is by Sir Johanna Canary De Kol and from the grand champion, Glen De Kol Artis 3d, a daughter of Homestead Jr. De Kol.

THE SIRE OF THE CALF

is Uneeda King Alcartra. He is from a 33-lb. daughter of Johanna McKinley Segis, the only 40-lb. son of King Segis. His sire is the $50,000 bull, King Segis Pontiac Alcartra, a son of King Segis Pontiac and from a world's record daughter of King of the Pontiacs.

Price on this Calf is $1000.00

E. C. SCHROEDER FARMS,

Moorhead *(A Federal Accredited Herd)* **Minnesota.**

Ready For Service

Iowana Pontiac Homestead 267584, a son of OAK DE KOL OLLIE HOMESTEAD 85529, and therefore a brother to Piebe Laura Ollie Homestead King, (5 20,000-pound two-year-old daughters). His dam, Iowana Aaggie Pontiac Fayne, is a daughter of SIR JOHANNA FAYNE 42147, (8 20,000-pound daughters) has a record of 22.9 pounds in seven days as a four-year-old and is now doing well on yearly test. Her dam is a great foundation cow with over 750 pounds butter in a year. Buy him now as he will undoubtedly be worth more money when his dam finishes her year. Price $750; send for pedigree and photo.

Our herd is under Federal Supervision.

IOWANA FARMS, - DAVENPORT, IOWA

Do You Want

A 30-lb.—1000-lb. Ormsby Bull?

If you want one of that kind —and a real individual, write for our sale catalog. We are moving our herd to California and rather than take these bull calves we are offering them at sacrifice prices.

They are sons of Sir Ormsby Skylark, the sire of Duchess Skylark Ormsby, and they're from cows with records of from 27 to 40 lbs. that either have or are making good yearly records. (Several of those dams have over 30 lbs. and will finish the year well above 1,000 lbs.)

Better write today for that sale catalog.

MAXWELL FARMS - - - - WATERLOO, IOWA

YOUNG BULLS

Backed By Real Production

We are offering for sale sons of our Sir Pietertje Geneseo Alcartra whose dam, Miss Pietertje Alexina 2d, has a 42.42-lb. 7-day record and a yearly record of 1,290.94 lbs. butter from 24,219.1 lbs. milk. These youngsters are good individuals from heavy producing dams. They are priced to sell.

Hubert Stuckart, - Raymond, Iowa

Write for prices and pedigrees.

G. BURLINGAME, - - CAZENOVIA, N. Y.

Facts in BLACK & WHITE

Four Thousand Five Hundred Quarts of Milk per Year

The big-yield cow is the only cow that will ever make dairying profitable in the United States. The dairy farmers of Holland have blazed the way to a successful national dairy industry with their Holstein-Friesian cows that average between 9,000 and 10 000 lbs. of milk per year.

Imagine our cows averaging 4,500 quarts! Our farmers would then be able to make the finest, best and cheapest milk on earth, just as the Hollanders do now, and prosperity would abound, for every quart would mean profit.

101 Hudson Street, Brattleboro, Vermont.

YOUR CHOICE OF 30 YOUNG BULLS OUT OF YEARLY RECORD COWS

FROM AN ACCREDITED HERD—325 FEMALES

OUR HERD SIRES

KING OF THE ORMSBYS

KING OF THE ORMSBYS is sired by Sir Pietertje Ormsby Mercedes (twelve 1000-lb. daughters) and out of Spring Brook Bess Burke 2d, the world's largest dairy cow and the only cow in the World with three 7-day records above 35 lbs. butter in connection with three year records each above 1000 lbs. Her best records are 38.22 lbs. in 7 days and 1290.93 lbs. in a year.

SIR INKA PRILLY SEGIS is a 30-lb. son of King Segis. He has 84 young daughters at Winterthur; 30 have freshened and 10 of these made above 20 lbs. at first freshening. At their second freshening they are coming back with from 25 to 28 lbs. 17 of his daughters have completed semi-official records, and 12 of these averaged 757.73 lbs. butter and 19,172.30 lbs. milk at an average age of 3 y. 6 m.

SIR INKA PRILLY SEGIS

KING OF THE SADIE VALES is sired by King Korndyke Sadie Vale (the only bull with a 40-lb. dam, a 40-lb. sister, and a 40-lb. daughter) and out of a 38-lb. "Sadie Vale" cow. Both his sire and dam are out of 41-lb. cows. The five nearest dams of King of the Sadie Vale each weighed over a ton and produced over 100 lbs. of milk a day. His three nearest dams average 40.19 lbs. butter in 7 days and 159.51 lbs. in 30 days.

JOHANNA KING SEGIS is out of a 40-lb. cow and sired by a yearly record son of King Segis. The dam of Johanna King Segis was the first cow to make 541 lbs. butter in 120 days and the second to make 40 lbs. in 7 days. Johanna King Segis now has 8 daughters with semi-official records and these average over 700 lbs. butter and 18,000 lbs. milk. All his daughters born at Winterthur will be given an opportunity to make semi-official records.

HALL BROS.

— A Dissolution and Dispersion Sale of —

150 Head of Registered Holstein-Friesian Cows, Heifers and Bulls

at their Western Holstein Farm, 5½ Miles Southwest of Denver
On the Morrison Road

After twenty-three years of agreeable partnership of the brothers —Carlos W. and Storrs H. Hall, by their mutual agreement they have decided to close their partnership in this very successful business, and are offering at public sale one of the great herds of the day.

The foundation blood upon which this herd was established was of the best of the breed, and under the guidance of the Hall Bros. has increased in quality, and is today recognized from coast to coast as one of the great herds of America, and its breeding is the standard of excellence in the nation's greatest live stock exhibitions and sales, and in official testing.

The herd is composed entirely of animals of correct conformation and great milk and butter-yielding qualities. The herd is healthy and high class in every way. It was established with the view in mind of creating a herd of this breed in Colorado to supply foundation stock of this breed to the fast-growing dairy interests of the Rocky Mountain States. The Hall Bros. are, in live stock circles, well known men and highly respected. After years of successful operation in the dairy interests of Denver, the Western Holstein Farm and its herd of registered Holstein cattle, the owners believe a lightening up of their responsibilities of their large business should be observed, and hence this sale.

Just once in a great while does an apportunity present itself to buy your own selection of real foundation breeding blood of any blood of the various breeds, at your own price, and you should, those who are interested in this great breed, avail yourself of this great opportunity. *Remember the date, Tuesday, October 5, 1920.*

350 HEALTHY HOLSTEINS—UNDER FEDERAL SUPERVISION

FOR SALE AND EXCHANGE

25 head of Holstein cows, 23 of which are high grade and 2 are registered. Also herd bull, a grandson of K. S. P. A., the fifty thousand dollar bull. This bull is from a 27-lb. cow. Most of these cows bred to this bull. All young cows and well marked, good heavy producers. Price $200 per head if the herd is bought together. Will take two good teams of draft mares or mules as a partial payment. Might consider a good automobile as a partial payment.

G. A. HIGGINBOTHAM, ROSSVILLE, KANSAS.

A Steady, Consistent Producer

Pillsbury's Dairy Ration

To Maintain Maximum Production

Forced feeding for short periods has produced remarkable milk records, but it is the long time, day-in-and-day-out results that count. The dairy cow must have the right kind of feed if she is to produce consistently. Her feed must not only bring her into a full flow of milk, but it must keep her there during the entire lactation period. Production must be kept up to the highest point of which she is capable. That is the only way to bring out her full value.

Feed Must Protect Health of Cow

To-day expert feeders realize that in order to obtain continued high production over long periods, the ration of the dairy cow must contain sufficient mineral matter to safeguard her health. In formulating Pillsbury's Dairy Ration we have provided for the health of the cow. For perhaps the first time, the proper balance of protein, carbohydrates and fats has been combined with sufficient mineral matter to replace wasted tissues and maintain maximum milk yield. Read our guarantee.

Pillsbury's Dairy Ration Will Maintain Every Cow At Maximum Milk Flow Throughout Lactation Period

Cows Like It!

Pillsbury's Dairy Ration is palatable. The cows like it. We have yet to see the cow that wouldn't clean up a full feeding of Pillsbury's Dairy Ration the first time it was offered.

No Filler!

There is absolutely no filler in Pillsbury's Dairy Ration. It is a clean, honest, dependable feed, with 79.2% digestible nutrients. It contains no molasses or disguised roughage.

Economical!

The eight ingredients contained in Pillsbury's Dairy Ration were selected for their feeding value alone. Every one is high-grade. Yet its cost is no greater than that of other feeds, and you could not begin to mix the same ingredients yourself at a cost as low as Pillsbury's, and

You Can Always Get Pillsbury's.

Pillsbury's Dairy Ration Contains:
Ground Oats, Wheat Bran, Hominy Feed, Linseed Meal, Standard Middlings, Corn Gluten, Cotton Seed Meal, Mineral Salts, ***and nothing else.***

One of A Hundred Ready-Cut Homes in the Harris Free Book of Plans!

Harris Home No. LB-2031 pictured above is but one of more than a hundred modern American homes shown in our 1920 Book of Plans—ready now for you. This home is the result of many suggestions which have come to us from our farm friends—featuring a "homey" well arranged interior and an impressive exterior. Good to look at but better to live in.

Guaranteed Ready Cut System

This ideal farm or suburban home has been built many times—always with big satisfaction and big economy to its owners. Our wonderful improved Guaranteed Ready Cut System of furnishing material machine cut is the only way to build your home right, without waste of a single penny. Our simplified marking and bundling system is instantly understood by anyone—if you can read you can't go wrong.

Selected Brand New Material!

The material which we furnish for all Harris Homes is brand new and carefully selected—guaranteed to please you and give you the satisfaction you have a right to expect.

FREE Blue Print Plan Offer! Our Free Plan Offers supply you with blue prints uniform in scale, easy to read and readily understood. Our Free Plan Book tells more. Mail the coupon for our Plan Book of Harris Homes now!

Army Camp Lumber and Buildings

Millions of feet of high grade lumber and complete buildings are ready now for immediate shipment from our latest purchase—Camp Merritt at Tenafly, New Jersey. Also plumbing material and general building supplies suitable for construction of buildings of every kind. If you can use material of this kind, mail coupon for complete catalogue of government and general material.

Angle Steel Fence Posts

No. Lb3—46,000 of these pointed drive angle steel fence posts have come to us with a big purchase of material from the government. Brand new high grade finely made posts at a remarkable saving. 6 ft. long, made of 1¾ angle steel ⅛ in. thick; easily driven. Hold 7 wires on one side of angle and 6 wires on the other side in alternating positions to hold line wire on every style of fence. Sale price each . . . **35c Each**
Lots of 100 each . . . 33c
Lots of 500 or more each . 30c

Government Barbed Wire

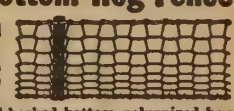
Greatest Offers Ever Made

A large quantity bought by us at less than the actual cost of manufacture. Fine barbed wire, made under rigid government supervision. 12 gauge open hearth steel wire with four point barbs ⅝ in. long, spaced 3 in. apart. Order quickly from special lots below.

4 point Painted Stock

No. LB6—This lot is coated with a special weather resisting paint. 58 lb. reels containing 750 ft.

625 reels or more per reel	$1.65
100 reels or more per reel	1.70
50 reels or more per reel	1.75
25 reels or more per reel	1.80
Less than 25 reels per reel	1.85

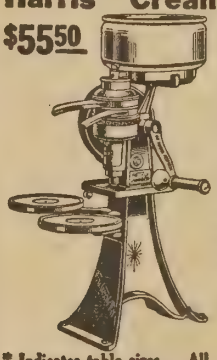


4 Point Galvanized Stock

No. LB7—This special lot contains quadruple galvanized coated barbed wire; galvanized after being made which means much to the life of the wire. 60 lb. reel contains 750 ft.

625 reels or more per reel	$3.55
100 reels or more per reel	3 60
50 reels or more per reel	3.65
25 reels or more per reel	3.70
Less than 25 reels per reel	3.75

Barbed Bottom Hog Fence



26 in. High Per Rod 32c

No. LB8—Special barbed bottom galvanized hog fencing made of No. 11 top wire and No. 14 intermediate line and stay wires. Stays spaced 6 in. apart. Space between line wires from bottom upwards are; 3, 3, 4, 4½, 5½ and 6 in. 100 rods weigh 425 lbs. 26 in. high per rod, **32c.** 32 in. high per rod, **39c**
By using two strands of barbed wire above this fence you can make a general purpose farm fence at very low cost.

Harris "Cream Getter" Separators

$55.50

Time to Pay If You Wish

No. LB12—These splendid machines have made a wonderful record in all sizes—all seasons of the year in all parts of the country. Newest model cream separators, easy to clean, easy to turn, easy to oil and now—easy to own.

Patented exclusive improvements everywhere—found only in these excellent separators.

Fully guaranteed to get all the cream—the best cream separator you can buy regardless of name, make or price. We'll take your old separator off your hands allowing liberally for it toward the purchase of your new cream getter.

No. LB13—Improved Cream Getter Junior Separator capacity 300 lbs. an hour on metal stand, each . . . **$33.50**

Bathroom Outfit $85.00

No. LB10—Splendid value is offered in this complete bathroom outfit. Consists of white porcelain enameled bath tub 5 ft. long, 30 in wide, fitted with nickel plated connected waste and overflow and nickel plated double bath cock. White porcelain enameled lavatory, size 17x19 in. with nickel plated trap and faucetts. Closet outfit includes white vitreous earthenware wash down bowl with highly finished golden oak tank, copper lined, seat and cover matches tank. Here's your chance to buy an outfit worth upwards of $100.00 now for **$85.00**

Famous Watts Corn Shellers

$99.50

The world's best corn sheller now offered at big reduced prices. Most liberal terms and a 30-day free trial with a guarantee of positive satisfaction. Order now from this ad or get full particulars without delay.

Watts No. 1 — $34.50

No. LB14—For the man who shells corn for his own use. Capacity 50 to 75 bushels per hour with a 3 h.p. engine.

Watts No. 4 — $79.50

No. LB15—With cleaning system, cob stacker and grain elevator. Shell for yourself and a few neighbors.

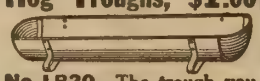
Watts No. 7—$257.00

No. LB16—With standard equipment including wagon box, grain elevator, cob stacker, type "R" feeder on steel trucks; 200 bushels per hour.

Watts No. 8—$390.00

No. LB17—Double cylinder corn sheller for custom work, with standard equipment, wagon box elevator, swivel cob stacker and feeder, on steel horse hitch trucks; capacity 600 bu. per hour.

No. LB18—*Watts No. 4 Corn Sheller with cleaning system, cob stacker, grain elevator and automatic feeder as shown.* **$99.50**
Sale price now ..



Guaranteed Paint

$2.64 Per Gal.

No. LB19—Best formula. White, black and 26 non-fading colors. Put up in 1 gal. cans, 5 gal. kits, 25 gal. half barrels and 50 gal. barrels.
Per gal. **$2.64**
Guaranteed barn paint red, yellow or maroon, gal. . . **$1.60**
Green, slate or red, gal. . . 1.90

Hog Troughs, $1.00

No. LB20—The trough you have hoped and waited for. Can't tip—flared legs. Ideal individual trough for hogs and sheep. Capacity 3 gal. Size 30 in. long and 7 in. wide. Built of heavy indestructible steel. Won't rust or cave in. Painted black. Lots of 12, each 90c.
Lots of 6 each 95
Sale price each . . . 1.00

Chemical Indoor Toilet

Brings to you every convenience of the modern toilet, sanitary and easily cleaned . . . $9.95

No. LB11—No plumbing needed with this improved chemical indoor toilet; fitted with regular closet seat and cover, finished in mahogany. Cast metal frame and base; steel casing in blue enamel. Complete with exhaust pipe and chemicals (about 6 months supply) **$9.95**

Iron Pipe Per Ft. 8c

No. LB21—Our big complete stock of pipe offers wonderful values. Pipe in random lengths complete with couplings; all sizes now offered at unusual money savings. Suitable for the conveyance of water and all liquids. Order now. 1 in. pipe per ft. **8c**

All other sizes priced proportionally low

New Mixed Nails

Per 100 lbs. $4.95

No. LB22—New wire nails including all sizes from 3 to 40d. Put up in 100 lb. kegs. A handy assortment for general use—indispensable on the farm. Plenty of all sizes. Sale price per 100 lbs. . . **$4.95**

HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

Volume LX FORT ATKINSON, WIS., SEPTEMBER 10, 1920. Number 8

THE MYSTERY OF THE SOIL

W. L. HOUSER, President Wisconsin Live Stock Breeders' Association

The Spiritual Side of Agriculture

There is mystery, profound and unfathomable, in the soil and its processes. This is the anchor that will hold men in their devotion and service to it, as the mystery and grandeur of creation hold men in devotion and service to The Great Author. Men find in modern agriculture a challenge to great learning ability, and skill of high order. The soil is the Mecca of their desire, a desire that is soul fed.

The soil, the earth, is holy. It is the cradle in which God rocks His children, soothed and comforted by the music of created things—a thousand singing birds, rushing, tumbling streams, rustling leaves, and the countless contributions of members of Nature's choir that swell their voices into a world chorus, grand and harmonious.

IN these days of intense commercialism, when the standard of achievement is the dollar, when the strife for wealth is mad and furious, when ideals are traded for profits, when compensation for effort is calculated only in cash, when integrity is legally defined, we find the tendency strongly away from things spiritual. And truly only in the pursuit of agriculture do we find an attachment for the calling that holds for those engaged in it a measure of compensation outside of the material gain that comes from the business. It is the spirit of the soil that does this. This is the subtle, though easily recognized influence that holds men, inspires and encourages them to continue in partnership with the soil even when the crops are poor, times hard, and returns in cash for labor and ability meagre. They love it as they love God and family. The soil is holy and men worship holy things. And things men worship most hold the greatest measure of mystery. There is mystery, profound and unfathomable, in the soil and its processes. There is no mystery involved in the making of a machine or the running of a railroad train, though judgment and skill are required to do either well. But there is hazzard, reservation, uncertainty, and speculation in the growing of crops and in every expression of the soil's economy. This makes the custody of the soil fascinating, romantic. There is so much room for interesting experimentation. The sources of investigation are so numerous and varied, the development of the crops and the response of the soil to scientific and skillful manipulation so pleasing and gratifying, that men are, and always will be, held under the magic of its irresistible influence. This is the spiritual side of agriculture. It is the anchor that will hold men in their devotion and service to it, as the mystery and grandeur of creation hold men in devotion and service to the Great Author.

HILCREST FARM, OWNED BY P. B. CRANE, NEW YORK.

Now this influence does not bind all men to the soil. The dominating desire for wealth, care-free employment, commercial success, luxury, and superficial pleasure, are winning sons of the soil away from farm environment and activity—too many of them. But yet the binding tie is there in the hearts of most men who have trod the earth, fed and handled domestic animals, enjoyed the music of the fields and the joy of partnership achievement with the soil, and all the scenes and experiences of farm life, though sometimes, oftentimes, hardships and disappointment outwardly seem to overbalance the compensating things. And wherever these go, whatever they do, the longing is active for a return to the scenes of youth and the country.

There is an attraction in the soil that has not been generally recognized in the past that will be potent henceforth in drawing men to the pursuit of agriculture. Men find in modern agriculture a challenge to great ability, learning, and skill of a high order. In fact, modern agriculture demands men highly trained and clever in all things that pertain to soil economy. Heretofore, locked up resources of the soil, the necessity for rehabilitation of exhausted areas caused by ruthlessness, carelessness, ignorance, and sometimes necessity, proper crop rotation, ascertainment of adaptability of certain soils for certain crops, application of business organization to farm operation, have been neglected, overlooked, ignored. But it is different now. The opportunity in farming for the use of ability, training, and skill is such a broad field, and returns result in achievements that are such splendid contributions to world needs, and hence are so gratifyingly compensatory to men of high ideals and lofty motives, men whose souls have not been poisoned and atrophied by the lust for pelf at whatever cost, men of fine fibre and clean, clear minds,—that these men and seeking and find the soil the Mecca of their desires—desires that are soul fed and that have in them the sublimity of consciousness of work with The Author in the evolution of His mighty plan of creation. Big men love to do big things. The soil offers opportunity for big achievement.

Sentiment, imagination, poetry, song, and beauty are the purveyors of tranquility. In farm life—in farm work—where the right spirit animates the man, are found these sweet things of life. It would be foolish to say that farming is one sweet unbroken song without discord or end, but from every farm task, however unpleasant, the right attitude of heart and mind coupled with scientific deduction will reason to and see the results that are compensating and in the achievement of which there will be stations along the way that are pleasant and beautiful. And the fruitage will be full and perfect. Everything that grows, that has life, is beautiful—beautiful in plan and if not marred or mutilated by man's neglect or ignorance should be beautiful in themselves. Beauty satisfies the imagination, the aesthetic in our natures, and pays all it costs. The fields and crops, the seasons, scenes and activities of the farm that are so shiftingly panoramic, so pleasing to the eye and soothing to the ear, that to men who have the spirit of their surroundings in their hearts, each day is a scenic picture far sur-

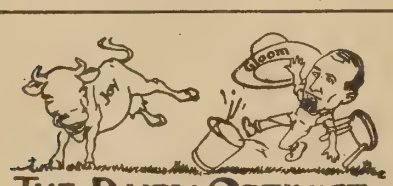
Subscription Rates

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.



All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

The Great Question

I'd like to clear that green knoll lot,
And dig up all the stumps and rocks.
I'd like to count the hogs I've got,
And shoot that pullet-hunting fox.
I'd like to buy two dozen cows,
And have a larger, better herd.
I'd like to mend my broken plows,
But all these hopes are quite absurd.
(I can't get help—the sort that pays,
Nobody wants to work these days.)

I'd like to get new acreage,
And plant new fruit trees in the spring.
I'd like to make my stock the rage,
And have my dairy records sing.
I'd like to market butter, cheese,
And buy a truck, a tractor, too.
I need to prune these orchard trees,
The house needs paintin'—want it blue.
(But where's th' help? Th' kind that stays.
Nobody wants to work these days!)

The Old Dairyman's Philosophy

There's money in the dairy business, but how can you ever really know, until you keep books?

The calf may seem to have absolutely no sense at all. Notice one thing, however, you can't fool him when it comes his feedin' time.

Just to prove that the cow does her part, you can leave even skimmilk set for a while, and there'll be a little more cream on top.

One thing that makes a bull have such a temper is having a cold in his head and a ring in his nose, both at the same time.

Doesn't it strike you as significant that when doctors want to build a man or woman up, who have been ill, they always say, "Drink plenty of milk"? Some things are legal tender; milk is one of 'em.

Can't Always Tell

Mr. Cityman had stopped in his car by the farm.

And out of the gate and down the road went three young farm boys and two pretty farm girls. They all carried dress suit cases.

"Ah, that's the tragedy of the farm," said Mr. Cityman, "all of those young folks are leaving you, I suppose—going to town."

"Wrong," smiled the farmer, "there's a fancy costume shindig at the village and my young folks are attendin'."

Tribute to the Meadow

It is a sweet and holy way,
A place that's sanctified, I guess.
Where soft rains fall and shadows play,
And buds unfold their loveliness.
The meadow, velvet soft and green,
Embroidered with the kindly trees,
And broad, cool stretches in between,
Where work the tireless honey-bees.

It is a fair and gracious place,
The playground of the happy herd.
A realm of Nature-prettied grace,
Made glad by many a singing bird.
The cows know every winding lane
That leads to it—each little stream,
Each road that brings them back again,
To nibbled cud, and care-free dream.

It is a realm of farm-land pride,
Whence comes the profit and the gain.
A banquet spread, sun-kissed and wide,
And freshened by the gentle rain.
The milk, the butter, cream and cheese,
Trace back their inspiration here.
Dear happy streams and sheltering trees,
We hold you infinitely dear!

Being stung by a bee is not so bad, when you stop to remember that the pesky little beggar is tipped with honey.

And So It Goes

The Irish servant girl had just arrived from the city and in letters had agreed to help assume some of the responsibilities of farm work. But she stood at the gate and looked all around, skeptically.

"How do you like it?" asked Dairyman Jim Higgins.

"Shure," she replied, "it do be grand, but Oi'm afther tellin' yez here an' now, thot salt wather do not agree wid me and Oi would not hov coom if Oi' hod known th' place was on th' ocean. Yez can't fool me. Oi' see wid me own eyes thim two loight houses over yonder."

It was the first time Norah had ever been introduced to silos.

Cussin' Out Cantaloupes

I hear a lot of folks complain about cantaloupes, and accuse the farmer of swindling the public because the flavor is poor, or this and that. But will city folks please think these items over for a minute:

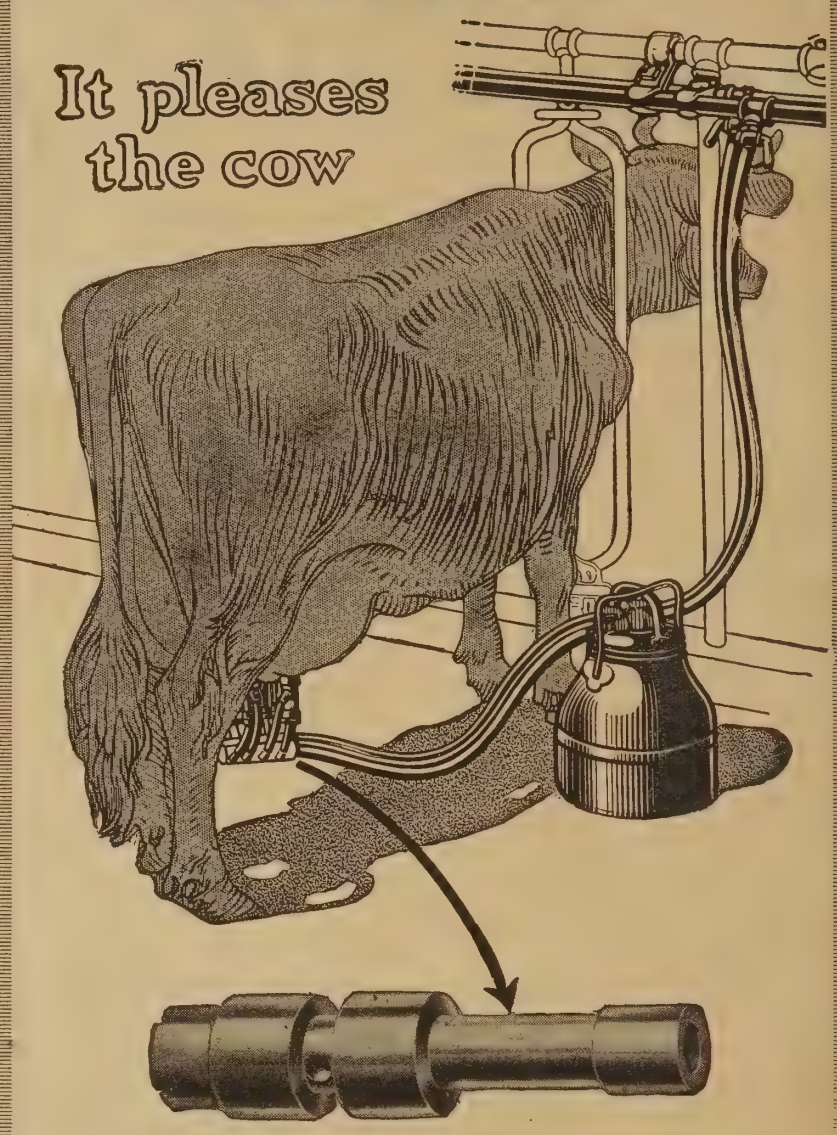
You eat them when they are still green.

You do not remember how long it has been since they left the melon patch.

You can't judge by feeling.

You cut the melon that should be eaten Monday, on Friday.

You must know that every melon can't be a good melon—even men aren't.



You fuss 'em all up with pepper and salt and sichlike.

Say—just you come out on the farm where we grow 'em, and let us pick you a fresh, ripe one from the patch, and sit right there under a tree and eat it. Then see what happens.

Mary had a little lamb.
Its fleas were mighty bad.
And catching one or two from it
Was what made Mary mad.

Just imagine eating sweet clover all day—is it a wonder that milk is so all-fired sweet?

The De Laval Milker

The only moving part of the Udder Pulsator

The De Laval Udder Pulsator is a remarkable advance in pulsator construction. It has no valves, no springs, no weights, no diaphragms. The only moving part is the small, plain piston of non-rusting, wear-resisting Monel metal, which never comes in contact with the milk, is entirely enclosed and lasts for years without oiling, adjusting or repairing.

The regular movement of the piston effects uniform action of the teat-cups and as the piston is moved with unfailing regularity by the De Laval Master Control, all cows are milked in the same manner every day in the year.

The De Laval Milker is alternating, positive, uniform and gentle in action—requiring no adjustment of any kind. It is faster, more reliable and more sanitary than any other method of milking, and is sold with full knowledge of the fact that more is expected of it than of any other milker—due to the Company's reputation for service and satisfaction to users of De Laval machinery.

Write to nearest De Laval office for Milker Catalog, mentioning number of cows milked

The De Laval Separator Co.

Owning an Ensilage Cutter

EARL ROGERS, OHIO

ONE of the biggest reasons for the silo to my mind is the advantage in having a place to take care of a frosted crop of corn. Without the silo it is almost a total loss; with a silo it is nearly always possible to save the whole feeding value so far as it has matured. There are other reasons, of course, but this is the biggest one.

So there is the main reason for a silo owner having a cutter of his own. If he has a late crop and it fails to mature he must wait for a custom machine to come along. Usually these machines make their trips before frosted corn days and are hard to get in later than that, without extra expense.

Four of us farmers here whose farms lie in one solid block own a 13-inch cutter of standard make. It will handle about 7 tons of silage an hour if cut ¼ inch long. We wouldn't want to be without a privately owned cutter since we've had one.

If one owns a silo 30 feet high and it is filled full with a big custom cutter the chances are that in 2 days he will have about 25 feet of silage. There's five feet of investment that isn't worth anything to him—no interest on it even. But with our size of cutter we don't have so much settling because it fills the silo slowly. There is time to settle while the work is being done. More than that, the cutter belongs here and we can let it stay at the silo and refill the settled space in a day or so if we wish. That allows us to get the full use of the silo. My silo has an extension of 2½ feet just for filling and allowing to settle. So I can get a full silo if I want it.

The biggest drawback we have is the lack of power to run this cutter. Steam is the really satisfactory power for this work and usually we can get a traction engine from our threshers to furnish the power. This cutter is rated to run with a 10-horse gasoline engine but it won't do it, of course. One seldom will find a machine that will do as it is rated or run as easy as it is rated.

I mentioned having a cutter for filling with frosted corn. Other corn that is matured without frost should go into the silo at a certain time to be best. A custom cutter can't get around for this just when it should be made into silage. They have a trip to make and your corn may go in the silo too green while the other fellow's may get in too ripe. The value of silage depends on getting it into the silo when it should go in—not latter or earlier. There is a certain day when oats should be cut and hay or most any farm crop. Corn for silage is just as particular.

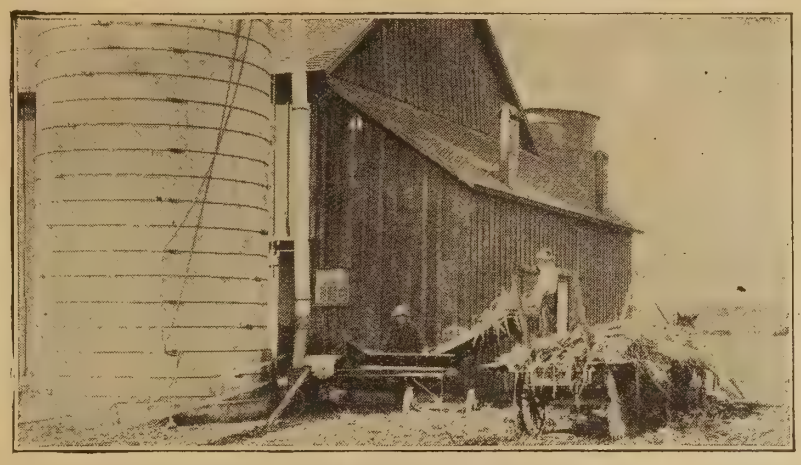
By having this size of cutter we are able to fill with a reasonable gang. We hire very little. There will probably be five silos this year to fill with this cutter. That will furnish nine men among us. Three men with teams if the field is close to the house with three men to handle bundles in the field, a feeder for the machine, and whatever one wants in the silo make the gang, outside of the engineer. I rather think I will use one man only this year in the silo. Tramping seems to be one of the relics of the first silos in some sections and I want to try once and see for myself.

We have found some things that may be of value to newer silo fillers. At first we had a man to cut bands and another to feed. One day we were short of help and I was feeding. I piled a few bunches of shingles up close to the feeding table and had the bundles thrown on the shingles. Then I cut the bands on this temporary table and fed alone. It is hard and fast work but it saves a man and does better work because one man always knows just what both hands are going to do. Two men bother each other more or less. Now we make a feed table as long as the feed box on the cutter. We slant it a little toward the feeder. It is about 2½ feet wide.

I think it pays to have an extra team and wagon on hand. The cutter must be kept busy. If one team is behind it holds up ten men at least. Ten men held up for three minutes is equal to one man for a half hour and that is too much. Every man on a job where the cutter is operated by owners of farms is apt to want to work. We don't care about loafing while the wagons come. So the extra team with a load on can be brought up and the machine kept going. There is usually a chance when stopping for oiling or something of that kind to load the extra wagon again.

We find that a hard oil for the cutter with graphite in it makes the machine work much easier. Graphite is the slipperiest stuff I ever saw in the lubricating line. Mix it with hard oil and you have something extra good. It pays to keep the oilers turned down often, too. Too much grease seldom harms a machine and too little does. A heavy balance wheel running 700 times a minute pushes grease away from its bearings pretty quick. Better keep the grease there.

Keeping the cutter knives sharp is another thing worth while, too. We have two sets and a grinder on the cutter. A man who is standing around waiting for his load to be cut can sharpen the knives and be ready for a change. We change every half day always and sometimes more often. The machine pulls easier and does much better work when the knives are sharp. Of course, it is easier on the machine if the cutting is done easily.



It pays to be careful in throwing the bundles on the feeding table. One bundle at a time will enable the feeder to cut the band and keep going easily. But if you throw two bundles down together and cross them, a little he has to straighten them out and gets behind. The machine runs partly empty while this is being done. If the unloader can throw three or four bundles down straight on the table for the last of the load the machine can be kept busy until the next team gets up and starts to unload. It is as hard on a machine of this sort to run empty as to run loaded and it doesn't pay to slow down for such a short time.

We have found that it is a loss of time to have to back a team out every time it is unloaded. If possible have a place so arranged that the teams can drive right on by the cutter. The following team can then be ready to unload at once.

Probably there are a lot more points that we will discover from time to time. But these have helped us so far.

If one can have a small pulley and good ⅜-inch rope the distributor pipe and blower pipe can be hauled up to the silo top much easier and with less danger of falling.

It certainly pays to have a distributor pipe.

POPULARITY OF THE SMALL SILO FILLING OUTFIT

It is on the job when wanted. There is no waiting till a dozen or more neighbors finish and the corn is dry. Refilling is more conveniently done. A smaller crew is needed. The interest on the investment may bring the cost above that of the commercial equipment, but the insurance of good silage is worth it. Last year saw good corn wasted and cows shrink in milk because the corn got too dry before filling and molded badly.

KEEPING MEN AND TEAMS BUSY MAKES FOR ECONOMY

Geese Milk Cows

The following effusion of a city reporter may be of interest to readers of Hoard's Dairyman who are more familiar with farm animals than the writer of an article which appeared in a Wisconsin local weekly paper. The occurrence is presumed to have been on a farm in Wisconsin owned by George Handsome. A portion of the tale follows:

"Mrs. Handsome discovered that instead of geese eggs, which she was attempting to fry for dinner, being composed of ordinary 'yolks and whites', they contained nothing more or less than real country butter!

"Mr. Handsome discovered several members of his big flock of geese deliberately 'sucking' milk from his cows as they stood or laid about the pond placidly chewing their cuds. That was enough for Handsome. He would have slain the entire flock of geese but for the interference of his wife.

"For several weeks the Handsome cows had been giving very little milk, and what they did give produced no butter. The family was compelled to buy milk and eat 'store butter', when they should have been having the best in the country. The calves, robbed of their sustenance by the geese, were pining away—literally drying up and about to die.

"These facts worried the Handsomes. They also worried their five children and about as many calves. To overcome the shortage of milk and butter and to cut the high cost of living Handsome and the family began eating geese eggs.

"For the past ten days Mrs. Handsome had noticed these eggs were 'getting thicker'. Finally they were 'so thick' they wouldn't fry. It was then Mrs. Handsome made the discovery. She tried to break one of the eggs into a pan of smoking grease, but the egg didn't pour. It just 'lumped out'. She broke another and it 'lumped out into a pan', where she examined it. It was then she found the egg was nothing else than butter!"

The Methylene Blue Reduction Test

A Simple Method of Determining the Number of Bacteria in Milk

E. G. HASTINGS, Wisconsin College of Agriculture

WHEN one speaks of the quality of milk, he may have in mind one or more of the factors that determine quality. If he is thinking of the nutritive value of the milk, he considers its content in fat, in casein, and in sugar. If his interest is broader, he will include in his consideration the keeping quality of the milk, its healthfulness, its taste and odor, and its cleanliness, i. e., its freedom from foreign matter. The importance of cleanliness is twofold. All wish clean milk for purely aesthetic reasons, and, furthermore, dirt introduces bacteria into milk which may injure its keeping quality, its taste and odor, and its healthfulness.

If one wishes to gain any adequate idea of the quality of a sample of milk, he must in some way determine the kinds of bacteria it contains and the relative number of each kind. The milk will contain a great many forms of bacteria since it receives its contamination from so many sources. It is impossible to determine by any one method all of the bacteria in a sample of milk. That method is best that comes most closely to this ideal. There are three methods of determining the bacterial content of milk. All are widely used. The most common is the plate culture method which requires a considerable amount of expensive apparatus and is costly in labor and materials. It is the one ordinarily used in laboratories that are concerned with the control of milk. Another method involves the counting of the bacteria under the microscope. This method is less expensive than the plate culture method to carry out. Each has its advantages and disadvantages. Under certain conditions the plate culture method can best be used; under other conditions the microscopic method will prove the better. Both have the disadvantage of requiring a considerable amount of time, and therefore but few tests can be made in a day.

Another very simple test for the number of bacteria in milk has been widely used abroad, especially in the Scandinavian countries. When a small amount of the dye, methylene blue, is added to milk the blue color imparted to the milk disappears sooner or later. The time required for the milk to become white again is dependent on the number of bacteria it contains. Different kinds of bacteria vary in their power to reduce or to decolorize the methylene blue. The lactic-acid-forming bacteria exert the most marked action, the other acid-forming and non-acid-forming a less reducing action. This is the order of their importance in influencing the keeping quality of milk.

The test must be made at some definite temperature in order that the results may be comparable. The smallest amount of methylene blue that will impart a decided color to the milk should be used since it has an unfavorable effect on the growth of bacteria. The test is carried out as follows: Ten cubic centimeters of the milk to be tested is placed in a clean glass tube. Such an amount of the dye is added that there will be one part in two hundred thousand parts of milk. The tube is now placed in water that is heated to 98°F. At intervals the tube is observed to note whether the color has disappeared.

A stock solution of methylene blue is made by dissolving one gram of the dye in 500 cubic centimeters of distilled water, or in pure well water if the former is not obtainable. This stock solution is diluted for use by adding one cubic centimeter of it to 39 cubic centimeters of pure water. One cubic centimeter of this solution added to 10 cubic centimeters of milk will give a suitable concentration for the test. The stock solution will keep for several months if stored in the dark. The more dilute solution should be made up at intervals of two or three days.

Methylene blue is carried by many of the larger drug firms. It is probable that the tablets used in Denmark for making the test will soon be on the market in this country.

The dye in the strength mentioned imparts to the milk a robin's egg blue. The disappearance of the color is very apparent since the milk returns sooner or later to its normal yellowish or bluish white. By comparing the tubes of milk which are being tested with a tube of milk to which no dye has been added one can easily decide whether all the color imparted to the milk by the dye has disappeared.

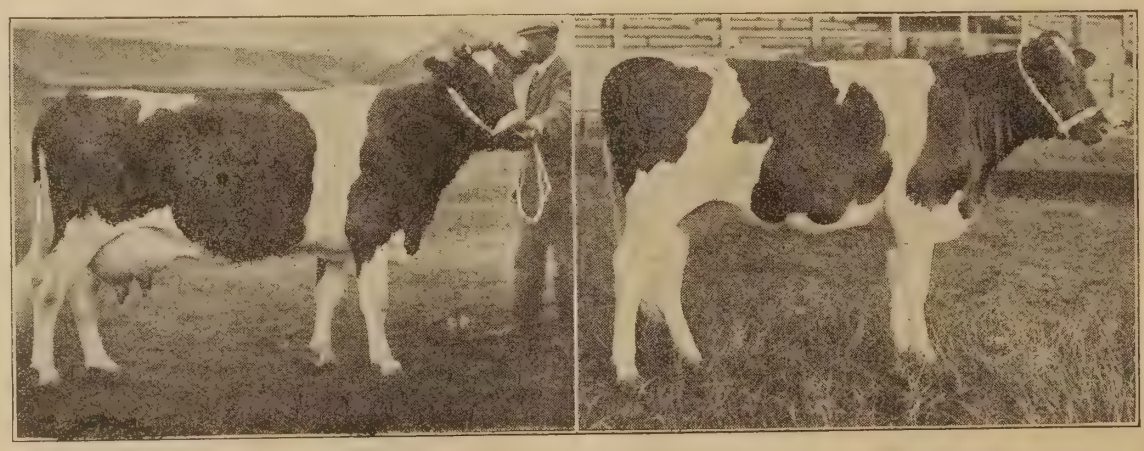
In actual practice abroad it is common to divide the milks into the following classes: The milks that decolorize in less than 20 minutes are classed as poor. As a rule, they will contain over 20,000,000 bacteria per cubic centimeter. The milks that decolorize in from 20 minutes to two hours contain from 20,000,000 to 4,000,000; those that decolorize in from two to five and one-half hours contain from 4,000,000 to 500,000, and the milks that require a longer period less than 500,000 and are classed as good market milks.

By extending the period of observation and by noting the milks at more frequent intervals, the grading can be made much more closely than is done in the above scheme. Milks that contain but a few thousand bacteria per cubic centimeter will require eight to ten hours before the disappearance of the color, while milks that are almost sour will lose their color in a moment. The milks falling between these two extremes can be divided into many classes, the number being dependent on the frequency of observation. It is evident that a large number of tests can be made in a day, that no expensive apparatus is required and no technical training is demanded.

The test has not been used to a great extent in this country, apparently because a number of papers have been published which showed that the results obtained did not always check with the counts obtained by plate cultures. There are many reasons why this should be so, and the non-agreement can not be used as an argument against the reduction test. It may be in its favor. A considerable amount of experimental work has been done in the writer's laboratory, and the conclusion to which we have come is that the reduction test is as accurate a means of judging the quality of milk as is any of the other methods. It excels them all in ease and cheapness.

The writer believes it can be used with great advantage in many places, as by milk distributors who desire to check up their various producers and do not feel justified in maintaining a bacteriological laboratory, by dis-

(Continbed on page 309)



A NEW GUERNSEY CHAMPION

MAY Rose of Westbrook Farm, owned by G. W. Koser, Pennsylvania, now heads the list of Class BB cows in the Guernsey Advanced Register, with a record of 15,530 pounds milk, 757.07 pounds butterfat. This performance exceeds the record of the previous champion of the class by almost 600 pounds of milk and 47 pounds of butterfat.

May Rose of Westbrook Farm was placed on test on May 5, at the age of four and one-half years, and was milked three times daily. In addition to making this large record, exceeding her requirement for entry in the Advanced Register by considerably more than 100 per cent, she carried a calf 273 days of her test period.

The new champion was bred by S. I. Murphy, Pennsylvania, and was dropped on August 27, 1914. She was purchased in dam by Mr. Koser. Her sire is Irene's King of the May, a son of Imp. King of the May. Her dam is Napoleon's Gentle Lee.—AMERICAN GUERNSEY CATTLE CLUB.

Eighty-Eight Acres of Sand

F. E. ELLIS, ONTARIO

MR. AND MRS. BECKER

GOOD soil is the basis of successful and profitable agriculture. This is almost a truism; an agricultural axiom, if you please. Every traveller can tell you that the houses, the barns, and the live stock—the outward symbols of the farmer's prosperity—are generally a reflection of the quality of his land. The farm with a fertile, strong soil will almost always be well built upon. The owner of 100 acres more or less of sand banks usually lives in a shack. There are exceptions, of course; such remarkable exceptions that one is led to believe that, after all is said and done, the man himself is a more important factor than his natural opportunities. The right man will rise superior to his environment and make a success in spite of the greatest obstacles. Such a one is Arthur Becker of Waterloo County, Ontario.

Mr. Becker is gradually becoming known in the live stock world. At his Heart's Delight Farm several good yearly records have been made in Record of Performance test. More recently he has made a few creditable Record of Merit tests. His Holsteins are attracting attention and are becoming so well known that one of his cows topped the last Waterloo Sale. In his registered herd are some of the choicest lines of breeding. His gross income in the past year on an 88-acre farm will total around $6,000. I mention these facts to prove that Mr. Becker is making good—even as many others are making good. The special feature of Mr. Becker's success, however, is that he has made good on a poor sandy farm; such soil, in fact, as many a farmer would not take as a gift if he had to make his living from it. It is for the encouragement of others who may be laboring under similarly adverse conditions that I persuaded Mr. Becker to tell me his story.

The Farm

Heart's Delight Farm is four and one-half miles from Petersburg on the Grand Trunk Railway. It consists of 88 acres of sandy land. The back half of the farm has a soil which would be classed in commerce as a fine grade of builder's sand. What is true of the surface is equally true of the subsoil; it is just sand as far down as anyone has ever cared to dig. The front half of the farm is more of a loamy nature, but even it must be classed as a light sandy loam. Just around the buildings there is considerable stone. A more unsatisfactory soil on which to farm would be hard to find outside of the blow sand areas. To make matters worse, the land had been grain farmed for years and the soil exhausted to the point where it would produce only enough on the 68 acres of workable land to winter a couple of horses and feed fourteen head of cattle. Such were the conditions when Mr. Becker, a young man in his twenties, moved on to the place fifteen years ago. Today the farm supports a herd of 44 pure-bred Holstein cattle, 20 of them two years old or over, and four horses. All of the roughage and a part of the grain is produced on the farm. How was such a transformation wrought? I asked Mr. Becker about it.

A COW OF MR. BECKER'S BREEDING THAT TOPPED THE WATERLOO SALE

"Progress has been made largely in the past eight years," he replied. "I did not have the advantage of even a short course in agriculture, or any other special instruction to enable me to study conditions and start right at the beginning. I knew of no other system of farming than that which had already impoverished the place and, because I had practically no ready working capital, I kept right on growing grain and feeding a few head of beef cattle in the winter. I got nowhere and soon became convinced that I was going to get nowhere. Accounts were always hard to meet and I guess some of my friends were figuring on just how long it would be before I would have to leave the place."

MR. BECKER HAS FOUND SWEET CLOVER AN EXCELLENT CROP FOR LIGHT SOIL.

But the hard pressed young farmer had already made two good moves. It came out in conversation later. He was doing all of his business through the bank when it was not common for the farmers to use the bank at all, except as a safe place for depositing their savings. This relationship created with the banker was used to Mr. Becker's advantage on more than one occasion when credit was badly needed. In the second place he had become an omniverous reader of agricultural literature. All of the leading agricultural journals published in his province were subscribed for and several of the best farm papers issued in the United States. At one time there were fourteen periodicals of one kind and another entering the Becker home. And they were read. Everything that had any bearing on his own problems was more than read; it was carefully studied. Then Mr. Becker began to write to agricultural experts, asking for information on points which were not covered in his reading. In the light of the information which he acquired, he began to analyze the possibilities of his farm.

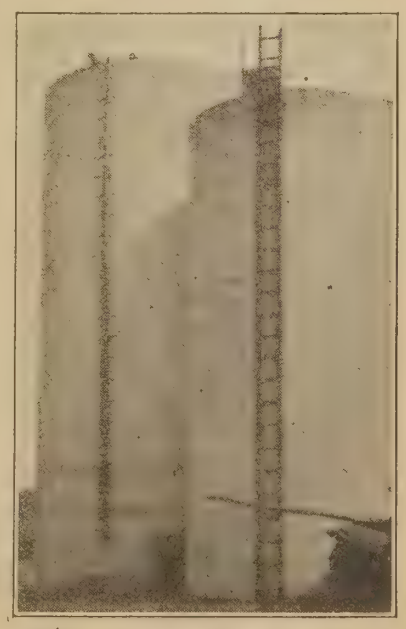
Two Good Moves

"The first year I was on the farm," Mr. Becker told me, "I had just two cows. They were very ordinary cows and the increase from them was ordinary also. When I had definitely decided on dairying I made the best moves of my life. I started to keep daily milk records and I purchased a pure-bred bull. The herd, such as I had, was tested for one year. Their average production was just 3,600 lbs. of milk. It was a poor showing but it was not all the cows' fault. I had one silo then, an old square one, 8x15 feet on the ground and 22 feet high. I did not know as much about feeding and management then as I do now, but even under better conditions the cows would not have been profitable producers. They just didn't have it in them.

"I sold off all of that herd but two and invested the money in a few good grade Holsteins," continued Mr. Becker. "The next year with my improved herd and, I suppose, a little better management, I secured an average production of 7,500 lbs. of milk a cow. Then the daughters of the pure-bred sire I had purchased began to come into milk. Two-year-old heifers of this breeding were giving more milk than their mature dams and in a couple of years I had an average production from the herd of almost 11,000 lbs. of milk. The poorest cow I ever owned produced 2,600 lbs. of milk in a year and the best cow I have ever owned made almost that much in a month as a three-year-old.'

In the meantime Mr. Becker built another silo. The astonished contractor protested when he found that the specifications called for a cement silo 14 feet in diameter and 42 feet high. He assured his customer that such silos were never built on such a farm; a silo 30 feet high would be ample to store all the corn that he would ever grow. Mr. Becker replied that he was going to double his corn area. Then well intentioned friends argued with him that corn is a very exhaustive crop on the land and that his soil would not stand such heavy cropping with corn. The silo was built, however, and the corn grown to fill it. At the present time 23 acres are devoted to this great ensilage crop and another silo was built 12 by 36 feet to be succeeded last fall by a third of similar proportions.

THE BECKER YOUNGSTERS ARE ENTHUSIASTIC YOUNG HOLSTEIN FANCIERS



Alfalfa Now a Standby

Six years ago Mr. Becker made another good move. He seeded his first field to alfalfa. He got one excellent crop of hay, but the alfalfa was killed out in the following winter. "It was here," remarked Mr. Becker, "that I learned the importance of a hardy variety. The first seed used was merely northern grown. Ever since then we have used the Ontario variegated seed and have had no trouble in keeping our stand. We consider alfalfa as profitable a crop as we can grow and consider that it is a mighty good acre of oats that will make as much feed as an acre of alfalfa, or bring in as much money."

And here we have the secret of this farmer's success from the cropping end. His two principal crops are excellently adapted to his light soil and at the same time they afford the best possible combination of roughages for the basis of a ration for dairy cattle.

"The variety of corn grown is an important point on such soil as this," said Mr. Becker in discussing his corn

(Continued on page 300)

Uncle Sam's Hired Men Who Serve You

If George Livingston, Chief of the Bureau of Markets, Doesn't Put Money in Your Pockets It Won't Be His Fault

FRANK GEORGE

This is the fourth of a series of articles this publication is running, in co-operation with the U. S. Department of Agriculture, to acquaint our readers with the type of men who are making possible the wonderful service the Department is rendering and stands ready to render our readers, that those not now availing themselves of these services may do so.—EDITOR.

IT will be recalled that in Greek Mythology Argus, the son of Zeus and Niobe, had a hundred eyes. George Livingston, Chief of the Bureau of Markets, United States Department of Agriculture, has but two eyes—being just an every-day human being—but his friends say that his vision is better than Argus' ever was. It has to be good to see all sides of the big farm marketing problems of today and then to look after 100 field offices distributed throughout the United States, as well as to direct the activities of some 1,330 employees who are trying to solve them.

But going back a little farther, George Livingston first saw the light of day on September 14, 1886. Thereafter, he spent 18 years on a farm. During that time he saw a great many things. Other people saw them, too. But, whereas others sat down and grumbled at the hard lot of the farmer, George Livingston determined to apply corrective measures if he ever got the opportunity. At the same time he perceived that Mr. Opportunity might fail to put in an appearance, so he donned his hunting togs and went after him.

At tweny-nine G. L. was an authority on grain and grain marketing. He had graduated from the Ohio State University and thereafter spent five years specializing in agricultural and marketing methods in the capacity of instructor and assistant professor at various universities. His post-graduate course at Cornell University subsequently led him to Europe to study agricultural practices there. Then he joined the Bureau of Markets. His executive ability and genius for organization were soon recognized and four years later. he was appointed chief of the bureau.

Quick to recognize ability in others, George Livingston is never satisfied until its full force is being applied. When he established the grain inspection service he assembled the best talent that could be found—men who knew their business from the ground up. It was not an easy job. There were many persons who knew that while the adoption of standard grades would remove the guesswork from grain marketing and therefore be of huge benefit to the farmer, it would also reduce their own incomes considerably. However, that did not deter G. L. for a moment. But instead of holding a bludgeon over their heads he sought quietly to secure their cooperation. And he did it. That is the way he does everything—quietly, courteously, unerringly.

For more than half a century agricultural experts and agencies have devoted almost their entire attention to production problems. But these experts are now agreed that the question of marketing is of equal importance, and that the present marketing system is wasteful and inefficient in many spots. They say that with the present methods farmers lose millions of dollars annually. More important than that is the economic waste caused by the quantity of food actually lost.

It is only comparatively recently however, that any organized effort has been made to develop the machinery of marketing to meet the nation's requirements. And with the United States leading the world in the maintenance of a government agency to study and devise new marketing methods, economists and students of food distribution problems everywhere are watching closely the results secured by the Bureau of Markets and the man who directs its activities.

Already conspicuous achievements have been secured by establishing standard grades for farm products, reducing waste caused by faulty storage and shipping methods, and lowering costs of distribution of some agricultural products. One or two examples will indicate what it is possible to accomplish by improving present marketing methods.

By developing an inexpensive storage house for sweet potatoes and widely advocating its use the loss by decay of the sweet potato crop has been reduced from 25 per cent to 2 per cent—a saving of about $2,000,000 a year.

The president of a national bank in Marshall County, Texas, has stated that the service rendered by the Bureau of Markets in connection with the assistance given cotton growers in grading and stapling cotton before sale has been worth $150,000 to the county. Another prominent man in Hall County, Texas, states that similar service performed there has been worth $200,000. Hundreds of letters containing statements such as these regarding all agricultural products are continually received by the bureau.

G. L. considers that the standardization of farm products and the containers in which they are packed is fundamentally the most important work being performed by the bureau a work that is basic to all improvement in marketing, for without established standards and grades there is no recognized basis for buying and selling; no common language by which the parties to a transaction may understand each other; no uniform standard of quality upon which values and prices may be based.

Mandatory standards have been fixed for American upland cotton, including grade, color, and length of staple; for shelled corn, wheat, and oats; and for climax baskets and containers for small fruits, berries, and vegetables. Permissive standards have been recommended for white potatoes, sweet potatoes, Bermuda onions strawberries, Sea Island and American-Egyptian cottons, and tentative standards have been formulated for some other commodities. There is urgent need for the standardization of

hay, wool, live stock, dairy and poultry products. In the matter of hay alone many farmers have stated that nine-tenths of the losses sustained in the hay business are due to a lack of standard grades and a uniform impartial inspection service.

He also believes that the economic waste caused by shipping products to glutted markets and away from under-supplied markets will be prevented by the use of the Bureau of Markets news service which many farmers find of inestimable value in marketing their produce. These reports cover live stock and meats, poultry and dairy products, fruits, vegetables, peanuts, cotton, hay, feeds, and seeds. The data are secured from most reliable sources by special representatives at the markets, and by means of a reporting arrangement with 474 railroads. The cantaloupe growers and shippers of California state that this service, together with the assistance given by personal representatives of the Bureau of Markets, have saved them $1,000,000 in a single season.

The daily, weekly, and monthly market reports and summaries showing market conditions, prices, movement, supply and demand in connection with live stock, meats, wool, hides, and skins; the preliminary standardization of classes and grades of these products; investigations of waste and loss in marketing with suggestions for improved methods, and stockyard supervision calculated to detect and prevent dishonest practices have effected a stabilization of the live stock markets and a saving of millions of dollars, directly and indirectly, to the producers, shippers, and handlers concerned.

Another important factor in marketing is the Food Products Inspection Service established by the bureau, by the use of which shippers and others interested can obtain certificates attesting the condition of their perishable products received at central markets; a service that facilitates the distribution of the products covered, hastens the release of cars, lessens deterioration and waste on account of delays resulting from disputes as to the condition of products, and prevents unfair trade practices.

Then there is the organization of farmers' co-operative associations—permanent, economic institutions that have a far-reaching effect. There are now more than 14,000 farmers' co-operative associations in the United States, in the organization of many of which the bureau was called upon to lend assistance. A staff of experts is maintained to study practical methods of co-operative marketing and to place the results in the hands of the farmers.

The writer endeavored to draw out from George Livingston something about himself. But without success. Self has no place in his lexicon. But he had a great deal to say about the work of the Bureau of Markets, and in doing so the force of his personality and capability was plainly evident in spite of his modesty.

"The Bureau of Markets is endeavoring to devise the quickest, most direct, and least expensive methods of getting products to market," he said. "Slip-shod methods must go, for the new methods will be better."

"Of course, it must be appreciated that the job can not be done over night. Present marketing methods are the product of evolution, and better marketing practices must come through gradual improvement in methods and procedure. It has taken decades and in fact a century or so to develop the production side of agriculture to its present degree of efficiency, and there yet remains much to be done. I hope that the development of efficient marketing machinery will not take that long, but it is a vast undertaking, and every step of the journey must be sure-footed.

"To accomplish that result the bureau needs to have on its staff workers of proved ability through practical experience; workers who are keenly sympathetic with the farmer's needs. In a word, we want in the Bureau of Markets the best marketing specialists found anywhere in the world.

"But of equal importance is the hearty co-operation of everyone. By the character of service rendered we want the farmer to know the bureau is his friend, and not to hesitate to call upon it to help him solve his marketing problems. It is his bureau, and we are ready and anxious to serve him."

In that last sentence is contained the keynote to George Livingston's code. Service to others is his religion. He is constantly devising means of helping the farmers with their problems, and the only reward he asks is that the farmers come half way to meet him.

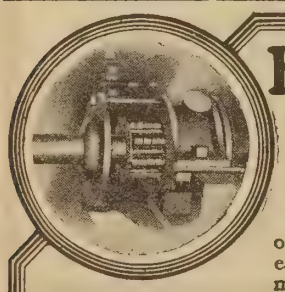
A 12,000-pound Cheese

MR. HORACE REECE OF NEW YORK STATE AND THE 12,000-LB. CHEESE WHICH WILL BE DISTRIBUTED AT THE 1920 NEW YORK STATE FAIR

THE biggest cheese ever made in New York State was recently turned out at Reese and Searle factory at West Martinsburg, Lewis County. It weighs 12,000 pounds and into it went the curd from seven factories made from two days' supply of milk. The weight of the milk used was about 120,000 pounds and was the output from 2,400 cows for two days. The cheese was made for exhibition and distribution at the New York State Fair in Syracuse.



Horace Reese superintended the making of the cheese, although the dozen or more expert makers, including some sent by the State Commissioner of Agriculture, were under the direction of Albert Searls. Lieutenant Governor Harry C. Walker and State Commissioner of Agriculture George Hogue attended the ceremonies when the curd was poured.

Mr. Reese is 79 years of age, although he looks only 60 and is as active as a man of 40. He has been making cheese in Lewis County for sixty years. For thirty-one years he has been an instructor in cheese and butter making under the direction of the state department of agriculture. In this capacity he has traveled from one end of the state to the other, helping make fancy cheese and aiding makers who were having a run of bad product to get straightened out.

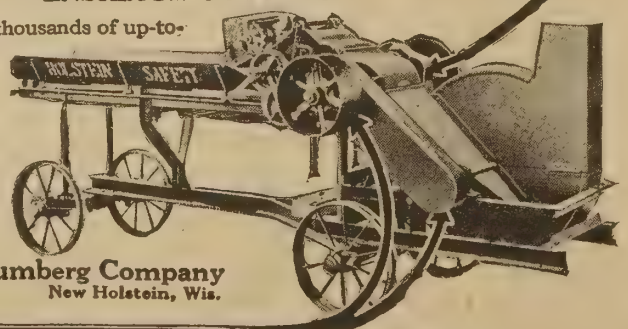
Mr. Reese made a cheese weighing 11,000 pounds which was exhibited at the San Francisco exposition. Only one cheese larger than the one made this year has ever been produced in the United States, that being the one at the Dairy Show last year, a Wisconsin product.

The accompanying picture shows the huge mold in which the cheese was formed, with Mr. Reese standing beside it.

New York. P. H. WERTZ.

Easy Running

Most buyers of Holstein Safety Ensilage Cutters are ordering them equipped with



Hyatt Roller Bearings

on the main bearings and the blower. This insures easy running, while the compression grease cups make it easy to keep the bearings well lubricated.

Bearings base for cutter head and lowe rroller is cast in one piece, insuring everlasting alignment.

HOLSTEIN SAFETY
ENSILAGE CUTTERS

are the choice of thousands of up-to-date farmers, because of these and other desirable features.

Free Booklet

on modern ensilage cutters will be mailed to you on request. Send for it today.

New Jersey Holstein Breeders Going After a Paid Secretary

HOARD'S DAIRYMAN:—Saturday, August 21st, was a banner day for New Jersey Holstein breeders. For about a year things have been livening up among the New Jersey Holstein men. Somerset County started things going in August, 1919, when they started plans for an organization made up of breeders of Hunterdon and Somerset Counties. The next thing that happened, Salem and Cumberland organized the Salem—Cumberland Association. Following this Warren County organized the Warren County Club. Mercer County came next. Morris County organized her local club in the spring of 1920. Three of the clubs have held sales with very good success, but the capping climax has arrived. New Jersey is to put on a statewide campaign for a paid secretary, September 13 to 23. President Aitken and R. C. Pollock are going to spend ten days in the state and put something worth while across.

New Jersey had the first 40-lb. cow. New Jersey boasted of some of the pioneer breeders. Some of the best breeding in the country has originated in this little state. Although she has but 120,000 Holsteins she stands twelfth in the list among the states of the Union. She has the Allamuchy and Tranquility Farms, the home of King of the Ormsbys and King of the Sadie Vales. She has Pequest Farms, the home of the $100,000 bull, King Pontiac Hengerveld Fayne; Bloomingdale Farms owned by the late A. A. Cortelyou, the home of King Model. Mr. Cortelyou has given some of the best cattle of the breed to the Holstein world; Bernard F. Myer developed Valdesa Scott (2); Forsgate Farms who now have 100 pure-bred females and 8 cows on semi-official test; and one of the last, but not the least, Rancocas Stock Farm where some of the best cows of the country are being brought together.

At the meeting on Saturday at New Brunswick, about fifty enthusiastic breeders were present. Mr. G. D. Brill of Forsgate Farm and president of the state association introduced Dr. J. G. Lipman, director of the Agricultural Experiment Station and dean of the Agricultural College. Dr. Lipman urged upon those present the strengthening of their association. He was followed by John Ridgeway of the Salem County Holstein-Friesian Association who told of the work of Mr. Bullard, the secretary of their local Holstein-Friesian Club. He made the statement also that Mr. Bullard, although he had only been on the job two months, had made his salary both months. He said that the men in that section were so interested in the Black and Whites that they had gone down in their pockets and put up

enough money to assure the success of a paid secretary for the first year.

The next man on the program was Mr. R. C. Pollock of the Holstein-Friesian Association of America. After Mr. Pollock had talked to the dairymen for a few minutes he called for a vote as to how many thought a paid secretary for the state organization would be worth while. Every man voted in the affirmative. When Mr. Brill called for a vote on whether New Jersey should put on a campaign or not, the vote was again unanimous that a campaign be started. New Jersey will be the seventh state in the Union to have a paid secretary. Although this little state is known as the Garden State, she produces annually about thirty million dollars' worth of dairy products. These products are practically one-fifth of the total valuation of agricultural products of the state.

Meetings in the local counties during the campaign will be in charge of the presidents of the local clubs. These men are Salem—Cumberland Club, Walter Garrison; Mercer County, DeWitt Green; Warren County, Ernest Race; Somerset—Hunterdon Counties, John Tine; Morris County, L. F. Castle. A great deal of credit for this movement is due to the interest that the county agents have taken in this black and white organization. In connection with the meeting on Saturday, the Somerset—Hunterdon Club held a summer tour making the meeting at the College Farm its first stop. County Agent Haines had a good crowd with him from his club. Mr. Crissey, county agent in Salem County, also made the event one for holding a tour of several dairymen from Salem County. Breeders of other states must watch New Jersey. She was one of the first ones in the Union to boost the black and white and she is going to stay in line and be one of the first states in the Union to have a paid secretary.

New Jersey. JOHN W. BARTLETT.

U. S. Chamber of Commerce

We publish the following report sent to us by the Chamber of Commerce of the United States to show our readers what this organization is doing to keep its members informed upon business conditions throughout the United States. This report emphasizes agricultural products which is another reason for presenting it to our readers:

Washington, August 13—Somewhat lower prices of foodstuffs as the result of bumper crops in all parts of the United States is predicted by A. W. Douglas, chairman of the committee on statistics and standards of the Chamber of Commerce of the United States in his monthly bulletin on crop and business conditions.

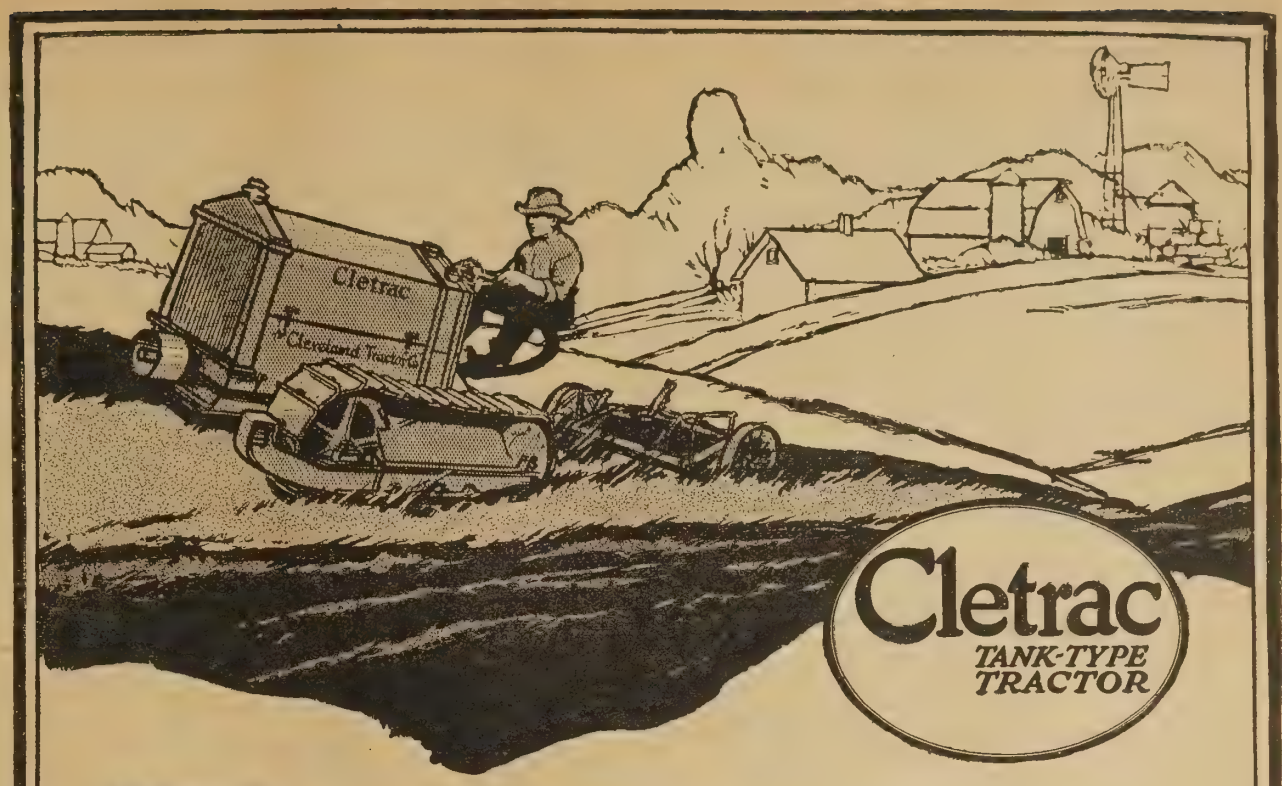
According to Mr. Douglas, receipts of grains at primary points have not been heavy, largely due to lack of cars, yet prices have been on the toboggan slide because of a great surplus, which, sooner or later, must find not only a domestic but a foreign market.

"There is no longer any question as to an abounding harvest in all manner of agricultural products," says the report. "The winter wheat crop will be about 535,000,000 bushels and the spring wheat not less than 275,000,000 bushels despite severe local damage by black rust in some states in the Northwest. With a few more timely rains there will be 3,000,000,000 bushels of corn, of which the southern states will furnish about one-third. Texas has the greatest corn crop in its history, while Kansas has the unusual accompaniment of large corn and wheat yields in the same season.

"There will be a plentiful supply of other food products: grain, tubers, forage, fruits, and vegetables for man and beast. Those prophets of famine and bread lines can have the satisfaction that no one now remembers who they were or what they said. The wheat surplus in Kansas alone, taking into account that carried over from last season is over 100,000,000 bushels, and requires 100,000 cars to move it, or about 4 per cent of the total of all freight cars in the country. Shipments from southern points of fruits and vegetables average about 15,000 cars weekly and are gradually bringing down the prices of these table necessities once regarded as merely delicacies and luxuries.

"We have only to consider the uncertainties which would have confronted us in the event of an actually poor harvest to realize the altered meaning of the presence of untold numbers of boll weevils in some sections, and the lateness of the season. This come-back is due, as in the case of all other agricultural products—this season, to favorable weather of late, and to incessant, industrious cultivation. These things make for large production per acre, which, rather than large acreage, is the basis of all great crops. The promise now is for a production of 12,300,000 bales, barring those 57 varieties of things which may happen in the next three months.

"There is now on foot a widespread and comprehensive movement to treat the cotton crop from planting to picking and marketing in a strictly scientific business manner. This, as in all like movements in other agricultural products, simmers down in the last analysis to the elimination or modification of the final operation of marketing as a thing subject mainly to all manner of competition, from local to international.



"As regards probable prices in either the near or far future, cotton has nothing on Providence in that its ways are past finding out. Cotton raising by irrigation in California and Arizona is growing in volume and importance. From 1912 to 1919 the acreage in Arizona increased from 400 to 37,000 acres and the yield from 240 to 40,000 bales. This year the acreage has still further expanded to 210,000 acres.

"Indecision and hesitancy still characterize textiles and some leather products. Reduced working days and sometimes entire closing down of the mills marks textiles in some localities. It seems to be more a waiting and readjustment period in a moderate way than the prelude to any marked change. This waiting attitude commences with the consumer and extends to the manufacturer. Conditions in metal lines are much the same.

"Lack of transportation is the principal hindrance to better and larger distribution. This operates to maintain and even advance prices because of the comparative scarcity thus caused. Railroad rate advances point the way to an ultimate solution, but, at the best, it seems a long story. Unless experience be misleading the new purchasing power of the railroads will be a strong factor in maintaining both prices and the volume of business.

"Building operations are much hampered by almost everything that can happen to them: Scarcity and the high price of labor and material, and difficulty of financing loans on con-

(Continued on page 312)

More Work and Better Work

THE tank-type Cletrac plows steadily—an acre an hour—turning properly mulched furrows and getting the job done quickly.

Because of its wide track surface and even distribution of weight the Cletrac does not sink into soft or wet ground—never packs or slips. Enables you to keep going later in the fall and get out earlier in the spring.

The powerful Cletrac replaces three or four teams—works readily in any size field—is handled by one man. You'll find it a steady performer on all odd fall jobs—from clearing new land for breaking to hauling drags and scrapers in roadwork.

You can put more acres under cultivation with a Cletrac—and still have plenty of time and abundant power to work them. Talk to the dealer near you—or write for the booklet "Selecting Your Tractor".

The Cleveland Tractor Co.

"Largest Producers of Tank-Type Tractors in the World"

Virginia Jersey Club Meets

A good turnout of Jersey breeders attended the annual picnic of the Virginia Jersey Cattle Club, held at Snowden Farm, Fredericksburg, August 25th.

The meeting was formally opened at 12 o'clock and talks were given by Mr. William G. Houston, president of the club, Mr. Baldwin, the secretary, and Professor B. H. Rawl, Assistant Chief of the United States Bureau of Animal Industry.

In the course of Mr. Baldwin's talk he related the story of Edwin Orrock, former superintendent of Snowden, and told of the development of his Jersey herd. After Mr. Orrock left Snowden Farm he devoted his entire attention to his herd which consisted of pure-bred and grade Jerseys. During the winter of 1918 Mr. and Mrs. Orrock were victims of the "flu", leaving three children, the oldest being Sarah, aged 14. With only the guidance of an aunt, and the assistance of one hired man these children are now running the farm and developing the herd of Jerseys left to them. Every morning little Miss Sarah delivers the cream at the local creamery, hurries off to school, and then returns to the work of the farm.

Mr. Baldwin brought the little girl before the audience and introduced her as a little fellow breeder.

After the picnic lunch on the beautiful grounds of Mr. Baldwin's farm, Capt. R. C. Vance gave an interesting and instructive talk, illustrating the points by which a careful buyer should judge Jerseys. He also gave a cow judging demonstration.

Then the cow judging contest was held. Contestants were requested to write their opinions on the merits of cows brought out for this purpose, and these were submitted to a committee for consideration. Mr. Sanford of Orange, Virginia, won the prize, a gold medal donated by the American Jersey Cattle Club.

When the formalities of the meeting were concluded everybody was invited to inspect the beautiful Jerseys and the barns of Snowden. After all had admired to their heart's content the meeting was closed and everyone departed feeling they had spent a pleasant and profitable day.—American Jersey Cattle Club.

August Milk Prices

The following table from the U. S. Bureau of Markets August report presents a comparison of the net prices received by producers for fresh milk (test 3.5%) f. o. b. local shipping points or milk plants operated by fluid milk dealers:

Sections	Range of Aug. prices per cwt.	Comparison of average prices 1920 July	1920 Aug.	1919 Aug.
United States	$2.10—$6.69	$3.34	$3.59	$3.40
New England	2.50— 4.90	3.96	4.12	3.76
Middle Atlantic	2.84— 4.35	3.21	3.62	3.37
E. North Central	2.30— 3.96	3.17	3.26	3.41
W. North Central	2.10— 4.42	3.11	3.40	3.10
South Atlantic	3.05— 6.69	4.37	4.49	3.79
E. South Central	2.85— 4.45	2.90	3.14	3.23
W. South Central	2.87— 4.65	3.87	4.10	4.06
Mountain	2.45— 3.70	3.01	3.01	2.98
Pacific	3.00— 4.41	3.59	3.65	3.25

Producers' and Consumers' Prices

In general August shows an increased price of nearly twenty cents paid producers. The next table shows, for certain representative city markets, the prices of standard grade milk (Grade B, test 3.5%) received by producers and paid by consumers during the month of August:

	Producer receives per cwt.	Consumer pays per qt.	Butterfat allowance per lb.*
Birmingham, Ala.	$3.15–3.50	$.22	$.95
San Francisco, Cal.	4.51	.17	.29
San Diego, Cal.	4.45		
Denver, Colo.	2.98	.12	.85
New Haven, Conn.	4.85	.17	.40
Washington, D. C.	4.13	.16	.46
Jacksonville, Fla.	5.47	.25	.50
Atlanta, Ga.	5.82–6.40	.25	flat
Chicago, Ill.	4.20	.16	.40
Indianapolis, Ind.	2.80–3.52	.14	.65
Des Moines, Ia.	3.50	.15	.50
Kansas City, Kans.	3.22	.15	.29
Louisville, Ky.	3.33	.16	.50
New Orleans, La.	4.42	.17	.50
Portland, Me.	2.82		.57
Baltimore, Md.	4.13	.16	.58
Boston, Mass.	4.65	.17	.55
Detroit, Mich.	3.70	.16	.40
St. Paul, Minn.	3.51	.14	.50
Kansas City, Mo.	2.97–3.78	.16	.35
St. Louis, Mo.	3.84–4.42	.16	flat
Butte, Mont.	3.33–3.49	.15	flat
Lincoln, Neb.	2.98	.15	.85
Carson City, Nev.	2.91	.12	flat
Trenton, N. J.	4.40	.15	.40
New York, N. Y.	3.91	.16	.40
Asheville, N. C.	4.50	.17	flat
Fargo, N. D.		.15	.40
Cleveland, Ohio	4.13	.16	.50
Cincinnati, Ohio	3.85	.15	.45
Okla. City, Okla.	3.50	.18	1.00
Portland, Ore.	3.05	.14	.50
Pittsburg, Pa.	4.19	.16	.50
Philadelphia, Pa.	4.40	.15	.40
Providence, R. I.	4.65	.17	
Sioux Falls, S. D.	3.75	.14	flat
Memphis, Tenn.	4.32	.16	flat
Dallas, Tex.	3.85	.21	1.10
Salt Lake C., Utah	3.26–3.49	.12	flat
Burlington, Vt.	2.50–3.00	.14	flat
Richmond, Va.	5.12	.16	flat
Seattle, Wash.	3.58	.14	.70
Milwaukee, Wis.	3.75	.13	flat

*In actual practice this allowance is made on the basis of a certain price per hundred of milk of a certain test, one-tenth of the price per pound fat being paid or deducted for each one-tenth per cent above or below the stipulated basic test. Where the word "flat" appears in this column, it means that no allowances are made for butterfat content but the milk must not be lower in test than legal requirement and must not be adulterated or skimmed.

The prices quoted for producers are for milk testing 3.5 per cent and delivered f. o. b. city, from which must be deducted the various transportation costs in order to get the actual price. In certain cities the prices given apply only to that portion which is considered as the producers' average production, the surplus being either handled by the producers' association or the dealers at somewhat lower prices.

The prices given are here reduced to the comparable basis of 3.5% fat, as different cities vary from 3% to 4% as the basic fat test. To reduce the prices per hundredweight to either a gallon or a quart basis divide by 11.63 or 46.33, respectively.

The prices paid by consumers are for average testing milk delivered in quart bottles. It is the grade of milk most generally sold in these cities and in most cases is for pasteurized milk.

Country Shipping Stations

Prices per cwt. paid at the dealers' country receiving stations or at producers' railway shipping plants are given as follows for August:

New Haven	$3.74	Butte	$3.15
Washington	3.49	Lincoln	2.63
Chicago	3.70	Trenton	3.78
Indianapolis	2.33	New York	3.55
Portland	2.82	Albany	3.64
Baltimore	3.40	Cleveland	3.55
Boston	3.94	Cincinnati	3.00
Kansas City	2.36–3.43	Pittsburg	3.40
St. Louis	3.75	Philadelphia	3.87

New Price Basis

The method of determining prices for the Minneapolis and St. Paul markets has been modified somewhat. The price paid producers for 100 pounds of 3.5 per cent milk will be determined by averaging ten times the average of the Plymouth, Wis., quotations for cheese (styles Twins, Daisies, and Young Americas) for the preceding month; with 5.2 times the average of the New York quotations for 92-score butter for the preceding month; plus an arbitrary differential which will vary as follows: August, $.85; September, $.90; October, $.95; November, $.90; December, $.80; January (1921), $.70; February, $.65; March, $60; April, $.55; May, $.50; June, $.40; and July, $.60. For fat in milk above or below 3.5%, 5 cents per one-tenth per cent will be added or deducted.

Retail Prices

The following table gives, for a few cities, the retail prices of milk, cream, and buttermilk for August, 1920:

Cities	Common milk per quart	Special milk per quart	Certified milk per quart	Light cream* per half pint	Butter milk per quart
	Cents	Cents	Cents	Cents	Cents
Boston	17.5	20	25	16	11
New York	17	20	27	21	12
Philadelphia	15	17	30	18	13
Pittsburg	16		25	19	
Cleveland	16	20	32	20	15
Chicago	16	22	25	17	10
Milwaukee	13	15	25	15	8
Detroit	16	22	25	16	11
Minneapolis	14		21	16	14
St. Louis	16	20	25	13	14
Des Moines	15	17	25	15	12
Washington	16	17	30	19	14
Richmond	16	17		16	16
Jacksonville	25	30		30	12
Baltimore	16	20		22	16
New Orleans	17	19		16	15
Salt Lake City	12.5	15		15	8
Portland	14		21	17	14
San Francisco	17		25	17	14

*Testing 18—20 per cent butterfat.

The world is given as a prize for the man in earnest.—F. W. ROBERTSON.

Washington, D. C., Weekly News

[SPECIAL TO HOARD'S DAIRYMAN]

WASHINGTON, D. C., AUGUST 30—The Washington office of the National Dairy Union has word of the effective anti-oleomargarine action taken this week by the New York State Fair Commission, which has refused to permit space to be leased or supplied in the buildings or anywhere on the grounds of the New York State Fair at Syracuse, for the display of oleomargarine in any form, or any advertising or propaganda in the interest of butter imitations. It is suggested that this be made the basis of an appeal to the managers of all the great agricultural fairs and expositions to take similar action. The National Dairy Union is also "going after" national magazines which permit in their columns statements claiming imitation butter as equal to the real article. McCall's Magazine is a recent offender. The attitude of the Dairy Union office is that the time is ripe to be on the aggressive and maintain at the fairs and in newspaper and magazine publicity everywhere that there is no substitute for butter, and that those who are engaged in the dairy industry should know the offenders and those spreading the opposite doctrine.

⚜

Manager Warber of the Washington office of the National Milk Producers' Federation has gone to Columbus, Ohio, where the Federation is holding a session in connection with other farmers' organizations in conference there. Mr. Warber has been in Washington long enough to be able to present to his association a very clear picture of the needs of an office here, and the plans and policies to be pursued. It is expected that the association will approve of more active work and more general activity from their Washington headquarters.

⚜

The Maryland-Virginia Milk Producers' Federation at a meeting of its directors and executive committee declined to permit the August rates for milk to remain in force another month, and ratified the decision to charge Washington distributors 40 cents per gallon for the month of September. The August rate has been 36 cents a gallon. The District of Columbia Health Officer, Dr. W. C. Fowler, appeared before the committee and basing his plea on the alleged surplus of milk in sight, asked the producers to continue the August rate in effect. The committee representing the producers unanimously rejected this plea, but adopted a resolution inviting the District authorities to join with them in a study of the cost of production of milk in this territory. Their resolution asks for a "cost of production" committee to consist of "one representative of the Federation of Citizen's Associations, Health Officer Dr. W. C. Fowler, one representative of the milk dealers, one representative of the Maryland State College of Agriculture, one representative from the Agricultural College of Virginia, and one representative of the milk producers. This committee, it is expected, will hold a meeting soon to organize and begin work.

In addition to proposing this committee to study costs, the producers drafted a reply setting forth why it was impossible to continue the 36-cent price. The reply cited the increases in rates from 36 cents to 40 cents in Philadelphia, Baltimore, and Boston, from 42 to 46 cents in Cumberland, Md., and the 44-cent price which has been in effect all summer at Richmond, Va. "Dairy farmers have proceeded," says this reply, "on the assumption that this raise would take effect, as it has been planned for a long time. Many of them already have contracts with their dealers on this basis. To lower the September price four cents as asked would cause serious financial losses to more than 1,200 farmers supplying milk to this city, and would undoubtedly bring on an acute shortage during October and November when there usually is not enough milk to meet the demand. Another factor which the producers have to contend with is the increase in freight rates which will add one cent a gallon to the cost of delivering milk in Washington."

⚜

Propaganda for the appropriation of several hundred million dollars for reclaiming land, a new version of the Lane-Mondell raid on the treasury discovered and headed off by prompt work by the National Grange in the last Congress, has again made its appearance. This scheme masquerades as a "Land for the Soldiers" project. Agents of some invisible interests are visiting congressmen, and congressional nominees in widely scattered states, asking pledges to put this bill through this next session. A Washington newspaper says the bill will call for two hundred-fifty milion dollars to "reclaim 4,000,000 acres for farm lands". This is at the rate of $62.50 per acre. A real project of value to agriculture, and to the soldiers would be to make a large sum available, not a quarter of a billion dollars, however—for loans to soldiers who knew how and wanted to farm, with which they could buy the farms they might select and be able to pay for. This was the plan of the Morgan bill in the last Congress, and the death of Congressman Morgan, since the adjournment of Congress removes a real friend of the soldiers as well as a real friend of the farmers and of honest legislation from the lower House. It will pay all friends of agriculture to watch out for the Soldier Land scheme in its treasury raid form. It is now pending in the Senate where it is known as the Borah bill.

⚜

Dr. Kiernan, of the tuberculosis eradication work in the Bureau of Animal Industry, reports good progress in the anti-tuberculosis campaigns now going on in many states. A special effort is being put forth just now especially in Iowa. List No. 3, of the accredited herds is in the printers' hands.

⚜

Butter markets show a slight upward tendency, according to the Bureau of Markets. And this is in spite of receipts of two additional shipments of Danish butter amounting respectively to 2,300 and 1,900 casks. Declining receipts of high quality butter are held responsible for a steadying of the market, sufficient to overcome the effects of these imports, and force a slight increase during the past week. Total cold storage holdings increased over the corresponding week last year, but is still only about sixty-six million pounds as against more than 82 million pounds at this time in 1919. Figures on the total receipts since January 1 in the five chief markets as compared with total receipts in the same markets and the same period last year, show the 1920 shipments to be fifty million pounds less than the 1919 shipments.

⚜

Chairman McFadden of the House Banking and Currency Committee is in receipt of letters from Congressman Haugen and Senators McLean and Gronna, indicating that there will be early action by all three in appointing the members of the special committee to hold a judicial hearing on rural credits. Action of the Record Associations in asking for this legislation, backed up by many leading breeders' associations, has started action with unusual celerity. Plans now call for hearings to begin November 8.

Education or Law

"Education or Law" is the title of an editorial published in our issue of August 27th. We find we are in error. In the first place, Ontario has never enacted such a law as was stated in the editorial nor has any province in Canada such a drastic law as we presented. It is the province of Nova Scotia which at its 1919 session enacted a law governing the use of the scrub bull and, in part, is as follows:

"No keeper of a scrub bull shall allow or permit such scrub bull to serve any cow that is owned or harbored or kept within the boundaries of any agricultural society, except a cow owned by him as hereinafter provided.

("The word 'keeper' includes any person who owns, harbors, or has the custody or control of a scrub bull.)

"When a scrub bull is within the boundaries of any agricultural society, the keeper of such scrub bull shall keep the same in some place so fenced or otherwise enclosed that the passage of such bull therefrom will in any event be prevented while such scrub bull is unaccompanied by or not under the control of a competent attendant.

"Where it is made to appear to the president or secretary of an agricultural society that it is impracticable for a person owning a cow within the boundaries of such society to procure the services of a pure-bred bull, such president or secretary may issue a permit authorizing the keeper of a scrub bull to allow such bull to serve said cow. In case of refusal or neglect to issue such permit, the superintendent of agricultural societies may, if he thinks proper, issue the same.

"Every person who is guilty of a violation of any of the provisions of this Act shall be liable, on summary conviction, to a penalty of not more than one hundred dollars."

ONE OF THE GUERNSEY HEIFERS IN THE HUNTINGTON COUNTY CALF CLUB IN INDIANA

The 27 heifers owned in this club are all in good condition and the boys are well pleased with the results from their work. These heifers will be shown at the Huntington County Live Stock Show both in the calf club classes and in the heifer classes. Through such activities as this club work, Fred A. Loew, county agent, reports that the dairy interests of Huntington County are steadily increasing.

EDITORIAL COMMENT

It has been known for a long time that second growth sorghums are poisonous under certain conditions. The poisonous substance which develops in the leaves of sorghums is prussic acid. Just what causes produce this poison is not clearly understood, but experiment has shown that second-growth sorghum is likely to develop prussic acid, especially when it is dry or after the leaves have been frosted. Therefore, it is not safe to pasture second-growth sorghum.

The question has been raised as to whether sudan grass will develop these properties under certain conditions. It is reported that in a few instances Johnson grass has been poisonous to cattle. If any of our readers have any definite knowledge regarding sudan grass developing poison under certain conditions we would be pleased to have them write us. The reports from those who have had experience in raising sudan grass state they have never known of a case of poisoning caused by sudan grass.

Elsewhere in this issue will be found a letter commenting upon our editorial entitled "Milk and Meat". This letter comes from a milk producer who thoroughly appreciates that to increase the consumption of milk and to secure a price in keeping with its value the dairyman must produce a high quality product. There are too many milk producers who do not appreciate that to increase consumption and to secure a better price for their product they must put quality into it.

Effort is being made to put forth the food value of milk, but little can be accomplished in increasing the consumption of milk unless the man who milks cows appreciates that the consumer's taste must be taken into consideration, that he is the judge and the one who controls the price and the consumption of dairy products to a large extent.

The milk producer who is indifferent to quality is not only working against his own interest but against that of his neighbors'. Milk can be advertised, its food value set forth in glowing terms, but unless its taste pleases the consumer the consumption will not be increased.

We commend this letter written by a subscriber, for it points out what we consider one of the fundamentals in successful dairying and in securing reasonable prices for dairy products.

VALUE OF ADVERTISING

A state dairy council received the following in reply to its solicitations to a co-operative creamery to become a member of the council: "Wish to advise that at the present time we cannot see our way clear to give you our membership. The demand for butter is greater than our output at the present time, and any further advertising would be needless."

The state dairy councils and the National Dairy Council are attempting to inform the consumer regarding the food value of milk and its products in order that there will be a larger consumption and a willingness on the part of the consumer to pay what dairy products are worth. In the past, milk, butter, and cheese have sold relatively cheaper than other food products because the consumer has not been educated as to their food value. Before the consumer will pay what an article is worth he must be taught its value to him. The manager of the co-operative creamery, from whom this letter was received, evidently does not appreciate that advertising is done for the purpose of enlarging the market and to lead the consumer to pay willingly what a commodity is worth.

The dairy farmer is producing the best food product, the most nutritious and the cheapest animal food on the market. Yet, as a people, we do not consume over one-third as much butter, cheese, and milk as we should to nourish us properly. With the right kind of advertising people can be led to consume more dairy products and to pay what they are worth. The trouble has been with the dairy industry that too many have taken the same view of advertising as the person who wrote the letter quoted above. When butter was sold as low as 10 cents a pound the manufacturer of good butter could sell all he could make, but there was no profit in it at that price.

The conception this man has of advertising shows clearly that state dairy councils must educate those engaged in the production and manufacture of dairy products to understand the value of judicious advertising.

CHAMBER OF COMMERCE REPORT

A report of the Chamber of Commerce of the United States will be found elsewhere in this issue. This is an organization representing the various business interests of the country. It is to the manufacturer, the merchant, the banker, etc., what the American Farm Bureau Federation is to the farmer. Its purpose is to keep its members informed upon the business conditions of the nation and the forces which are likely to affect it.

It will be observed in the report we are publishing that the production of the various farm crops is presented, the purpose being to inform its members in regard to our agricultural conditions, for business depends upon farm crops.

If the American Farm Bureau Federation, when it is fully organized, can keep its members informed upon the business activities of the country, upon the supply and demand for various agricultural products, and the general trend of business conditions, it will be serving its members the same as the Chamber of Commerce of the United States. The manufacturer, the merchant, the banker, the distributor have seen fit to establish agencies to keep them informed upon the entire business of the nation, in fact, of the world. If it is wise for them to secure such information, it is also wise for the farmer to be similarly advised. He can then gauge the acres he devotes to certain crops according to the world's needs. In other words, he can to a large extent regulate production according to the demand of the market and not have a great surplus in one crop and a large shortage in another. This will assist to stabilize the market and to make his income more uniform and minimize his losses. No system will ever be devised that can control the production of various crops to the degree, perhaps, which would be desirable, for seasons are not uniform nor are the buying powers of the consumer constant; but with an effective farm organization, statistics can be gathered which will assist the farmer in the conduct of his business as the member of the Chamber of Commerce of the United States is assisted in his. We consider it well for the farmer to study and understand the methods of successful business men.

MAKERS OF FILLED CHEESE FOUND GUILTY

Dairy and Food Commissioner George J. Weigle of Wisconsin has lately been successful in a court case against makers of filled cheese in Wisconsin. Cocoanut oil was used to replace butterfat in this cheese and the product was sold in competition with the real product of Wisconsin cheese factories. The maker was found guilty and fined and the owner of the factory forfeited his bail rather than face trial. The factory will not continue in operation. Commissioner Weigle makes this statement: "We are very much pleased at the promptness with which we were able to stamp out the manufacture of this cheap imitation cheese before it had a chance to injure the reputation of Wisconsin's full cream product."

This experience of Commissioner Weigle brings to our mind the experience which Wisconsin had with filled cheese more than thirty years ago. Prior to this Wisconsin had developed a splendid reputation for a cheese producing state and the demand for her cheese became general. A great deal of the cheese made in Wisconsin was exported to England where it found a very favorable market. Then came those who thought they would capitalize this reputation and fool the consumer with a spurious product. The manufacture of filled cheese became general as there was no law at that time to prevent its manufacture and sale. This counterfeit product was also exported and, as a result, less cheese was consumed in a short time and English merchants refused to buy cheese from Wisconsin. The cheese market was destroyed and a legitimate product injured. This condition brought about a law which does not permit the manufacture of filled cheese but, notwithstanding this, an outsider came into Wisconsin last year and in the face of advice against manufacturing filled cheese established himself and got a factory in Wisconsin willing to turn out an illegal and unlawful product. This man had no interest in the welfare of dairying in Wisconsin nor in the welfare of humanity. He simply desired to manufacture a product with which he could make money, but the prompt action of Dairy and Food Commissioner, Mr. Weigle, annihilated this business and the person who started it has left the state.

The producers of dairy products, the men who milk cows, should appreciate that it requires everlasting vigilance to keep the counterfeiter and the dishonest manufacturers of spurious, so-called dairy products out of our markets.

ANNUAL SWEET CLOVER

The new annual sweet clover discovered by Professor Hughes of the Iowa Experiment Station is gaining favor. It will be remembered that most sweet clover is biennial. This annual white sweet clover is a new plant for agriculture. It can be sown with grain in the spring or as late as the middle of July and develop much growth which will bring to the soil both nitrogen and organic matter.

This annual white sweet clover was described in an issue of Hoard's Dairyman early this summer. Its general use is limited because of the high cost and scarcity of seed. The seed is now selling at $5 per pound. The Henry Field Seed Company has stated to us that from 50 seeds sent them by Professor Hughes two years ago they raised two pounds of seed, and from the two pounds they raised 300 lbs. This year they estimate that from 25 lbs. of seed on about five acres they expect 40 bushels.

The Rural New Yorker reports this annual sweet clover grown on the editor's farm in New Jersey, planted June 12, as being 22 inches high on August 1 and for the seven days following grew 8½ inches, more than one inch per day.

The biennial sweet clover is far better for fertilizing purposes than most farmers appreciate and should have a larger place in agriculture, but annual sweet clover promises a still better green manuring plant and we look forward to the time when there is an abundance of seed, that its use will become general. It has been estimated that a good crop of annual sweet clover will yield as much nitrogen to the soil as eight tons of manure and also furnish a large quantity of organic matter.

Summer Feeding Pays

Has it been proven a paying proposition to supplement short pasturage with grain? The cows freshen in the fall and reach their highest milk production during the winter months.

Round Lake, Ill. R. C. S.

Hoard's Dairyman is very certain that it pays to supplement pasturage with a grain ration or by supplying liberal amounts of a palatable hay. A profit on high priced feed may not be received in direct returns, but, considering the whole lactation period, we are positive that very good returns will be received from the feed inve ted at this time.

It is important that a milking herd should not be allo ed to get in thin flesh or in weakened vigor, because for a few weeks during short pasturage they do not receive as much feed as should be

allowed. The extra allowance helps them enough at this time that they are brought to the winter milking period in better strength and enough better condition that they produce more profitably during those months than they would had they been stinted during the summer. We hold that liberal feeding is much more profitable at all seasons than too great economy in the matter of concentrate supply.

Erecting Second Hand Silo

I have purchased a second hand stave silo. In putting it up again would it be advisable to paint the edges of the staves with coal tar? Would it be a good plan to paint the inside with creosote?

Maquoketa, Iowa. H. E. S.

We see no objection to painting the edges of the staves with coal tar, particularly if the tar is thinned somewhat. There is, however, a tendency for coal tar to crystalize in time. If it is applied thick enough to keep the staves slightly apart, it will finally prove a detriment instead of an advantage.

We would suggest, as a preferable method, that the edges of the staves be coated with creosote prior to erection. However, if the exterior is to be painted with an oil paint, care must be exercised in not getting any of the creosote on the exterior of the staves. Paint will peel off when applied over creosote.

It would be highly desirable to paint the interior of the silo with creosote after its erection. If the exterior is not to be painted, the staves might well be given a brush coat of hot creosote prior to the erection of the silo.

Sweet Corn Fodder

We are growing a few acres of evergreen sweet corn to feed our cows this fall and early winter. As we have no silo we would like to know what stage to cut this corn to receive the most milk from it. We expect to cut it and put in large shocks unless you suggest some other way of keeping it in a green stage.

Adams, N. Y. H. E. W.

There is no practical means of preserving corn as a green and succulent feed except as one may have a silo. If the sweet corn was rather thickly planted it will make a very palatable feed if cut and cured as shocked corn. The ears will not be so hard and dry and they are easily masticated. When grown in this manner a considerably larger portion of the nutrients remain in the stalk and leaves, which makes the whole plant a better roughage feed than thinly planted corn. This corn may be cut shortly before frost or before it commences to dry up unduly. Since the stalks stand almost vertical in the shocks, as the leaves wilt there is ample room for the upward passage of air. This tends to rapidly dry the interior and check molds and fermentation. Care must be taken that this corn fodder is well cured before it is stacked, as it often carries a considerable quantity of moisture even when thought to be very dry.

If the sweet corn was thinly planted and matures well grown ears, it would be doubtful economy to cure it in a manner above outlined and feed it without husking out the ears. It is quite possible that if a good quality of roughage is desired it would be preferable to cut this corn when in the roasting ear stage and cure it as fodder corn. As to whether this last suggestion would prove most profitable depends upon a variety of conditions, such as the possible yield of ear corn, the demand for a good roughage, etc.

If ten or more cows are kept it will be found highly profitable to erect a silo before another year rolls round. The silo is well nigh indispensable on the dairy farm, both because it conserves labor in handling and feeding the corn crop and because it provides a succulent feed that helps to induce a good and profitable milk flow.

Antitoxin Available for Forage Poisoning

Circular No. 38 of the Extension Service of the Illinois College of Agriculture, by Robert Graham, just issued, dealing with the cause and treatment of certain forms of forage poisoning, will be found of unusual interest to veterinarians and to farm advisers in helping to combat this very fatal and costly disease of farm animals.

Forage or food poisoning of farm animals, has, by extended experiments, been definitely established as a specific fatal disease. Originally it was believed that horses were the only animals affected, but more recent studies contribute evidence of the existence of this disease in cattle, sheep, swine, and poultry, as well as the human family. The noticeable symptoms of food poisoning in different animal species are somewhat variable but in general affected animals display marked weakness together with varied nervous manifestations. The extent of forage poisoning in farm animals remains to be more accurately established, yet the experimental work at the Illinois Experiment Station and College of Agriculture indicates that this, or closely related diseases, are somewhat prevalent throughout the Mississippi Valley. The public interest in food poisoning has been stimulated from the recent outbreaks of the disease in man, resulting from the consumption of incompletely sterilized ripe olives. The results of investigations show that animals suffer from a similar disease.

Cause of Food Poisoning

Food poisoning, as discussed in extension circular 38, deals principally with the disease commonly referred to as botulism. The poison is developed on animal feed, including ensilage, wheat screenings, ground oats, oat hay, or other feeds, during the time it is stored before being fed. The poison is the result of bacterial growth upon the feed and may take place without any visible change in the feed. Molds so often associated with food poisoning in animals have a very remote connection with the primary cause of the disease, according to the results of recent experiment.

Antitoxin Prevents

A specific antitoxin which will prevent the development of food poisoning has been developed and applied under practical conditions with good results, as reported in bulletin 210 (1918) of the Illinois Experiment Station, by Ruek and Crindley. From preliminary observations made by the Illinois station, as well as observations in connection with the outbreaks referred to in Circular 38, it appears that veterinarians may find botulinus antitoxin a very valuable asset in combating food or forage poisoning in domestic animals. It can be obtained from the Illinois Experiment Station, until available from commercial sources, at the cost of production, which at the present time is two cents per cubic centimeter.—Illinois Experiment Station.

Relative Efficiency of Tuberculin Tests

I was much interested in your comparison of tuberculin tests in your May issue. I note it seems to be agreed that the subcutaneous is the most accurate. Does that mean that it is less liable to overtake a reactor, or that the intradermal is more apt to condemn a healthy cow? Why does it require greater ability on the part of the operator to interpret the intradermal test? Are there other factors besides a swelling to be taken into consideration? I have been told by a man who has helped do the work that a swelling as large as a pea is considered final proof against a cow, while a local veterinarian tells me a swelling that large may be made by a mistake in applying the test. A little further light on this subject would be appreciated.

Redding, Calif. E. W.

The above inquiry was referred to Dr. J. S. Healy, of the United States Bureau of Animal Industry, who replies as follows:

"The statement that the subcutaneous test is the more accurate is, no doubt, based on experience tables carried on to check the relative efficiency of the three tests—the intradermal, subcutaneous, and ophthalmic. It was found by applying the test to a large number of herds and containing a large number of cattle that the subcutaneous test revealed more reactors than any of the other tests. Therefore, they concluded that it was more accurate. However, in some individual herds it was found that the intradermal test revealed more reactors than either of the other tests. The statement that the subcutaneous test is the most accurate should not lead anyone to draw the inference that the intradermal test is more apt to condemn a healthy cow.

"Second: 'Why does it require greater ability on the part of the operator to interpret the intradermal test? Are there other factors besides a swelling to be taken into consideration? I would rather use the word 'skill' in this case than the word 'ability' as the injection is purely a question of technique and for an operator to be skillful requires experience.

"Third: In the case of the interpretation of the test—all authorities are agreed that the swelling the size of a buckshot or greater constitutes a reaction. We have watched our post-mortems on reactors on which the character of the swelling was indicated by a notation 'skin thickening' to the 'size of an orange' and find out that lesions are demonstrated in those swellings of lesser size as constant as those of a larger character. The factors extraneous to tuberculin that have to be considered in interpreting the test are traumata caused by the needle and infection introduced by the needle. However, these cases are negligible as demonstrated by the application of the test and the substantiating post-mortems.

In speaking of the swelling the size of a pea I agree with the authorities that it should be considered a reaction as that is a rather large swelling. However, there is a swelling which is constant following the application of some tuberculins, which is described as a 'match head' swelling right at the seat of injection and which is not regarded by those using such a product, as a reaction."

Tool Rental

HOARD'S DAIRYMAN:—"What will I charge my neighbor for the use of my tools and what should I pay him for the ones that I use?" These are questions that every farmer has to solve from time to time. I have them because I do not own all the farm tools that I must use. Some of them I may not use for five years but I need them when I want them.

For my own farming I have a fortunate co-operative condition that helps out. My neighbor lives about four rods from us. He has a manure spreader and I haven't. I have a 12-hoe fertilizer grain drill. Our grain acreage is not big enough but that we have plenty of time to get both jobs done. Another neighbor has a grain binder and I have a corn binder. We make this trade very well. It saves a lot of investment for both of us and saves much room for housing the machinery.

But how are we going to get at this rate for charging when we do hire a machine? So far I've never charged a neighbor for a machine. I never expect to. Yet others than my neighbors may want to borrow. Then I ought to figure it out.

A potato planter near here used to rent for $1.25 an acre. I always thought that was a little high. It cost about $75 in the first place. About 60 acres of work would have it paid for. It ought to be good for two or three times that amount. I have paid 10c an acre for a two-row corn planter. I thought that was rather low. I've also paid that price for a grain drill with fertilizer attachment. Probably that was too low.

I rather think that the life of a machine plus about 6% interest and repairs is the fair base for a rental. Yet if a man uses his own machine it might easily last twice as long as when every fellow uses it. Perhaps an average tool will last for ten years and give fair service. Then if it is a corn binder it ought to cost $21 a year. Interest on it is about $13. There's $34 a year. It will average five or six acres a day and the average farm will use it for a week or so. Probably 30 acres of corn to the farm is cut though this is hard to estimate off hand. At that rate a dollar an acre is about right. That seems high but it isn't. Suppose that a part is broken that costs $4 to replace? Then that comes out of the owner's pocket.

A corn planter costs about $75 now without a fertilizer attachment. I know of one planter that has planted something like 600 acres. The repair cost has been slight—probably $5 in all. Ten cents an acre in this case would have let the owner out all these years. Yet I don't think he ever charged for the use of it at all. However, it is good for more years as the wearing parts to a corn planter are not many and are not expensive to replace.

There are bigger tools that we are using now that have to be considered. Tractors usually have idle days when they could be hired out. Yet I wouldn't care to hire a tractor to some other fellow or wouldn't care to hire his. I would want to hire the driver along with it. I know one neighbor who disced for a farmer and charged a dollar an acre. That made him $15 a day. His fuel cost about $4 and his time was worth at least $5—hired man price here—besides the wear on the machine. I paid $4 an acre to have a tractor plow alfalfa sod for me last year. It ought to be more this year.

Plows, cultivators, harrows, and a few other such tools with little or no moving or wearing parts are lent to neighbors everywhere I suppose without a rental price being mentioned. There are some tools that I would rather not lend if I can help it. A garden drill is one of them. If the furrow opener is allowed to get rusty from leaving dirt on it it is a hard job to get it to working again. With larger tools this isn't so important. A plant setter comes in this class as also does a spray pump. Most farmers will clean up a spray pump when they are through but if one doesn't then there are new parts to buy and a general clean-up in order before it can be used again. With some spraying material this is not true but with many it is. However, I would just as soon lend these machines to some neighbors because I know they will take as good care of them as I would.

Dont Send a Penny

Not a penny now and you get this startling bargain. Send coupon—no money now.

$2.45

Work Shoe Bargain

Sturdy dependable Work Shoes—built for all outdoor workers in cities and on farms. Blucher last on army toe. Specially tanned to resist acid in manure, milk, etc. Strong, durable leather soles nailed and stitched. Heels that won't come off. Durable grain leather insoles. Guaranteed counters. Bellows dirt-excluding tongues. Copper riveted seams and vamps. Sizes 6 to 12. Wide widths. **Bargain price $2.45.** Special purchase that brought these shoes to us at an unequalled wholesale bargain price lets us make this great offer. And here is something more—a stunning Dress Shoe value. Read how you get these shoes at a bargain on our great combination offer. Sensational value. **Only $4.84** to pay for this stunning dress shoe. Fine quality black gun metal veal leather. Hi-toe Blucher. Strong leather soles. Low broad heels. New Broadway last. Sizes 6 to 12. Wide widths. We defy competition on this shoe. See if you can equal it anywhere.

Don't Miss it!

With every pair of these Dress Shoes at $4.84 you get the Work Shoes put in at $2.45—total only **$7.29—both pairs for one price**—a record smashing bargain.

Send Coupon

No money now. Just send coupon. Pay the bargain price, $7.29, and postage when both pairs arrive. Then if not satisfied, return both pairs of shoes and we refund your money. Send coupon now. **Give size on both pairs.**

We positively do not sell either pair separately.

LEONARD-MORTON & CO. Dept. 7452 Chicago

Send me Men's Dress Shoes and Work Shoes. I will pay $7.29 and postage for both pairs on arrival, and examine them carefully. If I am not satisfied, will send both pairs back and you will refund my money. Order No. AX996.

Cow Waters Herself

with this wonderful new **Libbey Automatic Water Bowl.** Animal moves lever, opening water valve, when it starts to drink. Lever swings back, closing valve, when animal stops drinking.

15% More Milk

Milk is 87% water, and cows cannot give their greatest yield unless they have plenty of water constantly within reach. Farmers who use Libbey Bowls report an increase of 15% to 20%, which soon pays for the bowls.

Libbey Automatic Water Bowls

are the most sanitary and successful ever invented. Each bowl controls its own water supply, operated entirely by cow, and may be put at different heights, or in any stall or pen. No float tank required. Cannot overflow; cannot get out of order. Almost no water left in bowl to become stagnant. They save labor and feed and increase milk. Prevent spread of contagious diseases, as each cow has her own bowl and no water can pass from one to another, as with old-style bowls. Very simple and easy to install. Write for circular and prices, also FREE DAILY MILK AND FEED RECORD.

If interested in Stanchions, Stalls, Carriers, etc., ask for free General Catalog.

Water in the Stable a Necessity

THE "BUCKLEY" DEVICE

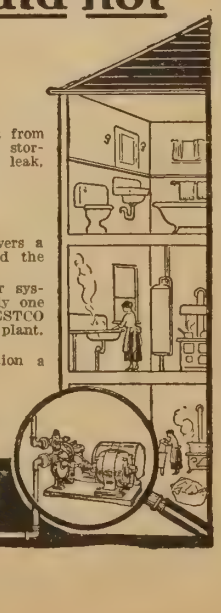
Is the leader. Why not use the best? Write to the manufacturers for a descriptive circular.

Poughkeepsie Foundry & Machine Co.,
POUGHKEEPSIE, N. Y.

When writing advertisers please mention Hoard's Dairyman.

Water Should not be Stored in a Tank

This water supply system pumps direct from the well or other source of supply—no storage tank is required. No tank to leak, freeze, rot, rust, overflow or collapse. No stale, stagnant water. The



WESTCO
Tankless Water System

is marvelously simple. As you open the faucet the pump starts and delivers a full, steady stream of water **under ample pressure.** Close the faucet and the pump stops.

It is the lowest priced, simplest, most dependable, automatic, power water system obtainable. Easy to keep in good running order. The pump has only one moving part. No belts, no valves, no gears, no springs, no oiling. The WESTCO System can be run off the regular electric light circuit or farm lighting plant. Thousands are in daily, successful operation.

Send for bulletin C-4 and find out what a great saving and satisfaction a WESTCO will mean for you.

A City-owned Milk Plant

Jamestown, New York, the First City to Vote Bonds for this Purpose

PAUL A. DAVIS, NEW YORK

A MAJORITY of 115 taxpayers in the city of Jamestown, N. Y., August 21, voted to loan the credit of the city the sum of $150,000 to be used in the erection and operation of a municipal milk plant. Thus Jamestown becomes the first city in the United States to take this step, and adds one more municipal enterprise to its already good sized list. For several years past now, Jamestown has conducted with success a municipal water and lighting plant and a municipal hospital and market, and Mayor Samuel A. Carlson, supporter of all these movements, has at last, after ten years of effort, obtained the consent of the majority of the taxpayers to go into the milk business.

It is proposed to pay off the bonded indebtedness of the city at the rate of $5,000 annually, with interest on unpaid bonds, from revenues derived from the sale of milk from the plant.

The proposition in its same form, in February, 1919, was voted down by a majority of almost two to one against it, the total vote at that time being about half of the total vote recorded in the recent election, which was 2,185.

Supporters of the plan, during the campaign waged prior to the last election, took the position that the plant was needed to insure a better quality of pure milk, to insure more stabilized prices to the consumer, and even lower these prices, and to safeguard the future milk supply to the city.

It was argued that with the ever increasing number of milk condenseries, a shortage is likely in the future. The city should be in a position to offer the producer as attractive a market as the condenseries, it was contended, and this will be worked out by the contract system. Thus, when the height of the milk season is on, and the city's population leaves for summer vacations, producers will be assured that their supply will all be taken.

The milk will be pasteurized in the plant. This the board of health claims will protect the public health of the city. During the past, from time to time, the health board has had complaints of dirty and impure milk. This really caused the question to come about some ten years ago.

The cost of overhead operations will be reduced, the supporters of the plant claim. In place of some 70 peddlers, there will be about 25 to deliver the 18,000 quarts of milk delivered daily. Each peddler will have his own district to cover, and there will be no crossing of routes and no occasion for a dozen peddlers to pass over the same block each morning.

Sentiment of the dairymen about the outcome of the venture seems divided. Some contend that were the city located in a region where there is not an abundant supply of milk, as there is in Chautauqua County, the plan would be successful. How the city expects to shut out competition is not exactly known, but it has been suggested on numerous occasions that this be done by the adoption of drastic ordinances regulating the kind of milk which can be sold within the city limits.

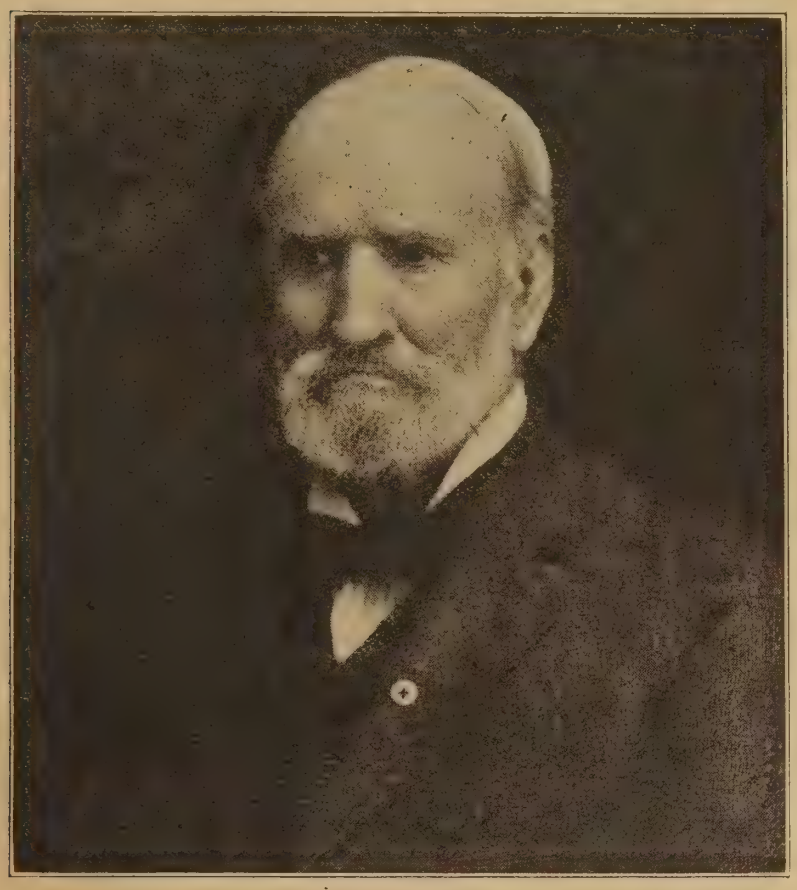
Dairymen seem generally, however, to be skeptical over the prospects of reducing the cost of milk to the consumer. Just before the opening of the mayor's compaign prior to the recent election, dealers in the city were compelled to reduce their prices from 15 cents to 13 cents. They had boosted them from 12 cents to 15 cents, and a federal grand jury which investigated this increase declared there was a violation of the Lever Act, strengthened by the fact that the dealers made the increase jointly. A federal attorney allowed them to come down to 13 cents, because the dealers had advanced the price to the producer a cent and a cent and a half, the average price paid to the producer per quart of milk being around 8 and 8½ cents.

The experiment will be watched with interest, however, this is certain, inasmuch as Jamestown is the first city in America to adopt this plan. A milk commission recently named by Governor Alfred E. Smith of New York, after making an investigation, reported that municipal distribution would solve the situation which many cities face.

JERSEY HEIFER, TRILL POGIS OF LILYDALE

In 332 days as a 3-year-old she has produced 11,012 lbs. milk, 619 lbs. fat. She is owned by University Farm, Minnesota, and by this production becomes the record Jersey of her age in that state.

JAMES WILSON



JAMES WILSON, ex-secretary of agriculture, is dead. He was born in Ayrshire, Scotland, Aug. 16, 1835, and died at Traer, Ia., Aug 26, 1920. He came to this country with his parents in 1851 and settled in Connecticut and in 1855 moved to Traer, Tama Co., Iowa, which has been his home for sixty years. In 1861 he engaged in farming, but his natural abilities led him into various fields of activites and especially into the service of agriculture.

He was educated in the public schools of Iowa and the Iowa College. His work for the advancement of agriculture won for him unusual recognition from several universities and he was given the degree of L. L. D. by the University of Wisconsin, Cornell College, and Iowa in 1904 and by McGill in 1909. Mr. Wilson's services in behalf of advanced agriculture were appreciated by the farmers and they recognized him as an intelligent and safe leader in their affairs. In the years 1890 to 1897 he was director of the Iowa Experiment Station and professor of agriculture in the Iowa Agricultural College; and secretary of agriculture, U. S. Department of Agriculture, from March 5th, 1897, to 1913, a period of 16 years, serving under Presidents McKinley, Roosevelt, and Taft.

Mr. Wilson's interest in public affairs extended beyond the realm of agriculture. He was a member of the 12th, 13th and 14th Iowa Assemblies and speaker of the 14th. He also represented his district three terms in Congress, in 1873—77 and again 1883—85.

In the passing of James Wilson, agriculture has lost a good friend and comprehensive leader. He was closely associated with such men as Henry Wallace and W. D. Hoard, both of whom are considered pioneer leaders in agricultural education. They were earnest advocates of better methods of farming, better rural schools and a better rural life. All these men were spared to serve agriculture until they were 80 or more years old and the death of Mr. Wilson marks the end of their generation.

His splendid service to agriculture in Iowa attracted the attention of President McKinley and he made Mr. Wilson secretary of agriculture. He was so admirably adapted to this work that he was retained in this position during Roosevelt's and Taft's administrations. He enjoyed the distinction of serving longer in the U. S. Cabinet than any other person. This distinction cannot be attributed to his political service or activities, but rather to his constructive work as secretary and the service which he rendered to the farmers. Under his administration this department of government became a strong and useful institution to the agricultural interests of our country. His accomplishments as secretary of agriculture were a most fitting and satisfactory ending of a successful and useful career. Blessed be the memories and work of this good man.

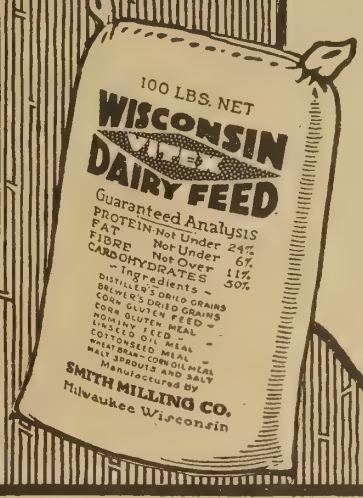
JAMES WILSON

Costs and Milk Prices

Consumers often complain that the farmer is getting too much for his milk. The best way to settle the question is to have definite figures on the cost of producing milk in each community. The Dairy Division of the United States Department of Agriculture has organized community groups in 7 states for this purpose. Each group consists of about 20 representative dairy farms, with a supervisor in charge. Cost items are collected in terms of quantity rather than price, wherever possible. Results may then be interpreted at any time using prevailing prices. Data from four of the states—Indiana, Vermont, North Carolina, and Washington—will be available at the exhibit of the Dairy Division at the National Dairy Show, Chicago, October 7 to 16.

WISCONSIN VITEX DAIRY FEED

Feed 4-All to horses, sheep, beef cattle, hogs and poultry. It costs less than grain and keeps them in better condition.



WHEN your cows get off pasture you'll want a mixed feed to keep them in condition and maintain low feeding costs.

Vitex Dairy Feed is made in Wisconsin, the nation's greatest dairy state. It is made from the best milk-producing ingredients and contains no molasses, hulls, dirt, chaff or other waste. You get full money's worth.

When you feed Vitex Dairy Feed you increase the milk yield at lower cost and save your whole grain for the market. Vitex can be fed with equal success to either single breed or mixed herds.

If your feed dealer does not handle Vitex and 4-All, write us for the name of a dealer who does.

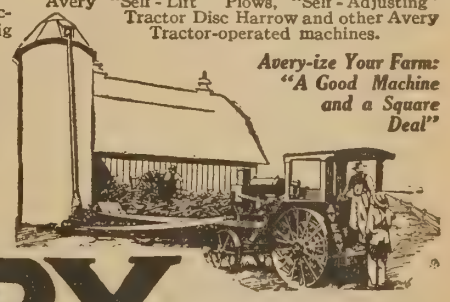
14-28 H. P. Avery Tractor

Get Your AVERY Now for Fall and Winter Work

Get your Avery Tractor NOW when it can give you the most valuable service in your fall and winter work. Avery owners use their machines the whole year around—winter as well as summer. Think of the belt work you could do with *your own Avery* on the job. Not only get your fall plowing, discing and seeding done on time, but fill your silo, saw wood, grind feed and do other jobs. The extra work you can get done with an Avery Tractor this fall and winter will help to pay for a big share of its cost. *Now* is the time to get it.



You can get an Avery Tractor outfit to exactly fit your size farm or the kind of power work you have to do. Avery Tractors in sizes from 8-16 to 40-80 H. P. are built with the famous Avery "Draft - Horse" Motors and "Direct - Drive" Transmissions. They have Renewable Cylinder Walls, Adjustable Crankshaft Bearings, Gasifiers which turn kerosene into gas and *burn it all*, and other features which enable Avery Tractors to give unusual service.

There are also two small sizes of Avery Tractors, 6-cylinder model "C" and 5-10 H. P. model "B." Ask for special circulars describing these machines or

"SNAG-PROOF"
Rubber Footwear

Here's a Happy Combination of Warmth, Comfort and Economy

THE Pennsy, lighter than a boot, warmer than a shoe. The ideal rubber footwear for all work around the farm. You'll get more service and save more money by wearing Pennsy's this fall. Made out of the finest grade rubber and fabric, absolutely watertight, springy, tough, natural fitting and warm.

The Pennsy is a Snag-Proof product. You know that means the best in rubber footwear. For nearly fifty years the Snag-Proof label on rubber boots, shoes and arctics has meant the utmost in quality. You just ask anyone who has ever tried Snag-Proof—he'll tell you that for comfort, fit and service, Snag-Proof footwear *can't be beaten.*

Do you know the Snag-Proof dealer in your town? He's an exceptionally fine fellow to know. For his big desire is to make you a friend by giving you more satisfaction than you can get anywhere else. That's the reason Snag-Proofs have so many warm friends today. Every customer is a satisfied customer. Find out for yourself.

Destroying Canada Thistles

The Grundy County, Illinois, Farm Bureau has taken as one of its projects the destruction of Canada thistles. County Advisor F. E. Longmire and his assistant, W. F. Keepers, have prepared instructions as to how this may be accomplished in various ways. We reproduce their circular below:

Owing to the general spread of Canada thistles throughout the county, and to the lack of good control measures, we have gathered together as many methods as seem practical in destroying this weed.

After the weed has obtained a foothold the best way to eradicate it is to prevent it from sending up top or above ground growth, which finally causes the roots to die. Therefore, starve the root by preventing top growth. This is the basic principle which must be kept in mind. The top of the plant serves much the same purpose as the lungs of the animals. If the plant is continually deprived of that part it must soon die.

Clean Cultivation

Plant infested land to corn and give clean cultivation. Follow up each week with hoe. This method requires unusual persistence, but gives good results.

Cutting or Hoeing

In pastures which can not be cultivated, the best method is to cut each week or ten days just below the surface of the ground. It helps to apply a little kerosene with oil can to the cut surface.

Salting

Applying damp salt to the tops of plants at regular intervals of a week to ten days, is very effective. Some farmers succeed by applying moist salt to the cut surface after cutting off the plant. In pastures live stock can be salted on the patch and help to keep down the crop.

Smothering Crop

One plan which has given good results in some cases, is to seed very heavily to cane or sorghum, using about 80 lbs. of seed per acre, in early June. Cut the cane for hay in early September and prepare the land for rye, seeding any time before November 1, the earlier the better. Use the rye for fall, winter and spring pasture, then plow it under and plant to either corn or cane and cultivate. This gives good results.

Plowing or Summer Fallow

If patch is large, plow shallow in early spring and either plow or disc each week until late fall, about October. This method is generally satisfactory if followed by a cultivated crop the following year. The roots of the Canada thistles extend deeply down into the soil, hence for this reason, deep plowing will be of no avail.

Smothering

Smothering with straw is rarely successful since the thistles finally grow through it, aside from depriving the owner from the use of the land for a longer time than summer fallow. If the patch is to be smothered with a straw stack, the stack should extend well out over the boundaries of the patch so the plants will not grow out around the edges. In some cases tarred paper has been used for smothering, with good results.

Gas-Crude Oil Spray

Use two parts of crude oil and one of gasoline and spray plants with this mixture or apply it with sprinkling can. This will kill the tops and starve the roots. Patches in small grain or in stone piles and waste land where they are difficult to reach, can be treated in this way.

These are a number of ways of keeping down top growth. There is no best way for all cases. The farmer should use the method which best fits his rotation or convenience. About ninety-five per cent of the efforts to kill thistles are failures because the man tires of the job about the time he has the best of the thistles and they

SANOMA'S ARCHER GIRL, A DOUBLE CLASS LEADER

SANOMA'S Archer Girl, a Guernsey owned by Harbor Hill Farm, New York, now holds two places among the class leaders as a result of her second official record recently completed in Class BB. Her latest achievement is the production of 12,098.9 pounds milk, 652.72 pounds butterfat in Class BB. This record qualifies her for seventh place in her division. She also holds tenth place in Class E, with a record of 13,270.6 pounds milk, 692.08 pounds butterfat.

Sanoma's Archer Girl was bred by R. H. L. Chichester, Virginia, and was dropped on August 27, 1914. Her sire, now owned by F. K. Babson, Illinois, is King of Chilmark, a bull that has attained unusual distinction through the splendid performance of several of his descendants. The first six Advanced Register records completed by his daughters average 699.2 pounds of butterfat.

The history of Sanoma's Archer Girl is another intensely interesting proof demonstrating the value of Advanced Register work. Sanoma Girl, the dam of Sanoma's Archer Girl, was purchased by Mr. Chichester for $100. None of the immediate ancestors of this cow had Advanced Register records to their credit. After Sanoma's Archer Girl had completed her first official record she was consigned at the first Guernsey combination sale and brought $4,000.—AMERICAN GUERNSEY CATTLE CLUB.

obtain a new foothold and grow as rank as ever.

If the basic principle is understood, that is starving the roots, and a systematic plan is carried out for the destruction of the plant, a farm can soon be free of thistles.

Dairying Thirty Years Ago

Notes From the Issue of Hoard's Dairyman for September 12, 1890

"How are you going to cure "depression in agriculture" when the actual depreciation in the productive capacity of the land from what it was, "in a state of nature" is greater than the depreciation in the prices of general farm products between war and "soft money" prices, and now. Legislation cannot evoke good crops out of a soil that lacks manure and judicious cultivation. But there are lots of men who would rather howl and carry a banner with some "strange device" imprinted upon it, than to make a compost heap and apply it to a soil gaping for food,—and there are lots of demagogues who will "egg" them on. "Depressed agriculture" stalks in vengeance over land that is deficient in phosphorus, acid, nitrogen, and potash."

"Mr. W. H. Randolph of Iowa writes he has seen it stated that at a Wisconsin Farmers' Institute 22 Wisconsin farmers expressed by a show of hands a desire to exchange their silos for the money they cost. He asks, "Is there any sequel?"

"We guess not; or beginning, either. This is the first we ever heard of such a condition of mind among Wisconsin farmers. We do not believe it, for two reasons: First, that we have more faith in the good sense of the Wisconsin farmers who have built themselves silos; and second, we think silos have not yet been built so plentifully in any part of the state that there would be 22 farmers present at any institute, who owned so many silos.

"There are easy-go-luck, 'general purpose' farmers who are content to farm land that is not fertilized more than is done by keeping a cow or horse or 8 sheep to each 5 or 6 or 7 or 8 acres of the farm, their ambition being to keep a farm from 'running down' as it is called; they believing that if they keep it in as good a condition as it was 'in a state of nature' that they have achieved high success as farmers. They do better than those do who sell the farm gradually, by the bushel, but they do not get the approbation or the respect of such a farmer as J. M. Smith of Green Bay who says life is too short for him to fool it away in farming, unless he makes the land far richer than any land he ever saw in a state of nature.

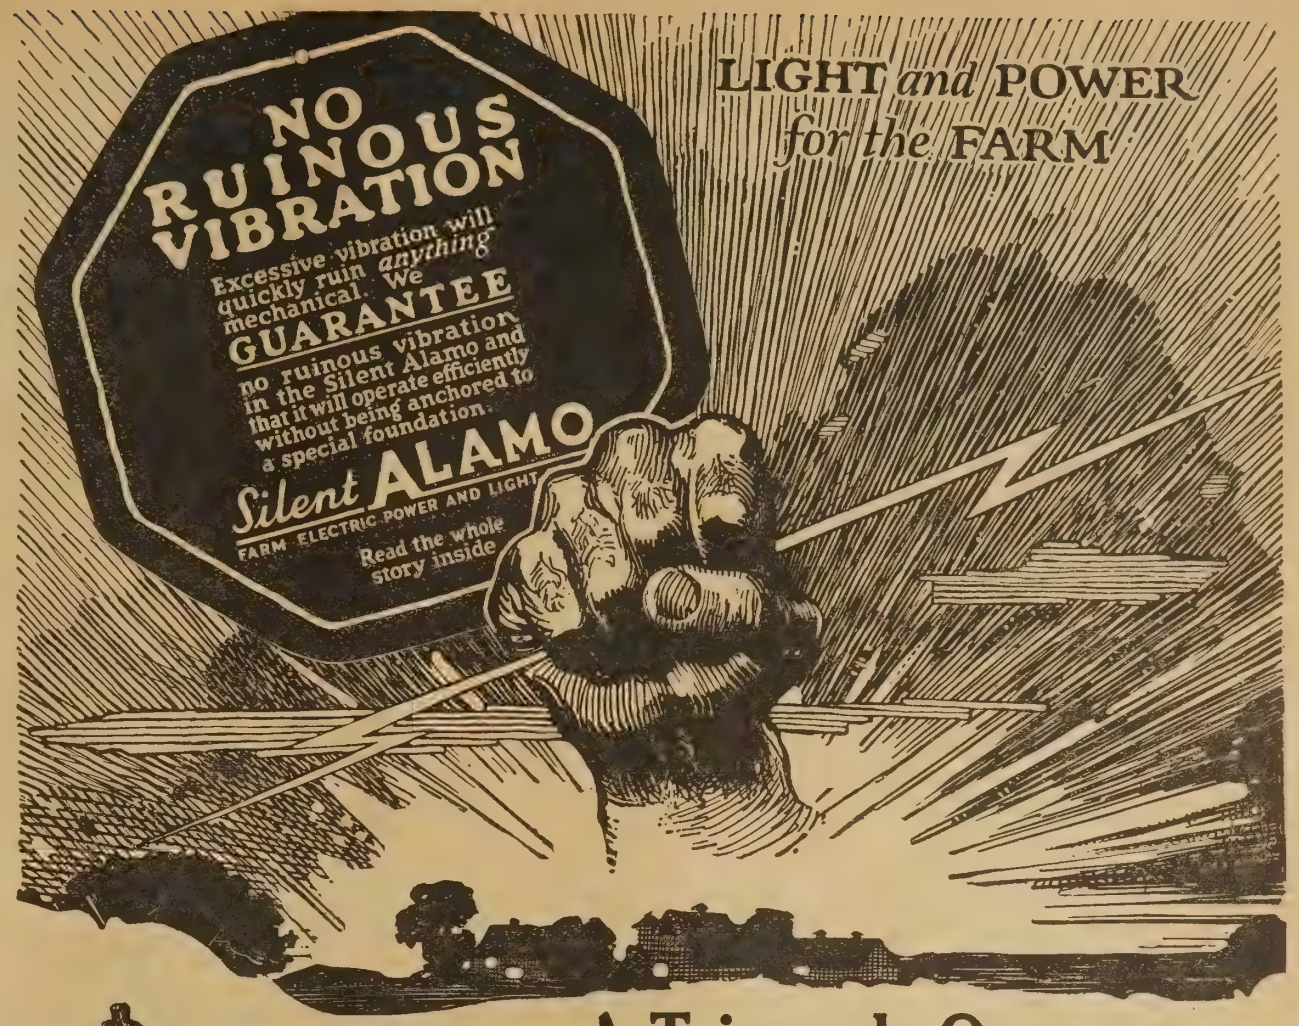
"Mr. A. L. Crosby had said in the National Stockman: 'It is a question in my mind whether a cow can stand a steady diet of ensilage 365 days.'

"'A Blast at the Untidiness in Cheese Factories' was the heading given an article. Our correspondent said:

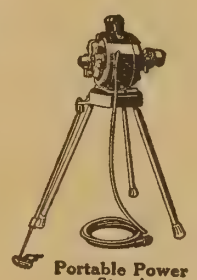
"'I am not exaggerating when I say that the great majority of our factories are anything but clean. I have been in factories this summer where the flies were so thick that the limit of my endurance was reached in five minutes and I beat a retreat. Many of the luckless ones are found floating in the vat, but the maker carelessly remarks, 'Oh we do not mind those now, by and by we skim them all off.' I'd like to invite him into a kitchen and while the flies drop into the soup-kettle I would console him by telling him I'd skim them off before dinner time. Think you he would relish the soup?'"

Iowa State Dairy Commissioner Tupper had been after the dealers of adulterated milk throughout that state. At Cedar Rapids he had secured 12 pint samples from as many dealers and found all but three adulterated. The names of the delinquent dealers were published.

Market quotations for September 8th were as follows:



Elgin, Ill., Sept. 8—Butter call board sales 80 tubs at 22 cents. Floor sales, 312 tubs at 23c. September 1, 1920, butter sold at 24—24⅛c. Sept. 9, 1889, butter sold at 21c., Sept. 10, 1888, sold at 24c. Sept. 12, 1887, sold at 23½c.



Fond du Lac, Wis., Sept. 8—The attendance at the Fond du Lac Dairy Board today was large and offerings up to those of a week ago, namely, 4,000 Cheddars, and 2,000 boxes flats. The price paid for both Cheddars and flats was 8½c. This price was one-half cent lower than last week, and few sales were made.

First Guernsey field representative appointed by the American Guernsey Cattle Club. His territory is the Rocky Mountains and Pacific Coast States.

Portable Power Stand

Electric Washing Machine

The quiet-running Red plant that needs no special foundation

A Triumph Over *Ruinous* Vibration

In the silent Alamo you have a machine of watch-like perfection. All that terrible shaking—that violent jarring and jolting which loosens bolts, breaks down adjustments, wears bearings unevenly, and quickly ruins any machinery, *is gone*. It requires no anchoring to a special foundation.

Read the Guarantee Tag

The whole story of this great achievement is told in the tag-booklet illustrated above, attached to each machine. It explains the ruinous effects of excessive vibration. Tells graphically how Silent Alamo engineers have finally overcome it. Explains why this remarkable plant will operate at 100% efficiency while mounted on three frail drinking glasses; why it needs no anchoring to a special foundation. It shows, too, why all this added efficiency means more power to operate your pressure water system, to run your churn, separator, washing machine, sewing machine, electric iron, percolator, fan, etc. *More* current to illuminate your house and barns—at less cost for operating.

These are things you should know. They determine the value of your investment. Visit the local Silent Alamo dealer. Read this tag-booklet. See the Silent Alamo demonstrated. In the meantime—

ILLINOIS STATE FAIR

ILLINOIS State Fair continues to benefit from the non-political administration of its affairs, legislated in 1917 and first put into operation in 1919. This year's attendance and exhibits give it rank with the best agricultural expositions in the middle west.

The quality and number of live stock shown reflect a healthy optimism and faith in Illinois agriculture. The hog show was a record breaker while the beef classes contained over 100 more entries than a year ago. The horse show drew much interest and had many entries, and the sheep exhibit was the best ever held at Springfield. The dairy cattle entries failed to maintain the 1919 mark but the show was distinctly creditable, a total of 443 animals being on the grounds. Transportation difficulties and labor shortage kept a number of herds away. While the animal husbandry of Illinois is all improving, good hogs being particularly in demand, dairying has much more than held its own. A new agency has entered upon its promotion in the activities of the Farm Bureau. Also, a plan is under way to bring more dairy cattle into "Egypt", the southern twenty-three counties being studied to determine upon a working extension plan.

In the Dairy Building

The National Dairy Council's "Use More Milk" exhibit was used in the dairy building. The Holstein-Friesian booth in this building was equipped for good service but too few breeders left the barns to visit it. Demonstrations of milk testing and butter making were given daily. Sample rations were suggested by the University of Illinois Dairy Department and graphic illustration showed the value of the pure-bred sire. A scrub cow whose production was 3,874.6 lbs. milk, 192.66 lbs. fat, when bred to a pure-bred bull, dropped a heifer which at maturity produced 6955.5 lbs. milk, 266.25 lbs. fat. A calf from the daughter and by a pure-bred sire was so much of an improvement that at maturity a production of 13,366.2 lbs. milk, 497.9 lbs. fat was made.

A miniature breeding crate furnished an example of the construction of this valuable and inexpensive piece of equipment.

The only striking thing in the building, except J. E. Wallace's butter sculpturing, was C. S. Rhode's roulette wheel. His adaptation of the famous gambling device to dairying draws attention. By two wheels he shows the chance of good and poor offspring through mating a herd to a pure-bred and to a scrub bull. His wheel shows that the occasional daughter of the scrub bull may produce as much as some daughters of pure-bred sires, but that the average is very much lower. He spiced the arguments of the wheel with the lines:

Simple Simon took some live stock to the county fair,
But his scrubs with all the pure-breds did not well compare,
"How can I improve my stock?" Simon did inquire,
And the judge told Simple Simon, "Use a pure-bred sire."

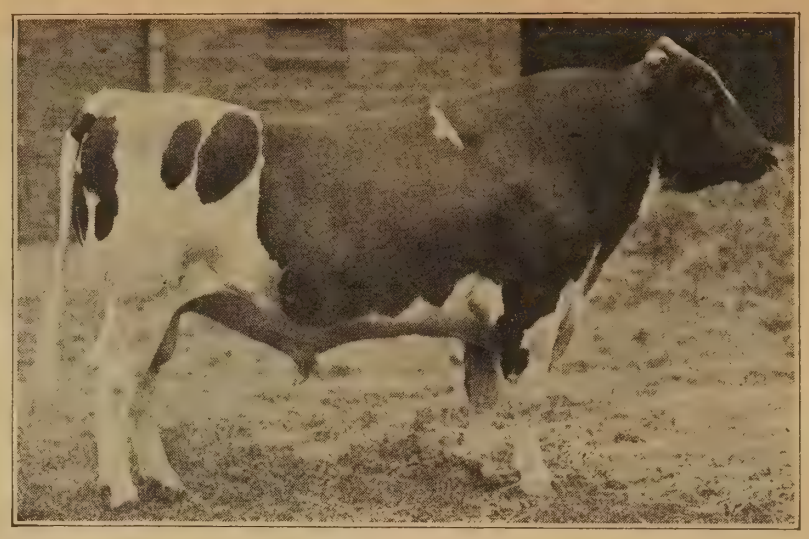
The Dairy Judging

W. S. Moscrip placed the Brown Swiss and Holstein awards and pleased both exhibitors and onlookers, as is his custom. W. W. Yapp, of the University of Illinois, appraised the Ayrshires, Jerseys, and Guernseys and did a thoroughly good piece of work.

Ayrshires

The Ayrshire show failed to bring forth the offerings of any new exhibitors. Three veterans represented the breed, Stephen Bull and Adam Seitz of Wisconsin, and C. H. Peverill of Iowa sending a few more than half a hundred of the red and whites. The Seitz herd made its usual circuit beginning by annexing the greater part of the winnings, taking the blue in all male classes but losing three first honors to Stephen Bull in the female classes.

Lord Roseberry easily held his place among the males, being a clear winner of the grand championship. His chief competition came from his sons, all three two-year-olds and the winning calves being by his service. Friendlesshead Victor is much improved over previous showings and was considered worthy competition for the Seitz winner in the aged class. Cavalier's Sherry Redman, senior calf, has unusual promise as a youngster. He won his class easily and made good company in the final awards for his sire.

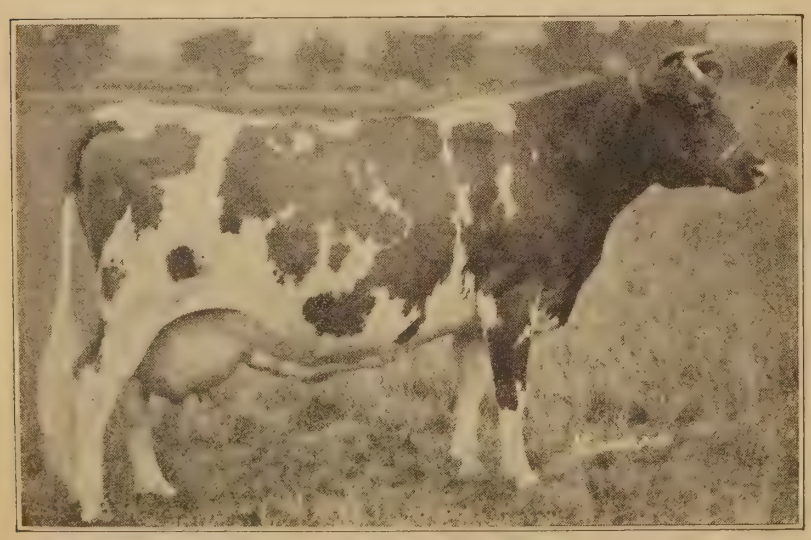


Beuchan Lady Lofty, shown dry but due to freshen for the National, led the aged cows for Seitz. The first strong female class was that for two-year-olds in which Silver Actress, junior champion at the 1919 Illinois fair and grand champion at the Iowa Dairy Cattle Congress, was an easy winner. A winner last year, she is greatly improved for the 1920 circuit. She repeated her performance of the week before, winning grand championship. Stephen Bull's Violet Finlayston 2nd won among the senior yearlings but lost in the finals to Seitz's younger entry.

In all, the show was commendable. The animals were in good condition and were well shown. The absence of beginning breeders was its only shortcoming.

The list of awards follows:

Bull 3 years or over—1, Seitz on Lord Roseberry; 2, Bull on Friendlesshead Victor. Bull 2 years and under 3—1, Seitz on Cavalier Silver Mint; 2 and 3, Peverill on Cloverdale's Choice Goods and Cavalier's Fashion Plate. Bull 1 year and under 2—1, Seitz on Cavalier's Wonder Boy; 2, Peverill on Rosebud Buster; 3, Bull on Garclaugh Ivanhoe. Bull calf 6 months and under 12—1 and 2, Seitz on Cavalier's Sherry Redman and Cavalier's Cupbeam; 3 and 4, Peverill on Rosebud Carl and Rosebud Bill; 5, Bull on Aldebaran Crest. Bull calf under 6 months—1, Seitz on Cavalier's Ping Pong; 2, Bull on Aldebaran Hugh; 3 and 4, Peverill on Cavalier's Good Gift and Rosebud Lassie Boy.



Cow 5 years or over—1, Seitz on Beuchan Lady Lofty; 2 and 3, Bull on Rosy Genevieve and Rosie Noxemall; 4, Peverill on Enid Lessnessock. Cow 4 years and under 5—1, Bull on Creigley Ada; 2, Peverill on Sylva Good Gift. Cow 3 years and under 4—1, Seitz on Howie's Glen of Valley View; 2, Peverill on Beauty of Cloverdale. Cow 2 years and under 3—1 and 3, Seitz on Cavalier's Silver Actress and Cavalier's Silver Queen; 2 and 4, Bull on Aldebaran Milkmaid and Hughina Beauty. Heifer 18 months old and under 24—1 and 4, Bull on Violet Finlayston 2nd and Garclaugh Snow; 2, Seitz on Cavalier's Creampot; 3 and 5, Peverill on Rosebud Stonehouse Lucy and Rosebud Nellie Carlton. Heifer 12 months and under 18—1 and 3, Seitz on Netherall Katchleen 2nd and Cavalier's Queen 2nd; 2 and 4, Bull on Aldebaran Blossom Again and Aldebaran Delightful; 5, Peverill on Rosebud Financier's Violet. Heifer calf 6 months and under 12—1 and 2, Seitz on Cavalier's Dorothy II and Cavalier's Lila Lee; 3 and 6, Bull on Aldebaran

Senior and Grand Champion Male—Lord Roseberry. Junior Champion Male—Cavalier's Sherry Redman. Senior and Grand Champion Female—Cavalier's Silver Actress. Junior Champion—Cavalier's Ella.

Brown Swiss

Brown Swiss cattle took third rank in numbers among the five dairy breeds. Four herds furnished eighty head, most of them distinctly creditable exhibits for the breed. The exhibitors were: W. O. Bohart, Montana; A. E. Bower and E. W. Wilson, Illinois; and Hull Brothers, Ohio, with herds, and W. V. Crane of Illinois with one junior heifer calf, the winner in her class.

Bower's aged bull, Nick's Prize Master, easily led his class and was made senior champion. In the finals, Wilson's yearling, Milo of Walhalla, found favor with Judge Moscrip for highest award. Swiss Valley Girl 7th, a consistent winner in the Hull herd in former years, suited Mr. Moscrip's ideas of dairy type so well that he delivered what he termed "an oration" to the ringside on her qualities. She was made grand champion over Betty of Lakeview, winning four-year-old and grand champion at the 1919 National, and Bob's Mascot, first prize senior yearling and a 1919 ribbon gatherer for Bohart. Bower's junior yearling, Lou Anna of Lake View, led the under two years females.

The list of awards follows:

Bull 3 years or over—1, Bower on Nick's Prize Master; 2 and 4, Bohart on Sunny Hill Bob and Beauty 2nd's Master; 3, Hull Bros. on Gallatin Browny. Bull 2 years and under 3—1, Hull Bros. on Ethel V.'s Militor; 2, Wilson on La France of Swiss Summit; 3 and 4, Bohart on Beauty C.'s N. M. and Zell A. W. Bull 1 year and under 2—1 and 2, Wilson on Milo of Walhalla and Eldred of Walhalla; 3 and 4, Bohart on Tassa M.'s Nick and Bruno B; 5, Hull Bros. on Prince of Lake View. Bull calf six months and under 12—1, Bower on General of Sedgley; 2, Wilson on Jubilee Prince; 3 and 4, Bohart on Beauty 2nd Dick and D.'s Dick. Bull calf under 6 months—1, Bower on Dutch Boy; 2 and 3, Bohart on Bozeman Boy and Little Nick's Dick; 4, Hull Bros. on Gold King; 5, Wilson on Jubilee Trumpiter.

Cow five years old or over—1, 2, and 5, Hull Bros. on Swiss Valley Girl 7th, Swiss Valley Girl 9th, and Nan of Lakeview; 3, Bohart on Master's Beauty C.; 4, Wilson on Penelope. Cow 4 years and under 5—1, Bower on Betty of Lakeview; 2, Bohart on Master's Bernice; 3, Wilson on Queen's Daughter; 4, Hull Bros. on Darlene W. Cow three years under 4—1, 2, and 5, Bower on Elsie of Lakeview 3rd, Fairview Maxine and Ethel of Lakeview; 3, Bohart on Browny's Perfection; 4, Wilson on Aimee. Cow two years and under 3,—1, Hull Bros. on Forest Girl 7th; 2, Wilson on Francis of Walhalla; 3, Bohart on D.'s Tassa; 4 and 5, Bower on Silver Girl and Elsie of Lakeview. 4th. Heifer 18 months and under 24—1 and 2, Bohart on Bob's Mascot and Catherine's heifer; 3, Hull Bros. on Nettie of Lakeview; 4 and 5, Wilson on Trilba of Jubilee and Uhleen of Jubilee. Heifer 12 months and under 18—1 and 5, Bower on Lou Anna of Lakeview and La Mark of Sedgley; 2 and 3, Wilson on Elenor of Walhalla and Kathryn of Walhalla; 4, Bohart on Nellie Dear. Heifer calf 6 months and under 12—1 and 5, Wilson on Helena Walhalla and Retha of Jubilee; 2 and 3, Bohart on Dick's Madge and Dick's Charm; 4, Hull Bros. on Vogel's Girl of Lakeview. Heifer calf under 6 months—1, Crane on Kate of Bower Farm; 2 and 4, Hull Bros. on Lottie H. of Lakeview and Militor's Nan of Lakeview; 3, Bower on Anna Dean; 5, Bohart on Bob's D. 2nd.

Dairy Herd—1, Bower; 2, Hull Bros.; 3, Bohart. Graded Herd—1, Bower; 2, Hull Bros.; 3, Bohart; 4, Wilson. Breeder's young herd—1 and 4, Bohart; 2, Wilson; 3, Hull Bros.; calf herd—1, Wilson; 2, Bohart; 3, Hull Bros. Get of Sire—1, Wilson; 2 and 3, Bohart; 4, Bower. Produce of cow—1, Bohart.

Senior Champion Bull—Nick's Prize Master. Junior and grand champion bull—Milo of Walhalla. Senior and grand champion cow—Swiss Valley Girl 7th. Junior champion cow—Lou Anna of Lakeview.

Guernseys

Guernseys put up the best exhibit of the dairy breeds. Eight breeders from six states contributed to the exhibit of 125 head shown; J. L. McIntosh, South Carolina; John Ebels, Michigan; Dairyland Farm and W. W. Marsh, Iowa; Goodhand Kingston and Son and Jones and McKerrow, Wisconsin; Folly Farm, Illinois; and W. O. Bohart, Montana. Not only did the fawn and whites outnumber other milk breeds but the average quality was superior, except for some animals in the Bohart herd which had suffered so much from shipping as to be unfit for competition. The winnings were quite well divided among the Iowa and Wisconsin herds, with Marsh the leader with nine firsts and three of the six championships.

Eight aged bulls made a class fit for the National. Cherub's Prince, shown by Marsh, was an easy first on his pronounced dairy type in his length, depth, openness of frame, quality, and color. After that the class had close contests in every placing, especially between the Dairyland Farm and Kingston entries for third place, the latter farm winning on Hopeful of Edgemoor. The age of Chene King, Jones and McKerrow entry, kept him from a higher rating than fifth. Aristocrat of Muskego, a junior calf, won junior championship for Kingston.

Imp. Mildred II of Les Godaines, owned by Jones and McKerrow, was as showy as when she was twice made first prize A. R. cow and second in the open class at the National. She has the finish, capacity, and mammary development to carry her high in any exhibition. Dairyland Farm's first prize three-year-old at the 1919 National, Velma of Mapledell, won in the four-year-olds. Honey Bloom of the Prairie, made grand champion five times in 1919 and this year at the Missouri State Fair, was junior champion from the senior yearlings. She lost in the finals mainly through the advantage accorded a mature cow. Professor Yapp found his hardest classes among the younger females. Fifteen were shown as junior yearlings and nineteen as senior calves. The tops were well conditioned and of a uniformity which made every ribbon won well earned.

The placings were as follows:

Bull 3 years or over—1, Marsh on Cherub's Prince; 2 and 5, Jones & McKerrow on Bonnie Boy of Riverside and Chene King; 3, Kingston & Son on Hopeful of Edgemoor; 4, Dairyland Farm on Plato of 4 Pine. Bull 2 years and under 3—1, Marsh on Marie's Cherub of the Prairie; 2, Dairyland Farm on Cloth of Gold's King; 3, Ebels on Starlight of Bon Ayre; 4, Bohart on Prince Boy. Bull 1 year and under 2—1, Dairyland Farm on Lalla's Prince; 2, Marsh on Golden Laddie of the Prairie; 3, Folly Farm on Folly Noble; 4, Jones & McKerrow on Dora's King; 5, Bohart on Major Bozeman. Bull calf 6 months and under 12—1 and 2, Marsh on Prince Charming of the Prairie and Blossom Prince of the Prairie; 3, Jones & McKerrow on Coral Tom King; 4, Goodhand Kingston and Son on Steadfast of Muskego; 5, McIntosh on Six Roses. Bull calf under 6 months—1 and 3, Goodhand Kingston and Son on Aristocrat of Muskego and Warrior of Muskego; 2, Marsh on unnamed; 4, Bohart on Select's Major; 5, Folly Farm on Folly Jupiter.

Cow 5 years old or over—1 and 4, Jones and McKerrow on Imp. Mildred II of Les Godaines and Imp. Bordeaux of Courtil Bree; 2, Goodhand Kingston and Son on Imp. Violet of Tol. Val; 3, Folly Farm on Imp. Cynthia of Sarnia; 5, McIntosh on Glenwood's Soso of Oak Ridge. Cow 4 years and under 5—1, Dairyland Farm on Velma of Mapledell; 2, Bohart on Prince's Lela B. Cow 3 years and under 4—1, Jones and McKerrow on Kate of Aurelian Farms; 2, Marsh on Princess Bo Peep of the Prairie; 3, Goodhand Kingston and Son on Raider's Surprise of Muskego; 4, Bohart on Onward Girl; 5, Ebels on Rosette of Butternut Hill. Cow 2 years and under 3—1, Goodhand Kingston and Son on Itchen's Queen of Edgemoor; 2, McIntosh on Gemsey's Soso; 3, Jones and McKerrow on Century Girl of Edgemoor; 4, Bohart on P. Lela Onward; 5, Ebels on Princess of Oliver. Heifer 18 months and under 24—1 and 3, Marsh on Honey Bloom of the Prairie and Golden Locks of the Prairie; 2, Jones and McKerrow on Eidelweiss of Edgemoor; 4, Dairyland Farm on Nonpariel Cherry; 5, Goodhand Kingston and Son on Lillian of Edgemoor. Heifer 12 months and under 18—1, Marsh on Princess Pretoria of the Prairie; 2 and 3, Jones and McKerrow on Spring Maid of Edgemoor and Dancing Girl of Edgemoor; 4, Goodhand Kingston and Son on Wonder Girl of Muskego; 5, McIntosh on Gemsey's Princess of Clover Farm. Heifer calf 6 months and under 12—1, Goodhand Kingston and Son on Hopeful's Miss of Sunny Slope; 2 and 5, Marsh on Honeydew of the Prairie and Sensation of the Prairie; 3 and 4, Jones and McKerrow on Ultra Rosie and Ultra Elizabeth Beauty. Heifer calf under 6 months—1, Jones and McKerrow on Chene King Northern Lady; 2, McIntosh on Soso's Sunbeam of Clover Farm; 3, Marsh on unnamed; 4, Dairyland Farm on ————; 5, Goodhand Kingston and Son on Wonderful Girl of Muskego.

Dairy herd—1, Goodhand Kingston and Son; 2, Bohart. Graded herd—1, Jones and McKerrow; 2 Goodhand Kingston and Son; 3, Dairyland Farm. Breeders' young herd—1, Marsh; 2, Dairyland Farm; 3, McIntosh; 4, Folly Farm; 5, Bohart. Calf Herd—1, Marsh; 2, Jones and McKerrow; 3, Goodhand Kingston and Son. Get of Sire—1, Marsh; 2, Jones and McKerrow; 3, Goodhand Kingston and Son. Produce of Cow—1, Marsh; 2, Goodhand Kingston and Son; 3 and 4, Jones and McKerrow.

Senior and Grand Champion Bull—Cherub's Prince. Junior Champion Bull—Aristocrat of Muskego. Senior and Grand Champion Cow—Imp. Mildred II of Les Godaines. Champion Female—Honey Bloom of the Prairie.

CHERUB'S PRINCE, SENIOR AND GRAND CHAMPION GUERNSEY BULL AT THE ILLINOIS STATE FAIR

He was recently owned by Charles L. Hill of Wisconsin who has lately sold a third interest to F. G. Rueping of Wisconsin for $11,000, made a gift of a one-third interest to W. W. Marsh of Iowa, and retained a one-third interest.

Holsteins

Two more than one hundred black and whites were shown owned by seven farms in three states: Cass Farm, Iowa; The Pickering Farm, Missouri; and John H. Diehl, E. M. Detweiler, A. F. Randolph, Elmer Frazier, and Bert Irwin, all of Illinois. The Pickering Farm exhibit of ten cows filled the double capacity of contesting in the ring and serving as nurse cows for beef calves. Cass Farm took fourteen firsts, losing two and a junior championship to Frazier and one each to Detweiler and Randolph.

King Aaggie Hengerveld, Cass Farm's aged bull, headed his class, defeating Ragapple Korndyke Segis Echo, shown by Diehl, and leaving Ragapple Korndyke 8th, entered by Detweiler, in third money. The aged sire maintained his lead throughout the showing. Frazier's first in the open classes came in the junior bull line-up where his Merrygold Bo Peep won on his scale, capacity, and strength. With these qualities he carries sufficient quality to make him junior champion. No classes of extra merit among the males were shown.

In the aged cow class a Cass Farm entry, Lulu Baby Girl, of "the Moscrip type" won. She was shown dry but had quality from nose to tail, being an easy leader of the senior line-ups and a successful contender in the championships with Fayne Glitka De Kol, a Cass Farm junior calf. A highly pleasing feature of the younger female classes was the uniformity of the get of Fayne Bessie Homestead. This was especially noticeable in the junior calves where first, second, third, and sixth were awarded to half sisters in a strong class. These classes were the redemption of a rather common showing for the breed. They were well filled with distinctly attractive, straight lined heifers of producing form.

The awards as made are listed below:

Bull 3 years or over—1, Cass Farm Co. on King Aaggie Hengerveld; 2, Diehl on Ragapple Korndyke Segis Echo; 3, Detweiler on Ragapple Korndyke 8th. Bull 2 years old and under 3—1, Cass Farm Co. on Aaggie Almeda Hengerveld. Bull 1 year old and under 2—1, Cass Farm Co. on Bessie Homestead Alcartra; 2, Detweiler on Superior Ragapple Mata; 3, Ramsey on Ramsey Segis Paul Meteor. Bull calf 6 months old and under 12—1, Elmer Frazier on Merrygold Pontiac Bo Peep; 2 and 4, Cass Farm Co. on Hengerveld Walker Homestead and Fayne Mollie Walker; 3, Randolph on Hengerveld De Kol Homestead Lad; 5, Detweiler on Greenway Segis Hengerveld Lad. Bull calf under 6 months old—1, Cass Farm Co. on King Aaggie Craddock; 2 and 5, Detweiler on Golden Oak Sarcastic Clorinda and Unnamed; 3 and 4, Randolph on Mercedes Mechthilde Ormsby and Mercedes Homestead De Paul.

Cow 5 years old or over—1, Cass Farm Co. on Lulu Baby Girl; 2 and 4, Detweiler on Prilly Clothilde De Kol and Hartwood Spotford Again; 3, Irwin on Johanna De Kol Fairmont Maid; 5, Frazier on Adelaide Tritomia Prilly. Cow 4 years old and under 5—1, Cass Farm Co. on Almeda Luecke Hengerveld; 2 and 3, Detweiler on Lady Calamo Hengerveld and Greenway Lady Sarcastic Segis; 4, Diehl on Berndale Pontiac Bloemer; 5, The Pickering Farm on Nellie Quora De Kol. Cow 3 years old and under 4—1 and 5, Randolph on Whitehurst Colantha Homestead and Whitehurst Ormsby Homestead; 2, Lanus on Lady Pontiac Jewel Mechthilde; 3, Cass Farm Co. on Pearl Johanna Pontiac De Kol; 4, The Pickering Farm on Spring Valley Queen Pontiac. Cow 2 years old and under 3—1 and 2, Cass Farm Co. on Aaggie Hengerveld Daisy Homestead and Aaggie Hengerveld Tritomia De Kol; 3, Lanus on Queen Clothilde Aaggie Pontiac; 4, Hill Den Farms on Greenlawn Aaggie Changeling; 5, Randolph on Whitehurst Gretqui Mechthilde. Heifer 18 months old and under 24—1, Detweiler on K. S. P. Nancy Pontiac; 2, Frazier on Merrygold Lilly Korndyke; 3 and 4, Cass Farm Co. on Bessie Homestead Jewel and Queen Waumandee Beauty; 5, Hill Den Farms on Greenlawn Lily Posch Change. Heifer 12 months old and under 18—1 and 2, Cass Farm Co. on Bessie Homestead Walker Lyons and Canary Bessie Homestead; 3, Frazier on Merrygold Pearl Segis Korndyke; 4 and 5, Diehl on Diehl Ragapple Echo Segis and Diehl Ragapple Cornucopia. Heifer calf 6 months old and under 12—1, 2, 3, and 6, Cass Farm Co. on Payne Glitka De Kol, Bessie Homestead Baby Girl, Ormsby Bessie Johanna, and Bessie Alcartra Pink; 4 and 5, Frazier on Merrygold Queen Bo Peep and Merrygold Elenora Bo Peep. Heifer calf 6 months old—1 and 2, Cass Farm Co. on Nirvana Grace De Kol Fayne and Aaggie Hengerveld Canary Pearl; 3 and 6, Detweiler on Golden Oak Clara De Kol and Golden Oak Maggie Segis; 4, Diehl on Diehl Ragapple Colantha Pontiac; 5, Frazier on Merrygold Bess Pearl Bo Peep.

Dairy Herd—1, Cass Farm Co.; 2 and 3, The Pickering Farm. Graded Herd—1 and 2, Cass Farm Co.; 3, Detweiler. Breeders' Young Herd—1 and 3, Cass Farm Co.; 2, Frazier; 4, Randolph. Calf Herd—1, Cass Farm Co.; 2, Frazier; 3, Detweiler. Get of Sire—1 and 3, Cass Farm Co,; 2, Frazier; 4, Randolph; 5, Detweiler. Produce of Cow—1, Frazier; 2 and 3, Cass Farm Co.; 4, Randolph; 5 and 6, Detweiler.

Senior and Grand Champion Male—King Aaggie Hengerveld. Junior Champion Male—Merrygold Pontiac Bo Peep. Senior and Grand Champion Female—Lulu Baby Girl. Junior Champion Female—Payne Glitka De Kol.

Jerseys

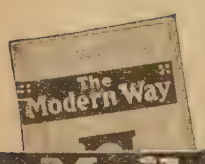
The Jersey Show fell far short of last year's record. In 1919, a dozen herds brought 180 animals, while this season's total of 75 was furnished by four herds: Longview Farm, Missouri; Crystal Brook Stock Farm and W. A. Brewerton, Illinois; and A. M. McClenahan, Colorado. Longview cleaned the boards, taking ev-

(Continued on page 306)

FOR ONE CENT A DAY

While tractors and gang plows and automobiles are making farming an attractive profession for the man of the farm, it is still necessary on thousands of farms for the women to pump and carry water.

Such work is unnecessary drudgery. It is a waste of time, a waste of strength, a waste of energy. No woman should be asked to be a drudge. No woman should be compelled to pump the water needed by the household. A V-K Water Supply System will do this work for about a cent a day. It will provide running water under pressure at a turn of a faucet—in the kitchen, bathroom or laundry. It will furnish pure, fresh water direct from the well for drinking.



It can be equipped with a heater and will furnish hot and cold water at all times and in any room where you want it.

A V-K Water Supply System will provide sufficient water to irrigate the garden and water the stock—no matter how many head you may have. It will pay for itself in the time it saves. It will bring big dividends in the increased yield from stock and gardens.

V-K Water Supply Systems are easy running and quiet. They can be placed in the basement, the barn, the garage, or a pit. They will pump water from a well, cistern, lake or stream.

Find out for yourself how much money and time a V-K Water Supply System will save you. Write at once for a free copy of our booklet, "The Modern Way". Ask your plumber or jobber in plumbing supplies about V-K Water Supply Systems.

Association Notes

Rock Prairie, Wisconsin:—One pure-bred Guernsey bull and three pure-bred Guernsey calves were purchased during August. Six sets of drinking cups were installed and one new silo built. A carload of oil meal was purchased. Market milk testing 3.5% sold for $3.70 per cwt., and 4c per point above. Milk retails for 15c per quart, butter for 64c per pound, and cheese for 50c per pound. Local feed prices are: barley, $2.85 per cwt.; oats, $3.60; bran, $2.80; oil meal, $4.

Waterbury—Waitsfield, Vermont:—A few unprofitable cows were sold during July. Several members of the association purchased pure-bred stock and three new herds were entered during the month. A large quantity of grain was ordered through the Farmers' Exchange at Montpelier. Milk brought 9½c per quart delivered in Boston. Milk retails at 14c per quart. Cottonseed meal is rated at $4 per cwt.; corn meal, $3.40; mixed feed, $3.50.

Dickinson County, Kansas:—Two cows were sold for breeding purposes and six cows were sold because of unprofitable production. One faulty separator was found during June.

Montgomery County, Kansas:—A Jersey herd was dispersed July 3rd but another Jersey herd came in to take its place. There was a complete dispersal sale of a herd of 70 head of fine Holsteins on July 17th.

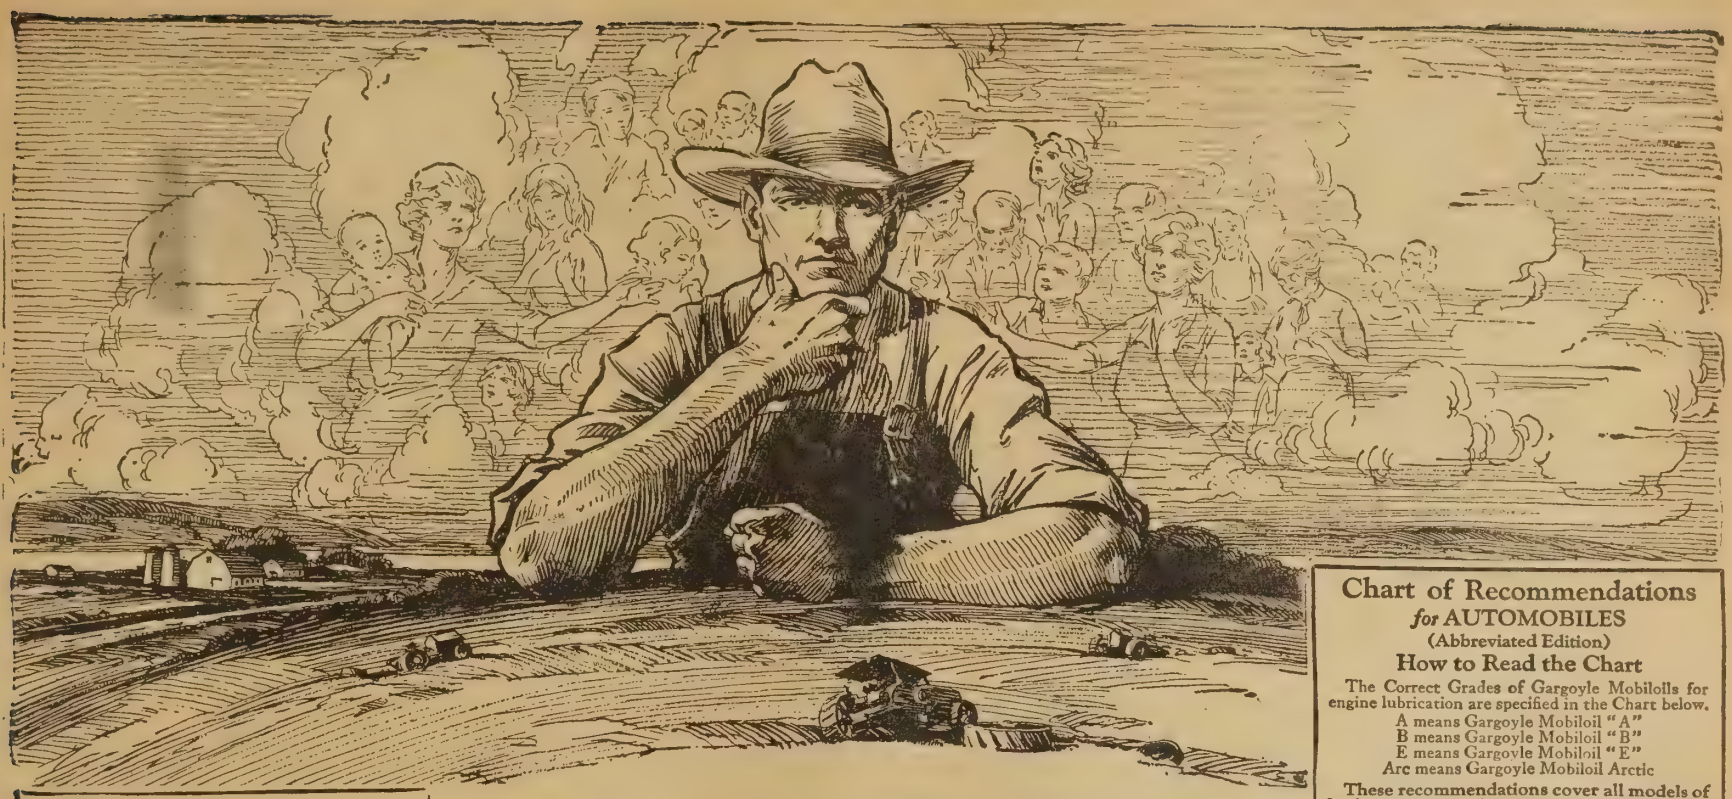
Meade County, Kansas:—Two registered cows and one registered bull were purchased in June by the owner of a grade herd. Two faulty separators have been found.

Lake County No. 5, Illinois:—The following improvements in this association took place during the year just finished: Four silos were built, 7 sets of drinking cups installed, 8 pure-bred bulls purchased to head herds, one barn built, one barn remodeled, 30 pure-bred females purchased, and 81 cows sold. There were 300 cows in 18 herds that finished the year's work. The association average was 6,907 lbs. milk, 259.36 lbs. fat, with a fat per cent of 3.75%. The herd with the highest fat average was that of H. F. Berghon, which averaged 321 lbs. fat in 9,551 lbs. milk. The high cow belongs to R. C. Meyer with a fat production of 468 lbs. in 8,381 lbs. milk. There are 10 herds in this association that have not used pure-bred bulls until this last year. Some herds are still using grades. Six herds have used pure-bred sires for five years or longer. From these herds the following information is gathered: Herds using pure-bred sires average a production of 7,772 lbs. milk and 272.89 lbs. fat, with a profit above feed cost of $94.99. Herds using grade sires average a production of 616.70 lbs. milk and 239.93 lbs. fat, with a profit above feed cost of $79.12. A difference of $15.87 per head profit above feed cost is shown in favor of the herds using pure-bred sires. On a herd of 20 cows, this would amount to $317.40, a sum worth saving.

Rosendale—Eldorado, Wisconsin:—The average production of 35 herds for the year just ended is 6,890 lbs. milk containing 259 lbs. fat. The number of cows qualifying for the Register of Production was 26. Seventy-two low producers sold during the year. The average for the high herd was 9,875 lbs. milk containing 360 lbs. fat, with a profit above feed cost of $179.55. The low herd averaged 4,990 lbs. milk and 180 lbs. fat, with a profit above feed cost of $88.

Lake County No. 2, Illinois:—One pure-bred sire was purchased during August. One new silo is being built. August market milk sold for $3.70 per cwt. Local feed prices are as follows: Oats, $70 per ton; bran, $56; cottonseed meal, $78; Unicorn, $78; B. Q., $76; oil meal, $79; alfalfa hay, $30; silage, $10; pasture, $2 per cow per month.

Meadville, Pennsylvania:—July market milk sold for $3.15 per cwt. and 5c per point above 3.5%. Feed prices are: Cottonseed meal, $75 per ton; oil meal, $77; gluten, $75; corn meal, $78; bran, $60; pasture, $1.50 per cow per month.



Union County, Ohio, Off a Bang

Two very profitable and enjoyable days were spent July 27 and 28, in Union County, Ohio. President Williams and Secretary Nuetzel had planned a tour of the farms of the following breeders: Harry Burns, J. F. Geigel, Christ Berger, Richard Bishop, Farm Ladnas, Liberty Stock Farm, Kirtland Bros., Sweeny & Shields, L. P. Ruppright, Frank Ruprecht, and O. P. Neutzel.

At a meeting the evening of the 27th a large number of the local club and their families came together for a general good time. Secretary H. C. Barker told of Holstein activities in Ohio and urged that there be a big showing of Holsteins at the Union County fair. A committee was appointed by the chairman to see that every Union County breeder show at least a few head. Every breeder present bought one of the "Holstein-Friesians on this Farm" signs.

The three high herds in the Union County Cow Testing Association during the year ending June 1st were Holstein herds. Ten cows from this county are shown in the cow testing association exhibit at the Ohio State Fair.

H. C. BARKER.

Tractor Shortage

A problem which every farmer must face

FOOD is the reconstructor of nations. In their efforts to regain a normal peace production, European Peoples are bidding their bottom dollar for food—*and machinery to produce food.*

Here in America, lack of man power has for some time caused a scramble for farm machinery. Authoritative sources predict a serious shortage of tractors.

This condition makes it more important than ever that the farmer get the utmost service from his tractor. New tractors may be hard to get. In any case the replacement cost will be high.

In the conservation of the tractor no one thing is more important than scientific lubrication.

Working constantly in a cloud of dust and grit, farm tractors demand lubrication of the highest quality. These lubricants, to be efficient, must be scientifically correct for the engine of the particular make of tractor on which they are used.

The Vacuum Oil Company has for years been recognized as an authority on scientific lubrication. Gargoyle Mobiloils when used as specified in our Chart of Recommendations have time and again proven their superior value in actual savings of oil and fuel and in greater power delivered.

The Charts shown here will tell you exactly what grade of Gargoyle Mobiloils will enable you to get most power and longest service from your auto, truck and tractor.

Gargoyle Mobiloils are put up in 1- and 5-gallon sealed cans, in 15- 30- and 55-gallon steel drums, and in wood half-barrels and barrels.

Write for "Correct Lubrication," a booklet containing complete automobile and tractor charts and other valuable data.

Mobiloils

A grade for each type of motor

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container.

VACUUM OIL COMPANY, New York, U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world

DOMESTIC BRANCHES: New York, Philadelphia, Detroit, Minneapolis, Kansas City, Kan, Boston, Pittsburgh, Chicago, Indianapolis, Des Moines

Chart of Recommendations *for* TRACTORS
(Abbreviated Edition)

How to Read the Chart

The correct grades of Gargoyle Mobiloils for tractor engine lubrication are specified in the Chart below.

A means Gargoyle Mobiloil "A"
B means Gargoyle Mobiloil "B"
BB means Gargoyle Mobiloil "BB"
Arc means Gargoyle Mobiloil Arctic

These recommendations cover all models of tractors unless otherwise specified.

Where different grades of Gargoyle Mobiloils are recommended for summer and winter use, the winter recommendations should be followed during the entire period when freezing temperatures may be experienced.

This Chart is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and constitutes a scientific guide to Correct Tractor Lubrication.

If your tractor is not listed in this partial chart, consult the Chart of Recommendations at your dealer's, or send for booklet, "Correct Lubrication for Tractors," which lists the Correct Grades for *all* Tractors.

Chart of Recommendations *for* AUTOMOBILES
(Abbreviated Edition)

How to Read the Chart

The Correct Grades of Gargoyle Mobiloils for engine lubrication are specified in the Chart below.

A means Gargoyle Mobiloil "A"
B means Gargoyle Mobiloil "B"
E means Gargoyle Mobiloil "E"
Arc means Gargoyle Mobiloil Arctic

These recommendations cover all models of both passenger and commercial vehicles unless otherwise specified.

Where different grades of Gargoyle Mobiloils are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures may be experienced.

This Chart is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and constitutes a scientific guide to Correct Automobile Lubrication.

If your car is not listed in this partial chart, consult the Chart of Recommendations at your dealer's, or send for booklet, "Correct Lubrication," which lists the Correct Grades for *all* cars.

MISSOURI STATE FAIR

THE 1920 Missouri State Fair in attendance and in its exhibits was the best which has yet been held in the "Show-me" state. Though some sections of the state have suffered from light rainfall, general crop conditions are highly favorable and Missouri is prosperous. This is reflected in the heavy attendance, the largest total being 65,000 for one day.

The dairy cattle show was superior to that of former years, outranking previous exhibits both in numbers and in quality. The total of 317 head compares with 225 shown in 1919. L. S. Gillette of Iowa served as judge of all breeds and gave universal satisfaction both to the exhibitors and to those who were in attendance at the fair to see the best types within the several breeds.

Ayrshires

Stephen Bull of Wisconsin and C. H. Peverill of Iowa furnished the Ayrshire exhibit and divided winnings quite evenly, Peverill taking the grand championship on his two-year-old bull, Cloverdale Choice Goods, while this honor among the female classes went to the Bull herd on Hugina Beauty, a two-year-old. The division of junior championships was the same, that on bulls going to Peverill, on Rosebud Carl, senior calf, and that on females to Bull on Aldebaran Blossom Again, a junior yearling.

Guernseys

The Guernsey show was the strongest of the dairy exhibits in quality, five herds being represented with 66 head; J. L. McIntosh, South Carolina; H. W. Scott, Missouri; and three Iowa herds, Mountain Bros., W. W. Marsh, and Dairyland Farm. Marsh and Mountain Brothers were the heaviest winners with Dairyland Farm ranking next as a competitor. Cherub's Prince led the male classes, bringing the grand championship to the Marsh herd and defeating for this honor the Marsh junior champion, Golden Laddie of the Prairie. The Marsh 1919 senior heifer champion begins the circuit with a grand championship to her honor, winning over the senior champion cow owned by Mountain Brothers, Ingleside Pretoria Vrangue.

JOHANNA BONHEUR CHAMPION 2ND, GRAND CHAMPION HOLSTEIN BULL AT THE MISSOURI STATE FAIR
OWNED BY THE UNITED STATES DISCIPLINARY BARRACKS FARM COLONY, KANSAS

CLOVERDALE CHOICE GOODS, GRAND CHAMPION AYRSHIRE BULL AT THE MISSOURI STATE FAIR
OWNED BY C. H. PEVERILL, IOWA

Holsteins

Seven out of nine Holstein herds came from Missouri farms, the only out of state exhibits being the Cass Farm Company of Iowa and the Kansas State Holstein-Friesian Association. A total of 95 head were shown. The Kansas herd took five of the six champions, losing only two to the Cass Farm Company in the junior champions for females, which was won by Canary Bessie Homestead. Johanna Bonheur Champion 2nd easily held his place against the Cass Farm entry, King Aaggie Hengerveld, and faced no serious competition from the juniors. The grand champion female, Rijanta Inka Hengerveld, from the Kansas herd was shown dry but had the advantage of scale and showiness over the Cass Farm cow, Lulu Baby Girl, an animal of unusual quality and type.

Jerseys

Twelve Missouri breeders exhibited Jerseys, A. M. McClenahan of Colorado and White City Dairy Farm of Oklahoma being the only out of state exhibitors. The Colorado herd and Long View Farm of Missouri made the heaviest winnings. In the aged cow class 26 animals were led in. Long View's Rollie's Star of Peace led the class and maintained her position to the championship. The junior champion cow came also from Long View Farm, from the senior yearling, Raleigh's Blue Feather. Among the bulls, Leda's Raleigh won in the aged class. A senior bull calf from the same farm, Wolf's Chieftain 2nd, was given the advantage in the purple competition and placed grand champion.

QUALITY IN MILK COUNTS

A. W. ROSSITER, PENNSYLVANIA

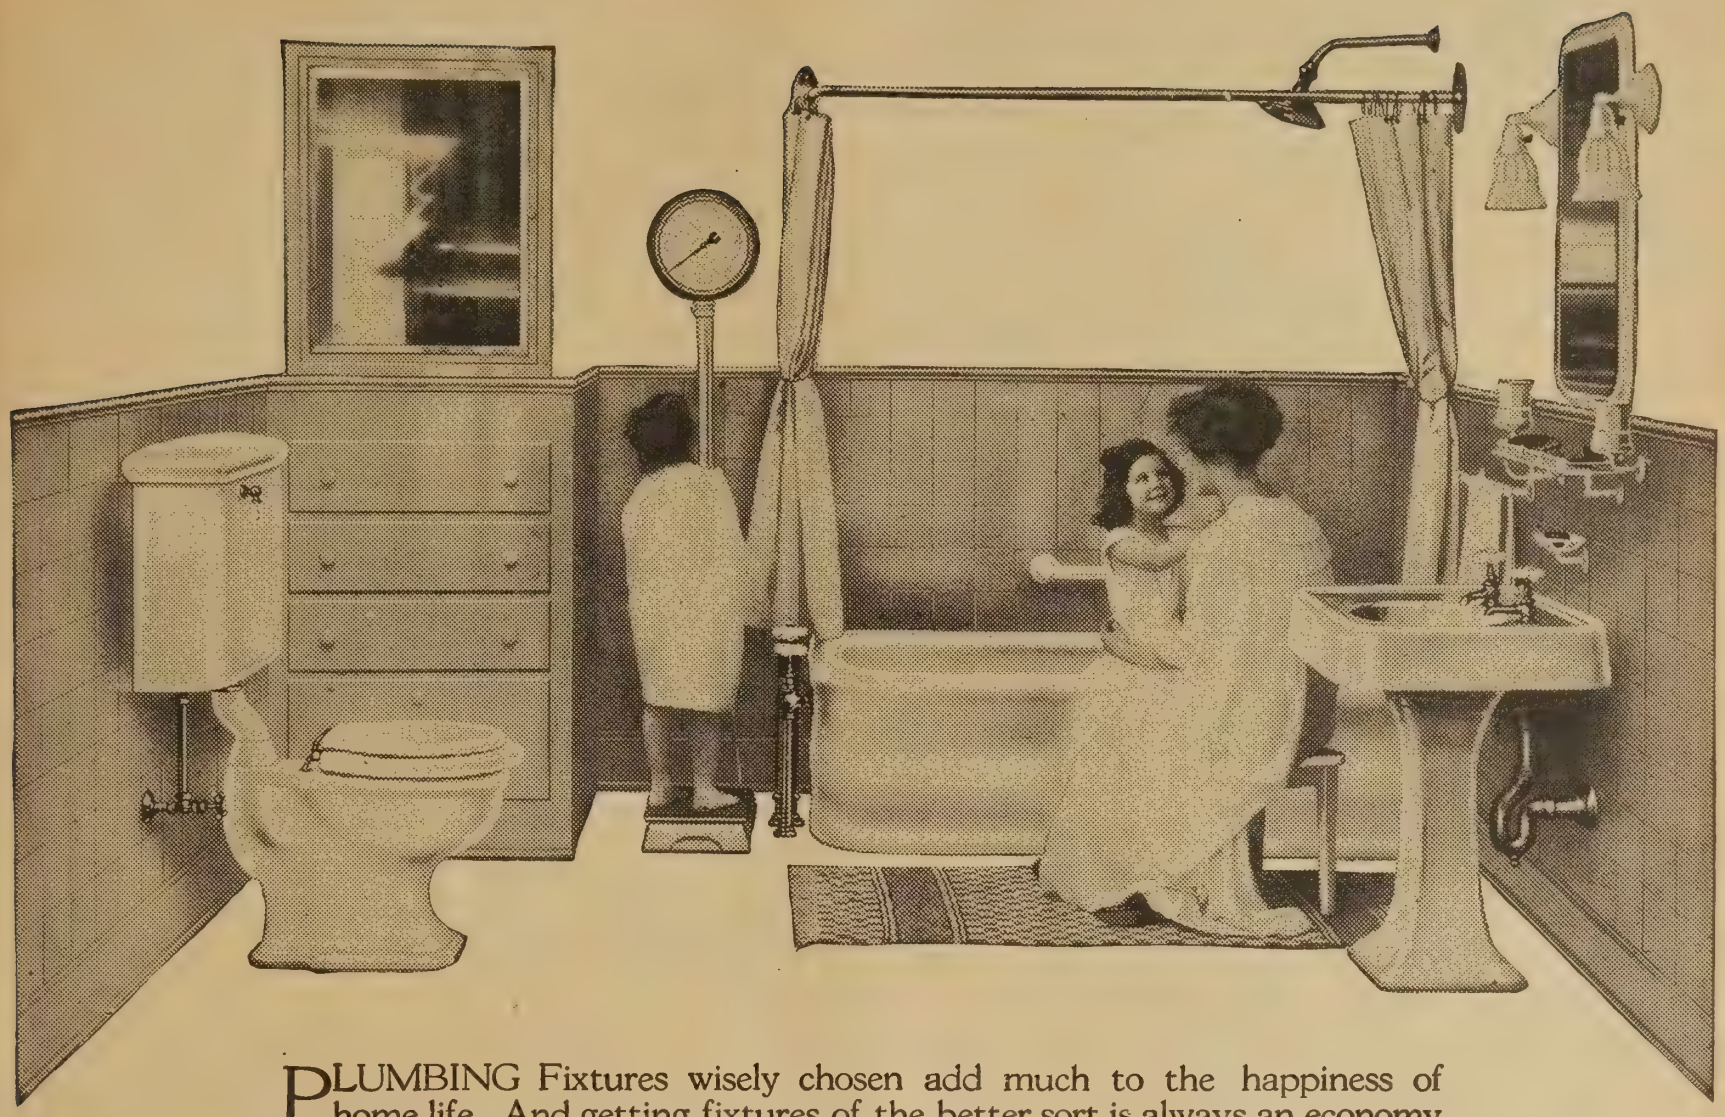
YOUR most excellent editorial "Milk and Meat" in your August 20th issue brings to my mind an experience I have been enjoying for most one year since starting a retail milk route.

Next to the last paragraph in your editorial states "Mr. Whisenand suggests letting people balance their rations according to their tastes." Taste is the vital factor most dairymen seem to overlook. Tastes in milk are of as many as 57 varieties; tastes for milk are destroyed by the indifference of many dairymen as to the taste of their milk.

For most one year my trade has been telling me about my milk keeping so well; and question: "What makes it so sweet?" One woman urges another, "If you can't drink milk, try Green Acres Jersey; it's wonderful milk." An elderly person started out with 3 pints a week; now she takes a pint daily. Recently a new customer tried the flavor test on three boys from 9 to 12 years (my competitor was a neighbor with good milk). These boys judged in my favor, without having a forehand knowledge of which milk they were drinking. Regular consumption in this family was 1½ qts.; now 2½ qts. and going up. This woman's next door neighbor came in on the same kind of test. She was a two-quart customer, but is now consuming three quarts per day. Two instances of a 33⅓% increase in demand and many more could be cited.

The truth is, I've spent fifteen years in business and seven years farming. I've never in this time heard such praise for a food product. What is the reason? I think healthy cows, clean udders, clean hands, covered bucket, prompt cooling and bottling on the farm, protection from weather during delivery, plus the all important grain ration in liberal quantities the year round, and the elimination of all feeds that make bad flavors.

These words of praise have been for me a stimulating force; have proven to me that each dairyman's responsibility is far greater than he assumes.



If each and every milk producer could have a thirty-day experience at retailing he would wind up by quitting the production end or brushing up his ideals toward the production of sweeter and cleaner milk. This would make delightful retailing competition as then no one milk would be best. It would simply be a question of alloting territory and simplifying delivery.

My experience convinces that no educational campaign will increase consumption of milk if the producer doesn't build in flavor and keeping qualities and maintain a healthy herd through supervision, thereby making pasteurization unnecessary.

PART OF A RECENT SHIPMENT OF AYRSHIRES FROM CRESTMONT FARM, PENNSYLVANIA, TO VICENTE USERA OF PORTO RICO
Left to right: Daisy Dummond 2nd, Dolly of Midland, and Captain Ayer of Crestmont.

Don't be afraid to ask questions. That's the only way you can find out a good many things.—FARRINGTON.

PLUMBING Fixtures wisely chosen add much to the happiness of home life. And getting fixtures of the better sort is always an economy when their cost is spread over years of service.

Give your home a *modern* bathroom. Why wait until the family grows old? Passing years should be no less pleasant than the years still to come, and it is better to install the best fixtures the first time and enjoy the advantages of their service.

Get in touch with a Contracting Plumber in your vicinity and let him help you solve your problem. Get the benefit of his years of training and experience.

Write for our color-printed catalogue "Standard" Plumbing Fixtures for the Farm." It illustrates all types of fixtures.

Tarvia will save the country's roads—

ALL over the United States there are thousands of road commissioners facing the prospect of having to build new roads at the present high cost of construction.

And all around them are miles and miles of old gravel and macadam roads, not in themselves equal to traffic conditions, but which can be made serviceable if they are repaired and given a Tarvia treatment.

Some Michigan roads, illustrated herewith, show how easily and economically old roads can be salvaged with Tarvia.

One road, for instance, was so bad that the Township Board decided the only thing to be done was to rebuild it at the cost of a new road, but after seeing results obtained on other roads, decided to patch and treat with "Tarvia-B" and stone chips, and—*"the road is better than when new,"* they say.

It is just as easy for your community to beat the high cost of new roads by saving and restoring your old ones. It is almost a crime to neglect your old roads and let them go from bad to worse, when Tarvia treatment can be applied so easily and cheaply.

Tarvia is a coal-tar preparation for restoring old roads and building new ones. With it you can also widen your narrow roads by adding Tarvia macadam shoulders. It provides a smooth, dustless, mudless, waterproof, traffic-and-frost-proof roadway at moderate first cost and with the minimum upkeep expense.

"Tarvia-KP" is a cold treatment for patching existing roads of every type. It fills up worn places, restores broken shoulders and edges and keeps the road always at the top notch of condition. Let our engineers advise you how to salvage your old roads with Tarvia, at very attractive costs.

Special Service Department

In order to bring the facts before taxpayers as well as road authorities, The Barrett Company has organized a Special Service Department, which keeps up to the minute on all road problems.

If you will write to the nearest office regarding road conditions or problems in your vicinity, the matter will have the prompt attention of experienced engineers. This service is free for the asking.

If you want *BETTER ROADS* and *LOWER TAXES*, this department can greatly assist you.

Illustrated booklets free on request.

Eighty-Eight Acres of Sand

(Continued from page 281.)

crop. Our choice is the Eureka or Late Leaming, both of which are very large southern corns. On light soil, these varieties reach a fair degree of maturity and give a large tonnage. On the same soil the earlier maturing corns, such as Wisconsin No. 7 or Flints, would go largely to ears and the tonnage would be small. Had I heavier land, however, I would not pick the varieties that I have as I would not then get the same degree of maturity.

Herd Bull a Fortunate Buy

But while Mr. Becker has been improving his soil the herd also has been progressing. He made a most fortunate buy in his herd bull. He paid only $65 for him as a yearling. When he had used him a couple of years he was about to sell him, but decided to wait and see what his daughters would be like. He also sent for an extended pedigree. The calibre of the daughters we have already mentioned—the two-year-old heifers were heavier producers than their dams. The extended pedigree showed that the sire of his bull, Brightest Canary, had 15 tested daughters, one of them with 34.64 lbs. of butter from 727.9 lbs. of milk in seven days and several others running around 28 lbs. He in turn was a son of Paul De Kol Jr., a brother of the first 41-lb. cow, with 23 A. R. O. daughters and a grandson of Paul De Kol with 38 A. R. O. daughters. Mr. Becker was more concerned with yearly production than short time records, however, and the most pleasing feature of the extended pedigree was the knowledge it brought him that the sire of his bull was also a brother of Creamelle Vale with 29,591 lbs. of milk in a year, a world's record when made. The dam of his bull he found to be a granddaughter of DeKol 2nd Butter Boy 3rd, with 118 A. R. O. daughters. His dam had never been tested, but Mr. Becker knew her to be an excellent individual, and it was on the strength of her individuality that he had purchased her son in the first place. The bull remained in the herd.

In the meantime a start had been made with pure-bred cattle. Money was still very scarce, but the bank was friendly. In fact, banks usually are friendly with farmers who do business with them and who are trying to get ahead in a sane and intelligent manner. Mr. Becker's first purchase was an old registered cow that died the next year, but not before she had left him one heifer calf. This heifer calf, Lily Pamela Butter Girl, when of milking age, produced 15,051 lbs. of milk and 475 lbs. of fat as a junior two-year-old in Record of Performance, the seventh highest in her class for that year. And she is one of four daughters of the herd sire now qualified in Record of Performance.

The real start with pure-breds was secured the following year, however, when Mr. Becker purchased Mary Gray and her daughter. This old cow is still in the herd although 13 years old and still a profitable producer. In the herd also are four of her daughters in milk, one two-year-old that will soon freshen and other daughters and grand-daughters. Several of these have made excellent yearly records and they are good individuals. By the spring of 1917 the pure-bred herd totalled 10 head, eight of them being two years old. By this time Mr. Becker was milking 20 cows. He decided to call a sale and sell off his grades.

A Record Making Sale

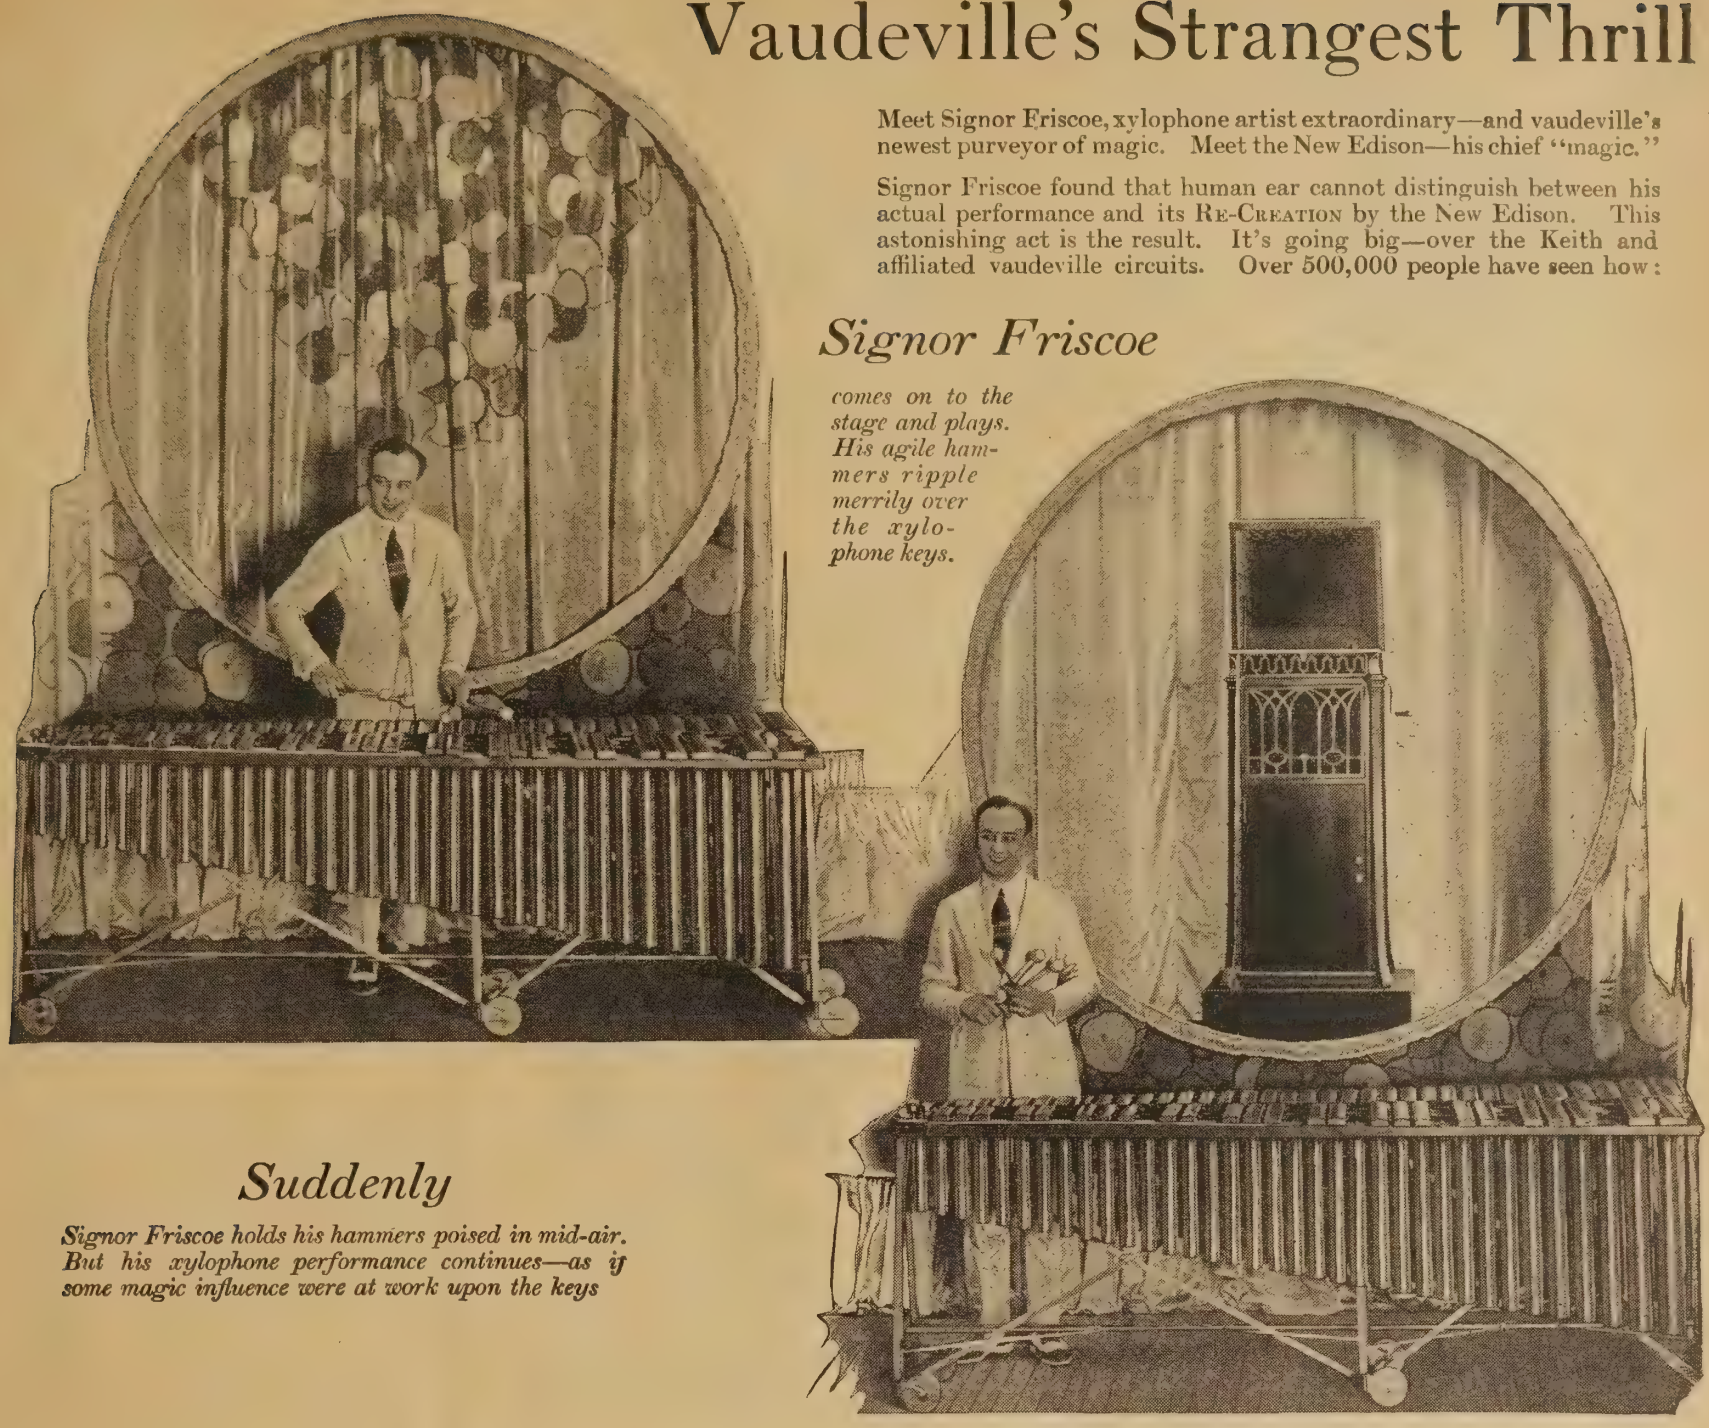
It was at this sale that Mr. Becker reaped his first really substantial reward from his herd improvement policy. The most of the grades he had to offer were two-year-old daughters of his herd bull. One four-year-old grade cow topped the sale at $185. A two-year-old heifer with a private record of 10,592 lbs. of milk in the year sold for $160. The average price of the sale for cattle in milk was $139.35. At the present time, cows such as these would sell readily at $175 to $200. No sale in this district had ever brought such prices. Its results were a surprise to his friends and, I have no doubt, convinced many of the doubting Thomases among his neighbors that Mr. Becker was on his right track and not simply getting ready for a greater failure than he might have had in the first few years under the old system of farming.

Aside from the two purchases mentioned very little new blood had been introduced; none in fact except four heifers purchased from the estate of A. C. Hallman. At the dispersion sale of the Hallman herd, Mr. Becker also purchased a successor to his first herd sire paying over $500 for Sir Echo Beets Posch, a young bull by the same sire as May Echo Sylvia, world's champion milk producer. On his dam's side, too, this new sire traces back to May Echo and he is therefore more than 50 per cent of the same breeding as May Echo Sylvia.

The pure-breds have multiplied since 1917 and now they fill the stables numbering over 40 head. This valuable herd has been built up from a small foundation representing a very moderate outlay; in fact, the increase in value of the herd alone would represent good wages for Mr. Becker during the years of its development. In the year 1918, receipts from the creamery were $159 per cow. The skimmilk is fed to calves and hogs and in the past year the income from hogs alone will be about $2,000. There will be an additional $2,000 from cream and $2,000 from surplus stock. The first two items will more than meet all expenses and the latter will represent wages for labor.

As yet the farm is not paid for in full. Here, too, Mr. Becker has shown good business judgment. He has put his money where returns are greater than in a first mortgage on a farm. The old and out-of-date stables have been remodelled. The fittings are now of the most modern steel design. A litter carrier simplifies the cleaning out process. A small gasoline engine runs the milking machine and the cream separator. The home has been refinished throughout. The increased fertility of the soil must also be counted on the credit side and is a credit that is always growing as 40 acres of the 68 are manured each year. The clearing off of the balance of the mortgage with such a money making plant as Mr. Becker now has will be easy.

Mr. and Mrs. Becker, for both must be included, have worked hard for the success they have obtained. For a couple of years now, or perhaps more, the cows have all been milked three times a day. Occasionally, on Record of Merit work, they are milked four times a day. This involves a couple of hours of chores in the barns at midnight, and it is at this time that the milking machine is most appreciated. Even the hardest work, however, would not account of itself for such success as has been theirs. Good management as represented in herd improvement and the adaptation of crops to soil is the most important factor. Here, too, Mrs. Becker has been a real inspiration to her husband. Their success is well deserved.



Vaudeville's Strangest Thrill

Meet Signor Friscoe, xylophone artist extraordinary—and vaudeville's newest purveyor of magic. Meet the New Edison—his chief "magic."

Signor Friscoe found that human ear cannot distinguish between his actual performance and its RE-CREATION by the New Edison. This astonishing act is the result. It's going big—over the Keith and affiliated vaudeville circuits. Over 500,000 people have seen how:

Signor Friscoe

comes on to the stage and plays. His agile hammers ripple merrily over the xylophone keys.

Suddenly

Signor Friscoe holds his hammers poised in mid-air. But his xylophone performance continues—as if some magic influence were at work upon the keys

Then *the curtains part. The audience gasps. The New Edison stands revealed. It has been matching Signor Friscoe's performance so perfectly that its RE-CREATION could not be distinguished from his original performance.*

Ask them to explain this!

THE absolute realism of the New Edison has been demonstrated by actual comparison with the art of living artists. More than 4,000 comparisons have been given, with more than fifty great artists, before a total of 3,500,000 people.

America's principal newspapers have reviewed these comparisons at length. They have conceded that the New Edison's RE-CREATION of an artist's voice, or instrumental performance, cannot be distinguished from the actual singing, or playing, of such artist.

It has been reported to us that over-zealous salesmen, who are interested in the sale of talking-machines, have stated that the artists, who take part in these comparisons, imitate the New Edison.

In the first place, it is a physical impossibility for any person to imitate the phonograph in a way to sustain this comparison.

In the second place, the artists, who make these comparisons are of the first rank, and would not lower themselves to sing, or play, in an unnatural way.

In the third place, the music critics who have witnessed the comparisons could not, for a moment, be deceived by an attempted imitation, and would immediately expose an imitation, if one were attempted.

HOWEVER, argument is unnecessary. Signor Friscoe's extraordinary act makes the accusation of "imitation" quite absurd. Everyone knows that a xylophone cannot be made to imitate a phonograph so as to deceive its hearers.

In the interest of fair play, and for your own satisfaction, hear Signor Friscoe when he comes to the vaudeville theatre in your town. He is the world's greatest xylophone player. Pay particular attention when he plays in direct comparison with the New Edison's RE-CREATION of his xylophone performance.

IF anyone suggests to you that the artists imitated the New Edison in the 4,000 comparison tests that have been given by the Edison Laboratories, ask such person to explain Signor Friscoe's act.

Your Edison dealer has a New Edison exactly like that used by Signor Friscoe. Test its supreme realism for yourself. The dealer gives the Realism Test in his store.

The Price of the New Edison

—has increased less than 15% since 1914, and this increase includes the War Tax.

Mr. Edison has absorbed, out of his own pocket, more than half of the increased cost of manufacture, in order that the New Edison might remain within the reach of every pocketbook. The high-grade materials and expert craftsmanship required in the manufacture of the New Edison continue to be scarce, and our selling prices may have to be increased, but we shall make every effort to avoid such action.

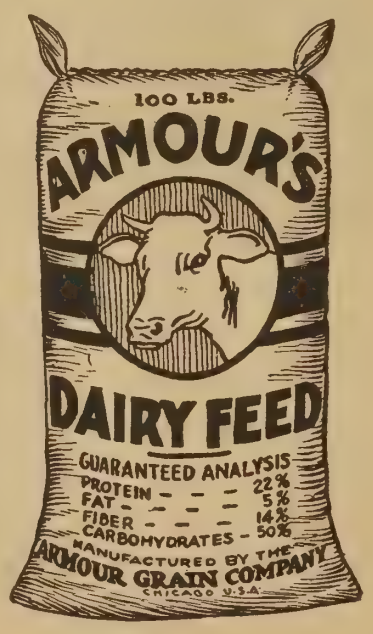
Thomas A. Edison, Inc., Orange, N. J.

The NEW EDISON

"The Phonograph with a Soul"

Mixing Feed Is More Than Scoop Shovel Work

JUST NOW, with the bins full of grain, dairymen are often tempted to experiment in mixing feeds.



Don't do it. Your scoop may cost you money instead of making it.

For the modern dairymen cannot afford to take chances on cutting down his milk production by feed box mixtures which have not the greatest milk producing qualities in them.

With Armour's Dairy Feed you have something that is time-tried, satisfactory and mixed along scientific formulas.

The profits from this complete feed are so satisfactory that dairymen who use it will not take a chance on anything else. A test will convince you.

ARMOUR'S DAIRY FEED

Examine Armour's Dairy Feed at your dealer's, or write us for a sample and state in what quantities you usually buy. The Armour dealer will gladly supply you with Armour's Stock Feed and Armour's Hog Feed also.

ARMOUR GRAIN COMPANY
CHICAGO, U.S.A.

A Milk Dispensary

When the people of Sheboygan, a little city in eastern Wisconsin, recognized that many children in their city were suffering from lack of proper food, they arranged with the American Red Cross through their Committee of Public Health to start two milk dispensaries and sell milk to the children at less than cost. In three months, 28,565 half pints of milk were sold, and the plan proved so successful that the school board decided to place a dispensary in all schools.

The Sheboygan Chapter of the American Red Cross selected a practical means of improving the health of their town children, when they decided to start a milk dispensary where the children could secure milk at a very low price. A local dairy company was charging 3½ cents per half pint bottle of milk, but they agreed to let the Red Cross chapter have a limited amount each day at 2 cents per half pint. At first the Red Cross thought that they would give this milk to the children in need. Since most children have a penny or two for an all day sucker or some other kind of candy, and because they believed it would be poor policy to get the children in the habit of getting something for nothing, they decided to sell the milk at 1c per bottle, providing the milk was drunk on the grounds, thus preventing the children from taking the milk home for cooking purposes.

In some cities children have been supplied with milk during the school year, but in very few have dispensaries been operated during vacation. But the Sheboygan people recognized the value of a vacation dispensary. The county nurse had asked different children how many got milk to drink at home and very seldom over 10 or 12 hands out of 50 or 60 would be raised. Yet when asked how many received coffee for breakfast almost every hand went up. The Red Cross saw the need of proper food for the growing child. They remembered that while nature furnishes the mill the grist is of our choosing. Upon the wisdom of that choice depends health and safety.

On July 16th, two milk dispensaries were opened. Since they were new institutions each school only ordered 125 half pint bottles the first day. Those in charge soon realized that they did not have enough milk so they ordered an extra supply. Children of all descriptions came with their pennies from every direction. Since the milk had to be drunk on the grounds, some device had to be put into operation whereby the milk would not be wasted. Consequently, each child was supplied with a fountain straw which attracted attention and added to the novelty of the scheme. Some of the smaller children were supplied with paper cups though in most cases the straw method was preferred. During the first four weeks, the highest amount sold at one school was 430 bottles. Only twice did the number fall below 100 bottles.

Eleven thousand and forty bottles were served the first month. This makes a total of $108.64 spent by the children for milk which in many instances would have been spent for candy. During the three months the two dispensaries served 28,565 half pints of milk, 3,600 straws, and 925 paper cups. The receipts amounted to $271.47. Besides keeping the children from eating unwholesome candy and other confectionary material they had consumed the best food product on the market, the only material that is a perfect food. The saving cannot be measured in dollars and cents because the benefit of this wholesome food to these children, many of whom were undersized and undernourished, who are struggling for development into robust manhood and womanhood, cannot be measured in that way.

When the supply was adequate and all the children had been served, some came back for a second, third, and even fourth bottle. Practically the same faces appeared every day, which goes to show that children like milk if it is given them. So many mothers claim that their children will not drink milk. Miss Gertrude Lohmann, county nurse who originated the plan, claims that is the poorest excuse any one can offer because most children like milk if a good sanitary quality is given them. She says every mother should compel her child to drink at least two glasses of milk each day and more if they will take it.

Many children who received milk at home craved it at the dispensaries because of the novel way it was served. Then, too, the children enjoyed getting together during the vacation months and meeting with their little playmates, and they enjoyed their bottle of milk through the straw. Two or three children were selected each day to assist in serving the milk and caring for the dispensaries. Each child received one bottle of milk for its services.

After the three months' campaign the committees recognized the value of milk as a food and knew that the children needed it, so they recommended to the School Board of Sheboygan that a dispensary be placed in every school. Dispensaries were started in all schools and many quarts of milk are supplied to the school children at cost. Several children who get milk at home now buy their extra bottle at school because they say that the milk tastes better than that they get at home. In all cases the children are drinking more milk than ever before and the teachers say they see great improvement in their mental and physical development.

If more schools had these dispensaries there would be less malnutrition among our school children. When we stop to think that there are six million children, or one out of every four, in the United States suffering from effects of undernourishment, it is high time for mothers to realize that they must feed their growing children proper food. Miss Lohmann examined 1,047 children in Sheboygan County and found only 38 physically perfect children. Six hundred ninety-two out of 1,047 had one or more physical defects and 358 had three or more physical defects; 526 of these children had enlarged tonsils; 681 had defective teeth; 37 were underweight; 21 had symptoms of anaemia; and 6 showed symptoms of tuberculosis. It is not so much a case of poverty as it is ignorance. Much of the food now given to children costs more than dairy products, yet the average housewife complains about the price of dairy products.

Dr. McCollum says: "The people who have achieved, who have become large, strong, vigorous people, who have reduced their infant mortality, who have the best trades in the world, who have an appreciation of art, literature, and music and who are progressive in science and in every activity of human intellect, are the people who have used milk and its products liberally."

Many people deserve a vote of appreciation for this wonderful scheme worked out at Sheboygan. Among those are the Sheboygan County Chapter of the American Red Cross, the Committee of Public Health, Miss Gertrude Lohmann, Mrs. Albert Wagner, the Sheboygan Dairy Products Company, the county board, and the Sheboygan School Board.

WHY THIS TRADE-MARK MEANS A NEW SERVICE IN THE LUMBER BUSINESS

IN nearly everything we buy or use we have become accustomed to look for a standard article of known merit.

We want to know where it comes from, who is back of it, what can be expected of it, and how it compares in quality and price with similar merchandise sold for a like purpose.

This is a busy world. We cannot take the time to learn solely by our mistakes; we may learn too late.

We cannot wait to test every coin we accept in payment for goods or services. So we have a standard currency—the Government's stamp or trade-mark to certify its worth.

For like reasons we insist on products with the stamp or trade-mark of responsible manufacturers to assure us the value we pay for.

Some of these makers' stamps are almost as dependable as the mint-mark on a coin.

Yet when it comes to lumber most of us know very little about it; what species or grade of wood is best for the purpose we have in mind, where it comes from, who manufactures it.

As substantial factors in the lumber business, the Weyerhaeuser people want you to think more about the wood you use. To this end they will supply to lumber dealers and to the public any desired information as to the qualities of different species and the best wood for a given purpose.

This service will be as broad and impartial as they know how to make it. They are not partisans of any particular species of wood. They advise the best lumber for the purpose, whether it is a kind they handle or not.

What they advocate is conservation and economy through the use of the right wood in its proper place.

From now on the Weyerhaeuser Forest Products trade-mark will be plainly stamped on their product. You can see it for yourself at the lumber yard or on the job after it is delivered.

When you buy lumber for any purpose, no matter how much or how little, you can look at the mark and know that you are getting a standard article of known merit.

HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

Convincing a Sceptical Father

"A pretty bum crop of clover, I'd say," Jimmy Greene grumbled disgustedly to himself, as old Dick and Betsey jogged lazily along before the noisy old McCormick. "I'll swear if there isn't something sick on this farm most of the time. But dad doesn't take any stock in this soil acidity business. That's because he doesn't understand about the chemistry of things, I suppose. Well, though that isn't any reason for his not listening to the soil expert," he continued, thinking aloud.

"Get up, Dick, you old fox," as the wise old bay eased up to a dead standstill. "Can't I talk loud without you thinking that someone is visiting with me. You'd stop on the way to Heaven if you thought there was a chance to rest. Your years of hard work have made you pretty wise, I'll admit, but you can't get away with that stuff, can he, Betsey," as the nervous little black mare struggled to drag both old Dick and the mower.

Just then a shrill whistle from the rear caused him to shout "whoa" in startled tones. Looking around he saw the elder Greene approaching, swinging a pail in one hand as he hurried along.

"Gosh, dad, I'm as famished as this clover crop, the only difference being that I want water and this crop wants lime. If this stuff was mine, I'd let the cows harvest it. 'Tisn't worth the time it is taking to make it into hay. Dad, I haven't seen a respectable crop of clover on this field for some time, and I don't think you can lay it all to poor seasons. I'll just bet you enough money to pay my school expenses next year that this field has a pretty acid soil."

"Don't talk any more of the moonshine stuff to me," answered the father. "This farm is just as good as ever. The Lord didn't figure that his old earth would wear out, did he? If He did, what about future generations? How will they be fed, eh? Answer that now if you can with all your college education."

"Why, dad," said Jimmy as he swung around on the mower seat reaching for the pail of water. "Let me wet up first, then I'll show you up. Now," as he hung the pail on one of the levers of the mower. "Will you promise to answer all of the questions I ask?"

"Will do my best," he grinned, "but remember I ain't college bred, and what's more I'm proud I'm not sometimes when I see some of the college product."

"Never mind that, dad. That isn't in the argument, and remember you said you'd be square. Now for question number one," as he turned to brace his feet against one of the wheels. "Are you as good a man today, for work I mean, as you were twenty years ago," he asked with the grin of confident victory upon his face.

"Well, I consider myself pretty good yet," drawled the father, thinking to evade a more direct answer.

"But are you through?" broke in his son impatiently. "Don't you tire out easier than you used to?"

"Yes, I guess so if that's what you want me to say," he answered.

"I don't want you to say anything, dad, unless it's the truth. All right, then your answer is yes to question one. Does this old mower do as good a job now as when you first got it, and besides, why did you buy a new grain binder this year? Yes, and why is old Dick nearly played out? You know right well, dad, that there is but one answer, and that is, everything wears out with age and work. Isn't that so?"

"Why, of course, but you haven't proved one thing in the argument yet, young man," answered the father somewhat triumphantly.

"Give me time, dad, I'm just spreading my net and bye and bye I'll begin to draw it in on you. So you'd better be on your guard, if you don't want to be trapped."

"Don't all plants take some things from the soil," he continued, "which are never returned in the amount they were removed?"

"There's where you're wrong, young feller," snapped Pat Green. "You forget the return of them things to the soil in the manure."

"Hold on, dad," broke in Jimmy excitedly. "Only 80 per cent at the most can be returned in the manure and that only when the best of care is given it. I guess you never have returned any more than 30 or 40 per cent in yours, the way you handled it. The best of it has run away in that brown stream of water following every rain. That water wasn't colored that way for nothing, dad," he added as he scored on point number three.

"Now dear old dad, I'm going to pull in on you. Guess this will land you O. K. on good dry soil too," he laughed.

"Can you name one single thing in this world that isn't changing daily and doesn't the Bible say that everything shall change, nothing remains the same? Therefore arguing from what we know to be the case and also from what the good book says, yes and from what the soil expert has found out, doesn't it stand to reason that all of the soil on this farm isn't what it was when you started in farming? It just naturally is wearing out, dad, in things that plants must have. Any soil won't stand always taking away more than is returned. You don't need to answer this question, dad, your face tells the answer. Now let's get down to business.

"Soils like everything else are made up of two kinds of compounds, those which are acid in reaction and those that are basic. To illustrate: vinegar is acid and lye is basic. Now if there are two kinds of compounds together in the soil, and there is more of one than the other, then a test of the soil will react in favor of that kind which is present in larger amount. Just as simple as if I pass money from my pocket to yours."

"It usually goes from mine to yours though," interrupted the father quickly.

"All right, dad," laughed Jimmy, "and I guess 'twill have to be that way, at least until I get through school. Point for you, dad, but I'm not through yet.

"I learned this year at school—college of course I mean—that the carbonates of the soil leach away faster than the acid compounds, so of course that leaves the soil with an acid reaction." Then noting his father's furrowed brow furrowing more deeply, he added, "carbonates, dad, means the same thing as bases that I spoke of a moment ago. We call them soil carbonates down there, but that's only, well, the college of it, that's all. If that is true, then doesn't it stand to reason that a soil could get acid and that plants like clover and alfalfa that like a lot of basic materials couldn't grow very good for the lack of them? They usually get sick and thin out very easily. Same thing as an animal that isn't properly fed.

"And I'll just bet you the first hundred dollars that I make, this soil is acid. What do you say? And I'll prove it by the latest scientific method too. That's why we aren't getting good stands of clover on this field any more. The carbohydrates are worn out."

"Well, I won't take your bet, son. Might be betting against your own game. I don't know all the things you learned this year and you may be right. Why don't you test the soil then if you are so sure?" he added.

"Haven't a tester, dad, that's a good reason, isn't it? We ought to own a Truog Soid Acidity Tester. I feel certain we could use it to good advantage. Ramsay's have one, maybe I could borrow theirs. They found acid soil, and by the way have you seen the alfalfa on the field they limed two years ago? It's a sight. Up to your knees, every bit of it. That's what lime did for them. Made a sour soil sweet and make the alfalfa happy."

"Where did you get them testers from?" inquired his father a little skeptically, "and what do they cost?"

"From the Central Scientific Co., Chicago, and I guess they cost about $12.00. Gone up in price like everything else," he added. "Why, dad, going to get one?"

"I'll think it over. Suppose we ought to make use of your education and test you out. No use paying for an education unless it can be used. If this land needs lime to make it yield more clover, then it will have to have it, that's all. But your case isn't won yet, son. You've still to apply the scientific test."

"What time is it, dad? I feel as though I need lime too. Isn't it noon yet?" as he gazed up at the hot morning sun.

"Eleven," called back the father. "You'll have about time to finish before noon. Poke old Dick along, he's good for another hour now."

"You'll have to hand it to dad," Jimmy said to himself as he continued with the morning's work. "He's always open to conviction anyway even if it does take a lot of arguing. I'm not going to wait for him to get one of those testers either. I'll just borrow Bob's. He'll be glad to loan it if it will help to convince dad. I might be wrong about this, Dick, then wouldn't dad make sport of me? There could be other reasons and I suppose there are, but this soil is acid though, I'm sure. Yes, so acid, Dick, it makes you all out of sorts to walk on it. But never mind, old boy," as he clucked away at him. "You will still live to see the day that will make some decided improvements on this farm."

TRUOG'S SOIL ACIDITY TEST TELLS IF THE SOIL NEEDS LIME TO GROW CLOVER AND ALFALFA SUCCESSFULLY

Junior Dairy Clubs in Montgomery County, Tennessee

The Montgomery County Dairymen's Association made its first shipment of milk Saturday, June 19, and since that time milk has been shipped every Wednesday and Saturday. Farmers have become more interested in dairying and several are recruiting for herds with pure-bred animals.

Naturally, the farm boys and girls are becoming interested in dairying, and there is much talk of organizing junior dairy clubs. County Agricultural Agent Harmon believes such clubs will be successful and practical, and the bankers of Montgomery County have agreed to loan money to the members of the club without interest to enable them to buy pure-bred dairy cows.

The junior dairy club complete includes three years of work divided as follows: First, raising a heifer calf from weaning to breeding time; second, caring for the bred heifer; third, caring for the cow during first lactation period. A club may begin with either year, e. g. with the calf, bred heifer, or the milk cow.

Seeing the immediate possibilities for dairying, the club boys of Montgomery County have about decided to purchase bred heifers. While they will cost more in the beginning than calves, they will bring quicker returns. The junior dairy club work will be a big asset to the present system of farming in Montgomery County.

Minnesota's Club Show

Do you know that Minnesota leads in boys' and girls' club work, perhaps due to the reason that the people of the state believe in true co-operation? The live stock breed associations, state breeders' association, state dairymen's association, state club leader, county agents, and others are all back of this enterprise and work together for their development.

This year Minnesota boys and girls are feeding approximately 750 baby beef calves, about 450 dairy calves

about 300 lambs, and over 1,000 pigs. Some of these projects are being carried on in nearly all of the counties in the state. County shows are held in connection with county fairs where the contestants can get together, compare notes, and compete for prizes.

The two highest winners in the baby beef and dairy calf classes of each county are each eligible for entrance in the state contest. The junior Live Stock Show will be held at South St. Paul, November 17, 18, and 19. The junior show this year will be one of the largest and best exhibits of this kind ever held in the United States. Nearly 200 head of the choicest calves, both dairy and beef, will be on exhibition, as well as the choicest individuals of the other classes.

In connection with this show the Junior Live Stock Judging Contest will be held. The counties are co-operating in this project. About 350 boys and girls will compete in the county contests in 25 counties. The two in each county which have proven themselves the best judges by competition will enter the state contest and compete for state honors.

The Minnesota Live Stock Breeders' Association together with various St. Paul and South St. Paul interests will finance the baby beef show. The dairy calf club will be financed by the above and also the State Dairymen's Association which is giving full co-operation. The live stock judging contestants will have their railroad fares paid by the Minnesota Live Stock Breeders' Association.

Minnesota. W. A. Mc KERROW.

An Inspiring Pig Club Member

When Erwin Eckert of Markesan, Wis., decided to join the pig club work in the spring of 1917, he did so with a firm determination to win. His achievements in this direction have not only been of monetary value to him, for as he himself says: "The experience of my work, and the incentive which it has given me to be of service, although I am still but a boy, to say nothing of a new point of view about farm life which I have gained, is worth the time I have spent while engaged in this interesting project."

This is not the first time that this young man has been introduced to our Juniors, for it was but a few months ago that I noted an interesting account of him somewhere in the body of the Dairyman. Although this did not appear as a feature of the Junior page, I take it for granted that many of the Juniors had it called to their attention at that time. But the story is so good that all prospective pig club Juniors should know about it, and since we now have more complete information, obtained directly through personal conversation with Erwin, we shall give the story just as he tells it.

Erwin is now really beyond club age, but his enthusiasm is just as great as ever, and although not continuing as a club member, he does not intend giving up a piece of work which has been so interesting and profitable to him. He will continue, but in a larger way than he has done before. At present he is taking a short course in agriculture at the University of Wisconsin, and it has been the Junior Editor's pleasure to have formed an intimate acquaintance with the young man as a member of one of his classes, and his work here is characterized by that same spirit in which he entered the pig club work.

America's greatest inventor, Thomas Edison, at one time said to his employees: "Men, there are just three things that will make any man successful. These are hard work, stick-to-itiveness, and common sense." Edison is a splendid example of this combination of factors. I usually like to add what I call a fourth factor, although I am sure Edison has expressed this, but in a rather hidden way. This is enthusiasm, that driving force which makes one get on the inside of the proposition which he has undertaken. The difference between the successful man and the failure is not so much one of a difference in capacity as it is the difference in amount of genuine enthusiastic energy put into the work. It is the thing which makes play out of what is usually termed work, but most of all it is the one thing which will make a place for you higher up.

Erwin Eckert had the right idea at the outset, and I really believe that it was this idea, put into execution, that has crowned him with so much success. He said: "I made up my mind that the only sensible way to start out would be to buy a pure-bred sow. And do you know," he added, "that I had to go outside of my own county to get one that would be suitable and of the breed which I wanted. So after much inquiry I got in touch with Mr. J. W. Thomas of West Salem. I had heard that he was a breeder of pure-bred Duroc-Jerseys, and as this was the breed that I was looking for, I decided to buy a bred gilt, registered as Golden Girl. It took what I then called a nice little sum of money to get her. She cost me $75, but when you know what she has done for me you will say that she was well worth that and then some. I relied entirely upon the judgment of Mr. Thomas, and he certainly did not disappoint me. She was an excellent type for a young sow, at least that is what I thought at the time she arrived. She looked good to me, and I want to add right here that she looks better to me today than she did then. If any one thinks that my success was due to the fact that I was right on the job all the time, I want to let you know that Golden Girl is the one that was really on the job, like any good sow should be."

"I suppose you were pretty anxious for that first litter to come," I inquired.

"Anxious does not express it," he laughed. "I lived with her day and night, and I guess I never had such a thrill as I got on March 29th, 1917, when I found her with a litter of 11 pigs, one of which was dead. But she raised the other 10, and I thought that was doing pretty well for her first litter. When they were six weeks old, I started feeding them buttermilk diluted with warm water. To this I added some middlings, and as they grew older I added ground barley and oats and also fed more buttermilk and less water. I considered this a pretty good ration, as my pigs did very well on it. In addition to the above they had a clover pasture to run on. This gave them plenty of green feed and exercise and they grew like weeds. At the age of five and one-half months, I started to sell them for breeding purposes. My price was $50 apiece and I did not have any trouble in disposing of them at that rate. They weighed about 250 pounds apiece, and I thought that this was a mighty good record for spring pigs. Well, I got $500 for that litter, and before they were all disposed of Golden Girl came across with another litter in September. This time she did not do quite as well, but I was satisfied. She had 9 and raised all of them.

"It was a trifle more trouble to raise this litter as I had to provide better shelter than for the first. But I kept them warm at night and allowed them to run outside on the warm, bright days. This entire litter was sold at the same rate as the first, so you see I received $450 for these. The cost of the feed for the two litters I estimated to be about $300. This left me with a balance of $650 for the year 1917, and in addition I had the sow left.

"During 1918 she raised two more litters, both good sized ones. The first one was sold for $475 and the second for $60. You may think it queer that I got so small amount for the second litter. Well, I sold them when they were six weeks old, because I was about to enter the army. This made $535 for that year, and as I figured that it cost about $200 to raise them, I realized a profit of $335.

"This past season has been Golden Girl's banner season. In the spring of 1919, she had the largest litter, numbering 15. Twelve of these were raised and at six weeks I sold them for $175. In the fall she had another litter of nine live pigs and these I estimated were worth $150 at six weeks of age. I figured they cost me about $150 during this year."

"Your profits have been remarkably good on one sow," I remarked. "She is certainly the type that one wants for breeding purposes."

"Yes, and she is just as good today as she was at the start for all that I can see," he enthusiastically added. "There was no mistake in buying her and I certainly made no mistake when I joined the pig club. If you will take the trouble to add up the gross receipts received and subtract the costs as I have given them, you will find that Golden Girl has made me a bank account of $1,160 in three years."

"Well, that is a record to be proud of," I remarked. "But do you think that one could do as well if he had a number of sows?"

"I don't think it, I know it from experience," he replied. "This past summer I worked for L. P. Martiny at Chippewa Falls and I had my eyes opened to the possibilities of pure-bred hog production. I'm not going to give away any secrets, but I will say that what I have done with Golden Girl can be done on a larger scale, and some day not in the far distant future, I hope to prove it through my own efforts. I'm going to give some of Wisconsin's pure-bred swine raisers a little competition. I figure that I have learned a lesson early in life that it takes years for some of our farmers to learn, and that is this: It's far more profitable, pleasanter and more businesslike to engage in pure-breds than it is to deal in scrubs. It takes high class material to run a high class farm."

Junior Letters

Hoard's Dairyman Juniors:—I received my fob, creed, and button.

I have a cow, a calf, and a Poland-China pig. My father gave me the pig. I paid $12 for my cow. I got her when she was a little calf. My calf is her calf. They are part Holstein. My cow's name is Violet; my calf's name is Pansy. I have a pony; her name is Dais We have two silos.

I will close for my letter is getting long.

Stockton, Kan. Harold Cooper.

Hoard's Dairyman Juniors:—I will write to let you know I am still a junior. We have built a new dairy barn 38 feet wide and 52 feet long. We also built a new wagon shed. We cut all of our grain. We are cutting hay now. We take our cows to the pasture every day with our pony. Us boys bought two calves. We have 24 head now, 10 of which are milking. We will be milking 15 cows this winter. It is dry here and the crops do not look very good.

Minong, Wis. Roy Fiedler.

Hoard's Dairyman Juniors:—I received the watch fob and creed and I thought them very nice.

I am 15 and in the seventh grade. The name of our school is Fairmont.

I live on a 40-acre farm. We just moved on it this winter.

We have eight cows and are getting about 10 gallons of milk a day. They are Jerseys, except two and they are Holsteins.

Macomb, Ill. Helen Baker.

Do You Belong to the Juniors Club?

If you are a dairy farm boy between ten and eighteen years of age, and if your father or some member of your family is a subscriber to HOARD'S DAIRYMAN, we want you to join the HOARD'S DAIRYMAN Juniors Club.

The Juniors Club consists of several thousand boys like you, banded together to help each other get more pleasure and profit from farm life, and to have the advantage of associating with other boys who live and work and think as you do.

It costs nothing to join the club—and there are no dues. All you need to do to join is just to fill out the coupon and send it to us. We'll at once enroll you as a member and send you a watch fob, a coat lapel button, and the "Dairy Farm Boy's Creed". Do it now—then you'll soon be a full fledged member of the HOARD'S DAIRYMAN Juniors Club.

COUPON

HOARD'S DAIRYMAN Juniors,
Fort Atkinson, Wisconsin.

I want to join your Juniors Club. My father's name is _____.

I am _____ years old and like _____ (name breed) cows best. Send me the watch fob, button, and creed and enroll me as a member.

Name _____

P. O. _____ State _____ R.—

FAIRBANKS SCALES

The Standard of Weight in Your Neighborhood

WHEN YOU INSTALL a Fairbanks Scale for Wagon and Stock use, you establish the standard of accuracy for your neighborhood.

Why? Because for ninety years Fairbanks Scales have been the world's standard, by which the accuracy of all others is judged.

An enviable record, which is the logical result of painstaking, unswerving accuracy in manufacture. This year's farm profits will come from a close scrutiny of the wastes and "guesses" of the past. The first step in learning your exact profits is *to know your weights*, and to base your transactions on the knowledge which only a Fairbanks Scale reveals.

Illinois State Fair

(Continued from page 295)

ery first and the major part of the second prize money.

Chief Raleigh, closest competitor of the Longview champion, Poet's Whiteheart, last year at the Illinois fair, was an outstanding candidate for the purple award. The quality of this three-year-old makes him fast company in any show against bulls of his age. Professor Yapp found sufficient promise in the junior calf, Star's Fairy Lad, to let him head the junior class.

Golden Matron, grand champion female at this fair a year ago, attained that honor again when she headed a class of sixteen aged cows. Raleigh's Pretty Maiden, senior calf, represented the juniors in the championships.

The Illinois Jersey Cattle Club held its annual meeting and banquet the evening of the Jersey show. A. L. Tichane, representing the American Jersey Cattle Club, addressed the breeders, urging increased extension activities for the breed within the state and recommending the co-operative employment of a fieldman by the breeders of Illinois, Indiana, and Ohio. The sum of $1,500 per annum was pledged to this end. It was voted to bring together a state show herd from the herds in Illinois and send it to the National Dairy Show. Also, an expression of favor was made for holding a state consignment sale of Jerseys. In the election of officers, W. A. Brewerton and Carlton Trimble were retained as president and secretary-treasurer, respectively, and Miss Mary Judy was made vice-president. The board of directors is made up of J. C. Piper, W. L. Hull, J. K. Dering, W. W. Yapp, and C. A. Clegg.

In the past year a good start has been made toward carrying out the program outlined twelve months ago. The meeting was one of enthusiasm and every indication was evidenced that an active campaign will be waged to give the Jersey cow a larger place in Illinois. A Jersey booth was in operation in the Jersey barn where breed literature was distributed.

The awards were as follows:

Bull 3 years or over—1, Longview Farm on Chief Raleigh; 2, Crystal Brook Stock Farm on Brampton Beauty Heir. Bull 2 years and under 3—1, Longview Farm on Fashionable Fern Lad; 2, McClenahan on Majesty's Feather Lad; 3, Crystal Brook Stock Farm on Brampton Second Garcon. Bull 1 year and under 2—1 and 3, Longview Farm on Raleigh's Golden Pioneer and Manora's Fairy Lad; 2 and 4, Brewerton on Raleigh's King Thornbury and Jap's Prince Thornbury. Bull calf 6 months and under 12—1 and 2, Longview Farm on Wolff's Chieftain 2nd and Blue Feather's Raleigh; 3, Crystal Brook Stock Farm on Bright Radiator; 4 McClenahan on Maj. Feather Lad's Boy. Bull calf under 6 months—1 and 2, Longview Farm on Star's Fairy Lad and Buttercup's Butter Lad; 3, Brewerton on T. N. T.; 4, McClenahan on Bosnian's Shy Duke.

Cow 5 years or over—1, Longview Farm on Golden Matron; 2, 3, and 4, McClenahan on Westfield Girl, Gray Cannoness and Jolly Oxford Buttermilk. Cow 4 years and under 5—1 and 2, Longview Farm on Queen's Raleigh Nimay and Raleigh's Star of Peace; 3, McClenahan on Western King's Flora Dora; 4, Crystal Brook Stock Farm on Brampton Lady Brebis. Cow three years and under 4—1 and 2, Longview Farm on Rochette's Noble Nina and Fairy Flag; 3, McClenahan on Ruby's Financial Girl. Cow 2 years under 3—1 and 2, Longview Farm on Raleigh's Fairy Finance and Raleigh's Evening Star; 3, Crystal Brook Stock Farm on Larkin Farm Glory. Heifer 18 months and under 24—1 and 2, Longview Farm on Raleigh's Queen O' the Night and Raleigh's Blue Feather; 3, McClenahan on Maj. Finance Oxford; 4, Brewerton on Jap's Alma Thornbury; 5, Crystal Brook Stock Farm on Larkin Farm Pirmula. Heifer 12 months and under 18—1 and 3, Longview Farm on Raleigh's Royal Fairy and Raleigh's Golden Brightness; 2, Brewerton on Raleigh's Bessie Thornbury; 4, McClenahan on Princeley's Sweet Rose; 5, Crystal Brook Stock Farm on Viola's Bright Maiden. Heifer six months and under 12—1 and 2, Longview Farm on Raleigh's Pretty Maiden and Raleigh's Miriam; 3, Brewerton on Miss Pennithorne; 4, McClenahan on Maj. Cowslip Feather. Heifer calf under 6 months—1 and 2, Longview Farm on Raleigh Royal Maid and Raleigh's Starling; 3, McClenahan on Maj. Feather Lads Dodo; 4, Brewerton on Jap's Ophelia Thornbury.

Dairy Herd—1, Longview Farm; 2, McClenahan. Graded Herd—1 and 2, Longview Farm; 3, McClenahan; 4, Crystal Brook Stock Farm. Breeders' Young Herd—1 and 2, Longview Farm; 3 and 4, McClenahan. Calf Herd—1, Longview Farm; 2, Brewerton; 3, McClenahan; 4, Crystal Brook Stock Farm. Get of Sire—1 and 2, Longview Farm; 3, Brewerton; 4, McClenahan. Produce of Cow—1, 2 and 3, Longview Farm.

Senior and Grand Champion Male—Chief Raleigh. Junior Champion Male—Star's Fairy Lad. Senior and Grand Champion Female—Rochette's Noble Nina. Junior Champion Female—Raleigh's Pretty Maiden.

Scrub Bull Funeral

One of the most impressive and inspiring funerals ever held in Waupaca County occurred on Wednesday, July 28th, when the Bear Creek Cow Testing Association commemorated the passing of the scrub bull in that vicinity. Twenty-two cars followed the likeness of such a bull from Bear Creek to Chain o' Lakes where it was dumped over board with due ceremony.

Mr. Ralph Spillman, tester of the Bear Creek Association and five other young men acted as pallbearers while "Chub" Raisler, prominent Holstein breeder of Bear Creek, officiated as undertaker. The casket was covered with beautiful bouquets of bull thistles, presented by members of the association. Remarks of tribute were made by Tom O'Conner in view of the deceased having so long resisted the inevitable coming of the pure-bred sire.

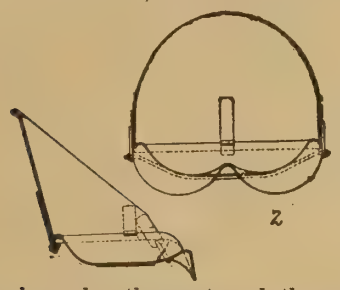
The procession was interrupted by stops at farms where registered bulls hold places of profound respect and high esteem.

The herds visited were those of Christensen Bros., W. P. Kissinger, John E. Erickson, A. B. Rowe, A. E. Smith, W. H. Taggert and Sons, and George Lindsay and Sons. It was a long, hot trip and the place on the county agent's Ford where a speedometer should be, registered about 125 miles. The members of the association have voted in favor of corporal punishment and are already looking for a victim for next year's excursion.

JAMES H. DANCE, County Agent.

Inventions and Appliances of Interest to Agriculture

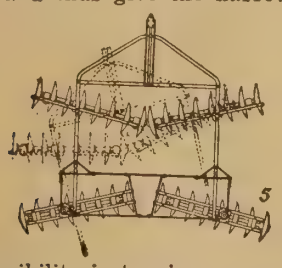
Back Rest



This back rest is made by bending and twisting heavy wire in the manner shown. It is fitted to seats of different sizes by means of the chain and spring shown at the left. Try

your hand at making one.
(Carl Gerstenmaier, St. Paul, Minn., U. S. Patent, 1,309,725).

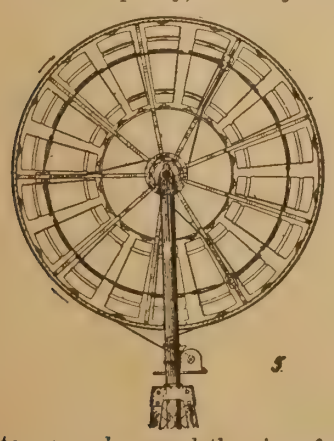
Back Rest



This back rest is made of sheet metal bent into a U shape, and with a roll at the top. It is attached to seats of varying sizes by means of a bolt at the back, and a tie rod which

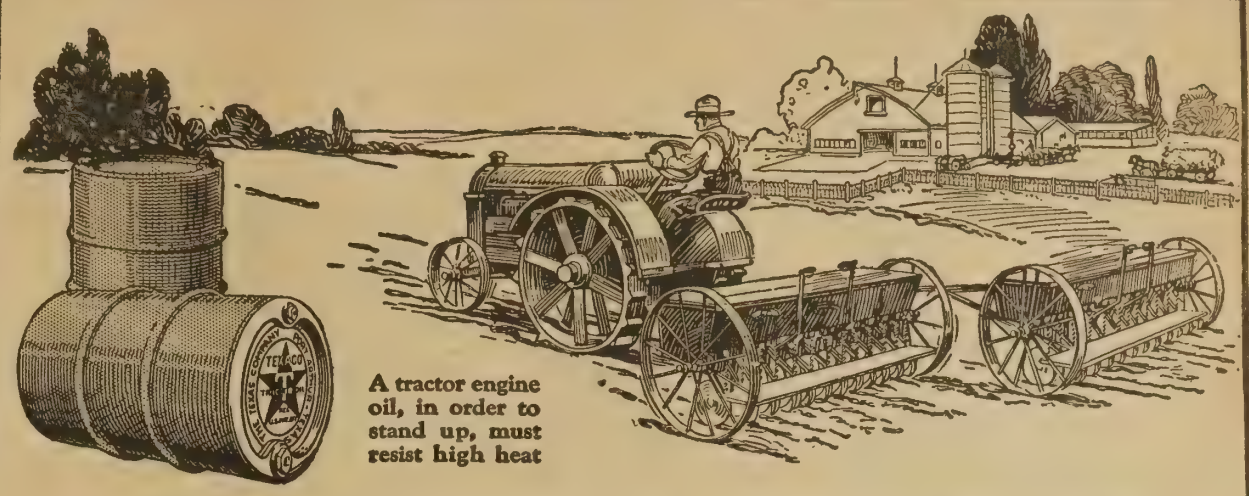
extends under the seat and through both sides.
(Emerson Brantingham Co., Rockford, Ill. U. S. Patent, 1,315,810).

Tandem Hitch



The side connecting straps of the rear gang on this harrow keep the rear disks in proper alignment to strike the hills left by the front disks; also, they can slide or telescope backward and thus give the harrow pro-

per flexibility in turning a corner.
(International Harvester Co., Chicago, Ill. U. S. Patent, 1,322,046).



Windmill

The power of this self-regulating windmill is used to generate electricity for lighting and for running small machines on the farm. The dynamo is attached to the mast and is driven by a leather belt which passes around the pulley, over a yielding

tightener, and around the rim of the wheel.
(Wind Electric Corporation, Wyndmere, N. D., U. S. Patent, 1,334,458).

TEXACO MOTOR OIL ★ THUBAN COMPOUND ★ HARVESTER OIL ★ AXLE GREASE

A tractor engine oil, in order to stand up, must resist high heat

TEXACO

Tractol—*for Tractors*

The tractor engine operates under a severe strain. Full rated horse power is reached and maintained for long periods. High engine heat is developed. A tractor engine oil, in order to stand up, must resist this heat. A good tractor oil must resist dilution by the fuel. It must prevent leakage of the kerosene past the piston rings. Leakage means loss of fuel and when this occurs, stroke by stroke, the loss is multiplied. The oil must be thoroughly dependable—as repairs and replacements are hard to make and continuous operation is a vital factor in securing full return on the investment. The oil must burn clean—as excessive carbon deposits mean trouble and stops for cleaning out.

There are three grades of TEXACO TRACTOL—"B," "C," "D"—Grade "B" for large engines in severe summer conditions. Grade "C" for large engines in winter. By "winter"—frost temperature (about 40°F.) is understood. For smaller engines use Grade "C" in summer, Grade "D" in winter.

TEXACO TRACTOL is shipped in 55 and 33-gallon steel drums, wooden barrels and half-barrels, and five-gallon cans. Try it. "You'll see a difference"—*now* in power, and *later* in your bearings.

Farm Leaders Go West to Study Co-operative Marketing

Plans Taking Shape to Market Principal Farm Crops Co-operatively

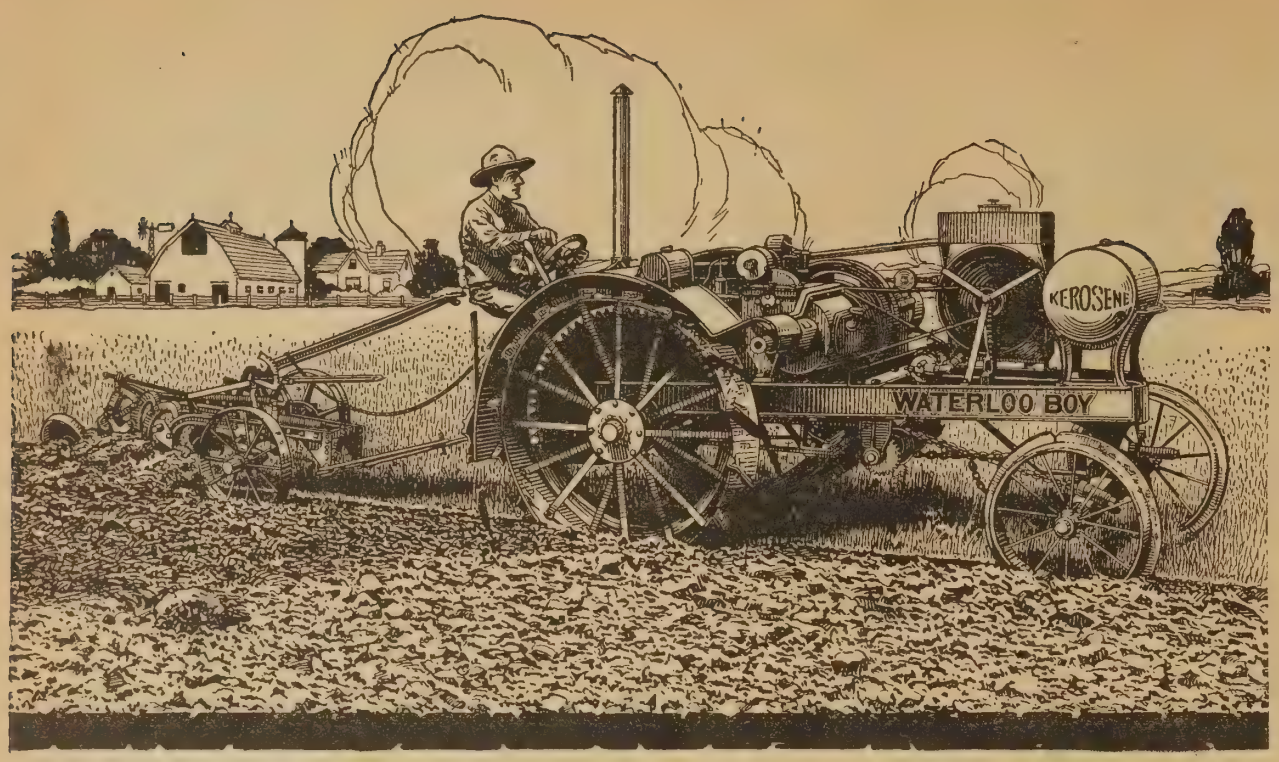
Washington, D. C., August 17.—A party of farm bureau officers from eight of the mid-western and eastern states are now enroute to California to study the co-operative marketing system so successfully used by fruit, nut, and raisin growers of that section, with a view of adopting some of the principles in the marketing of staple farm crops of the grain sections, according to advices received today at the Washington headquarters of the American Farm Bureau Federation.

At a recent meeting held in Chicago by the federation more than 500 prominent agricultural leaders went on record as favoring some plan of co-operative marketing of farm crops which would cut down selling expenses and eliminate ruinous fluctuations. A committee of seventeen, representing all the grain growing sections, is being appointed by President J. R. Howard to develop a plan of co-operative marketing that will handle the entire grain crop of the United States.

The delegates now on their way to California have been commissioned by their respective states to learn at first hand just how the Californians sell their farm crops so advantageously through co-operative effort and to what extent this system is adaptable to the staple farm crops of the rest of the United States.

This delegation is at Denver today and is sitting in at a session of the executive committee of the American Farm Bureau Federation which is considering a number of important agricultural and economic questions, among others the attitude of the organization toward proposed national tax legislation.

Professor T. S. Adams of Yale University, who is also tax adviser to the U. S. Treasury Department, is the guest of the executive committee at Denver today and is discussing certain taxation principles on which the federation hopes to formulate a farmers' policy toward new tax legislation expected during the coming session of Congress.



Following the Denver meeting the executive committee will meet at Salt Lake City with representatives of leading wool growers' interests of the range states to consider the advisability of extending the wool pool of the Middle Western states to include the entire United States.

The pooling and storing of wool has already prevented millions of dollars of loss to farmers and now that the wool market is beginning to show signs of recovery from the violent slump brought about last May by cut price clothing sales and the resulting cancellation of buying orders, extraordinary care must be exercised in bringing the available wool supply upon the market only as needed instead of in one huge wave.—American Farm Bureau Federation.

Be a Leader

When you work, work. Put the whole mind and heart in it. Know nothing else. Do everything the very best. Distance everybody about you. This will not be hard for the other fellows are not trying much. Master details and difficulties. Be always ready for the next step up. If a bookkeeper, be an expert. If a machinist, know more than the boss. If an office man surprise the employer by model work. If in school, go to the head and stay there. All this is easy when the habit of conquering takes possession.

Be yourself the leader, not the trailer. Set the standard as conscience dictates. Then you will mold instead of being molded.—ARCHER BROWN.

Power You Can Rely Upon

To make you the most profit, each of your different farm operations must be timely. Often weather conditions call for extraordinary effort. It is then that you can count on the dependability and rugged power of the Waterloo Boy.

WATERLOO BOY
BURNS KEROSENE COMPLETELY

It gives you dependable service at small operating cost. Its twin-cylinder engine develops full 12 H. P. at the drawbar and 25 H. P. on the belt, using kerosene as a fuel. A patented manifold converts every drop of this low-priced fuel into power. Two gallons of kerosene per acre is the average amount used when plowing.

The cooling system always holds the engine at the proper temperature. While the motor runs at the right temperature for perfect lubrication, enough heat is maintained to insure complete combustion and full power. The radiator holds thirteen gallons of water. You don't have to stop in the field every few hours and fill it.

The Waterloo Boy is especially strong and rugged. Its various parts are designed to meet every possible strain. Every part is easy to get at. The engine runs without vibration. Its well-balanced weight provides proper traction in soft ground.

Buying a tractor is an important investment. We have a booklet describing the Waterloo Boy fully. Drop us a postal card or letter today. Address John Deere, Moline, Illinois, and ask for booklet WB-514.

The Mystery of the Soil

(Continued from first page.)

passing the artistry of the screen or the skill of painters of greatest renown—they who are only imitators of He who made the earth, the grass, the trees, and beasts—all, things of beauty and joy forever, and all pleasing parts of farm life. Our shortcomings are in magnifying the so-called drudgeries of the farm, so that they obscure the beauty of scene and play—the great drama of nature nowhere so close to man, of which he is so much a part, as on the farm. The spirit of agriculture! The spirit of the soil! Again, the soil, the earth, is holy. It is the cradle in which God rocks His children, soothed and comforted by the music of created things—a thousand singing birds, rushing, tumbling streams, rustling leaves, and the countless contributions of members of nature's choir that swell their voices into a world chorus, grand and harmonious. There are no bad or broken notes in creation's music.

Count your cash, ye captains of industry, glory in your sceptors, ye governors and kings. Satisfy your lust for wealth and power, ye who determine the destiny of government and commerce by their use and misuse. But when we seek the place where the soul is satisfied, where tranquility of spirit is found, where health, a clear conscience, and clean living are common, look to the farm and its contributing environment. And they will weigh in the balance against all these other things when we reflect and return over life's paths and seek in retrospection the comfort and consolation that the evening of our lives demands.

Cheese Not True to Type

There seems to be an idea prevalent among many cheesemakers that so long as they keep within the law pertaining to the moisture content of cheese they need not give any particular attention to other defects for which in their carelessness they are responsible.

Cheese are being delivered at receiving points from factories supposed to be making American cheese and in so far as the color and general shape are concerned are of the American type, but when flavor, texture, and general appearance of a plug are concerned are of a type for which no name has been coined. Such cheese have not the characteristic texture of American Cheddar and certainly are not an ideal Brick, simply a cross bearing an imitation of both and are a disgrace to the ideal American and Brick type.

The first idea that comes to mind upon examination of this mongrel type in the form of American cheese is that some Brick maker not experienced in the American process has attempted to make American and has followed rather closely the Brick process up to the salting point and the finished product seems to combine the undesirable features of both types. Cheese of such inferior character whether it be American or Brick is an injury to the industry and makers who through ignorance or carelessness place such goods upon the market should not be classed as cheesemakers.

This type of American cheese is mostly found to be the result of the "granular" or "hand stirred" process and the makers that can turn out a cheese of fair quality with this method are mighty scarce. Even the best cheese of this type are undesirable for they invariably lack keeping qualities and rarely develop true Cheddar flavor. Many cheese dealers absolutely refuse to purchase this kind of cheese except at a price that will protect them against defects and imminent future deterioration.

The only safe and sane plan is to follow the true Cheddar process for making fine American cheese. Cook the curd to the proper degree of firmness with the right amount of acidity. Mat and mature the curd together with the proper acid development before milking, then give plenty of time for further mellowing and maturing. After salting allow plenty of time for the salt to properly dissolve and the curd to again acquire a smooth velvety texture before hooping.

The extra time required to make a fine article is not wasted as so many makers suppose, but is a protection against possible losses on account of poor quality. It is the duty of every cheesemaker to do his best to maintain and to uplift the reputation of Wisconsin cheese. There is always a penalty attached to inferior work in any line and this is true today particularly in the cheese industry.—Wm. Winder, Wisconsin Dairy & Food Commission.

If we are wise, we never leave school.—Horace Fletcher.

The Methylene Blue Reduction Test

(Continued from page 280)

tributors in checking up the condition of their plants, and by cities that are seeking to improve their milk supplies and realize the first step in a general survey to determine which producers are delivering milk of poor quality with the idea of showing them how by a few simple precautions they can greatly improve their milk. To hire a bacteriologist and to equip a laboratory involves a greater expenditure than many small cities feel justified in making. By employment of a man with a practical knowledge of milk production who would be able to successfully instruct the producers in proper methods and by use of the methylene blue reduction test in order to discover those producers whose methods should be improved, a marked betterment in the general supply might well be attained at the minimum of expense.

Many producers of high grade milk desire to determine the number of bacteria in their milk from day to day. It is doubtful whether the reduction test can supplant the plate culture method for this purpose. Here the milk is of practically the same quality from day to day even though one day's milk may contain 5,000 bacteria per cubic centimeter and that of the next day 15,000. The problem here is to check up the efficiency with which the various operations concerned in production have been carried out. The plate culture method does this admirably and probably is the only method that will do it successfully.

The test as described gives information concerning the number of bacteria alone. If the tubes of milk are kept at the temperature used in the test, 98°F., for twenty to twenty-four hours, much can be determined concerning the kinds of bacteria from the nature of the curd. The solid jelly-like curd is evidence of the presence of the lactic bacteria while a curd containing many gas holes is proof of the presence of harmful organisms.

Does Lack of Fresh Air Prevent Your Cows From Having 30-Lb. Records?

HOW much more milk could your cows give you with plenty of fresh air in the barn? Couldn't the cow that produced 28 pounds on her last test have given you 30 pounds with the barn properly ventilated? The loss of that extra two pounds on just a few animals may be costing you many times the price of a King Ventilating System.

No one can tell definitely how much more milk a cow can give with her barn properly ventilated, but everyone knows that she can show you an increase worth while. One owner of a prize dairy herd, Mr. E. T. Winship, living near Owatonna, says, "I know that it cost me at least $5,000 during the winter of 1917 and 1918 because I did not have my barn properly ventilated."

When you order a King System, you order your building to be ventilated. This is our obligation in the guarantee we give with every King System. We design and place the units of the King System according to the conditions of the building, guided by the years of experience we have had in this work.

Send For the Book That Shows How to "Make Good Barns Better"

Many farmers saved more money than they expected by sending for this book. It answers many questions that most farmers want to know about barn ventilation —questions that you are vitally interested in.

"How many cubic feet of air space can a cow heat?" "How can twenty cows keep warm in a barn built for thirty cows?" "Why is a good barn in Iowa not a good barn in North Dakota?" "How much moisture does a thousand-pound animal throw off every twenty-four hours?" "How many pounds of air does a cow need to properly digest one pound of food and water?" "Why does foul air in a barn attract lightning fires?" "Why can you get a King System for less money than you could properly ventilate your barn yourself?" These and many other important questions are answered for you in this book. Shall we send you a copy free?

Pointers on Painting

Paints and painting cost less than repairs necessitated by decay or disintegration.

There is no such thing as an all-service paint. Paint should be selected according to the material to be painted and the conditions under which it must give service. The wear on a floor is more severe than on a wall; hence the floor calls for a tougher, more elastic paint.

Painting should not be done when the temperature is lower than 50°F. as the paint will not flow well. It is impractical to paint a hot surface. The old painting axiom is: In spring and fall follow the sun; in summer, follow the shade.

Outside painting should be done in dry weather. Surfaces should not be painted when wet.

Surfaces to be painted should be gotten as smooth and clean as possible. They should be free from grease. In painting new wood knots and sappy surfaces should be shellaced first. If painting over previously painted surfaces, all blisters and loose or peeled spots should be scraped or burned clean. A brushing with stiff wire brush followed by sandpaper is good practice.

A priming coat usually pays for its cost. A firm base for the final coats is very essential to insure long service. The primer should be thin enough to penetrate the lumber; it should be well brushed in.

Only pure linseed oil or pure turpentine should be used to thin paint.

Although frequently used, ochre is not a good primer. The primer should be of as good quality as the body coats, but reduced to the right consistency. Elbow grease is a very good thing to use on paint, especially the priming coat.

If the paint is cracked in small hair lines which do not go through to the wood, reduce the first of priming coat with equal parts of raw linseed oil and turpentine, in order to penetrate clear through to the wood. This only applies where the old paint is well bound to the surface.

If the old paint does not adhere well, scrape the surface with a stiff wire brush to remove all scale, then dust with a stiff brush.

Spots from which much of the old paint is scraped should be touched up with a thin coat of paint, reduced with turpentine. After this has dried, the surface is then ready for the first coat.

Paint may peel from any one of several causes, but the most frequent cause is the improper application over a damp or frosty surface.

Paint that is peeling rolls back from the surface in thin scales. A coat of paint put over a seemingly good surface will sometimes peel down to the bare wood or to the priming coat, showing that the old paint has lost its grip. Be on the lookout for this condition when re-painting surfaces. The old paint surface should be well wire-brushed and dusted, after which the bare spots should be touched up with a thin coat of paint, reduced with pure turpentine. When these spots are dry, paint over with the first coat.

Blistering is easily recognized and is caused by moisture having come out of the surface under the paint or from priming to cheap ochre. When this condition exists, wire-brush and dust the surface, than wash with turpentine to cut any grease or excess oil which may be present. After this is dry, proceed as directed for first-coat work.

When the paint cracks into large blocks of every conceivable shape (becoming alligatoried, so-called), it is caused by the application of heavy, non-drying undercoats, "fat" paint, the use of adulterated oils or from painting over cheap ochre priming. Boiled linseed oil in the under-coat will also produce this condition. The only treatment is to burn and scrape off the paint down to the bare wood.

Better Butter Prices

Customers willingly pay *more* for butter they know is *perfect*, just as first churned.

A Dairy Farm of Real Value—An exceptionally productive dairy farm of four hundred thirty-eight (438) acres, located one mile from Chautauqua, N. Y., known the world over as a summer resort and educational center, is offered for sale at $100 per acre, if sold by November 1st. The farm has never been leased, is carrying at present 97 head of pure-bred Holstein-Friesian animals, is beautifully watered, well located and exceptionally fertile. As a matter of good faith, the owner will pay one-half of the railroad fare of anyone from any place, who upon investigation fails to find that this farm has the local reputation of being at least one of the most fertile productive farms in the section. The owner is a manufacturer in Detroit. He has owned the place nearly twenty years. His reason for selling is to transfer his stock operations from New York to Michigan. Terms can be arranged and a discount will be given for cash. The property is free from all kinds of incumberances. Arrangements can be made to buy a portion of the stock. G. E. WILDER, Gemmer Manufacturing Company, Detroit, Michigan. 5-4

If you wish a farm in the best grass section of the south where alfalfa and all the clovers, including Red White, Alsike, Sweet, Burr, Crimson and Japan grow to perfection, also soy beans, cowpeas, peanuts, velvet beans, corn, oats, wheat, rye, and barley, where we have a creamery making fine butter and paying Elgin for butterfat, and where there is no bovine tuberculosis nor cattle ticks; in a community of northern farmers, write to H. B. GURLER, Macon, Miss. 25*

The Cow Race at the Missouri State Fair

The rain and mud spoiled the horse races and auto races, but it did not interfere with the cow race. It took place in a big tent between the dairy barns. No, they were not hitched to sulkies as some had thought, but they were milked three and four times a day for butterfat production. This race attracted almost as much interest as a horse race, as great crowds streamed through the tent daily and watched the bulletin board where the daily production and rank were posted. This race was conceived and promoted by E. G. Bennett, State Dairy Commissioner. He induced the creameries and some of the agricultural papers of the state to put up $500 for each of the two breeds, Jerseys and Holsteins. This was increased by $500 each by means of entry fees.

First place was won in the Holstein breed by Pettis County Holstein Company, Missouri, and in the Jersey breed by Longview Farm, Missouri. Neither breed made any very high records owing to the abnormal conditions under which the cows were kept. The crowds going through all the time would not let the cows rest and a part of the time it was very hot.

While this was not a breed contest it aroused a great deal of interest among the lovers of each breed. The highest butterfat record was made by a Jersey, but it was only .68 of a pound higher than that made by a Holstein. In the 2d, 3d, 4th, 5th, 7th, and 9th places the Holsteins exceeded the Jerseys. The nine high Holsteins produced 4% more butterfat and 46% more milk than a like number of Jerseys. The contest was conducted under the rules of the two national associations, and supervised by the Missouri Agricultural College.

Honor and Profit for Mr. Dayett

We have said that a large number of leaders in cow testing associations are Unicorn users.

J. Irvin Dayett is one of these. He is a member of the Diamond State Cow Testing Association of Delaware.

For the year ending August 1, 1920, his herd stood first in average yield of both milk and fat for less than ten cows:

Milk . . . . . 12,271.0 lbs.
Fat . . . . . 416.4 lbs.
Average profit per cow, $186.63

His herd contained the champion producers of both milk and fat:

	Milk	Fat
Cow No. 7 . .	15,101	488.2
Cow No. 9 . .	13,691	519.1

Mr. Dayett feeds Unicorn and gives it much credit for his success. Credit is equally due to his good cows and to his skill in feeding.

From the annual report of the Association we copy the following:

"The question of whether or not it pays to feed cows heavily when the price of grain is so high has been answered through this year's work. In every case where heavy feeding has been practiced a good profit has resulted"

It pays to feed Unicorn to your cows.

CHAPIN & COMPANY, Chicago

"BetterSires—BetterStock"

We will award a money prize of $1,000 to the county that first eliminates its inferior sires.

This prize will be awarded under rules provided by the Bureau of Animal Industry, United States Department of Agriculture.

struction projects. Few things, in the present situation, could do more than general building and construction to give stability to conditions, employment to labor, and cause a widespread demand for commodities in every branch of business. The needs of new housing and new construction are too obvious to need comment. But it is equally obvious that only the most imperatively necessary construction can and will proceed under the present costs, present difficulties, and present uncertainties.

"The automobile industry gives indications of approaching the peak of production for the present. This may release material for other steel and glass industries which greatly need those commodities. Any complete point of "saturation" in automobiles does not seem imminent; rather, in a moderate way, a readjustment which has long been looked for. Not only will there be a demand for replacement but also for new purchases, for we are fast realizing that automobiles are a necessary and inalienable factor in modern civilization. Any talk about their being luxuries and unessentials is rather unknowing and foolish. There was once the same talk about telephones and the telegraph. Outside the definite part which automobiles play in business, and which steadily grows in importance, they have done more to broaden the understanding and the mental horizon of their users than any invention within a generation. In especial they have been a boon, beyond comparison, to the dweller on the countryside—on the farm and in the small town. Of a one popular sport, that of bicycles, now relegated altogether to strictly useful purposes, it is interesting to learn that the annual output is much in excess of the days when they were a passing craze.

"Among the things of cheer is the promise of good harvests in those sections of the Northwest, practically all of Montana, western North Dakota, western South Dakota, and northern Wyoming, which have been sorely distressed by crop failures for from two to three years past. With the completion of the harvest there will come a change in conditions in the volume of business in nearly all these sections.

"It is a great season for watermelons, with shipments close upon 30,000 cars before the season is ended. They come northward about 1,000 cars daily, not only from the southern states but even from far away California. Georgia leads with nearly 10,000 car loads, with South Carolina and Florida each approximating about 4,000 cars."

Advice to the Tester

HOARD'S DAIRYMAN:—Having enjoyed reading several articles by different cow testers of their experiences and impressions, an article by a member of a cow testing association may be interesting and perhaps profitable reading for some of the large number of young men who are now or soon will be engaged in this work.

Speaking for myself, I must say I joined the association reluctantly. The cost seemed out of proportion to anything I expected to get in return and the extra work it would cause my wife made me hesitate a long time before giving my consent to become a member. The credit belongs to our assistant farm advisor who did not give up when I refused to join at his first invitation, but kept after me till I consented to give the tester a trial.

The tester arrived one hot afternoon when we were hauling in hay. As soon as he was introduced by my neighbor, who brought him over, he asked what he could do to help me. This surprised me that he should be so anxious to assist, and yet it made me like him right away. So I gave him the trip rope and he pulled the fork out of the barn. After unloading he asked where he could change to his overalls so he might go to the field with us. He did go to the field and helped put on the next load of hay. After unloading the hay we started our chores. Here he was just as anxious to work even wanting to help milk.

In the house he was just as willing to help as he was outside. He didn't wish to cause any extra work and kept telling my wife to "Let me help you", "Don't make coffee for me", etc. Such an attitude takes all the strain off the women and makes them glad to do for such a person.

If I were a cow tester I would pay some attention to the children. In my early experience as a teacher I learned that the way to a mother's heart is by way of her children. And since founding a home of my own I know that the stranger who comes to our house and eats at our table absolutely ignoring the presence of our children is an unwelcome visitor whose return is not desired by the children's mother. Here again our tester scored, for he talked and played with the little folks. If the children are glad to see the tester come back he can be mighty sure the children's mother will do her part towards making his stay a comfortable and pleasant one.

Then our tester took great pains in making the tests so as to give every cow all the credit she deserved. A man wishes his pure-bred cows to make a good showing in the record book. Also he put the records in with ink and made a neat job of that part of his work. Afterwards he showed me the figures and explained everything to me.

We will not always need the tester to pitch hay or help with silo filling, but when we are engaged in that kind of work one appreciates the kind of man who is willing to lend a hand. And often the tester will be our guest to be taken to an entertainment in the evening, or spend part of a day hunting or fishing; in fact, we will try to give him pleasant memories of good times spent at our home.

Stock Raising in WESTERN CANADA

is as profitable as grain growing. Successes as wonderful as those from growing wheat, oats, barley, and flax have been made in **raising Horses, Cattle, Sheep and Hogs.** Bright, sunny climate, nutritious grasses, good water, enormous fodder crops—these spell success to the farmer and stock raiser. And remember, you can **buy on easy terms**

Farm Land at $15 to $30 an Acre

—land equal to that which through many years has yielded from **20 to 45 bushels of wheat to the acre**—grazing land convenient to good grain farms at proportionately low prices. These lands have every rural convenience; good schools, churches, roads, telephones, etc., close to live towns and good markets.

If you want to get back to the farm, or to farm on a larger scale than is possible under your present conditions, **investigate what Western Canada has to offer you.**

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Urinary Difficulty

What should I do for a valuable mule about 10 years old which has lately shown a growing tendency to strain in urinating, and stop several times, and attempt to pass water, before finally doing so. Her urine is sometimes very light and watery in color; at other times, is very cloudy and thick looking. She also has a slight cough, especially at night; otherwise she is in good health and condition. Her urinary trouble seems to be aggravated by hard pulling, such for instance as breaking new land, which I have been doing lately.

Folkstan, Ga. C. J. C

It is probable that the bladder is partially blocked with a stone or collection of gravel or limy substance. It would not be a very difficult matter for a trained veterinarian to remove these substances by operation. He can readily determine their presence by a rectal and vaginal examination. Meanwhile dissolve a dram of boric acid in the drinking water each evening and if necessary, increase to two doses a day.

Lame Cow

I have a good cow that about a week ago went dry. I kept milking her night and morning and now she has come back to her milk about one-half. Had a good appetite all the time but seems to be sore in stomach close to the bag. What was the trouble with her? She has been on permanent meadow pasture. She has also been lame in one hind foot for some time.

Libertytown, Md. E. L. B.

Shrinkage in milk secretion commonly occurs when a cow is sick or in pain and might readily occur under the conditions described. It is quite likely that she is tuberculous and to determine that you should have a qualified veterinarian test her with tuberculin by the intradermal or ophthalmic method. Scrub affected parts of skin, clean, and when dry apply once a week a solution of 4 ounces of sulphate of copper (bluestone) and 1 pint of hot water. Feed laxative rations, including wheat bran and flaxseed meal

Blind Quarters

I have a heifer just fresh, second calf, and is dry in three quarters. There is a very small bunch about half way up in the teat. The veterinarian here says she is ruined for milk. He advised me to dry up the other quarter and fit her for the butcher. He says he could open the teats, but they would not stay open and she may get blood poison from the operation. What causes the teats to close up and is there no cure?

Waupeton, Ia. L. F. B.

We thoroughly agree with the veterinarian that it would be best to fit this heifer for the butcher. As often stated here, unnoticed mammitis (garget) from sucking of the teats by other calves when young is the common cause of this condition; but it is also possible for warty or fibroid growths to form and block the ducts. The exact cause of the latter condition is unknown. It is certain, however, that calves should not be allowed to suck one another's teats.

Hump-backed Calf

Please let me know if there is anything I could do with a four-month-old calf that is getting humped back. The backbone seems to be bulging more all the time. Calf is in good health otherwise.

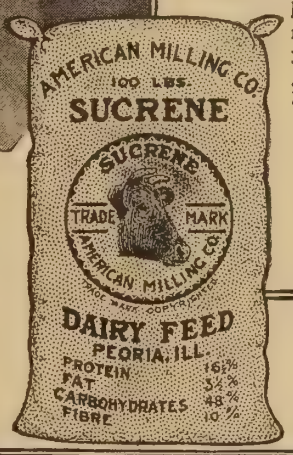
Boulder, Ill. F. B. S.

This is an unusual condition and if due to rickets will not be likely to respond to treatment. The only treatment we can suggest would be to thoroughly massage the back and loins two or three times daily, also pressing down upon the backbone. An old fashioned plan is to apply weight to the back, in the form of sand or grain in a sack. We fear, however, that treatment will not be likely to prove satisfactory in such a case.

SUCRENE

DAIRY FEED

COWS fed a correctly balanced ration gave 47% more milk and 39% more butter fat than cows fed the same concentrate and roughage but unbalanced.—Illinois Experiment Station.



Sucrene Dairy Feed has a record of substantially increasing milk flow when substituted for ordinary rations and fed only with the usual roughage. It is strong in all the milk-making nutrients—exceptionally appetizing, enjoyed by all cows.

"I advise all dairymen, if they want rich milk and a large quantity of it, to use Sucrene Dairy Feed, for as long as it is made as it has been I will use nothing else."—David Finkenbinder, Locust Grove Dairy Farm, Carlisle, Pa.

We also manufacture Empire 20% Dairy Feed and Amco Dairy Feed (25% protein) for extra heavy milkers, or to be fed with silage or other low protein feeds grown on the farm.

Give these feeds a trial for more milk at less feed cost. Place an order with your dealer. If he cannot supply you, write us. The coupon brings you full information.

Ten Reasons Why a Farmer Should Use a Silo

1. As the principal business of farming is to make money, the silo, especially on the stock farm, will best accomplish this end.

2. Corn silage is the farmer's cheapest source of digestible carbohydrates. As this is the principal food element required by our domestic animals it certainly is wise to provide it.

3. Summing up all the experiments conducted by some twenty-three different state experiment stations over a period of fifteen years, silage has proven the most economic food for the production of stock and stock products.

4. There are about one-half million silos now in use in the United States, and it is difficult to find a user who is not more than pleased with the results from his silo. Silo salesmen use as a slogan "Ask the man who has a silo".

5. The greatest expense connected with the live stock business is the cost of feeding the animals. The silo will lower this cost and therefore it should be one of the first considerations of the stock keeper.

6. The silo stands ever ready as an insurance against many of the common crop failures, especially such failures as damages from early frost, drought, and hail. Wet seasons often prevent the putting up of a crop of clover or alfalfa; this can be saved in the silo. Whatever is grown in the way of forage can be siloed and preserved for future use.

7. The silo is a labor saving equipment and it saves in storage space. Eight times more feed can be stored in the silo than in the mow. Cattle can be fed quickly and easily from the silo as it is in a condensed form close to the point of feeding and is always in condition for feeding. Many feeding arrangements require the hitching up of a team to a wagon or cart and the hauling of feed from one place to another. A silo properly placed will do away with this.

8. Silage is a succulent, grasslike feed, easily digested, and seems to stimulate digestion. It has much the same effect as grass, giving thrift to the animal; and less sickness is experienced among the stock when good silage is fed. Silage stimulates the milk flow and all milking stock should receive it. Silage is cooling and appetizing and it prevents many of the troubles resulting from the over feeding of concentrates.

9. Experiments and experience have taught that the most profitable feeding is liberal feeding, such as will supply the animal with its requirements. Quick growth is profitable growth, large production is profitable production, and the feeder of silage is more inclined to feed well, which means profitable feeding. The man with the silo is supplied with a large amount of good feed and in emergency it can be carried over for several years and still can be used with good profit.

10. Competition is keen in all lines of industry and the stock keeper with a silo has an advantage over his neighbor without one. In order to compete with the silo keeper, all stock keepers must use silos. World competition in growing stock and producing stock products will require the American farmer to use the best and most economical means. With the silo we need fear no competition from any country of the world. A. L. HAECKER.

THE NATIONAL DAIRYMEN'S SALE—Chicago, Oct. 13 and 14
IN CONNECTION WITH NATIONAL DAIRY SHOW

WHERE HALF A HUNDRED OF THE MOST CAPABLE BREEDERS OF THE UNITED STATES AND CANADA CONTEND FOR RECOGNITION AS CONSIGNORS OF THE BEST THE BREED CAN PRODUCE

Each consignor is supposed to bring to the sale the particular animals that in breeding and type best represent the standards of his herd. Is this going to mean the greatest array of highly bred individuals of outstanding quality ever assembled for exhibition and sale purposes?

COME AND SEE!

The National Dairymen's Sale—E. M. Hastings Co., Managers, Pulaski, New York (NOTE CHANGE OF ADDRESS)

American Farm Bureau Federation

In the effort to relieve the congested rail transportation from middle-west farms to eastern ports, the American Farm Bureau Federation has secured a cheaper rate by combination boat and rail shipment to eastern ports than by straight rail for the shipment of grain. A revision of the new rail rate schedule now going into effect makes it cheaper by 2¼ to 3¼ cents a bushel to ship by boat to Buffalo and from there on by rail. Word of this action by the Interstate Commerce Commission was received on the night of August 26.

This new schedule of rail rate increases will promote boat shipment and will relieve thousands of cars shuttling back and forth between Chicago and Buffalo for other service. To middle-west farmers it means the relief of congested rail transportation which has clogged elevators and in some cases stopped threshing rigs for lack of storage capacity, particularly on tenant farms.

Before the increases went into effect the rail rate from Chicago to Buffalo was 3 8-10 cents and from Buffalo to New York, 10 cents, in spite of the fact it is 100 miles shorter haul in the latter. This was brought out before the Interstate Commerce Commission by the American Farm Bureau. The roads were evidently losing money on their service between Chicago and Buffalo and charging exorbitant prices between Buffalo and New York to make up the difference. This made impossible for boat transportation to compete for business. Governor Harding of Iowa appearing for the Farm Bureau stated that sixty per cent of the congestion on eastern shipments is caused between Chicago and Buffalo.

This definite action accomplished by the American Farm Bureau Federation gives a chance for immediate relief of car shortage. Officials of eastern railroads meeting with the Farm Bureau at New York recognized their dependence upon the agricultural industry and their actions indicated they wanted to play square with farmers.—AMERICAN FARM BUREAU.

Jersey Cattle Notes

Willowmoor Miss Carston

Ravinia Ayrshires

Are the

All-Year Milking Sort

Almost any dairy cow will milk well on good pasture in spring and early summer; but the kind that pays your grocery bills and helps buy the things you want is the cow that keeps right on all through the year, especially in the winter when butterfat is high.

Our Ayrshires, led by Lily of Willowmoor, hold the world's record for the breed for two, three, four, and five consecutive years in both milk and butter production.
Write us for prices on bred cows and bull or heifer calves.

Ask, too, for "Why I Chose the Ayrshire".

Adulterated and Misbranded Seeds

For some years the Agricultural Appropriation Act has carried authority to purchase forage plant seeds in the open market, examine them to detect misbranding or the presence of adulterants, and to publish the analyses and names of seed dealers from whom purchased, when misbranding or adulteration was found.

Before this authority was given, it was not uncommon to find cases where one kind of seed was sold under the name of another, or where one kind of seed was adulterated with varying proportions of seed of lower price, but of somewhat similar appearance.

In carrying on this work seeds of most of the commoner forage plants have been collected, and, during the first years, large numbers of adulterated and misbranded lots were found. Red clover and alfalfa were adulterated with yellow trefoil, alfalfa with sweet clover, and sweet clover with alfalfa, according to relative price, orchard grass with ryegrass and meadow fescue, redtop with timothy; Canada bluegrass was used as an adulterant of or sold as Kentucky bluegrass; winter rape was adulterated with varieties of no forage value, and the hardy hairy vetch seed often was adulterated with or replaced by spring vetch, which is not winter hardy, or by worthless varieties.

The amount of adulteration and misbranding has decreased in successive years until very few cases are found at the present time.—By E. B. BROWN, U. S. Department of Agriculture.

When writing advertisers please mention Hoard's Dairyman.

Swollen Glands

My herd sire has a swelling on both sides of his throat just back of his lower jaw-bones which seem to be a source of trouble in breathing as the animal makes a gurgling noise when he is feeding. He is 21 months old, and has been used for service last spring, and has been on green pasture since spring.

Fond du Lac, Wis. J. P. K.

Tuberculosis of the glands of the throat in all probability causes all of the symptoms described, and for that reason you should at once have the tuberculin test applied by the intradermal or ophthalmic method. Retest if the bull was tested more than three months ago. Actinomycosis (lump jaw) would be the other possible cause, and it may prove curable by external applicatcns of tincture of iodin and internal administration of iodide of potash.

Have you talked with your neighbors about subscribing for Hoard's Dairyman? Why not do it now? Make up as large a club of subscribers as you can and send them in.

Facts in BLACK & WHITE

Bankers Buy Purebred Holstein Cattle

To promote general prosperity and their own business, bankers in many parts of the country are buying purebred Holsteins by the carload and selling them on time to the farmers of the community.

Every year it becomes clearer that with large yield cows the cost of milk and butter production can be brought down to a point that makes dairying profitable.

A herd of purebred Holsteins is an investment that combines safety with large dividends.

YOUR CHOICE OF 30 YOUNG BULLS OUT OF YEARLY RECORD COWS

FROM AN ACCREDITED HERD—325 FEMALES

OUR HERD SIRES

KING OF THE ORMSBYS

KING OF THE ORMSBYS is sired by Sir Pietertje Ormsby Mercedes (twelve 1000-lb. daughters) and out of Spring Brook Bess Burke 2d, the world's largest dairy cow and the only cow in the World with three 7-day records above 35 lbs. butter in connection with three year records each above 1000 lbs. Her best records are 38.22 lbs. in 7 days and 1290.93 lbs. in a year.

SIR INKA PRILLY SEGIS is a 30-lb. son of King Segis. He has 84 young daughters at Winterthur; 30 have freshened and 10 of these made above 20 lbs. at first freshening. At their second freshening they are coming back with from 25 to 28 lbs. 17 of his daughters have completed semi-official records, and 12 of these averaged 757.73 lbs. butter and 19,172.30 lbs. milk at an average age of 3 y. 6 m.

SIR INKA PRILLY SEGIS

KING OF THE SADIE VALES is sired by King Korndyke Sadie Vale (the only bull with a 40-lb. dam, a 40-lb. sister, and a 40-lb. daughter) and out of a 38-lb. "Sadie Vale" cow. Both his sire and dam are out of 41-lb. cows. The five nearest dams of King of the Sadie Vale each weighed over a ton and produced over 100 lbs. of milk a day. His three nearest dams average 40.19 lbs. butter in 7 days and 159.51 lbs. in 30 days.

JOHANNA KING SEGIS is out of a 40-lb. cow and sired by a yearly record son of King Segis. The dam of Johanna King Segis was the first cow to make 541 lbs. butter in 120 days and the second to make 40 lbs. in 7 days. Johanna King Segis now has 8 daughters with semi-official records and these average over 700 lbs. butter and 18,000 lbs. milk. All his daughters born at Winterthur will be given an opportunity to make semi-official records.

October 5, 1920 **October 5, 1920**

HALL BROS.

— A Dissolution and Dispersion Sale of —

150 Head of Registered Holstein-Friesian Cows, Heifers and Bulls

at their Western Holstein Farm, 5½ Miles Southwest of Denver
On the Morrison Road

After twenty-three years of agreeable partnership of the brothers —Carlos W. and Storrs H. Hall, by their mutual agreement they have decided to close their partnership in this very successful business, and are offering at public sale one of the great herds of the day.

The foundation blood upon which this herd was established was of the best of the breed, and under the guidance of the Hall Bros. has increased in quality, and is today recognized from coast to coast as one of the great herds of America, and its breeding is the standard of excellence in the nation's greatest live stock exhibitions and sales, and in official testing.

The herd is composed entirely of animals of correct conformation and great milk and butter-yielding qualities. The herd is healthy and high class in every way. It was established with the view in mind of creating a herd of this breed in Colorado to supply foundation stock of this breed to the fast-growing dairy interests of the Rocky Mountain States. The Hall Bros. are, in live stock circles, well known men and highly respected. After years of successful operation in the dairy interests of Denver, the Western Holstein Farm and its herd of registered Holstein cattle, the owners believe a lightening up of their responsibilities of their large business should be observed, and hence this sale.

Just once in a great while does an apportunity present itself to buy your own selection of real foundation breeding blood of any blood of the various breeds, at your own price, and you should, those who are interested in this great breed, avail yourself of this great opportunity. *Remember the date, Tuesday, October 5, 1920.*

Minnesota's First Fall Sale

THE DAIRY CENTER SALE

WILL BE HELD

October 1-2, at Northfield, Minn.

130 QUALITY HOLSTEINS 130

Have Been Consigned by Fifty-five Breeders From Eight Southern Minnesota Counties

Every animal was selected by the sale committee and in every case **type** was the prime requisite, not one with poor type being included.

Of course, in so far as it was possible, entries with good 7-day and long-time records were selected, but **type** was the **first** qualification and the lack of big records did not bar the animal of first class type and good breeding.

This makes the Dairy Center Sale particularly attractive to breeders large and small. Those men who want type and breeding but cannot afford to pay extremely long prices for high record stock, will find here, just what they want. There will also be entries to suit buyers who want good females that have already been developed—females with both 7-day and year records.

Remember this sale has the indorsement and is under the management of the Minnesota Holstein-Friesian Breeders' Association. You are assured that the cattle will be exactly as represented, the best that could be selected from the herds of southern Minnesota. They are guaranteed healthy.

Write today for a catalog and see for yourself just what is offered.

Dairy Farmers Find Them Most Dependable *and* Economical

A TYPICAL example of the performance of White Trucks in the service of Dairymen owners is furnished by C. W. Bolswiler, of Bethlehem, Pa.

"Our White Truck has been in service for 27 months continuously during which time it has covered 46,440 miles," says Mr. Bolswiler. "It is used principally in hauling milk to the city. We produce most of the milk on our own farm and we haul feed and supplies from the city every day, thus always carrying a full load. We have never lost a day on account of motor trouble or any fault of the truck."

White Trucks stand up and keep going day in and day out, year after year, carrying full loads over all kinds of roads. Owners' records show that Whites not only do the most work, but they do it for the least money.

HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

Volume LX FORT ATKINSON, WIS., SEPTEMBER 17, 1920. Number 9

Municipalization of Milk in New Zealand

J. S. DUNNET, AUSTRALIA

WELLINGTON, the capital city of New Zealand, is making a bold attempt to settle the problem of a milk supply by municipalization. So far the best results have been secured. The facts are interesting.

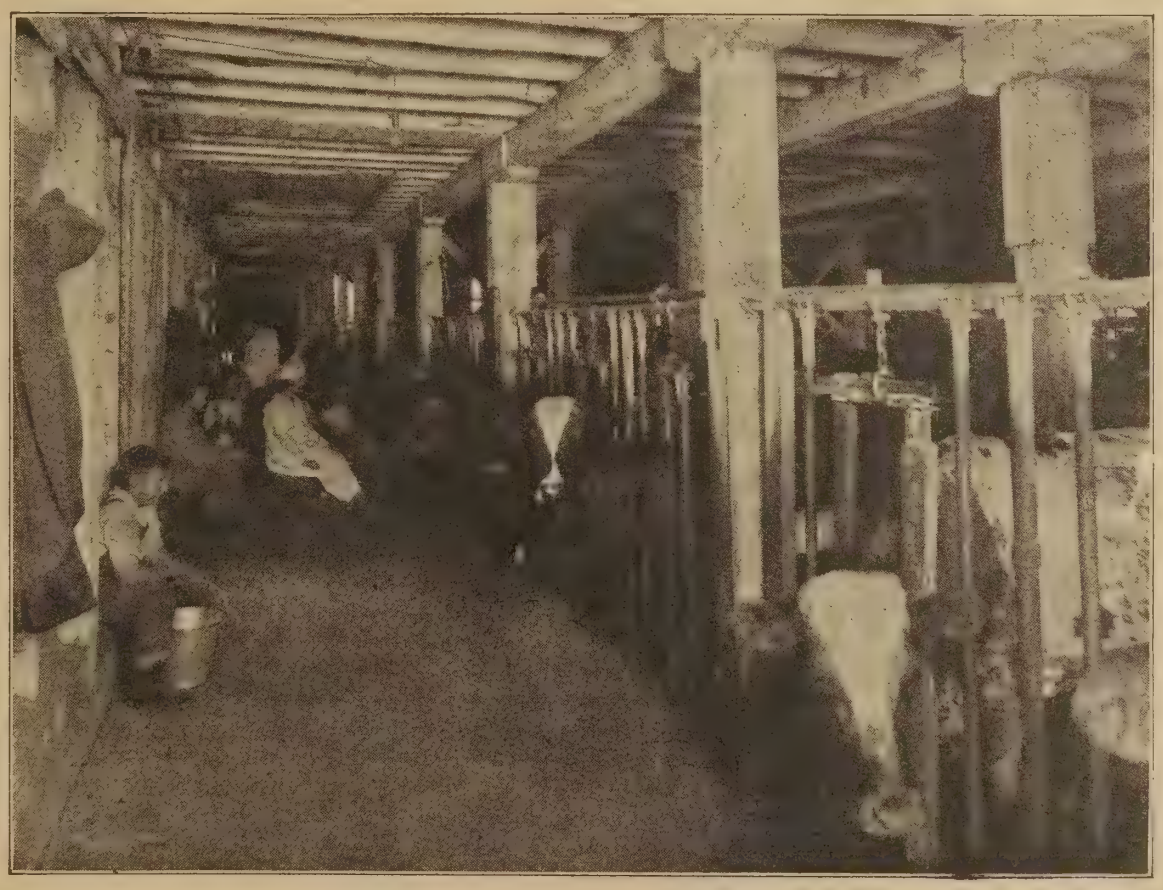
The Council awoke to the necessity of doing the thing well, so it acquired a large milk distributing company's premises, fitted up a first class plant, leased a dairy factory, improved its machinery and equipment, and bought lorries for conveying milk from the railway stations and other points, a capital outlay of £36,000. Before the city became a factor in the milk business, as a monopoly on the wholesale side, things were going from bad to worse. Factory suppliers work a good deal harder for their cheques than the man who lumps the butter-boxes on the wharves, and they are glad of the few months' interval in the winter when the factory closes, so that they can do useful work on their fences and other improvements on the farm. But the farmer supplying milk to a city has to keep the business going all the year round. There is no rest for him, and the winter is the hardest trial of all. Farmers who supply for human consumption have to submit to frequent and drastic regulation and inspection. It came to a point, under private enterprise with Board of Trade interference with prices, when the farmers practically gave an ultimatum that they would cease to supply. The multitude of private venders were practically unable to deal adequately with the position, so the City Council stepped in. The scheme has so stabilized the business from the farmer's point of view that it is a distinct advantage. The farmer sells to one customer who is able to pay promptly on the tenth of each month. That customer, having in view the public interest, has provided direct encouragements to winter milking.

It is worth while quoting fully from the agreement as to price which the city makes with the farmer. It reads:—"The price to be paid shall, subject to the restrictions hereinafter set forth, be 11d per gallon of 10½ lbs. weight for milk supplied daily up to 50 per cent over and above the average daily supply during the months of June and July, and for the balance of milk supplied daily 2d per gallon less than such price any or substituted price hereinafter fixed.

"Such price shall be varied; (a) So that the supplier shall receive at least such sum as will equal the price obtained for milk or butterfat values obtaining in any three butter or cheese factories within a radius of 70 miles from Wellington, and in addition freight and extra labor caused by supplying the city instead of a factory; and (b) so that for the winter period, being a period of at least twelve weeks, to be hereinafter agreed upon, the price shall be fixed by agreement, according to extra cost of production, but shall not be less than 5d per gallon more than the average price paid during the preceding months of October, November, December, and January.

"Rail borne milk shall be delivered free of all charges, including freight, to the Corporation at Lambton station or Thorndon station, in the city of Wellington.

"Road borne milk shall be delivered at the municipal milk depot, in Dixon street, free of all charges, but the freight charged against the supplier shall not exceed the freight, payable for carriage of the milk from the station nearest the supplier's premises to Wellington."



The system of payment is this: "We guarantee to take and pay the full price for 50 per cent of the summer supply in excess of the winter supply. We take the whole output of the farmer, and we pay him full butterfat rates for the quantity in excess of 50 per cent over his winter supply."

Compare this with the price obtained from the supplying factories. The latest report on factory returns from 58 cheese factories throughout New Zealand showed a return of 23.63d per pound of butterfat, equivalent to 9.89d per gallon of 10½ lb. This is the net return from the factory, but the value of by-products must be also allowed for, and this brings the net price per gallon up to 11d during the nine months of the season.

Under the Wellington agreement city suppliers are directly interested in maintaining a supply in winter, because the farmer who fails to supply during the difficult twelve winter weeks gets 2d less per gallon for his summer supply. A farmer who supplies, say, 50 gallons per day during winter is able to obtain full price in summer for 75 gallons 2d per gallon more than the summer milker. The agreement provides for taking the farmer's whole output, therefore the leasing of a dairy factory at Otaki was an important element in the scheme, as this is used as a regulator. This factory has the combined butter and cheese making plant and it is intended to market municipal butter shortly.

The whole milk supply comes to the city centre (according to the New Zealand Farmer). On arrival the cans are sent by lift to the top of the building, where the landing is similar to that seen at any well planned dairy factory. On either hand are the weighing vats, the scales in this instance being graduated to show gallons, instead of weight. Two expert tippers, who have had factory experience, handle the cans systematically. Each supplier has a number, and the labels for night and morning milk are of dif-

Subscription Rates

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Land Bank Sound

"The Federal Land Banks are financially stronger today than at any time since their organization, and their net earnings for the month of July—$257,000—were the largest for any month in their history" was the statement made by the Federal Farm Loan Board today. This statement was prompted by the suggestion that in some quarters an effort was being made to create the impression that pending litigation, which has temporarily suspended the loaning operations of the banks, was otherwise impairing the Farm Loan System. Commenting further, members of the Board stated:

"To understand this readily, it should be borne in mind that the earnings of a Federal Land Bank do not, like those of a Commercial Bank, depend upon their current transactions. The loans of the Federal Land Banks are made for a long term of years—mostly 34½ years. On the unpaid balance of these loans each bank has an annual income of from one-half of one per cent to one per cent. This earning is fixed and certain regardless of new business. As the total amount of loans now in force is $344,475,709, the extent and stability of this income can readily be seen. The increase in net income for July is explained by the fact that, while the fixed gross income was substantially the same, the several land banks, because of the halting in their loan operations, have reduced their operating expenses, thus increasing the net income. Dividends have been paid and will be paid as usual. Funds are accumulating for the payment of November interest, which will be paid promptly. So far as bondholders and stockholders are concerned, the banks are functioning normally. Persons wishing to avail themselves of the benefits of the system must, of course, for the time being be disappointed, which is much regretted but can not be helped. While the banks have reduced their personnel and consequently their current expenses, this has not been done at a point that would interfere with the prompt resumption of their loaning activities."—Federal Farm Loan Bureau.

Condensed Milk Market

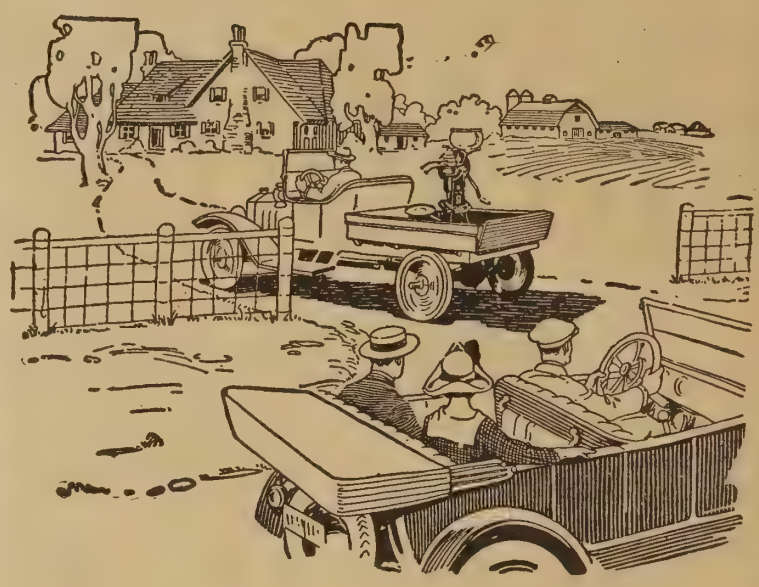
Condensed and evaporated milk manufacturers apparently are confronted with a trying situation. During July, prices to producers for 3.5 per cent milk were advanced to an average of 18 cents per 100 pounds, and producers' prices for August averaged $3.22 or 24 cents above those of July. Notwithstanding these advances in prices paid producers, the prices of manufactured products were advanced only 2 cents per case for sweetened condensed and 32 cents for evaporated.

Stocks on Hand Large

The tightening of loans and the large increase in stocks in hands of manufacturers has forced some manufacturers to liquidate their stocks on the open market since August 1, resulting in considerable stock being offered at considerably lower prices.

Stocks of both condensed and evaporated milk in the hands of manufacturers on August 1 had increased 9.5 per cent and 7 per cent, respectively, over the July 1 stocks and the amount of unsold stocks increased 34.5 per cent and 59.5 per cent, respectively. The increase in these stocks in New York City is interesting as condensed case increased 10 per cent and condensed bulk 49.6 per cent; the latter increasing from 211,500 pounds on July 1 to 1,261,000 on August 1. The August 1, 1920, stocks compared with the August 1, 1919, showed an increase of 75 per cent in condensed case, a decrease of 7 per cent in condensed bulk, an increase of 79 per cent in evaporated case, and a decrease of 41 per cent in evaporated bulk.

Heavy Accumulations in New York



The increase of unsold stocks at the port of New York from which heavy export shipments are made regularly is of special interest since these stocks naturally must have considerable affect on the open market price for both domestic and export trade. On August 1, 1920, the unsold stocks of condensed case goods in New York City were 32,546,000 pounds compared with 4,177,358 on August 1, 1919. The unsold stocks of evaporated case goods in New York City on August 1, 1920, were 33,572,400 compared with 4,319,817 pounds on August 1, 1919. Comparative percentages of unsold stocks and unfilled orders for the two years show a much better situation than the report of total stocks.

Export Slump Adds to Stocks

The slump in exports in July undoubtedly contributed to an increase in the August 1 stocks. Over one-half of the condensed milk exported went to the United Kingdom, France, and Cuba, the rest being shipments of less than 500,000 pounds each to many countries.

Unless conditions have improved somewhat during August, and it is rather doubtful that they have, the condensed and evaporated milk industry stands to take losses on high-costing milk unless the export demand increases soon and domestic outlets take larger quantities. The recent drop in sugar prices is helping the condensed-milk interests materially, but in general the market at present is weak for both condensed and evaporated products.

It's a New De Laval

Many new De Lavals have been delivered to farmers this summer, and they will soon pay for themselves.

In fact, De Laval Separators pay for themselves many times over; and as the number of cows increases, it pays to buy a new, up-to-date De Laval of larger capacity.

The local De Laval agent will gladly take a new separator out to your place, set it up, and let it prove by its performance that it skims clean and is easy to turn and easy to clean, even under unfavorable conditions.

A new De Laval will pay for itself in a few months because of the cream it saves — and besides it saves labor and time.

If a demonstration is wanted, call the local De Laval agent. If you do not know him, write nearest office.

The De Laval Separator Co.

Converting Corn Into Milk and Meat

C. A. LE CLAIR, WISCONSIN

LAST year, in the corn crop alone, there was an opportunity to add a billion dollars to the returns from the harvest. King corn, to whom more acres are devoted than to any other two crops put together, responds royally to good treatment. It pays us more in ready cash and gives a greater number of food units than any other crop, and yet there are many farmers who miss out on opportunity to realize on it to the fullest.

About eighty-one per cent of the corn grown in this country is matured for grain. Of the close on to three billion bushels annually grown, not over seven per cent is exported from the farms and used as a food for man. All the rest is used for live stock feeding. It is high time, therefore, that more thought be given to the matter of using easier and more profitable methods to convert this corn into meat and milk.

Observations by the Bureau of Crop Estimates on 1913 reveal the fact that 57.7 per cent of all the corn grown for grain is snapped in the field and the stalks allowed to remain standing. Nutrition experts tell us that about one-third of the digestible nutrients of the corn plant are to be found in the stalks. In the face of this fact, it is almost impossible to believe that, with rough cattle feeds possessing the high market value they now do, only a little over half of the eighty-one millions of acres of stover raised is made use of as animal food. Worse

FILLED SILOS TIDE OVER THE DROUGHTS OF SUMMER AND PROVIDE SUCCULENT FEED DURING THE FROSTY WEEKS OF WINTER.

than that, over four and one-half millions of acres are yearly burned over, making a loss from this source alone of three millions of dollars. Three times this amount of forage or material valued at nearly a billion dollars, is annually lost by plowing under of the stalks of unpastured fields.

This spring I happened to be traveling through a section of the country where this practice of plowing under seemed to be prevalent. A western stockman in the seat beside me turned to me with an exclamation of disgust. "Isn't that a crime?" he cried. "On the range there are cattle starving to death and here you see people burying food! Of course these farmers console themselves with the thought that they are plowing under more fertility,—but if they only knew! How much more economical it would be if they would only feed this roughage and return the plant food to the soil in the form of manure."

I quite agreed with him that it would be vastly better if the roughage were fed, but I think that if I could have then informed him that, as I have since figured out, when a hundred acres of cornstalks are burned up, $2,400 worth of digestible nutrients go up in smoke, his wrath would have sent him straight through the window on an immediate message of reform.

IT IS NOT A PLEASANT JOB NOR DOES IT PAY TO CHOP SLEET COVERED FODDER OUT OF THE ICE AND SNOW

Feeding for Greatest Profit

Three-fourths of all the corn grown in America is fed on the same farm upon which it is grown. How many of us find ourselves devoting needless time and energy playing waiter to our farm animals when they might far easier go out into the fields and serve themselves? Tests run on 200 farms seem to indicate that we are wasting our time in thus coddling our animals. On these farms, all in a typical corn belt state, experiments with steers and hogs showed that the fattening went on just as speedily and economically when the corn was "hogged off" as when it was hand served in the barns. Since a third of the thirty dollars an acre it costs to grow corn is represented in the labor of harvesting, what better way could be used to gather the crop? Could cheaper labor be found anywhere? Here we have our hogs and cattle doing the work of the harvest and paying well for the privilege. Despite the very evident efficiency of "hogging down", however, only three per cent of the corn grown in the United States is handled in this manner. Fortunately it is a practice that is yearly growing in favor. In speaking of the virtues of the system, Mr. A. Roberts, an enthusiastic advocate from Iowa County, Wisconsin, says:

"I get the best results from "hogging down" corn when rye, rape, hairy vetch, soybeans, or pumpkins are grown with the corn. The soybeans can be planted at the same time as the corn, while the other companion crops, when used, may be sown after the last cutivation. I find that it is well to feed some nitrogen concentrates, such as skimmed milk, wheat middlings, or linseed meal in conjunction with the field roughage. If confined to limited areas, spring shoats, followed later by old sows with a fall litter of pigs, will clean up the field as thoroughly as if it were hand harvested. Woven wire tied to the cornstalks can be used to limit the range of the animals. If the weather is dry, and the stock cannot puddle the ground, the system works at its best. In favorable seasons I can let the animals work in the corn fields for from two to three weeks. Farther south, I understand, the pasturing season is still longer."

The Cost of Shocked Corn

Fully one-fourth of all the corn grown in the United States is cut and shocked in the field at harvest. Those who handle the crop in this way usually feed the stover. Although more of the feeding value of the stalks is retained in well shocked corn than when the ears are simply snapped and the cattle turned in to graze on the stalks, the fact remains that even in the shocked corn there is a loss of nutrients through fermentation and leaching. This loss of valuable food is particularly marked in the corn belt proper and to the South, where the shocks seem almost to melt away as the season progresses. Probably $250,000,000 worth of digestible nutrients leaches away each season from the corn shocks of the United States. Quite a bit worth saving, wouldn't you say?

Aside from the tremendous loss of food in the stover of shocked corn, it must be admitted that one of the most disagreeable, tedious, and costly jobs on the farm is to go into the field in winter to chop the frozen stalks out of the ground. Did you ever try it? Remember the last time you had to cut a road through the snow and the crust was so thick and sharp that it made the hocks of your horses bleed? Can't you just feel now how cheerful you were when you reached the first shock and it was time to pull off your coat to load the frozen, sleet covered bundles on to the sled? How could you hope to get the best out of your cows if they are served iced fodder in zero weather?

Even if the fodder is stacked in the barnyard before snow flies, conditions are not much better, for, as a northern corn belt farmer recently said to me:

"The snow piles up around the shocks in our country until they are often completely buried. I have to haul away the snow before I can get at the corn, and with five feet on the ground and more on the way, it is no fun to have to cart away two loads of snow to get one of corn."

The custom of shocking corn and hauling it in any time before spring is a custom surviving the days when roughage was cheap. The most satisfactory way of handling corn for profit, next to "hogging" or "steering" it down in the field, is to cut and haul it to the barn where it can be husked, and the stover, either cut or shredded stalks, used for dry feed, or, better still, both the stalks and the ears put into the silo. About one-tenth of all the corn we grow is still handled in the former manner.

If the stover is cared for under shelter, twenty-five to fifty per cent of the dry matter and protein which may be lost in the exposed shocks can be saved. However, fermentation causes as high as twenty per cent loss even in the sheltered corn. Since stover must be well cured before it can be stacked or stored, there is always some additional, unavoidable loss in the curing process. Farmers who husk shocked corn by machinery and then either feed it with the cut or shredded stover, find that if this method is used, the animals leave less waste, and what they do waste makes better bedding and manure than when the corn with uncut stover is fed directly from the shocks.

Store Corn in Silos

By far the best way of getting the most out of corn when it is cut for subsequent feeding is to put it in a silo. Ensiled crops bear the same relation to fresh crops as canned fruit does to the fresh product. As compared to the shocking of corn in the field to be fed later, the use of the silo in making silage for the same purpose has many distinct advantages. The truth of this statement is very evident from the fact that since the first silo was built in Massachusetts forty years ago thousands more have been erected. At present there are about 500,000 silos on the farms of this country and the number is being increased at the rate of about ten per cent a year.

The invention of the silo has practically revolutionized the dairy industry. In leading dairy states like Wisconsin and New York there are today silos on each farm in every four. In 1919 Wisconsin alone had something like 70,000 silos, the yearly increase now being about 5,000. Although an appreciation of the advantages of the silo has been growing rapidly, some of the other states, where as many cows

THE WASTE OF PEA CANNERIES MAKES EXCELLENT SILAGE

Deserted Farms are Not Found on Paved Roads

H. COLIN CAMPBELL, ILLINOIS

MUD roads have had much to do with making it hard to keep farm owners on their land, not to mention the farm help. When the business head deserts the enterprise, one can hardly expect that the assistants will stay with the ship.

There is nothing startling in the statement that improved highways make rural life more inviting as well as more profitable. Good roads are time savers, which is the same thing as saying they are money makers. And while paved roads will not lift barren lands out of the depths of unproductiveness and put them among prize winners, they will do much to help make the former poor paying agricultural venture break even if not show a profit. So many instances have been cited of what good roads have done for farming communities that nearly every new instance may be shown to be parallel to some other example. However, they each have a lesson of their own and there is no harm in driving these lessons home.

Shortage of farm labor in the face of an insistent demand for increased production of products of the soil gives the good road a strategic position in helping to meet this demand. An instance has just been brought to the writer's attention of a farming community in Ohio where last February 88 farmers sold out because of competition of industry bidding for farm labor. An investigation of the situation showed, however, that of the farms for sale very few were on or near enough to improved roads to profit from them. L. W. Alber, an Ohio farmer living in a county where there are many miles of concrete roads although some of the stretches are not yet connected to make a real county system, says that in spite of these missing links the 50 miles of concrete pavement on his county's highways make farming both a delight and a profitable enterprise. A distant market no longer is distant when the concrete road usable every day in the year and the farm operated motor truck reduce miles to minutes. Mr. Alber raises wheat, oats, live stock, potatoes, apples, and other miscellaneous products and also markets milk, eggs, and poultry either in Akron or Cleveland, Ohio, depending on which market looks best to him on the day in question. Sometimes it is not necessary for him to go to town as the paved roads bring many auto tourists past his door where a wayside stand or sign tells those who can read that some of the things they want for the dinner table may be had just inside the farm gate. This farm is 20 miles from Cleveland and 15 miles from Akron by the most direct route. Milk from a herd of 25 Holsteins is trucked daily into Akron. In spite of the fact, however, that the 15 miles to Akron must be done by covering 30 miles, time is saved in making the latter distance because of the fact that the 15-mile stretch is ordinary earth road, frequently impassable. The trip to Akron, 30 miles and back, is made every day by a two-ton truck that picks up milk from farms along the route.

MUD HOLE IN EARTH ROAD ON ONE ROUTE

It used to be a considerable job to transfer live stock in the days before motor trucks could be operated, but now the farmers throughout Medina County operate trucks with detachable bodies especially adapted for handling live stock. Whether the trip made is for the purpose of taking cows to the farm or fattened stock to market, the time required is relatively so short that the animals arrive in the best condition. Mr. Alber says that before roads were paved it took as long to take 100 bushels of grain to Akron as it now takes to deliver 500 bushels. Various missing links in what will be a continuous system are now under contract and before the end of the year it is likely that this part of the country will be served by every-day-in-the-year roads.

As an example of what roads may do in enhancing land values, Mr. Alber states the two farms he owns contain 93 and 76 acres. Both are well improved and the value of improvements spread over the total acreage in each case is about the same. Both are approximately the same distance from the local markets and have practically identical soil. Dealers in farm land tell Mr. Alber that if he wants to sell the 76-acre farm he can readily get $175 an acre for it. This is situated one mile from the paved highway. The 93-acre farm fronts a concrete road and $250 is stated as the easily obtained market price. It is evident, therefore, that the few dollars per acre which the farm owner must pay as his contribution to permanently paving the highway along his farm represents a very profitable investment even in the face of present costs of modern highways.

Last spring many of the macadam roads in Medina County were so badly broken up by traffic when frost was coming out of the ground that for days at a time farmers were practically isolated from the county seat unless they were fortunate enough to reside on one of the concrete roads. As much as $30,000 is estimated necessary to put 20 miles of these roads into usable shape again and even then it will be only temporary repair. In two or three years these macadam roads will have to be entirely rebuilt at more than their original cost because of the increased cost of highway construction. It is for that reason that farmers like Mr. Alber are in favor of building permanently, because the greater initial cost soon becomes insignificant in the face of greatly reduced maintenance expenditures which also keep the permanently paved road in condition equal to new.

HAULING MILK OVER ONE-TRACK CONCRETE ROAD

THE INDEPENDENT FARMER'S WIFE

AGRICULTURE ever since the war has been coming in for the belated publicity so dear to the hearts of all professions and industries when things strangely stop coming their way. Not that the horny-handed son of toil and his calloused-palmed partner had ever particularly sought or received the limelight prior to 1914. But war changed matters with a vengeance. The food producer really came into his own and for five years the world has anxiously been feeling his pulse and taking his temperature and praying at his bedside—not that our hero has shown signs of lying down on his job or of taking up the role of invalid, but the world and his wife got wise to the terrible consequences such a possible catastrophe might mean during the past few seascns—and all know that an ounce of prevention is worth many pounds of cure.

So, when it came to pass that in the present year of grace 40,000 disgruntled members of our great Nature union told the curious post office investigators that life on the farm was just one darned thing after another, the world was instantly scared stiff and learned gentlemen and ladies here and there who had never been nearer the country than the adjoining golf links, vouchsafed reasons, causes, remedies, and recipes for those sick and ailing patients which, if they had all been practical or even reasonable, would surely have killed or cured without delay.

Yes, the good Americans who have been accustomed to eat three squares a day since the time they entered this vale of tears and the high cost of living, and who depend on the unassuming farmer to deliver the raw article, were quite disturbed about the minority-farmer's complaints, and all allowed that something had surely got to be done about it, by the other fellow. And then, the other day, to add insult to injury, what should the Department of Agriculture do but send broadcast the startling and disagreeable news that life down on the farm as Mrs. Farmer lives it is mainly to blame for the recent grand exodus to our thriving cities—and, until she has been appeased and pampered a little and conditions fixed more to her liking, the world stands an excellent chance of worrying for its tomorrow's dinner—for the farmer's wife, says the knowing Department, is strictly fed up on old fashioned wells and romantic oaken buckets and outside non-conveniences of a by-

(Continued on page 356)

Tillamook Cheese and Co-operation

E. B. FITTS, Oregon College of Agriculture

TILLAMOOK County, Oregon, is novel among dairy counties of the United States in that all the milk produced within the county is manufactured into one product—cheese—and all the cheese sold through one organization—the Tillamook County Creamery Association.

There are twenty-five cheese factories in the county, members of the central organization. The cheese in these factories is manufactured under uniform rules and regulations and the cheesemakers are under the general supervision of an inspector who regularly visits all the factories and grades all cheese made. The quality of the cheese is kept at a high level by painstaking manufacture and a careful inspection of all milk received.

The county employs a herd inspector who visits all herds in the county and suggests, and assists in putting into effect, changes in stables and in handling the herd and the milk that will insure the delivery of a high quality of milk to the factory. He is a frequent visitor to the factories during the time milk is being received and through sediment tests and examination of the milk there keeps posted as to the quality of the milk delivered by each of the many patrons. Cases of "off flavor" are followed back to the farms from which they come and assistance given the dairymen in locating the cause. The herd inspector has been deputized by the State Dairy and Food Commissioner and has authority to secure the enforcement of the dairy laws of the state, so far as they apply to his line of work. A real spirit of co-operation, however, exists throughout the entire organization, and dairymen and cheesemakers alike are interested in ever improving the quality of the cheese.

The county also employs a veterinarian who regularly tests all the cows in the county for tuberculosis. This man is deputized by the state veterinarian and works under his general direction.

THIS CHEESE FACTORY, IN TILLAMOOK COUNTY, OREGON, IS BUILT OF TILE AND IS STRICTLY MODERN IN EVERY RESPECT. MOST OF THE MILK USED IS FROM HOLSTEIN COWS

THIS IS ONE OF THE 25 CHEESE FACTORIES THAT CONSTITUTE THE TILLAMOOK COUNTY, OREGON, CREAMERY ASSOCIATION

Visitors to the factories are always welcome and the clean white uniforms of the cheesemaker and his assistants and the evident careful observation of sanitary methods cannot help but increase one's appetite for good cheese.

As a result of this careful inspection and manufacture there is being produced in Tillamook County what is probably the largest volume of uniform quality of cheese of any similar section in the United States, if not in the world. The demand is greater than the supply and prices are maintained at a high level. All first grade cheese (and there are but very few seconds) carry the famous Tillamook brand which is so stamped on the rind of every cheese that the purchaser of even a half pound has the name Tillamook on the wedge he carries home. An extensive advertising campaign has educated the consumer to look for "Tillamook on the rind", and the name is coming to be associated with good cheese in the minds of hosts of people along the western coast all the way from Mexico to Alaska.

Tillamook County dairymen are prosperous. The cool, moist climate and mild winters are favorable to the growth of grass and succulent feeds, and pasturage is good during eight months of the year. The factories are operated on a strictly co-operative basis, the farmers receiving the entire amount realized for their product, less the necessary cost of manufacturing and marketing.

The average price received by the farmers for their milk during 1919 was $3.31 per hundred pounds. The success of the Tillamook dairymen can be attributed to their consistent co-operation and the organizing ability and qualities of leadership exercised by the general manager, Mr. Carl Habberlach, who has been in charge since the association was organized more than ten years ago.

With the improvements in the methods of manufacturing and marketing the cheese have come improvements in the quality of the dairy cattle. There are active Guernsey, Holstein, and Jersey breeders' associations at work in the county and under the efficient leadership of Mr. Roy C. Jones, the county agent, a campaign is being waged to eliminate all scrub bulls from within the county lines.

WHERE DID QUALITY GO?

LUMAN W. COLTON, ILLINOIS

BROOKS was a plain, everyday farmer, with a fair education and an alert, inquisitive mind. He always wanted to know the cause of everything, and had a mania for getting to the bottom of things. One day during the year 1919 while tearing up some old fence early in the season, he kicked hard with his heel against where the woven wire was stuck into the ground. It was not an unreasonable sort of kick, nor one that should have hurt a properly built shoe that was as new as the one Brooks had on, but this particular shoe ripped open up the entire back, and Brooks had to go to the house and put on other foot-wear to finish his job.

It was a little thing, but it set Brooks to thinking. That was a five-dollar pair of shoes that he had worn only two months, and they had been inside of good high-topped overshoes nearly all of that time, so that they had not been exposed to wet or manure acids or the other things about the farm that wear out shoes. He had figured on getting six months wear out of those shoes, but if one of them would go all to pieces at the end of two months over a little thing that he was apt to do any day, where was six months of service to come from without a repair bill as high as the original cost of the shoes?

The incident was a last straw to him. Somehow the thought of it irritated him all the rest of the day. Anything might happen once, but Brooks recounted similar instances in his own very recent experience where quality and service in the things that he had bought and paid big money for, were sadly lacking, There was that last $45 made-to-measure suit that had ripped out in a side seam the first time he wore it, causing him considerable embarrassment while on the train, not enough cloth put into it to make a decent seam. After being returned to the tailors and certain measurements on it made larger it had done the same thing in another place, and after being returned a second time it was developing still another loose seam in lining. He recalled the price he had paid for his last winter's overcoat, and how little warmth it had, made as they all were, without lining, excepting across the shoulders. His socks could only be washed once before they had great holes in them, making his wife mend and darn them continually. Some furniture he had just bought for the spare bedroom was so cheaply put together that he had to go all over it after a very careful moving of it out from town. They had shown him signs pasted on the dresser mirrors by the manufacturers that they would not guarantee those mirrors or replace them if they broke under ordi-

BARN ON CRANBERRY RUN FARM, OHIO, OWNED BY HUGH W. BONNELL

The insert is Mr. Bonnell's Jersey cow, Hope You'll Do, long distance Jersey champion of Ohio. In four tests, the first begun at 2 years, 3 months, she has produced 49,065 lbs. milk containing 2,286.7 lbs. fat. Her last record is 17,193.3 lbs. milk, 770.9 lbs. fat.

During Hope You'll Do's last record she was fed a ration of 14 lbs. grain, 12 lbs. silage, 12 lbs. beets, beet pulp, steamed and dry alfalfa hay, and some mixed hay. The cost of this feed was $400. She is charged $300 for the labor of caring for her during the year, $50 for veterinary care, and $50 for insurance, making the total for the year $800. Within the year she produced 8,000 quarts of milk which gives her a total credit of $1,440 and leaves a satisfying net profit of $640 for the twelve months.

Every Farmer Needs This Kind of Saw

OUT in the woods, in the logging camps, the real worth of a man—and a saw—is proved.

The experienced lumberman knows that Disston Cross-Cut Saws are right for the gruelling job of cutting through tough, live logs that ruin cheaper saws. The new "hand" soon learns why the experts use Disston Saws.

Get a Disston Cross-Cut. Good hardware dealers everywhere sell them.

Send for free booklet, "Disston Saws and Tools for the Farm."

Clay Steel Stall —Only 3 Parts

Contented Cows Give More Milk

The dairy cow is "temperamental." No farm animal responds more generously to good treatment. None is so quickly and adversely affected by anger, fright or discomfort. That's why safety, orderly handling and pasture comfort in the dairy barn insure more milk and greater profit. These necessary features, with economy and convenience, are provided by

CLAY Sanitary Cow Stalls

Bolting only 3 parts together completes a **permanent** stall of smooth, strong steel tubing. No dangerous corners. No cumbersome castings. Easily kept clean. CLAY 2-Way Stanchion is instantly closed or opened **both ways** with **one hand.** Adjustable to any size cow or heifer. No sure-stops needed. Cow-proof lock. Users say CLAY Equipment quickly pays for itself. **Reasonably Priced.** Fully guaranteed. **Sold on 30 days' trial.**

FREE BARN PLAN SERVICE. CLAY architects will plan your alterations or new buildings FREE. Ask for catalog and Free Barn Plan Blank.

Grade Jersey Sets New Indiana Association Record

Just plain Blackie, with a record of 707.7 pounds of butterfat, is the name of the first cow in the state of Indiana to produce over seven hundred pounds of butterfat in a year in a regular cow testing association. This cow, a grade Jersey, owned by Bruce Brothers, was nine years old when she made her record and at no time during the year was she milked more than twice a day or given any special attention in the way of extra care or feed. Freshening about the middle of December, 1918, this cow was placed on test in January, 1919, and for the entire twelve months she was kept going at full speed. During these twelve months her ration consisted of alfalfa hay, corn silage, and a grain mixture composed of four parts corn, two parts oats, and one part cottonseed meal. During the early summer months she had free access to good pasture and in the late fall months rye pasture was used and with excellent production results for the entire herd.

Blackie, although not eligible for registration, is the result of a very constructive breeding program which has been carried on by the Bruce family for several years in their entire herd and just how well they have succeeded is shown by the exceptional high herd average of 392.4 pounds of butterfat for 14 cows. For years and years Mr. Bruce has used nothing but a pure-bred sire and a little over a year ago the boys started in to get some pure-bred cows with the result that three of the fourteen cows were pure-bred. Today over half of the herd is made up of pure-bred cows and the Bruces have gone into Register of Merit testing work and are making some very creditable records for their initial attempt.

Obtaining Farm Labor

HOARD'S DAIRYMAN:—Farm wages have more than doubled in recent years, but the problem of obtaining help has not improved. This indicates that something besides money is necessary to correct the difficulty.

Many of the things that make a good environment for hired help are under the farm operator's control. It is these factors that cause most of the trouble with hired help. These many small matters are not costly to correct but require some careful thought and observation. A man employed on a farm has a right to expect wages equal to those received by his friends engaged at other work requiring as much training and experience. In comparing farm wages to wages paid in the city allowance must be made for board and lodging at their true value.

The lodging a first class farm laborer deserves after a day's work and the lodging he gets are sometimes two quite different things. The interest and depreciation on good furnishings for a farm laborer's room do not amount to much. They look considerably better than do dry goods boxes for furniture and encourage better work. An individual bed, with a good mattress and springs, and enough blankets to keep warm are first in importance. A good place to keep his clothes and a table to write on are next in importance. A man rendering satisfactory service has a right to expect an orderly room and the use of a bath tub or shower.

Farm help is obtained in several ways. Lucky is he who can operate his farm with his own boys. The neighbor's boys are the next choice. Sometimes, for help in the rush season, the local daily papers will bring results. This is especially true if one is located near a city and is looking for boys during vacation. The local daily papers do not very often locate men looking for steady employment on the farm. Here the farm papers do their good work. This is particularly true of Hoard's Dairyman. If good labor advertisements were used more extensively, they would get more square pegs in square holes and round pegs in round holes.

To get results from labor advertisements, care must be used in the wording of the advertisement and in the writing of the first letter. The man one is trying to reach has nothing else to judge from. Repeated advertisements, continued for a long time, do anything but get results. If one is constantly in need of help, the fact should not be advertised with the same advertisement inserted week after week. It will do better work if the wording is changed and the farm address is omitted.

The letter of a man to an employer should give his experience, some of his past employers, his age, weight, education, wages expected, when avail-

"Customers, gladly pay more for butter they know is as perfect as when it first comes from the churn.

"That's why I wrap my butter in

Paterson Pioneer Parchment Paper

"Keeps it clean—sweet—pure. Makes my butter *worth* more and *sell* for more. Yet, the small cost of this Parchment Paper isn't worth considering when compared with my extra profit."

able, and anything requested in the advertisement he is answering. A picture of himself, if included in the letter, will give an employer more true material from which to form his opinions.

An employer's letter to a man he expects to hire should contain a brief description of his farm. This should include the size of the farm, the number of acres under cultivation, the crops raised, the breed and number of live stock kept, the labor saving machinery and equipment in use, a description of the buildings, and the distance from a railroad, church, and nearest town. Nothing of particular interest or convenience to men should be omitted. If some pictures of the stock or buildings are included with the letter, they will add much to its descriptive value. No man can afford to spend considerable railroad fare and go to a new job blindly.

The way a new man is received influences his first impression of a new job. If all the advertising has been done to hire a hobo, treat the new man as one. However, if one is expecting a man of some culture and education, treat him differently. It pays to treat a laborer fair. In no business are employer and employee in closer relation to each other than on the farm, and therefore it is well to consider a man as a companion as well as a laborer. A well kept set of buildings and good machinery in repair mean efficient days, a contented boss, and a satisfied laborer.

Some time is always lost in teaching a man a new job. This may vary from a fraction of a day to several days, or until a man is able to learn things by himself, which continues until he leaves his job. This makes a man most valuable when he leaves. Insisting on many petty, non-essential details bores a new man and will do so every time those jobs have to be repeated.

The length of time a man works at one place depends largely on his motive in working, and is usually in accordance to the care used in hiring him. A laborer that is not interested in farming, except for his wages, cannot be depended on as being a steady worker. This is not true of a man who is interested in his work and intends to operate a farm of his own some day. The first month of employment is the most expensive. In time a man becomes a "cog in the wheel" because he learns to know the live stock as individuals, and the peculiarities of the machines and the equipment.

Few men seeking experience expect to spend all their time working out on one farm. Many leave even before the above reason would necessitate a change. Some leave because they are inclined to wander. Others because they find themselves a round peg in a square hole or have a better position in view. Young men away from their homes become restless, if the home conditions are poor, or if social functions, or means of getting to them, are lacking. A daily work schedule with long, drawn-out work days breeds discontent. Lower wages than the average for the community arouse a desire for a change.

The personality of the boss is a big factor in getting results from hired help. It may even outweigh all the other factors. A man who has served a good apprenticeship working out and has learned to understand men can get results with them if he is not afraid to show his appreciation of good work.

Wisconsin. E. C. VOLLMER.

Exposure to weather often causes greater destruction to farm implements than using them. Avoid this loss by storing all machinery and tools properly under shelter before winter sets in.

Eventually,

every dairy farmer will use a suction-feed separator

WASTE, in production or labor, has no place on the modern farm. Yet thousands of farmers are unconsciously permitting a waste of butterfat that can and should be stopped.

That is why we go on record in stating that eventually every dairy farmer will use a suction-feed separator. The suction-feed principle in milk separation is the only one that absolutely prevents waste of butterfat.

Only by the suction-feed method can a separator *skim clean at any speed.*

Today, the only suction-feed separator is the Sharples—protected by patents that force other manufacturers still to cling to the old fixed-feed, wasteful method.

It is logical and natural that as farmers get acquainted with the Sharples (and every year thousands are trading in their old fixed-feeds for a Sharples Suction-feed) there will be a saving of millions of pounds of butterfat every year.

It will pay *you* to replace your fixed-feed separator with a Sharples, for it costs more to operate a wasteful separator than to buy a modern, 100% efficient Sharples Suction-feed.

Beside the exclusive, clean-skimming suction-feed principle, the Sharples is the *only* separator with the knee-low supply tank, simple one-piece bowl (no discs to wash) and once-a-month automatic oiling system.

Write for illustrated booklet, describing the Sharples Suction-feed Separator. Contains letters from users whose experiences will interest you. Address nearest office. Dept. H.

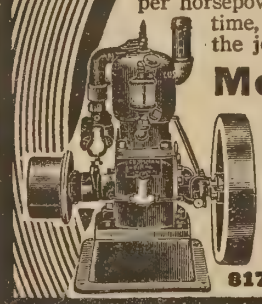
"There are no substitutes for dairy foods."

Controlling the richness of your cream—

As every dairyman knows, a slight turn of the cream screw of a separator results in a pronounced difference in the density of the cream. This is so because it acts directly on the small volume of cream—about one-ninth of the total volume of the whole milk. Because of this delicate adjustment, it is an easy matter for the average person to get the cream so rich that all of it cannot be discharged through the cream outlet. There is then but one means of escape for it—with the skimmilk.



In the **Primrose Separator** the thickness of the cream is regulated by a screw in the skimmilk outlet. It works on the large volume of milk instead of the small volume of cream and is proportionately easier of adjustment. And two large cream outlets, unobstructed by a cream screw, let the cream out of the bowl.

Bear this in mind when you are ready to invest in a new separator—and consult your nearby International dealer in regard to a ***Primrose.***

Light Weight Farm Engines

Cushman Engines, recognized everywhere as The Original Light Weight Power, give dependable, economical service on every power job on the farm. Cushman Engines weigh only 40 to 65 pounds per horsepower. The Cushman owner saves valuable time, because he can easily move his engine to the job, instead of hauling the job to the engine.

More Power Per Pound

Cushman Engines weigh only one-third to one-fourth as much as ordinary engines, and they run much more quietly and steadily. Better design, better materials and better workmanship give the Cushman more power per pound. Equipped with Throttling Governor, Carburetor, Friction Clutch Pulley and Water Circulating Pump without extra charge. Send for Free Book on Light Weight Engines.

Association Notes

Nelson County, Kentucky:—Three of the poorest cows have been sold from one herd. A few dairymen who have been using commericial mixed feeds are now using home-mixed feeds instead. Some of them are also interested in the use of pure-bred sires. Several farmers in this county are expecting to go into the dairy business in the near future. Since Nelson County is naturally adapted to dairying, a profitable industry should develop. August market milk sold for $3.48 per cwt. Local feed prices are: Schumacher, $80 per ton; alfalfa, $35; shipstuff, $75; hominy meal, $62.50; cottonseed meal, $80.

Knox County, Illinois:—Four new members have been added, one of them being the owner of the high cow for August. One pure-bred bull and four pure-bred cows of excellent breeding have been purchased by members of the association. Two unprofitable cows were sent to the butcher. Four silos have been built and one milking machine installed during the month. Market milk testing 3.5% sold for $4.37 per cwt. and 2c per point above. The condensery paid 56c per lb. for fat and the creamery paid 56c. Milk retails for 15c per quart, butter for 75c per lb. Feed prices are as follows: Corn and cob meal, $2 per cwt.; oats, 65c per bushel; wheat bran, $58 per ton; oil meal, $78; cottonseed meal, $66; alfalfa hay, $36.

Fairbault, Minnesota:—Pastures are very short and feed high. It pays to feed good cows on pasture as the man having the high cow and also the high record for July fed a good grain ration to his herd. Seventy per cent made over 40 lbs. fat. Feed prices here are: Corn, $1.75 per bushel; bran, $53 per ton; oats, $70; Schumacher, $65; oil meal, $67.

Pioneer, Minnesota:—August market milk sold for $4.50 per cwt. The creamery paid 72c per lb. for fat. Milk retails for 13c per quart and butter for 62c per lb. Local feed prices are: Hay, $12 to $20 per ton; silage, $3 to $5; bran, $44 to $48; oil meal, $66 to $70; oats, $30 to $35; corn, $40 to $45.

Porter County, Indiana:—The association average has increased slightly over that of the July, due to the fact that the members are beginning to feed grain and hay instead of pasture. Four unprofitable cows were sold during August. Market milk testing 3.25% sold for $3.70 per cwt. The creamery paid 56c per lb. for fat. Milk retails for 16c per quart and butter for 58c per lb. Feed prices are: Ground corn, $72 per ton; bran, $65; corn and cob meal, $66; ground oats, $45; cottonseed meal, $78; oil meal, $82; alfalfa hay, $26; clover hay, $26; corn silage, $8; Unicorn, $68; gluten, $72.

Amherst—Nelsonville, Wisconsin:—The members of this association are buying feed co-operatively by carload lots. A number of members fed grain and silage throughout the summer and found it profitable. Three cows were sold for beef. The creamery paid 63c per lb. for fat in August. Bran is rated at $48 per ton; oats, $50; rye middlings, $55; Unicorn, $78; oil meal, $75.

Richland County, Wisconsin:—One pure-bred Guernsey bull and three pure-bred Guernsey cows were bought during August. Two unprofitable cows were sold for beef. Some of the members increased the production of their cows by feeding balanced grain rations and green clover and alfalfa. Market milk sold for $3 per cwt. and 6c per point above 4% test. The condensery paid 80c per lb. for fat, the creamery 59c, and the cheese factory 54c. Milk retails for 12c per quart, butter for 57c per lb., and cheese for 24c. Feed prices are: Oats, 75c per bushel; corn, $1.90; oil meal, $80 per ton; bran, $50; alfalfa, $30; barley, $1.20 per bushel.

Fort Atkinson, Wisconsin:—The coming season ought to be ideal for dairy production owing to the abundant yield of both roughage and grain. Commercial protein feeds are getting lower gradually. August condensery milk sold for $3.20 to $3.35 per cwt. The creamery paid 70c to 76c per lb. for fat. Feeds are rated as follows: Silage, $7 per ton; alfalfa hay, $30; bran, $50 to $58; gluten, $65; oil meal, $70; barley, $1 per bushel; oats, 72c; pasture, $3 per cow.

Ohio County, West Virginia:—In August, 3.5% milk sold for $4 per cwt. Unicorn is rated at $4.15 per cwt.; Larro, $4; Schumacher Chop, $3.90; cottonseed meal, $4; corn, $2.25 per bushel.

Juniata County, Pennsylvania:—Four more unprofitable cows were sold during July. We have purchased a carload of cottonseed meal co-operatively at a considerable saving on the price per ton. Some of our members are feeding soiling crops, thereby keeping up the production of the herd. July market milk testing 3.25% sold for $3.73 per cwt. and 4c per point above. The creamery paid 75c per lb. for fat. Milk retails for 14c per quart and butter for 70c per pound. Feed prices are: Hay, $25 per ton; green corn, $6; corn and cob meal, $53; ground oats, $66.80; bran, $65; cottonseed meal, $85 to $90; Union Grain, $82; Larro Feed, $77; Peerless Dairy Feed, $70.

Muskingum, Ohio:—For the new year beginning September 1st, at least seven herds are going to do Register of Merit and Advanced Registry work. A couple of grade sales

are to be held and in every case pure-breds are taking their places. Twenty-four pure-bred Jersey heifers have been distributed by the local Jersey Association. July market milk sold for $3.50 per cwt. The creamery paid 57c per lb. for fat. Milk retails for 14c per quart and butter for 62c per lb. Oil meal is bought for $3.85 per cwt.; cottonseed meal, $4; bran, $3; corn meal, $2; pasture, $2.50 per month.

A Herd From a $33.33 Beginning

From an investment of $33.33 for a pure-bred Holstein heifer in 1910 to the highest producing herd in the Union County Cow Testing Association in 1919 is the record of Frank Rupprecht of Ohio. Mr. Rupprecht's herd last year consisted of 11 cows,

JOHANNA CONCORDIA GILT EDGE, HIGH COW IN THE RUPPRECHT HERD

four of these milking in heifer form. The average production per cow was 11,655.6 lbs. milk, 375.76 lbs. fat. His high cow, Johanna Concordia Gilt Edge, produced 14,831 lbs. milk, 556.-2 lbs. butter. Japalar Wonder Beuzzetta Woodcrest stood second in milk production with 14,043.9 lbs. milk and 444.96 lbs. fat. She is the daughter

JAPALAR WONDER BEUZZETTA WOODCREST, SECOND HIGH COW IN THE RUPPRECHT HERD

of the $33 heifer. The average cost of feed for the 11 cows was $139.86 and the income above cost of feed, $191.12. Some official testing is done also and the best seven-day record made was 204 lbs. fat on the foundation cow purchased as a heifer at $33.33.

The records on this herd were made by Mr. Rupprecht while at the same time he was working his 150-acre farm. Other than a little oil meal and cottonseed meal these cows received nothing except home grown feeds: corn, oats, barley, alfalfa, and silage. On the Rupprecht farm the milk is separated, the butterfat sold, and the skimmilk fed to the calves and hogs. A farm electrical plant furnished the juice for lights and power to run the cream separator and other labor saving appliances.

Besides taking care of his herd and farm, Mr. Rupprecht finds time to be president of the local county Holstein Club and to do other things that help to make his county and community a better place in which to live. H. C. BARKER.

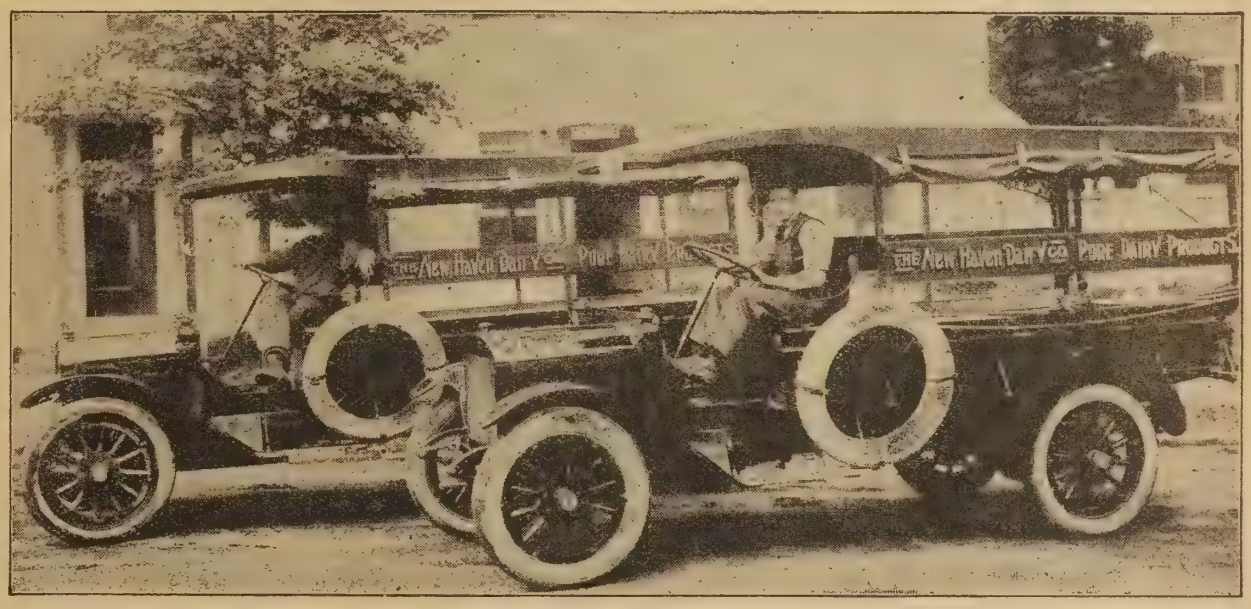
Most people will find that they can reduce their daily ration by one-third, sometimes one-half, without any inconvenience whatsoever.—DR. J. H. KELLOGG.

GMC

General Motors Trucks

Because of their speed and flexibility GMC Model 16, ¾ to 1 ton trucks are popular among dairymen for light, quick delivery.

This is the famous GMC Model standardized by the Government during the war for all work in the ¾ ton to 1 ton class, and which, in ambulance work made a record and a reputation never approached by another motor truck.



Exactly the same chassis is in Model 16. Great power is available in the fine motor, and in correct proportion, every other unit, clutch, universal joint, transmission and rear axle are built to handle that power.

Model 16 is a real truck, from the ground up, not a so-called truck built with passenger car units. Those who own this model are full of praise for its merits. Ask for book (H) "Motor Trucks On the Farm".

Size of Farm Business

HOARD'S DAIRYMAN:—A Wisconsin farmer owned 80 acres of land of medium quality. All of it was under cultivation. He was engaged in general farming and, because his farm business was small, he found it difficult to make a living.

Realizing that he was farming on too small a scale, he decided to enlarge the business. That was about twelve years ago. His first move was to try to buy adjoining land, but his neighbors would not sell. Next he tried to sell his farm and buy a larger one, but he was unable to sell his farm to advantage.

Receiving no satisfactory offers for his farm, he finally decided to enlarge his business by improving the farm business he already had. He began by culling out and selling to the butcher five of his low producing cows. The scrub bull went with them. The money received from the sale was used to purchase three high-yielding grade dairy cows and to pay for a share in a good registered dairy bull.

The farmer increased his acreage of corn, bought a silo, and limed his land for clover. He also prepared a small field for alfalfa by a heavy application of lime and twelve tons of manure to the acre. The alfalfa did well from the start and yielded about twice as much hay per acre as red clover.

Corn silage and alfalfa made it possible to keep more cows, the larger number of cows improved the fertility of the soil and increased crop yields. Some concentrates were purchased for the cows, which also helped to increase soil fertility and to bring greater yields of crops. Greater crop yields, more cows, and a greater return per cow gradually increased the net income of the farm.

Progress was slow at first, as it usually is, but the business gradually became larger and with every increase of the business, the farmer acquired more working capital. Within a year or two he purchased a registered dairy cow that proved to be a high producer of milk and butterfat. The following year he bought two more. From that time on progress was rapid. The increased soil fertility made it possible to add a small acreage of potatoes as a cash crop. This crop proved to be very profitable, and the fertility removed by the potatoes was replaced by the concentrates bought and fed on the farm.

For a few years there was no income from the sale of pure-bred dairy cattle, but a valuable herd of pure-breds was being built up. Ten years from the time the farmer began to enlarge his farm business, the income from the sales of pure-bred dairy cattle greatly exceeded the former sales from the entire farm. Such sales may fairly be considered net profit because the sale of milk from the herd of high producing cows more than paid all farm and living expenses.

At the present time the farmer and his family live in a modern farm house, own a medium-priced automobile, have a fair-sized bank account, and they have not lived a life of drudgery in order to accomplish these results. Success has come to them through the intelligent management of their small farm. The farmer early realized that he must increase the farm business in order to succeed. Not being able to add to his acres, he took the only other course available to him, and increased the income from the acres he already had.

Coming Events

Kansas State Fair, Hutchinson, Kans., September 18—24. A. L. Sponsler, Secretary.

Eastern States Exposition, Springfield, Mass., September 19—25. J. C. Simpson, Sec.

Trenton Interstate Fair, Trenton, N. J., September 27—October 1. M. R. Margerum, Secretary.

Vermont State Fair, White River Junction, September 28—October 1. F. L. Davis, Sec.

Dairy Cattle Congress, Waterloo, Ia., September 27—October 3. E. S. Estel, Secretary.

National Dairy Show, Chicago, October 7—16. W. E. Skinner, Manager.

Ninth Annual Convention, International Association of Dairy and Milk Inspectors, National Dairy Show, Chicago, October 11, 12, and 13. Ivan C. Weld, Secretary, 1120 Connecticut Ave., Washington, D. C.

Oct. 18-22—Wisconsin Junior Live Stock Exposition, Madison, Wis.

Louisiana State Fair, Shreveport, Louisiana, October 28 to November 7. W. R. Hirsch, Secretary.

Cheese Market Output Better with Prices Rising

Report of U. S. Bureau of Markets

Further advances were registered in the cheese markets during the week ending September 4, and trading was generally on a firm basis after the trend of the market became apparent. Although a tendency to sell low cost cheese was shown by certain dealers who overestimated their needs for the immediate future and bought heavily prior to the advance in freight rates or who have experienced difficulty in securing loans, it can not be said that such a feeling was general. For the most part, a realization of the fact that cheese could not be replaced at current country prices kept markets firm. Opinion seems to be that demand will continue to improve and that buying will be more active when cooler weather arrives and after vacation periods are over.

The average wholesale prices on American cheese, style Twins, for the week ending September 4, were as follows: New York, 27.21 cents; Chicago, 25.63 cents; Boston, 27.63 cents; San Francisco, 28.54 cents; and Wisconsin primary market, 25.67 cents. The corresponding weeks of last year showed 30.75c, 29.92c, 31.80c, 31.05c, and 30c, respectively for these markets.

Country Market Movement Satisfactory

Conditions at Wisconsin primary markets were much like those in the distributing markets. Trading was good during the week and price ranges were narrowed. With a few exceptions dealers followed the advancing market, possibly taking a smaller margin of profit in some cases, but showing no inclination to cut prices. Scarcity of Twins kept prices on this style especially firm. Some other styles did not move so well, but heavier demand this week was expected to remove all possibility of any surplus. Cooler weather has resulted in further improvement of quality in current make, and from now on better cheese should appear on the markets.

Interest Lags in Butter Trade Following Overbuying

Report of U. S. Bureau of Markets

No unusual features developed in the butter markets during the week ending September 4 other than a rather sharp decline in prices the fore part of the week which was followed later by a firmer tone and gradual recovery. Out-of-town buyers had evidently bought more heavily than was generally suspected prior to the advance in freight rates, and for several days following interest was decidedly lacking in the markets.

Receipts happened to be comparatively heavy just about this time, and as there was a surplus, particularly of undergrades, prices had to go lower to start buying. The New York market led in this movement and other markets were forced to follow to keep prices between markets in their proper relation. A wide range still exists between 86 and 92 scores, as the real active demand is almost entirely for the better grades of butter. No general improvement of the market is anticipated until after the Labor Day holiday. It is reported that a good many of the mill towns in New England, which have been poor buyers lately on account of the closing down of factories, are expected to be back in the market for butter shortly, and this fact should tend to improve demand somewhat.

The average wholesale prices of 92-score butter at five of the principal markets for the week ending September 4, were as follows: New York, 57.5 cents; Chicago, 54.9 cents; Philadelphia, 58.3 cents; Boston, 57.8 cents; and San Francisco, 57.8 cents.

Lower Prices Check Foreign Importations

For the time being, at least, importations of foreign butter have been almost entirely curtailed. Danish butter was offered at New York during the week at prices ranging from 55 cents to 56 cents, duty paid, but this quotation is prohibitive in view of present domestic prices. Holders of Danish stock in storage are ready to sell, and some few lots were moved at New York at from 53 cents to 53½ cents. The total quantity cleared, however, was small.

Hay and Feed Prices Decline

The report of the U. S. Bureau of Markets for the week ending September 4 shows a slight decline in hay prices, with the receipts in slight volume. Timothy ranged from $27.75 per ton in Kansas City to $43 in New York. Mixed timothy and clover is quoted at about three dollars under this, with straight clover at about two dollars under. No. 1 alfalfa is quoted at $26 in Omaha and San Francisco, $28.50 in Kansas City, $31 in Minneapolis, $32 in Chicago and Los Angeles, $35 in Memphis, and $41 in Atlanta.

Despite higher freight rates, wheat mill feeds declined 50 cents to $1 per ton in the eastern markets, with double this in the Central West. Bran averaged $39 in Minneapolis, $44 in Chicago, $47.50 in Buffalo, and $51 in Boston and New York. Middlings range from $48 in Minneapolis to $56 in New York.

Linseed meal is quoted at $61 in Buffalo, $62 in New York, $63 in Boston and Minneapolis, and $65 in Chicago and Cincinnati. Cottonseed meal, 41 per cent protein, ranged from $57 in Kansas City to $65 in Boston, while 36% meal ranged from $52 in Los Angeles to $62 in Boston. In Chicago 43 per cent meal was quoted at $61.75 and 36 per cent meal at $58.25.

Gluten feed was quoted at $63.75 in Chicago, $64.50 in Buffalo, and $73 in New York. At San Francisco beet pulp sold for $52, a decline of two dollars from last week.

Dairying Thirty Years Ago

Notes From the Issue of Hoard's Dairyman for Sept. 19, 1890

HOARD'S DAIRYMAN: — Concerning articles in last Dairyman in regard to delivery of milk to city customers, I wish to say from experience that Mr. Wilder should not lose $600 worth of bottles in two years or three times two years. While handling milk for two years, part bottles and part cans, all bottles lost or broken I received pay for. But in the use of the bottles I did almost entirely as you suggested, emptied the bottles into vessels furnished by the customer. In several cases where bottles were exchanged, breakage or loss was paid for and no complaint on the part of the customer.

SUBSCRIBER.

Prices for Dairy Products

September opened with Elgin butter commanding twenty-four cents a pound; a year ago September butter brought on the average twenty-two and four-fifths cents. Cheese, of course, is influenced by the price of butter, and that, too, has advanced. For years the prediction has gone forth that dairy products would sell for less than cost of production, because farmers were turning their attention in that direction as the only seeming source of profit. The change in dairying, after all, has not been through the increase in dairy cows to any great extent, but rather in co-operation.

When we look over the field and see that a large proportion of the butter yet produced brings second- or third-rate prices, we are willing to admit that there is yet plenty of room for the dairy gospel, and to those who carry it abroad we say Godspeed.

⚜

Dr. George E. Morrow notes the following among suggested conclusions from two years' tests at the Illinois Experiment Station:

"The rate of growth of cattle, either on grass alone or with an added grain ration, is very irregular, being especially checked by either drouth or excessive rains, extreme heat or cold storms. The addition of grain or other food to the pasturage before the grass fails in the autumn is clearly advisable. The acreage of pasturage may probably be safely decreased one-third, if the steers be given a full grain ration."

Seed corn selection is important this year. Good ears that mature this season will have a real value.

Sale Announcements

Sept. 18—Guernseys. New York State Geurnsey Sale, Albany, N. Y., L. F. Herrick, Sale Mgr., Worcester, Mass.
Sept. 21—Guernseys. Langwater Farms, North Easton, Mass. L. F. Herrick, Sale Manager, Worcester, Mass.
Sept. 22—Holsteins. G. H. Horrell, Humbird, Wis. F. H. Everson, Sale Mgr., Lake Mills, Wis.
Sept. 25—Holsteins. John Stotzer herd, Suffield, Ohio.
Sept. 27—Holsteins. Detweiler's Dispersal Sale. Illinois Holstein-Friesian Ass'n., Mgrs.
Sept. 27—Holstein bulls. Holstein Breeders' of Lake County Indiana, Crown Point, Ind. Roscoe Clark, Sale Mgr.
Sept. 29—Ayrshires. Ayrshire Dispersion of C. H. Peverill of Waterloo, Ia., at Dairy Cattle Congress, Waterloo, Ia. Amos Burhans, Sale Mgr.
Oct. 1—Jerseys. Virginia Jersey Cattle Club Sale at Fredericksburg, Va. Tom Dempsey, Sale Manager.
Oct. 1-2—Holsteins. Vermont Breeders' Sale at Rutland, Vermont.
October 1-2—Holsteins. Dairy Center Sale at Northfield, Minnesota. Minnesota Holstein Breeders' Association, Sale Managers.
Oct. 4—Holsteins. Summit Co. Holstein Breeders' Ass'n. Sale at Akron, Ohio. Wm. F. Cook, Hudson, O., Mgr.
October 5—Guernseys. Blue Earth County Breeders. Mankato, Minn. Dr. M. B. Wood, Mankato, Minnesota, Sale Manager.
Oct. 5—Holsteins. Hall Bros., South Denver Station, Denver, Colo.
October 6—Guernseys. Guernsey Breeders' Association of Northern Minnesota and Northern Wisconsin, Tristate Fair Grounds, Superior, Wisconsin. E. P. Gibson, Sale Manager, Duluth, Minnesota.
Oct. 6—Holsteins. Dispersion of H. G. Cox herd of Registered and Grade Holsteins at St. Charles, Minn.
Oct. 6-7—Hornless Holstein Farms. Geo. E. Stevenson & Sons Sale at Clark's Summit, Pa.
Oct. 7—Holsteins. Consignment Sale in sales pavilion, Marshfield, Wis. J. P. Heintz, Sale Mgr.
Oct. 8—Holsteins. Alfakorn Farms Fifth Semi-annual Sale at Evansville, Wis. F. B. Green & Sons, Owners.
Oct. 9—Holsteins. Pabst Stock Farms First Semi-annual Sale at Oconomowoc, Wis.
Oct. 12—Guernseys. Annual Sale Lake County Guernsey Breeders' Association, Libertyville, Ill. W. E. Watkins, Secretary.
Oct. 13—Guernseys. Wisconsin State Guernsey Sale at the Live Stock Pavilion, University Grounds, Madison, Wis.
Oct. 13-14—Holsteins. National Dairymen's Sale in connection with the National Dairy Show, Chicago, Ill. E. M. Hastings Co., Mgrs.
Oct. 18—Holsteins. West Michigan Holstein Breeders' Semi-annual Sale. W. R. Harper, Middleville, Mich., Sec.
Oct. 14—Guernseys. The Southern Wisconsin Guernsey Breeders' Ass'n., Janesville, Wis. James H. Murphy, Mgr., Delavan, Wis.
Oct. 15—Holsteins. Registered and grade herd of Louis P. Eigenmann, Rockport, Indiana.
Oct. 15-16—Holsteins. Holstein Breeders' Sales Co., Fond du Lac, Wis. S. H. Bird, Sec.
Oct. 15—Holsteins. Breeders of St. Joseph Valley, South Bend, Ind.
Oct. 16—Ayrshires. Fred Tschudy & Sons at Monroe, Wis. Sale Manager, Amos Burhans, Waterloo, Ia.
Oct. 22—Holsteins. Ashtabula Co., Ohio, will hold sale at County Fair Grounds, Jefferson, O.
October 22—Holsteins. Central Pennsylvania Holstein-Friesian breeders' second annual sale at Hughesville, Pa.
Oct. 25—Holsteins. The Lake County, Ind., Holstein Breeders' Consignment Sale. Secretary, C. Harry Newton.
Oct. 27—Guernseys. E. J. Himmelberger's complete dispersal sale of registered Guernseys at Lansing, Mich. F. E. Fox, Waukesha, Wis., Sales Mgr.
Oct. 27—Holsteins. H. C. and C. E. Burgess Consignment Sale, Huntington, Indiana.
Oct. 28—Holsteins. Virginia Holstein-Friesian Club Sale at Richmond, Va. R. V. Martindale, Sec'y.
October 28—Guernseys. F. G. Eberhardt complete dispersal sale of registered and grade Guernseys at Mishawaka, Ind. F. E. Fox, Sales Mgr., Waukesha, Wis.
Oct. 28-29—Holsteins. Green County Holstein-Friesian Breeders' Club Sale at Monroe, Wis. L. L. Hare, Monroe, Wis., Sec'y.
October 28-29—Holsteins. Holstein-Friesian Breeders' Consignment Sale at Minnesoto State Fair Grounds. Minnesota Holstein Breeders' Association, Sale Managers.
Nov. 6—Jerseys. National Jersey Show Sale, Shreveport, Louisiana.
November 16-17—Holsteins. Iowa Holstein Breeders' Association, Second Guaranty Sale at Des Moines, Iowa.
Nov. 17—Jerseys. "Golden Rule Jersey Sale" at Pacific International Live Stock Exposition, Portland, Oregon.
Nov. 17—Guernseys. Waukesha County Guernsey Breeders' Ass'n. Seventeenth and Semi-annual Consignment Sale of registered Guernseys at Waukesha. F. E. Fox, Sec'y., Waukesha, Wis.
Nov. 23-24—Holsteins. Watertown Holstein Sales Co., Semi-annual Consignment Sale at Watertown, Wis. Francis Darcey, Manager.
Dec. 3-4—Holsteins. Holstein Breeders' Sales Co., Fond du Lac, Wis. S. H. Bird, Secretary.
Mar. 29-30, 1921—Holsteins. Watertown Holstein Sales Co., Watertown, Wis. F. Darcey, Sec.
May 17, 1921—Holsteins. Wisconsin Holstein Breeders' Sale, West Allis, Wis.

How Co-operative Marketing Was Made a Success in California

HERMAN STEEN, ILLINOIS

"GENTLEMEN, this is what co-operative marketing has done for California." The speaker's words directed our thoughts to the valley below, where every acre seemed to be outdoing every other acre in productive activity. The dark green of the orange orchards gave way now and then to the lighter green foliage of the lemons, a color scheme that was broken occasionally by the yellow-green of Elberta peaches. Away in the background, perhaps eight or ten miles away, were vast fields of beans. Up in the valley to our right stood a forest of walnut trees. A dozen miles ahead was the Pacific ocean, behind us the Santa Ana Mountains. If there was a lazy acre anywhere between, we could not discover it.

Co-operation Built the Industry

"Not so many years ago this was all desert," continued the speaker, J. A. Campbell, president of the Orange County (California) Citrus Growers' Exchange. "The pioneers began growing oranges and the other fruits that are adapted to our conditions. It was hard to get a good market for the crops produced. Seldom did they get a fair price—more often they received only enough to eke out a miserable existence. Out of those intolerable conditions there grew up a system of co-operative marketing which not only brought fair returns to the fruit growers, but it built an industry. The uncertain returns of pioneer days gave way to a situation which seemed almost to guarantee the future. The result has been a tremendous increase in the area devoted to citrus fruits, and as fast as co-operative marketing has been applied to other products those industries also began to prosper. Co-operation has rescued California agriculture from the depths of despair and placed it upon a business basis which has been accompanied by a fair degree of prosperity."

This same story in different words was repeated to me by dozens, yes a hundred times, by people in all parts of California during the next two weeks after Campbell pointed out from the crest of Skyline Drive what co-operative marketing had done for the Santa Ana Valley. I heard it in the raisin vineyards around Fresno, in the poultry yards of Petaluma, in the rice fields of the Sacramento Valley, and in the Santa Clara prune orchards. Farmers told me stories of the old days when they and their families worked long, weary hours just for the privilege of existence; their shoulders straightened and their eyes brightened as they spoke of the square deal in business and the happiness in life that has been brought them through co-operation.

Farming on Business Basis

Co-operative marketing has been weighed in the balance by the farmers of California and not found wanting. Excepting alone the perfection of modern irrigation methods, co-operative marketing has done far more than all other factors combined to develop the industry of agriculture in California. By putting farming upon a basis where it pays dividends, it has taken a long step toward solving the questions which press the hardest upon those who till the soil.

The path of co-operation in California has not been an easy one. Its path has been covered with thorns and strewn with stones. It has been attacked by enemies from without and traitors from within. The speculative interests, always the enemies of stabilized prices for farm products, have entrenched themselves behind millions while they have resisted the advance of the co-operative idea. Upon every hand in California are the bleached bones of co-operative enterprises, yet co-operation has never permanently lost ground in its 40 years of existence there, but has made steady and consistent gains. The growth of the co-operative idea is a tribute to the courage and convictions of the farmers of the state.

Handled $225,000,000 Co-operatively

Farmers' co-operative companies last year marketed approximately $225,000,000 worth of farm products in California. This is 45 per cent of the total farm production of the state. In other words, out of every $100 worth of stuff sold from California soil, $45 has been handled through co-operative marketing associations. It is the high water mark in co-operation in America thus far, and is probably excelled only in Denmark and New Zealand in all the world.

The largest and best known co-operative marketing enterprise in California is the California Fruit Growers' Exchange. It markets 74 per cent of the citrus fruit—oranges, lemons, and grape fruit—produced in California, and during the past 12 months the volume of business handled was in excess of $57,000,000. It was formed in 1895 by the orange growers around Los Angeles because conditions governing the sale of fruit had become intolerable. Prices received were so far below the cost of production that orange groves were abandoned wholesale and many growers were bank-

(Continued on page 338)

Chester County Picnic

DANIEL J. ADAMS, PENNSYLVANIA

CHESTER County, Pennsylvania, is entitled to the banner this year for one of the greatest agricultural meetings and picnics ever held in the East. Five thousand farmers congregated at Lenape Park, near West Chester, Pa., on Monday, August 23rd, for the first big annual picnic and, during the afternoon, listened to a program of probably the greatest collection of agricultural speakers ever on one platform.

This big picnic was held in the interests of the opening of a big live stock campaign in Eastern Pennsylvania and the Chester County Live Stock Breeders' Association was joined by the Farm Bureau and Pomona Grange No. 3 in arranging for the picnic and meeting. In addition to the Chester County folks in attendance, several hundred from other counties and other states traveled to West Chester to be present and hear the nationally known speakers on the program.

Secretary of Agriculture E. T. Meredith was the principal speaker of the day and Secretary of Agriculture Frederick Rasmussen presided as chairman of the meeting. Mr. Meredith held his audience in very close attention as he told of the work of the Department of Agriculture at Washington and of the ways in which this national service could be of benefit to Chester County live stock people. He particularly emphasized the importance of a community interest in such progressive work and congratulated Chester County on being one of the foremost counties in this work in the United States today.

Secretary Rasmussen, of Pennsylvania, in his introductory remarks, said that Chester County, Pennsylvania, leads all other counties of the state in dairy production and the growing of corn and alfalfa. There are over 5,600 fine farms within the county and, during the past year, over $20,000,000 worth of farm produce came from Chester County farms. He also said that the dairy cow is the foundation of our agriculture and it is largely in the devolopment and improvement of the dairy cattle interests of the county that Pennsylvania people are most concerned.

Mr. Robert Scoville, President of the American Guernsey Cattle Club, was the next speaker on the program and prefaced his remarks on the improvement of live stock with the statement that "the scrub sire is a living reproach to American agriculture today and that it is a reproach to our agricultural people that they have been willing to accept the handicap of not using all of the brains with which they are endowed in the improvement of our live stock."

The crowd was especially pleased to hear Mr. John A. McSparren, of Lancaster County, the Master of the Pennsylvania State Grange. He assured the audience that the Grange association was ready to co-operate in every way possible in the improvement of our live stock.

The next celebrated speaker was Mr. M. D. Munn, President of the National Dairy Council and President of the American Jersey Cattle Club. Mr. Munn's address was especially timely in that he advised that this was a time for constructive effort on the part of agricultural people and he deplored the tendency of drifting and the destructive criticism that has become so prevalent. Mr. Munn was also asked for details in regard to the National Dairy Council and its work and the audience was especially interested and appeared anxious to assist in the work as being conducted by the National Dairy Council.

Hugh G. Van Pelt presented ways and means of improving our live stock.

Mr. James Watson, Secretary of the Ayrshire Breeders' Association, and Mr. James Dodge, President of the American Berkshire Swine Association, also spoke on live stock improvement.

The first step in the live stock improvement campaign will be an accurate survey of the live stock interests of the county, which is to be conducted during the month of September by a committee consisting of one man from each of the fifty-seven townships within the county. Following this survey and with the information obtained thereby, a program, consisting of the organization of calf clubs, bull clubs, and other important matters, will be immediately taken up and it is no idle boast that Chester County will prove to be one of the greatest pure-bred live stock centers of the United States within the next few years.

DISTINGUISHED SPEAKERS AT FARMERS' PICNIC, WEST CHESTER, PENNSYLVANIA

Left to right: P. M. Sharples, Pennsylvania; Congressman Thos. S. Butler; Wallace MacMonnies, New York; James E. Dodge, President Berkshire Breeders' Association; James G. Watson, Secretary Ayrshire Breeders' Association; Hugh G. Van Pelt, Editor The Dairy Farmer; Morris T. Phillips, President Chester County Live Stock Breeders' Association; Frederick Rasmussen, Pennsylvania Secretary of Agriculture; E. T. Meridith, Secretary of Agriculture; D. S. Adams, County Agent; M. D. Munn, President of the National Dairy Council and President American Jersey Cattle Club; F. P. Willitts, President Interstate Milk Producers' Association; Robert Scoville, President American Guernsey Cattle Club; Senator T. L. Eyre.

EDITORIAL COMMENT

LABOR SAVING

In reviewing the machinery exhibit at the Wisconsin State Fair, we observed a fanning mill being operated by a gasoline engine. This fanning mill had twice the capacity for cleaning grain of the fanning mill operated by hand and attached to it was a little elevator which conducted the clean grain into sacks.

We can well remember when it required a man to run the fanning mill, another to keep the hopper filled and to shovel the cleaned grain into a sack held by a boy usually. Here was required the time of at least two men and a boy to do not more than one-half the work that one man will do with the improved fanning mill with the assistance of a gasoline engine.

Those who are lamenting that many boys have left the farm for the city fail to appreciate that many of them are engaged in the manufacture of machinery for farm use and in this way are rendering a greater service to agriculture than they would by remaining on the farm. Economic conditions regulate the flow of people from one industry to another and no amount of preaching, regulation, or pleading will change this condition.

This fanning mill well exemplifies many other machines which have been improved, making farm work easier and requiring less labor. We do not believe we are in a serious condition when those who leave the farm are able to provide machinery which will require the work of only one man where the old machine required three and, further, which will do as much as six did with the old machine.

Our reasoning is often superficial and to come to a sane, sensible conclusion regarding agricultural conditions we must take into account the constant changes that are taking place and the improvements that are being made, requiring less people for the production of both food and clothing. The less people required in these occupations, the more there will be to provide luxuries and other useful commodities which make life more attractive and pleasant.

THE HOG MARKET

If we review the hog market for a period of 50 or more years we will find the prices fluctuating very materially. First, the farmer is selling his hogs above the cost of production and then below the cost. The farmer who raises hogs appreciates this condition in a practical way for the statement is made that if farmers will raise hogs and make a business of it there is money to be made from them, but going into hogs when they are high in price and selling out when they are low invariably leads to heavy losses.

The prolificacy of swine makes it comparatively easy to grow a large number in a short time. When the food administration urged that more pork be produced, inside of a year there was a large over-production of pork and prices declined below cost of production. That is, if we calculate that it requires twelve bushels of corn to produce one hundred pounds of pork; but we do not consider this sound economics. If corn sells for $1.50 per bushel then it is estimated, on the basis of twelve bushels for one hundred pounds of pork, that it costs $18 to produce the pork. Dairymen have by-products, such as milk and whey, which are admirable supplements to corn and barley for the growth of pork, but they do not have a market value unless live stock is kept. Further, there are certain pieces of land where hogs can be pastured and cared for at a very small expense. In this way the farmer lessens the cost of pork production. Even one hundred pounds of pork will not bring the equivalent in return for 12 bushels of corn. Hogs raised on by-products, pasture, unmarketable feeds, etc., will return some profit.

Attempt is now being made to stabilize the hog market to prevent wide fluctuations in prices and to assure the hog raiser a constant profit. This will be a most difficult thing to do. It is only the far-sighted hog raiser who appreciates that to get a profit out of swine he must continue in the business and use by-products. Stabilizing the prices of hogs would be advantageous to farmers, but it is most difficult to get all farmers to act in unison.

GOOD CHEESE

The producers and manufacturers of dairy products as a whole do not appreciate that quality is a large factor in the amount of dairy products consumed.

At the Wisconsin State Fair this year about 10,000 cheese sandwiches were given away daily. The cheese for these sandwiches was carefully selected and of high quality. It was contributed by cheese manufacturers for free distribution at the fair because they know the advantage to the cheese industry of Wisconsin in acquainting the consumer with a good quality of cheese. Dairy and Food Commissioner Weigle conceived the idea and handled the work, even to the handing out of sandwiches. As the people ate these sandwiches remarks were heard, as "My, I wish we could buy such cheese at our stores." "Why can't we buy such cheese at our stores?"

During the last few years cheese manufacturers have tried to produce a large overrun and in so doing produced a whey soaked cheese. It is easier for the cheesemaker to make this kind of cheese; his hours of work are shorter and the larger overrun has temporarily brought a larger return, but it has injured our cheese industry. These men who secured excessive overrun and who have put cheese on the market which contains too much whey are not deceiving the consumer but are camouflaging themselves.

Eight people at their noon luncheon at the Wisconsin Fair consumed two pounds of good cheese. We dare say this was more cheese than most of them had eaten in a month. Every one of these people desired to purchase some cheese just like that which they had been served. The cheese they ate was of high quality and that was the secret of its being so toothsome and their desire to purchase some just like it.

Prices for good cheese must be increased and for poor cheese they must be decreased. There must be a hearty co-operative effort between all the dairy forces in cheese producing states to improve the quality and to acquaint the consumer with the nourishing property of cheese if the cheese industry is to be enlarged and the prices secured for cheese in keeping with its food value.

FARM BUREAUS

No national movement to organize the farmers ever made faster progress or received more hearty approval from every source than has the farm bureau. The world's war revealed to the people a new understanding of agriculture and for the first time in the history of our country were we concerned about our food supply. Our conditions brought forth effort to stimulate the production of agricultural products, and in countries where there were no agricultural agents food emergency agents were placed to assist and to direct the production and handling of various agricultural products.

In our country a number of farm bureaus existed, some of which were entirely supported by the farmers, others by business men and farmers. It was soon found that in counties where there were successful farm bureaus, agricultural problems could be handled with dispatch and efficiency. This condition brought to the attention of the leading farmers the necessity of furthering this form of agricultural organization and, particularly, at the close of the war when agriculture had to be adjusted to new conditions.

It had also been shown that through organized effort and intelligent direction it was possible to increase the production of the crops most needed. For example, the acreage of wheat was materially increased and so was the production of pork. In this work the leading farmers saw how essential it is to have agriculture organized and served by agents similar to those the business man has employed for years. The outcome has been that many farm bureaus have been organized in this country. In Iowa and New York every county has a farm bureau and some other states are nearly 100%. In all there are over 800 county farm bureaus and 31 states have federated and these are organized into what is known as the American Farm Bureau Federation. This organization has made unusual progress because it is a form of organization in keeping with our form of government and American institutions, and it is organized from the bottom up and not from the top down. The farmers, themselves, are the ones forming these bureaus and the only persons who can become members are bona-fide farmers.

The American Farm Bureau Federation is rapidly perfecting its program. It will not confine all its efforts to the business side of agriculture, but will attempt to develop a better social life in the rural communities. The only danger we see is that some of its members and, perhaps, its officers will be too ambitious and attempt to carry into effect the reforms that are impossible or some of its members may become impatient because the evils that have crept into our economic system are not corrected as rapidly as they would desire.

It should be remembered that the American Farm Bureau Federation is not the first national organization which has tried to improve the social and economic conditions of the farmers. The problems which are now confronting us are not new. If we should read the history of the various national farm organizations we would find that they had in view correcting and improving about the same things that confront the farm bureau at present.

The farm bureau can do much to improve our present marketing system, to assist in securing better laws, in bringing about a better system of transportation, rural education, etc., all of which will contribute to the healthful development of agriculture. Its members must never lose sight of the fact, however, that notwithstanding the opportunity to improve our present condition and to eliminate men and agencies that contribute nothing either to the producer or consumer, the greatest factors for progress and profit in agriculture lie in the hands of the men who operate the farms. The largest toll today upon the average farm in America is revealed by the poor methods of farming, the keeping of poor cows, indifferent care to their products, improper feeding, lack of understanding of what is essential to the proper treatment of the soils and indifference to the value of co-operative effort.

Only a short time ago we found farmers selling butterfat for 5c less per pound than the local farmers' co-operative creamery was paying because they could receive cash from the other institution. We were amazed at the action of these farmers, their indifference to the co-operative creamery, and their willingness to sell butterfat at a reduced price for cash.

It is not our purpose to point out in an editorial all the opportunities to improve agricultural practices, but we do desire to call attention to the fact that if every farmer will put forth his best efforts to keep his soil fertile, to select the best producing animals, to produce a high quality of product, to co-operate with his neighbor, and otherwise show discretion in his business affairs, that his returns will be larger for such efforts than he can hope to gain through any organization or improvement in marketing system or laws which might be passed to his benefit. The destiny of most any individual is more largely under his control than under the control of others. We would not care to have it inferred that the farm bureau has not a large service to render, for it brings the farmers together for the discussion of their problems and it can be a tremendous force in correcting our economic evils and improving the social conditions, all of which are highly desirable and will be a tremendous help in the promotion of agriculture.

Registering Farm Name

We understand that there is a register in which record is kept of names of farmsteads. Would you please inform us where a copy of such might be obtained?

Valders, Wis. A. W. J.

The procedure for registering farm names in Wisconsin is very simple. The name is merely reported to the County Register of Deeds. If no other farm in the county has previously selected the same name, the name of the farm will be registered by him and no other farm in the county will be registered under the same name. The fee for this registration is 25 cents.

Barley Beards

Is there any danger to stock from the beards in feeding barley straw? I had a thin stand of barley this year and a great deal of red top came in so that it is nearly half red top. As the hay crop was light I would like to feed the straw if it can be done with safety. Would it be better to feed it to horses or cattle?

Camden, N. Y. J. B. G.

There is little danger in feeding barley straw to live stock. Occasionally the beards of the barley have produced sore mouths and in such cases there has been found a considerable number of beards under the tongue or at the sides of the cheek which the animal has been unable to masticate, but these can be easily removed and the trouble will disappear.

For cattle not producing milk, straw can be used to good advantage, as it will produce some heat. For the milking cows, however, we would not advocate the use of very much straw, if any, for it furnishes very little nutrients for the manufacture of milk. We prefer to feed horses straw, when not at labor, rather than dairy cows.

Two-piece Stave Silo

We are thinking of buying a two-piece stave silo, but fear it may warp and spread. Have any complaints on this score been received? What is your opinion as to Washington fir as a silo wood?

Milwaukee, Wis. W. L.

We have never had any complaints as to difficulty with the two-piece stave silo. Indeed we see no reason why there should be any complaint if these are properly erected and joints are broken between staves.

Fir is an excellent silo wood and should give very good satisfaction. According to the best information available, the best wood for the silo is edge grain selected from heart wood. The best varieties are, in the order given: Red wood, cypress, Oregon or Douglas fir, southern yellow pine, tamarack, white pine, hemlock, and Norway pine. Washington fir, which is practically identical with Oregon fir, is the most commonly used silo wood. It can be obtained in long lengths, is usually free from knots and sap, and is very durable.

Cutting Soy Beans for Hay

I have a field of soy beans which I intend to cut for hay. Will you kindly advise the best time to cut this to feed dairy cows? In another field I have some sowed corn. I have no silo, so will you also advise what is the best way to feed this and if it isn't advisable to shock in the field and let it cure as fodder? Have a field of rye and vetch. Is this a good dairy feed?

Chevy Chase, Md. J. B. W.

If cut too early, the stems and leaves of soy beans are too succulent to cure readily, while too late cutting means coarse, woody hay, much of which will be wasted in the manger. Just at the time that pods are forming gives the best results from the standpoint of high quality and ease in curing.

It is almost necessary that soy bean hay be cured in the cock. It should be allowed to wilt about a day in the swath and then raked up and built into small cocks to prevent too much heating. In good curing weather, it should be ready to haul in a week or less time. Before hauling the cocks should be opened up and allowed to dry out for a few hours.

If by "sowed corn" is meant corn that has been drilled in similar to the manner in which grain is seeded, probably the best method of handling is to cut and cure it as hay is cured. If this corn is drilled in rows about three feet apart, then the better way of handling it is to cut and cure it as shocked corn. Information as to handling of the crop in this manner appeared, in reply to a similar inquiry, in these columns a few weeks ago.

Rye and vetch will make a good grade of hay and should prove a good feed for dairy cattle. This will hold particularly true if the rye is cut when in the bloom and before it has fully matured and become dry and strawy. Such hay should be equal in feeding value to mixed timothy and clover, and if the vetch is in considerable quantity, it will possibly be equal to either clover or alfalfa hay. However, much will depend upon the time at which cut and the method of curing and handling the hay so as to make it most palatable and nutritious.

Cotton Seed for Cows

Cotton seed costs $23 per ton. Please tell me how much whole cotton seed it is safe to feed to young Jersey cows that have alfalfa hay and Bermuda grass pasture to run on. I am now feeding 30 to 35, per day, to 20 cows. How much should they have, in cold weather, when fed 30 lbs. of sorghum ensilage per cow per day?

Holtville, Calif. J. P. D.

Just how much whole cotton seed can be safely fed to young Jersey cows, we are unable to say. We appreciate that in the South as high as five and six pounds and, sometimes, more of cottonseed meal, is fed daily per animal, and cases have been reported to us where seven to eight pounds of cottonseed meal have been fed per steer per day. We are sure that better results can be obtained if less cottonseed meal is fed.

In making mixtures for rations we dislike to suggest more than two pounds of cotton seed per day and we would say that, on the whole, three pounds of cotton seed would be quite within the safe limits of feeding. We are strongly of the opinion that if cotton seed is fed that other meal should be mixed with it.

Alfalfa hay is rich in protein and so is cotton seed. In view of this, it would be better, if possible, to secure some ground barley to mix with the cotton seed. Sorghum silage will supplement the cotton seed pretty well, as it is rich in carbohydrates, but we would not consider it a good practice to feed just cotton seed in connection with it. If no other feed can be obtained, we believe it would be safe to give each cow daily as high as five or six pounds, gradually bringing the cow to this amount.

Value of Oat Straw

What is the value of oat hay for dairy cows? Is it superior to timothy? At what stage must it be cut to obtain best results?

Cle Elum, Wash. C. B.

According to average analyses, 100 pounds of oat hay will contain the following digestible nutrients: 4.5 pounds of protein, 38.1 pounds of carbohydrates, and 1.7 pounds of fat; or a total of 46.4 pounds digestible nutrients. This hay will be superior to timothy for feeding dairy cows because it contains over one-third more protein. This will hold particularly true where protein feeds are high in price and difficult to secure. Ordinarily carbohydrate feeds, such as corn and barley, are relatively cheaper in price than protein feeds, such as gluten and oil meal, which are necessary to supplement rations of corn silage and timothy hay.

Clover and alfalfa hay are superior to oat hay, but mixed timothy and clover is practically the same in feeding value as oat hay.

To obtain the best quality of hay, the oats should be cut when in the flower or when the grain is in the early milk stage. If left until a later stage, the stems and leaves become somewhat more indigestible and are less palatable. Also the protein content is somewhat less where the grain is allowed to practically reach maturity.

Feeding Oat Straw

What do you think of feeding oat straw as a roughage to milk cows this winter? When we threshed we had the straw blown into the barn. It is a fine straw, not coarse like some, and in good condition.

Mulberry Grove, Ill. C. E. T.

When oats are cut rather green, oat straw has feeding value. We would not, however, recommend its use to cows giving milk unless there was a decided shortage of hay, especially clover or alfalfa.

Good oat straw is nearly as good a feed as timothy hay provided the oats were cut early and the timothy hay late. Ordinary oat straw requires nearly as much energy to digest and assimilate it as it will furnish to the cow. In view of this, we do not believe it is wise for the person trying to produce milk to feed very much of it. A little for variety's sake, especially if there is a shortage of clover and alfalfa, may be in order.

It should be remembered that in the ripening process grain locks up the nutrients in the straw. The tender twigs of trees can be used by the animal and considerable nourishment gained from them, but when they ripen their nutrients become less available to the animal. In the ripening process the straw of the oats passes through a similar stage. Therefore, we do not recommend the feeding of oat straw except when there is a shortage of good clover or alfalfa or some other kind of legume.

Trouble With Pasteurized Milk

Six weeks ago I installed a pasteurizer (300 gallons capacity) and ever since have been having trouble with sour milk. Have been selling raw milk for years and never did have so much trouble. I was told to hold the milk at 145 degrees for 30 minutes but find out the cream will not raise at that temperature, so I have been holding at 142 degrees for 35 minutes. I cool with well water to 70 degrees which takes 25 minutes, then with brine to 50 degrees, temperature in ice box 50-58 degrees. Can you tell me my trouble? I always thought pasteurized milk would not sour very quickly.

Connersville, Ind. B. T. D.

Some twenty years ago, experiments were made at the Dairy Department of the University of Wisconsin to observe the effect of heating milk to a temperature of 140 degrees F. on the destruction of bacteria and on the cream line which will appear when such heated milk has been cooled and bottled.

These experiments were made in a closed pasteurizer where the conditions of heating were similar to those in the pasteurizer mentioned by the writer of this inquiry. The results of these trials showed that heating to 140 degrees F. for ten minutes in a closed pasteurizer was sufficient to destroy the vitality of the tubercle organism and further, that milk heated to 140 degrees F. for periods varying from fifteen to sixty minutes, then cooled and treated as bottled pasteurized milk is usually handled, showed a cream line and as thick a layer of cream as was noticed on the raw milk.

It was further noticed that milk heated to this temperature of 140 degrees F. kept sweet for at least six days, which is a sufficient length of time for all practical purposes.

A bacteriological examination of these milks showed that 99.8 per cent of the bacteria were destroyed.

From these experiments it was concluded that milk pasteurized by heating to a temperature of 140 degrees F. for not less than fifteen minutes would show a good cream line when bottled and the keeping quality was entirely satisfactory.

It has not been noticed before this, that if milk was heated to a higher temperature, say 145 degrees F. and above for a period of time for fifteen minutes or longer, this interfered considerably with the raising of the cream in the bottles and on that account made such bottled pasteurized milk unsatisfactory to the consumer.

Some of the essential points in successful pasteurization of milk which is to be bottled and delivered to the consumer are first, sweet milk. It is not possible to overcome any slightly developed acidity in milk by pasteurizing it, but the milk should be both clean and sweet, containing less than .2 per cent acidity when it is pasteurized.

Second, the pasteurizer must be absolutely clean and sterilized before the milk is placed in it.

Third, the milk must be heated to a temperature of 140 degrees F. and held at this temperature for at least fifteen minutes. The temperature of each lot of milk heated should be carefullly watched to be sure that 140 degrees F. is reached but not exceeded and a tolerably accurate thermometer should be used for this purpose.

Fourth, after the heating period, the milk should be cooled as rapidly as possible to at least 50 degrees F. and if the milk is bottled at this temperature, these bottles should be placed in a refrigerator or packed in boxes with ice so that the temperature does not exceed 50 degrees F. at any time until it is delivered to the consumer. A still colder temperature than 50 degrees F. aids both in obtaining a satisfactory cream line and in preventing the milk from souring.

I judge from the letter of your correspondent that the keeping quality of his milk will be improved if he will cool the milk to about 40 degrees F. instead of 50 degrees F. and hold it at this temperature until it is delivered to the consumer.

It hardly seems necessary to state that pasteurized milk should always be filled into bottles that are thoroughly washed and completely sterilized, as pasteurized milk may be easily seeded with germs which will cause it to sour if the bottles are not clean and sterile every time they are filled.

Barrett Everlastic Roofings

The Best Roofing Investment—

The only *economical* roof is one that *combines* low cost with long service.

You will always find *that* combination in Barrett Everlastic Roofings. And their economy is still further increased by quick, inexpensive laying and almost entire freedom from upkeep cost.

No matter what steep-roofed building you are planning to cover, one of the four styles of Everlastic is exactly suited to the job.

In roll roofing you have a choice of two styles—one plain-surfaced, the other handsomely coated with red or green crushed slate.

There are also two styles of Everlastic Shingles, one single and one in strips of four—both surfaced with crushed slate in artistic natural art-shades of red or green.

All four styles of Everlastic are fully described in our illustrated booklets, which we will send free on request. It will pay you to send for them.

Everlastic "Rubber" Roofing

This is one of our most popular roofings. A recognized standard among "rubber" roofings. Famous for durability. Made of high-grade waterproofing materials, it defies wind and weather and insures dry, comfortable buildings under all weather conditions. Tough, pliable, durable and low in price. It is easy to lay, no skilled labor required. Nails and cement in each roll.

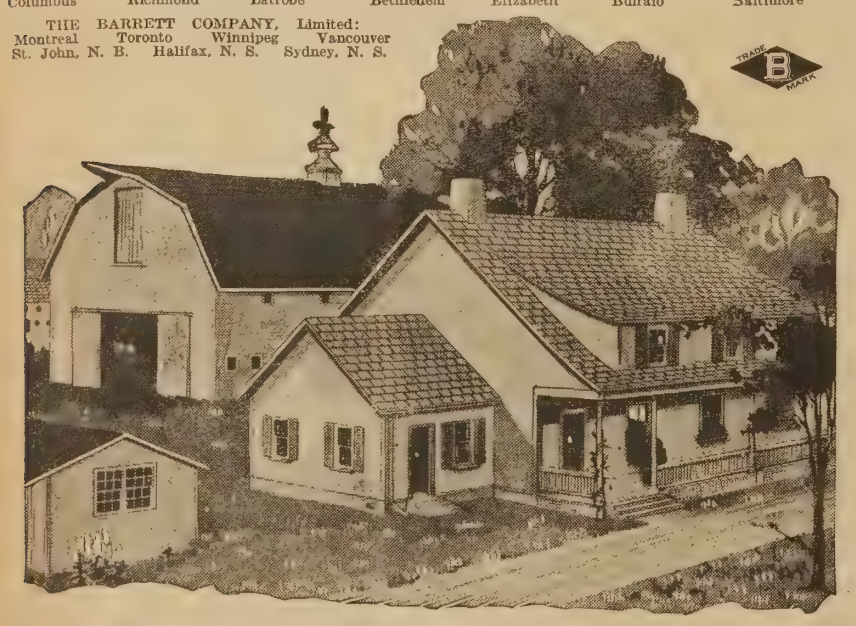
Everlastic Slate-Surfaced Roofing

A high-grade roll roofing, *surfaced with genuine crushed slate*, in two natural shades, red or green. Needs no painting. Handsome enough for a home, economical enough for a barn or garage. Combines real protection against fire with beauty. Nails and cement with each roll.

Everlastic Multi-Shingles
(4-Shingles-in-One)

Made of high-grade thoroughly water-proofed felt and *surfaced with crushed slate* in beautiful natural slate colors, either red or green. Laid in strips of *four shingles in one* at far less cost in labor and time than for wooden shingles. Give you a roof of artistic beauty worthy of the finest buildings, and one that resists fire and weather. Need no painting.

Everlastic Single Shingles



Made of the same durable slate-surfaced (red or green) material as the Multi-Shingles, but cut into individual shingles, 8x12¾ inches. Laid like wooden shingles but cost less per year of service. Need no painting.

Washington, D. C., Weekly News

[SPECIAL TO HOARD'S DAIRYMAN]

WASHINGTON, SEPT. 6—The Washington office of the National Dairy Union has undertaken an inspection of the leading text books used in the graded and high schools for instruction in food values to determine just how far the propaganda for margarine has found its way into these books. Numerous instances have been reported where other forms of margarine propaganda have been found in the schools, especially the motion pictures used to advertise some of the leading makes of imitation butter. How far this is getting into text books is not known but will be determined, if possible, by this survey. The officers of the National Dairy Union would be glad to have reported any specific cases where text books misrepresent the real facts as to the superiority of butter as a vital human food, so they may be looked up in Congressional Library and, if verified, given proper attention with publishers and school officials.

⚜

Attorneys for the five packers appeared in Federal District Court here on Tuesday last, and filed the plan for the disposal of the stock yards in accordance with the so-called "divorcement" decree entered into by the packers and the Department of Justice last spring. Selling the stock yards was one of the principal items in that agreement. The "plan" filed provides for the sale of the yards to a holding company under the name of F. H. Prince & Co., which is to take over the big yards but not the smaller ones at Newark, Jersey City, Portland, and Cleveland. F. H. Prince is said to be a Boston banker. The plan provides for the taking of stock in the holding company up to 49 per cent of its capital as part of the payment for the yards, said to be valued at upwards of $30,000,000. The holding company agrees to maintain them in their present position and condition for ten years. The Department of Justice is given until October 7 to file objections to this deal. An affidavit filed with these documents states that "it is inexpedient to attempt a piecemeal sale of the yards at this time owing to the financial uncertainties".

⚜

Mention was made in this letter recently of the stringent action taken by Secretary of Agriculture Meredith, in deciding that the proposed commission charged by live stock commission houses in the packer centers for so-called "plural ownership cars" was unjust, unfair, and discriminatory, and fixing a new and much lower schedule of commissions. The commissioner was served this week with injunction papers, secured by Kansas City dealers, restraining him temporarily from enforcing his order. He has asked representatives of agricultural and live stock produce associations to join him in opposing the demand of the commission firms to have this injunction made permanent, the hearing to be held September 16 in Federal District Court, Kansas City.

⚜

The current issue of the Market Reporter has an unusually interesting list of items of interest to dairymen. The first, and perhaps the most important, except the actual record of butter market prices and movements, is a review of the condensed milk market. This situation is far from satisfactory, the monthly report showing a marked decline in exports, a large increase in domestic stocks, a general advance in milk prices, and no corresponding increase in domestic prices. The tightening loans and large stocks on hand have forced the liquidation of stocks in the open market resulting in considerably lowered prices. The review concludes with the warning that unless conditions have improved, which seems unlikely, "The condensed and evaporated milk industry stands to take losses on high costing milk, unless the export demand increases soon and the domestic outlets take larger quantities." In the face of this showing, import records show almost doubled imports of condensed milk for July over July last year, and fully 50 per cent increase for the first seven months, 1920, over the same period in 1919.

However, both butter and cheese markets showed material strength and improvement in the period reported on. One shipment of 1900 casks of Danish butter came in. The supply as indicated by reports from the big centralizers and the arrivals at chief markets show a steady falling off both as compared with last year and as compared with previous weeks this year. So also butter in storage, while it increased last week by a trifle over a million pounds, is still far short of the 1919 figures, with about 67 million pounds reported as against 83 million a year ago. The current receipts in the chief markets were 10,707,000 pounds, as against considerably over twelve and a half million the same week last year. Strong consumptive demand for better grades of current make butter is reported. In the cheese side of the market, storage is more nearly normal, and a shortage of space is reported in some markets, especially Philadelphia. The better price seems to be due to seasonal decline in production, and in sympathy with the rising butter market.

The import figures call for some attention. Eight and a third million pounds of butter were imported in July, mostly from Holland and Denmark, with about a million and a half pounds from Canada.

How Co-operative Marketing Was Made a Success in California

(Continued from page 335)

rupt. By eliminating speculators and reducing distributing costs, this organization has been able to secure prices for oranges and lemons that are well above the cost of production at least five years out of six, and the thriving condition of the industry is a monument to the effective work done by the exchange.

Saved the Raisin Industry

The second largest co-operative marketing association in California is the California Associated Raisin Company, which last year handled over $38,000,000 of raisins and whose business during the next 12 months will probably exceed $60,000,000. This organization came into existence in 1913 because of the fact that practically all of the profits in the raisin business for years before had gone into speculators' pockets, and the industry was on the decline. The raisin company markets 87 per cent of the raisin crop of California, this being tied up over a period of years by an ironclad contract which binds raisin producers to sell their product through the organization.

The California Prune and Apricot Growers, Inc., is the third and young-

No Flies or Germ-laden insects can get into a Non-Spill Sanitary Dairy Pail. Dirt and foreign substances cannot get through the closely woven brass sieve top with the non-splash rim. The milk goes into the pail clean and free of impurities. These sanitary features of the new idea non-spill pail protect the health of your family.

The Non-Spill Pail is a dairy need on every farm for clean and sanitary milking. The non-spill feature alone will pay for the pail several times over in one summer season by saving the milk when the cow kicks. No milk can be spilled when the pail is overturned.

The Safeguards for the Health of your family are worth more than the pail costs. The pail holds 3 gallons, and is made of heavy charcoal tin plate. It is a good investment—not a luxury.

Your local dealer sells it or will get it for you.

It's a Schlueter metal product.

Dealers: Write for our special proposition. Your customers will want Non-Spill Sanitary Dairy Pails.

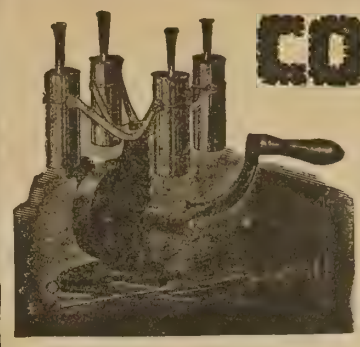
est of the Big Three of California co-operative marketing agencies. It began operations in 1917, and its organization resulted from almost identically the same conditions which forced the raisin and orange growers to organize. It now has over 8,000 members and markets over 70 per cent of the prunes and apricots produced in California. The general effects upon the industry have been almost exactly the same as with the other organizations—prices have been stabilized and farmers given a fair price for their products, speculators have been eliminated, the industry has been stimulated and largely increased production has resulted.

The smaller marketing organizations are about 30 in number, some of them being "small" only in comparison with the gigantic size of the Big Three. They include associations which market beans, almonds, berries, peaches, pears, honey, canned goods, dairy products, eggs, and various other products of the farm. It is interesting to note that every one of these associations was forced into existence because of the fact that these products were usually produced at a loss. The producers were literally forced to organize to keep out of the poorhouses. They have succeeded, often beyond the fondest dreams of those who backed them faithfully, and practically all of them now market two-thirds or more of the crop of the state in its particular industry.

Four Fundamental Principles

After two weeks of careful study of these enterprises in California, it seems to me that there are four fundamental things of outstanding importance in practically every one of these co-operative marketing enterprises. These are:



1. *These marketing associations are organized by commodity, and not by locality.* Peach growers and orange growers and bean growers may live in the same community, but they market their product through different co-operative associations. One man may sell different crops through three or four different commodity associations. All leaders in co-operative work in California, no matter how much they differ on other points, are agreed that this is an absolute essential.

2. *The associations have an absolute binding contract with every producer who belongs, requiring him to market all his products through the association over a period of years.* A California co-operative organization would no more think of starting now without this provision than it would of leaving its safe unlocked at night. The wisdom of years of experience in co-operation in California has burned the necessity of this provision into the very soul of co-operative enterprises.

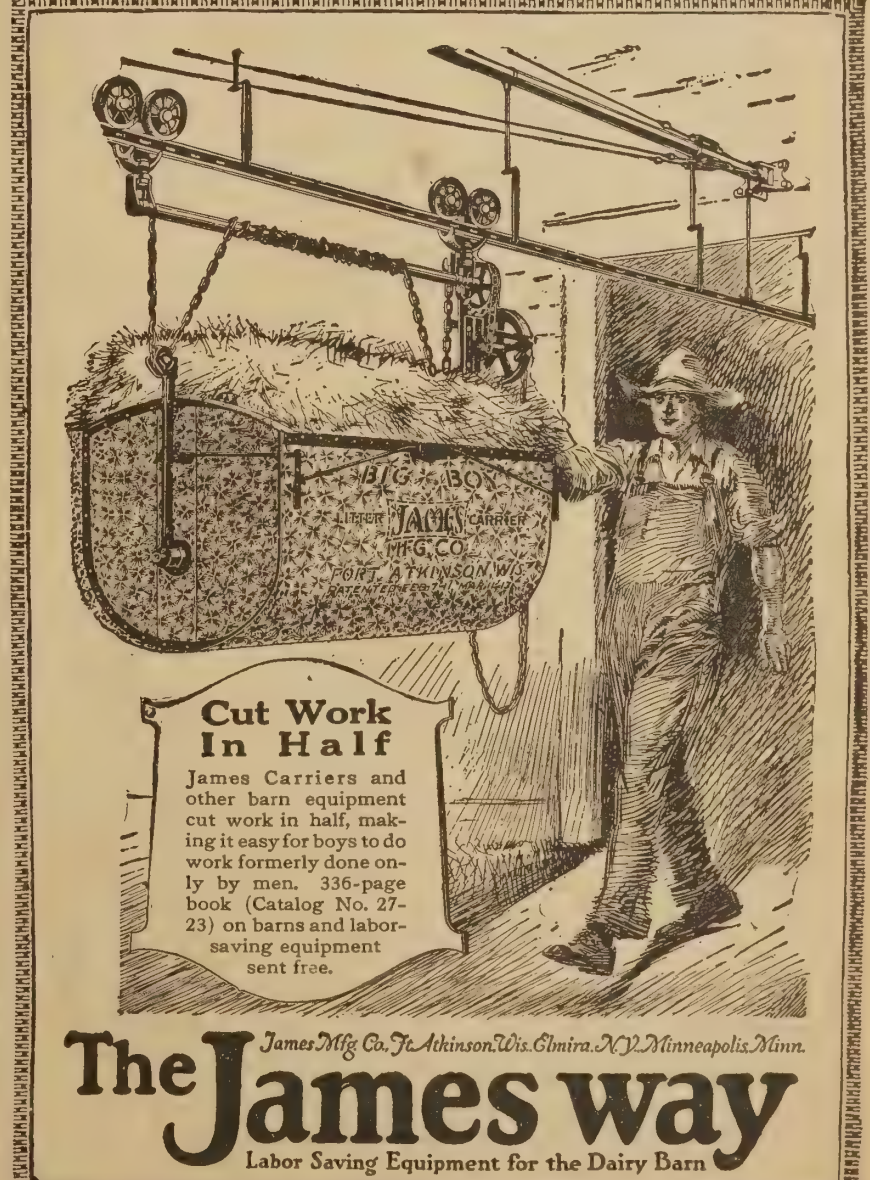
3. *Crops are handled on the pool basis, thereby giving every producer the same price for the same quality product, no matter when sold.* This rule, with little variation, is in effect in practically every co-operative organization in California. It is the basis of true co-operation, and the wisdom and fairness of this provision have been proven through the years.

4. *Organizations are without capital stock and operate on the non-profit plan.* Most of the California co-operative associations are operating under the non-profit plan with no capital stock, and the others are rapidly changing to this plan or are endeavoring to do so.

In subsequent articles, I will discuss these principles in detail, and in telling how they were arrived at, will tell the story of the development of certain of the important co-operative enterprises in California.—Copyright 1920 Standard Farm Papers Inc.

COMPLETE MILK TESTER for $6.95

The "boarder" cow must go. The high cost of feed makes it imperative that every cow must earn its keep. Appearances are deceiving. Frequently the cow you think is best, is found wanting when her milk or cream is subjected to the Babcock test.



The Crepaco Babcock Tester shown above is a necessity on every dairy farm. It will enable you to be sure you are accurately remunerated for your milk or cream; it will enable you to scientifically feed your cows to produce maximum results; it will enable you to dispose of the unprofitable cow and to buy new cows with your eyes open.

The day has passed when the dairy farmer can depend on guess work. The man who **knows** is the man who succeeds. The U. S. Dept. of Agriculture; the State Agricultural Schools; all County Agents and other authorities recommend the Babcock Test.

The outfit illustrated will give accurate results. Complete instructions for making tests supplied with each outfit. It is the No. 1, 4 bottle size. Supplied complete with glassware at $6.95. It is noiseless in operation. Can be clamped to any table or bench. Quickly taken apart for cleaning. Prices on other sizes and styles on request.

It Will Soon Be Cold

How About Those Cows of Yours?

HAVE you ever stood on a concrete floor in winter? Of course you have and you know that it chilled you clear to the knees in a short time. Concrete is a good conductor of heat. It draws the heat right out of anything that touches it.

Now, how about those cows you depend on for so much milk per day? They have bedding. Sure they have—loose bedding that they push aside. Most of the time some part of the body, probably the tenderest part, is right on the concrete. They can't help getting chilled, and getting chilled means lower milk production, if not actual sickness.

If you want to get results from your cows, keep them warm, comfortable and contented. Circle A Cork Brick floors will keep your cows warm. They are nonconductors of heat. The warm body that lies on Circle A Cork Brick stays warm because the heat can't get through them. No chilled udders, lowered production or sickness due to cold with cork brick floors.

The book, "Better Stall Floors", will tell you something about cow comfort that will be worth money to you to know. It is free. Just drop a letter or card and say where to send it.

Armstrong Cork & Insulation Company 112 Twenty-fourth Street PITTSBURGH, PA.

Municipalization of Milk in New Zealand

(Continued from first page.)

ferent colors for the sake of quick identification. The big lorries arrive from the railway station, and the word comes up from the weighing floor, "Twenty of number 50." The tippers wait until the whole consignment of Farmer 50 is on the tip landing, and they then make a quick examination, as they take off the lids, to ascertain if the milk appears to be sweet. If it passes this test the milk is tipped and weighed, and a bulk sample taken for the daily laboratory test. The empty cans go down a conveyor, on the endless belt principle, to the washing floor.

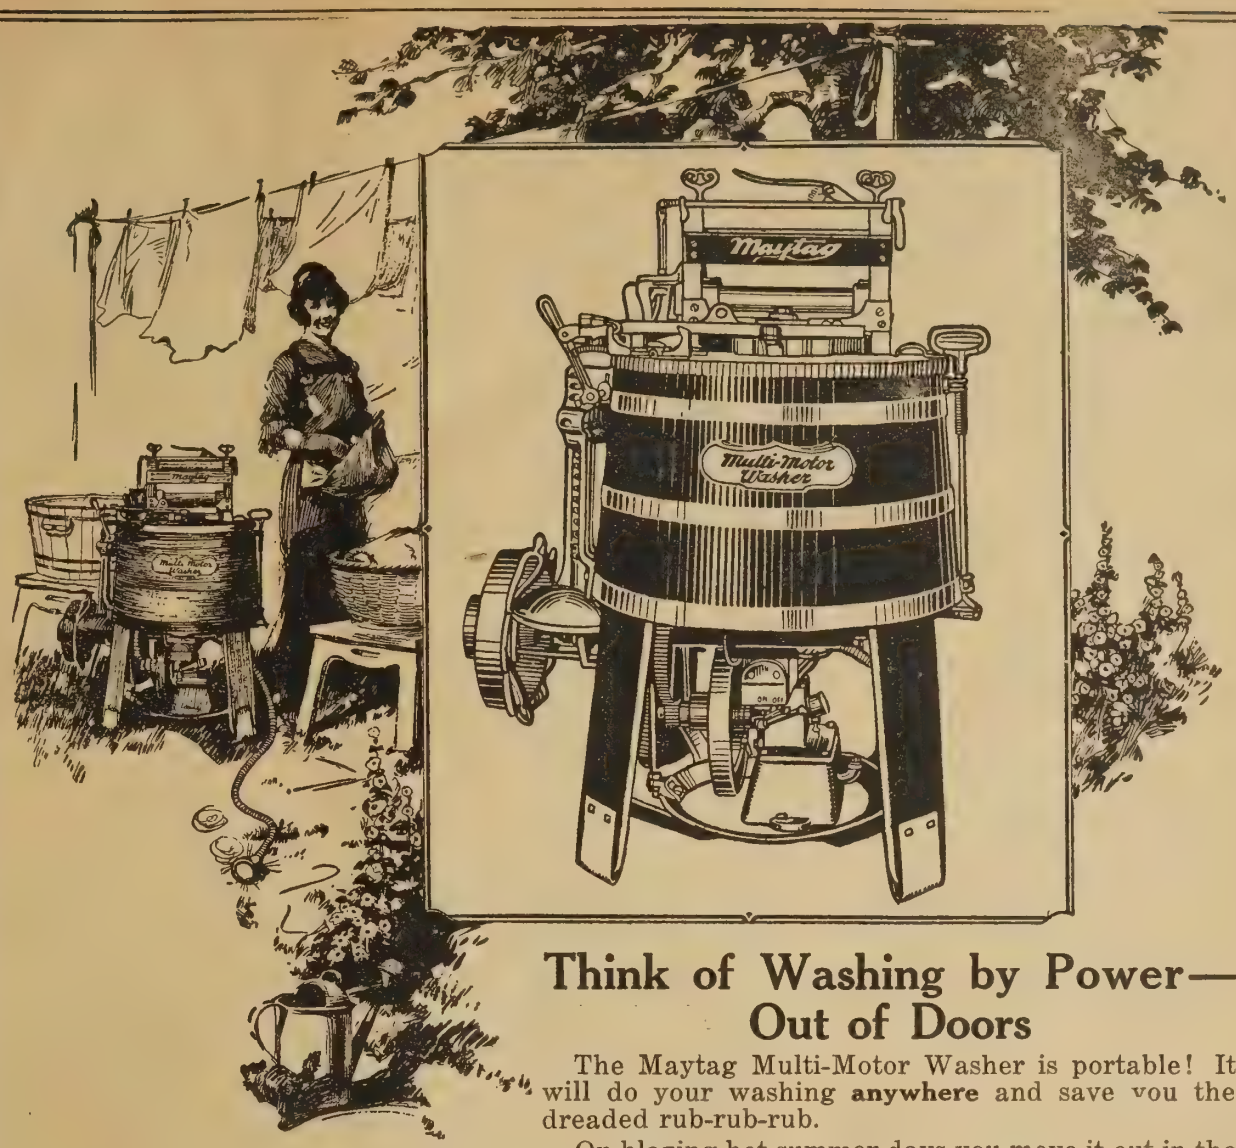
To follow the course of the milk one has to descend from this, the highest part of the factory, to the next floor, to which the fluid has gravitated to the pasteurizer. There are two Sharples clarifiers of 1,000 gallons capacity installed for the effective cleaning of the milk. The presence of these up-to-date machines shows the anxiety of the city council to provide the very best that can be obtained in order to ensure a perfectly clean product for the city consumer. The pasteurizer has a capacity of 2,500 gallons per hour. From this the milk rises into a large vat, divided into four compartments. An ingenious arrangement enables the milk to flow from each compartment into the next at the bottom. It passes through the whole series in about twenty minutes, during which time it has been subjected to a temperature of 145 to 150 degrees F., sufficiently long to decide the fate of all dangerous germs. The cooling process following is gradual. First, the milk goes over the water-cooler, then over a large cooler, the top half of which is cooled by water, and the lower half by a brine. Finally it is further reduced by a brine cooler, and is now ready to be drawn off into the milk vendor's cans at the basement. Here we find an excellent quick-service device under which a tank is filled from the cooler, automatically weighed (in gallons), and run off into six cans simultaneously. The entrance to the cool chamber is close at hand, enabling the purified cool milk to be placed in a temperature of 40 degrees until it can be delivered to the vendors.

An important provision is that under which no vendor is permitted to carry over until next day any of his unsold supply. It is returned to the depot, tested for quality, and an allowance of full value made.

At present the cans undergo the familiar cleansing process of rinsing and steaming, but the depot will shortly have in operation an American machine cleanser capable of dealing effectively with three hundred cans per hour. They go in at one side, travel round a large circle, and during this rotation are successively rinsed with cold water, then with warm water, soda solution, steamed, and finally dried by hot air. The depot undertakes the cleansing of all suppliers' cans, as well as these used by the vendors, and at present handles 1,400 per day.

The erratic nature of the demand for cream is usually the despair of the milk distributor. One of the most prominent men in the business in Wellington, replying to public criticism of the milk supply, plaintively asked why the public expected the unfortunate cow to give six times more cream on Saturdays than any other day in the week. The only resource of the average vendor was to build up his cream supply for Sunday's demand by preservative "dope". This is now taboo, but city enterprise has come to his aid. He can get what he wants, in any quantity, and quite fresh, for the depot equipment includes a complete cream separating and pasteurizing plant. Even now, the business is full of surprises. The luscious strawberry might be cheap and plentiful, but a "southerly buster" on Saturday will put cooling dishes out of the question on Sunday, and prospective orders drop to a fraction. Now the depot can turn the surplus cream into butter, and nobody loses.

A small laboratory staff keeps careful records of the condition of the milk when it arrives, and when it is bulked for the city supply. The test bottles constitute a check on the farmer, and also a safeguard. In the old days of unrestricted private enterprise prosecutions for below-standard and impure milk were frequent, and the vendor often endeavored to shoulder the blame onto the farmer. And now the vendor gets a supply which has been tested from the bulked milk in the cooler, where it



JEAN OF CRESTMONT, AYRSHIRE COW OWNED BY CRESTMONT FARM, PENNSYLVANIA

Her junior two-year record is 9,057 lbs. of 4.04 per cent milk. She has milked 50 lbs. per day as a three-year-old.

awaits delivery to him. He cannot impugn the honesty of the farmer if he is caught with adulterated milk. The farmer's test bottles go daily to the laboratory, where the Gerber test for butterfat content is applied. A fermentation test gives an indication as to the cleanliness of the consignment, and there are other checks upon the quality of the individual consignment. The Government minimum of 3.25 butterfat content is easily exceeded, even in winter, and the current test works out for bulk supply at 3.85.

Turning now to the retail distribution of the milk. There is in it a whole set of entirely different problems—not all yet solved to the satisfaction of the consumer. Wellington people are satisfied about the quality of the milk as it leaves the depot, but as it then goes into private hands, they realize that there is some risks of tampering. The vendors, however, have shown a good record on the whole, but complete confidence will only come when the city delivers the milk into the consumer's jug or preferably adopts the container system of distribution, which is now being investigated. The milk costs the city 11d per gallon. It is sold to the vendor at 1-5, and to the consumer at 2-. What is the reason for the big difference between the cost price, and that charged to the vendor? Herein lies an important part of the whole scheme. There was the utmost difficulty in getting the scores of milk vendors to adopt the block system of delivery. As sensible men, they realized that it would mean an enormous saving of labor and expense, but as individual business men, they were unable to concede this restriction on their enterprise. Faced with the early prospect of being superseded by the municipal competitor, they agreed to form companies in four groups, which included the whole of the vendors, and to serve separate districts having a consumption approximating to their former sales. This blocking of the city was achieved in a very creditable manner, and agreements were entered into with the four distributing concerns under which they undertake to charge the same price for milk summer or winter. There is admittedly high profit, especially when the savings of the block system are considered, and the scheme also involves overcharging the consumer in the summer, though he gets something back in the assured supply at the flat rate in winter. However, the difference between the depot price of 1-5 and the retail figure of 2- represents the concession which the city is making to the vendors for the right to take over their businesses without payment of good will in three years' time. The block system came into operation on July 8 last, and is working well, though there are occasional troubles due to the fact that customers with a grievance have no competitive vendor to whom their support can be transferred. But those who remember the serious evils of the old distributing system, it's danger to the public health, anl also have in mind the more assured and better paid position of the suppliers, admit that today's troubles are trifling compared with what used to prevail.

Think of Washing by Power—Out of Doors

The Maytag Multi-Motor Washer is portable! It will do your washing **anywhere** and save you the dreaded rub-rub-rub.

On blazing hot summer days you move it out in the cool shade of a tree or on the porch where delightful breezes blow. In winter you move it wherever it is most convenient—into the shed—the warm cellar—or the kitchen.

Handles biggest washings with ease. Will not harm most delicate things. It's a wonder. Comes equipped with reversible, adjustable, three-way power wringer.

Costs little. Does a big wash on a few pennies' worth of gasoline.

Go see the local Maytag dealer. Write for free copy of our "Household Manual".

Where Did Quality Go?

(Continued from page 329)

nary handling, as they had always been willing to do in the past.

Brooks was working hard. His hired man, whom he had counted on for all season, had just left because he had a good offer from the factory in a nearby town. All the arguments that Brooks could put up to him about the high living expense in town and his better chance to lay up money on the farm, as well as being better for his health and future plans, were of no avail. The hours were shorter in town and there was more going on, he said. Things were too quiet around that farm, anyway. So Brooks was doing two men's work until he could persuade someone else to try it in the lonely country for a time.

Brooks was fair minded enough not to complain unduly about the high prices of things that he had to buy, even though everything was double or treble what it had been three years before. But the thought that he could not get reconciled to was that no matter how much one now paid for many things, it was impossible to get articles that had the goods and would give reasonable service. It was not so long ago that one could get real quality by buying the best on the market, and he had always bought the best. What then had made this change in things all over the country in such a few months? For he knew that his experience was the same as that of others all around him and in all other parts of the country.

These things were on his mind so that he dreamed of them that night. It seemed as though he started out to find that elusive thing called quality, the thing that had been so sadly lacking in nearly everything that he had bought recently. He stopped first in his home town with his implement dealer. The wagon box that he had bought of him the fall before was giving out in several places, made of inferior wood.

"Come along with me," said Brooks, "and we'll see if we can locate the trouble. And you come, and you, and you," as he passed the grocer's, the clothier's, and the furniture store. "You may be responsible for some of the extra price tucked upon the things I have bought of you, but you did not manufacture them, and cannot be to blame for their poor quality. Let us see the wholesaler and the manufacturer."

So they took the train to the city and started on their rounds. The big wholesale houses were their first objective.

"What can I do for you, gentlemen?" asked the suave dealer whom they first accosted.

"We want to know why we can't get anything decent for our money any more," began the retail furniture dealer. The last shipment of stuff I got from you was almost junk when it reached me, and if I do sell it, the chances are that it will be brought

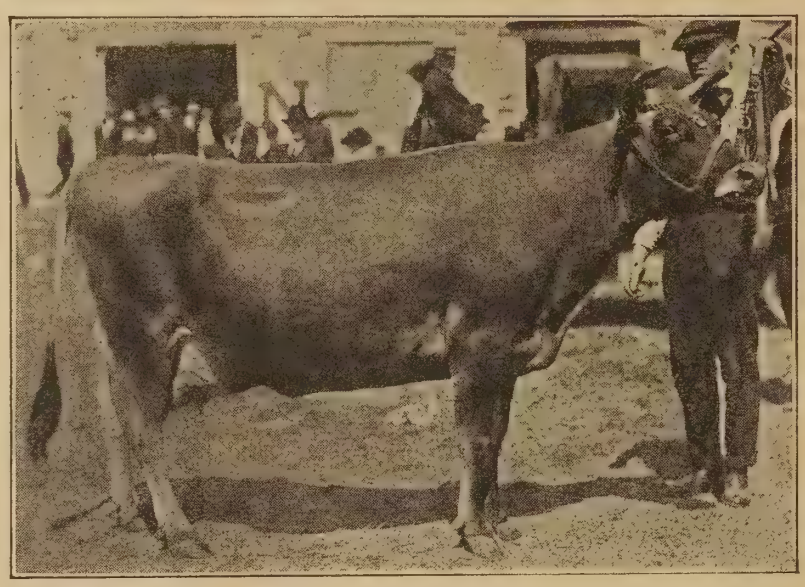
Wisconsin State Fair

IMP. ITCHEN MAY KING, SENIOR AND GRAND CHAMPION GUERNSEY BULL AT WISCONSIN STATE FAIR
OWNED BY FOX, KINGSTON & SON, WISCONSIN

"WE are gratified wth the attendance and growth of the Wisconsin State Fair," remarked Secretary Remey as we talked in his office on the great day of this year when for the first time in its history over a hundred thousand people passed through the gates. "I feel good over this," continued Mr. Remey, "not just because the attendance is large but because of an increase of from 25 to 35% or more in all the agricultural exhibits. That is what interests us. The free attractions and the races are a necessary part, but our increased exhibits and attendance will enable us next year to offer larger premiums and permit us to make it a larger and better agricultural fair. The cattle exhibit is increasing and we need more buildings to house them and to house our other agricultural exhibits. We have been assured of the co-operation of farm organizations in making this possible."

We have known Secretary Remey for many years, and it has been his aspiration and his constant effort to build an agricultural fair that will not only be a proper representation of the biggest dairy state in the Union, but one that will be of large and increasing service to the farmers of the state. He has sought to make it a clean fair and has worked in season and out of season to make it a real agricultural show rather than a carnival of extravagance.

⚜



Tired and disgusted with the weather given the state fairs of the past, Commissioner Norgord and Secretary Remey took up the weather reports for the past thirty years to find the dates when Milwaukee was most free from rain and storm. When they discovered the latter part of August to give the most ideal fair weather, they took that period for the fair of this year. Their judgment proved good, with the result that never before have such crowds visited the State Fair and never have the gate receipts been so plentiful and satisfactory. During the week 325,702 people passed through the turnstiles as compared with 242,095 for the biggest year ever before experienced, while the total gate receipts were $247,245.60 as against $196,810 for 1919, the largest receipts to that time.

The fair management is to be congratulated on its success in securing a large attendance and in presenting to Wisconsin the best fair of its history. The amusement program was excellent, the opportunity to spend money for every unnecessary object met the needs of the most extravagant, and the exhibits were of a character and number never before approached.

⚜

In the grand stand gathered immense crowds of sight-seers, but in the upper rooms were to be found the boys' and girls' clubs earnestly competing for the honor of representing their state at the Sioux City Fair. They were an interesting lot of youngsters and their parents and friends came in from all over the state to see their favorites demonstrate. The Fort Atkinson team, consisting of Russell Parks, Wilbur Glover, and Lester Daugs, secured the high score and were declared the state champions.

Up near the cattle barns was found the junior live stock exhibit and here were gathered the prize dairy and beef calves raised by the boys and girls of Wisconsin. The proud owners of these calves showed their devotion and they were good showmen even when the awards did not come their way. It seems too bad that all could not win, for all had given of their best. Several won prizes in the open classes, winning out against the serious competition of the well seasoned and veteran breeders and showmen.

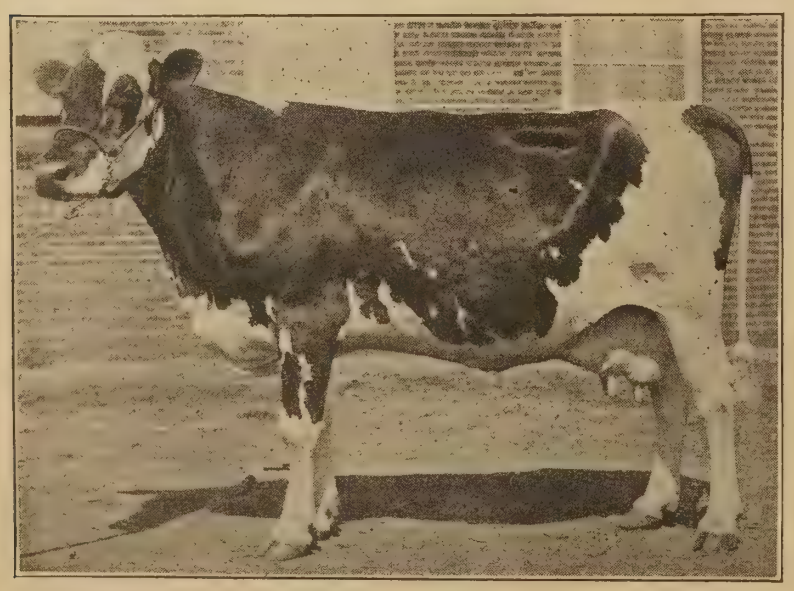
WESTFIELD GIRL, SENIOR AND GRAND CHAMPION JERSEY COW AT WISCONSIN STATE FAIR
OWNED BY A. M. MCCLENAHAN, COLORADO

But of all this, the junior editor will tell in an early issue.

⚜

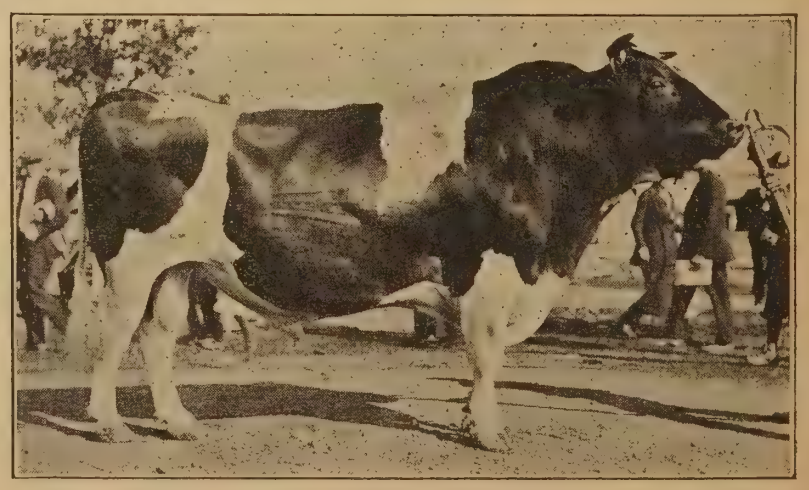
The horticultural exhibit was, perhaps, scarcely representative, but it could scarcely be expected with the fair held before fruit was ripe and showable. In the agricultural building there were many good exhibits and splendid grain was shown. Oconto County took first place with its attractive exhibit and display.

The immigration section of the state department of agriculture ran a moving picture show of why men come to Wisconsin to farm and told of the yet undeveloped empire in the North. This department has done much to advertise the state and stands ready to assist in advising where land can be purchased and what the prospective farmer may expect. Other exhibits by the department showed the extent of its disease control work and told something of the fearful toll of tuberculosis. The Bureau of Markets illustrated the service it stood ready to render farmers and it is to be hoped that the present political struggle in the state will not result in dislodging its efficient and fair-minded chief, Ed. Nordman.



⚜

The dairy building is scarcely commensurate with the importance of the industry in Wisconsin and could well be enlarged and made a more important center of interest around which to consolidate the various dairy manufacturers. The butter, cheese, and milk exhibits numbered 424, outranking those of previous years by over 50 per cent and were a credit to Messrs. Dodge and Sammis, who were in charge. The winners of first place in the several classes were as follows:



Cheddar Cheese, W. H. Thurk of Sugar Bush; Longhorns, etc., Emil Goull of Granton; Drum Swiss, Gottfried Rufenacht of Darlington; Block Swiss, Ernest Wuethrich of Bruce; Limburger, Arnold Widmer of Monticello; Brick cheese, Oswald Schneider of Appleton; creamery butter, Rudolph Else of Johnson Creek; dairy butter, J. H. Pilgrim of North Milwaukee; market milk, Bernard Hafemann of Wauwatosa; pasteurized milk, Blochowiak Dairy Co., of Milwaukee; pasteurized cream, Layton Park Dairy Co. of Milwaukee; certified milk, F. R. Whitcomb of Whitefish Bay; creamery milk, Schreiner Bros. of Thiensville; junior market milk, Floyd Klink of Cedarburg; market cream, F. S. Underwood of Wauwatosa.

⚜

Ten thousand cheese and butter sandwiches were given away daily at the booth presided over by Dairy Commissioner Weigle and the pretty girls from his office. As we stopped there for a few minutes, we heard the constant refrain: "Can I buy some

DOETJE NELLIE CONCORDIA, SENIOR AND GRAND CHAMPION HOLSTEIN COW AT WISCONSIN STATE FAIR

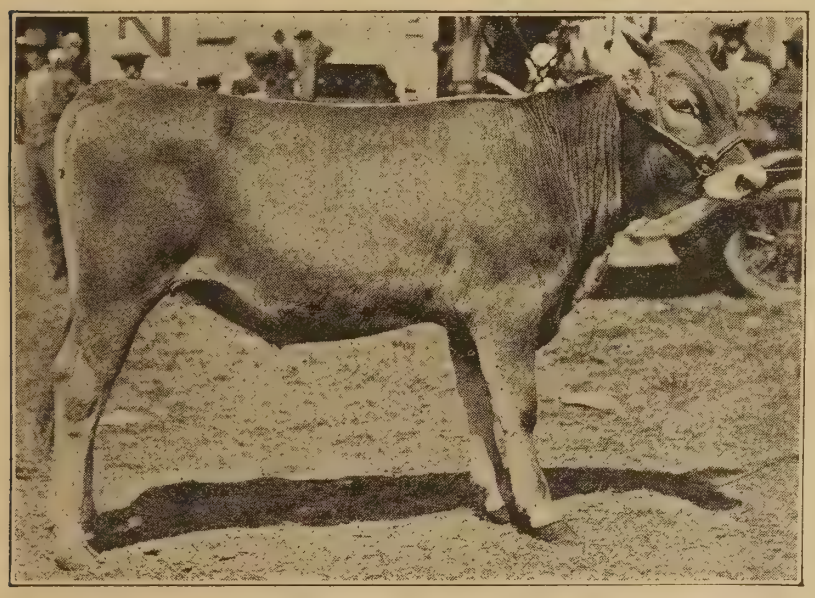
CEDAR LAWN CANARY PAUL, SENIOR AND GRAND CHAMPION HOLSTEIN BULL AT WISCONSIN STATE FAIR
OWNED BY BAIRD BROS., WISCONSIN

of this cheese?" Next year it is probable cheese dealers will see the desirability of meeting this demand, but above all else how are Wisconsin cheesemen to answer the accompanying complaint, "I can't get cheese like this at my grocery." Here in a nutshell is the cheese marketing problem. Improve the cheese sold over the counter and the demand will increase with leaps and bounds regardless of advancing prices. How long, how long before the industry will be able to so organize itself as to make this possible?

The Wisconsin Dairy Council distributed a large quantity of literature and had an attractive exhibit showing the value of milk and its products. It was also responsible for attractive signs and posters that appeared in appropriate spaces in the large glass refrigerator that held the butter and cheese exhibits.

⚜

Hogs, sheep, and poultry are found on most dairy farms, and there was a representative display in all departments. They are excellently housed and it is a pleasure to pass up the aisles in comfort and to be able to find the exhibits without the aid of a detective or a policeman. The live stock arena is convenient and accessible, but lack of space to properly house the cattle and enable them to be segregated in departments is an ever increasing shame to a state whose fame resides so largely in her cattle. The cattle were there in large numbers, but to find them and compare them was difficult. The fair management would improve this condition, but it needs an awakened interest on the part of the breeder in order to present properly this need to the state legislature.



The cow test barn was crowded at all times with farmers who came to learn and who know that "knowing" pays dividends in interest in the job as well as in money. Cramer, Searles, and Sutton presented their subject well and are to be congratulated on the discussion and interest aroused. A further discussion of this valuable part of the fair will appear in an early issue, where it can be given the prominence it deserves.

The Dairy Cattle

Wisconsin has for some years been ranked as the leading dairy state, but its state fair did not, for a good many years, boast of a really creditable exhibit of Wisconsin dairy cattle. There has, however, been a noticeable change during the past two years, a change which this year culminated in what was one of the best if not the best showing of dairy cattle ever made at any state fair. Approximately 850 entries passed through the rings, a very large majority of them Wisconsin owned cattle.

Such showings should be encouraged in every way possible and surely one of the first things needed is a suitable barn or barns for housing the live stock entries. Present accommodations are entirely inadequate and definite steps should be taken to remedy the difficulty before another fair season approaches.

One of the best features of the cattle exhibit this year was the showing made by boys' and girls' calf clubs. Starting with a half dozen entries two or three years ago, this department has grown to a point where it is a real feature. This year these junior stock men exhibited 141 calves, 97 Holsteins, 21 Jerseys, 16 Guernseys, 4 Brown Swiss, and 3 Ayrshires. They did not confine their entries to the junior classes, either. A score or more entered the open classes, several placed in the money, and one or two carried away blue ribbons in the face of stiff competition from their elders.

HELENA OF WALHALLA, JUNIOR AND GRAND CHAMPION BROWN SWISS COW AT WISCONSIN STATE FAIR
OWNED BY E. W. WILSON, ILLINOIS

Holsteins

The Black and White showing this year was not only the largest and best in the history of Wisconsin State Fairs, but it was a different kind of showing than at previous fairs. Heretofore the entries were largely members of a few fairly complete show herds, but this year the 472 head were representative of at least 60 different herds. The small breeder has apparently come into his own so far as showing is concerned, something for which the county herd idea is largely responsible.

Marlow and Randall of Minnesota brought the only out-of-state herd.

The quality of most of the entries was well above the usual standard although, of course, there were some misfits as there will always be in a good sized show.

The aged cow class was one of the two classes of females that stood out well above anything else. There were 26 entries and when Judge Moscrip had finally lined up the best ones the four leaders were outstanding good ones. Three of these were from the herd of Aitken Bros. and one was owned by Baird Bros., both Waukesha County breeders.

Doetje Nellie Concordia and Doetje Nellie, first and second respectively and incidentally dam and daughter, were Aitken entries as was Hulda Segis Koroba, fourth in the line. It is in-

Where Did Quality Go?

(Continued from page 341)

back to me or else I will never hear the last of the complaints about it. I have a good local trade that I have built up through long years of good service, and my customers know that I always have stood ready to make good anything that goes wrong with what I sell. But to do that now will soon put me out of business. Isn't it so, Dunn?"

"Yes," replied Dunn, the implement dealer, "I hate to handle the stuff that I do now, for I know machinery well enough to foresee all the trouble that will result when these cheaply made and put together implements that I am selling now have seen a little wear. But what can I do? I buy from the same houses that have always sent me good stuff before the war."

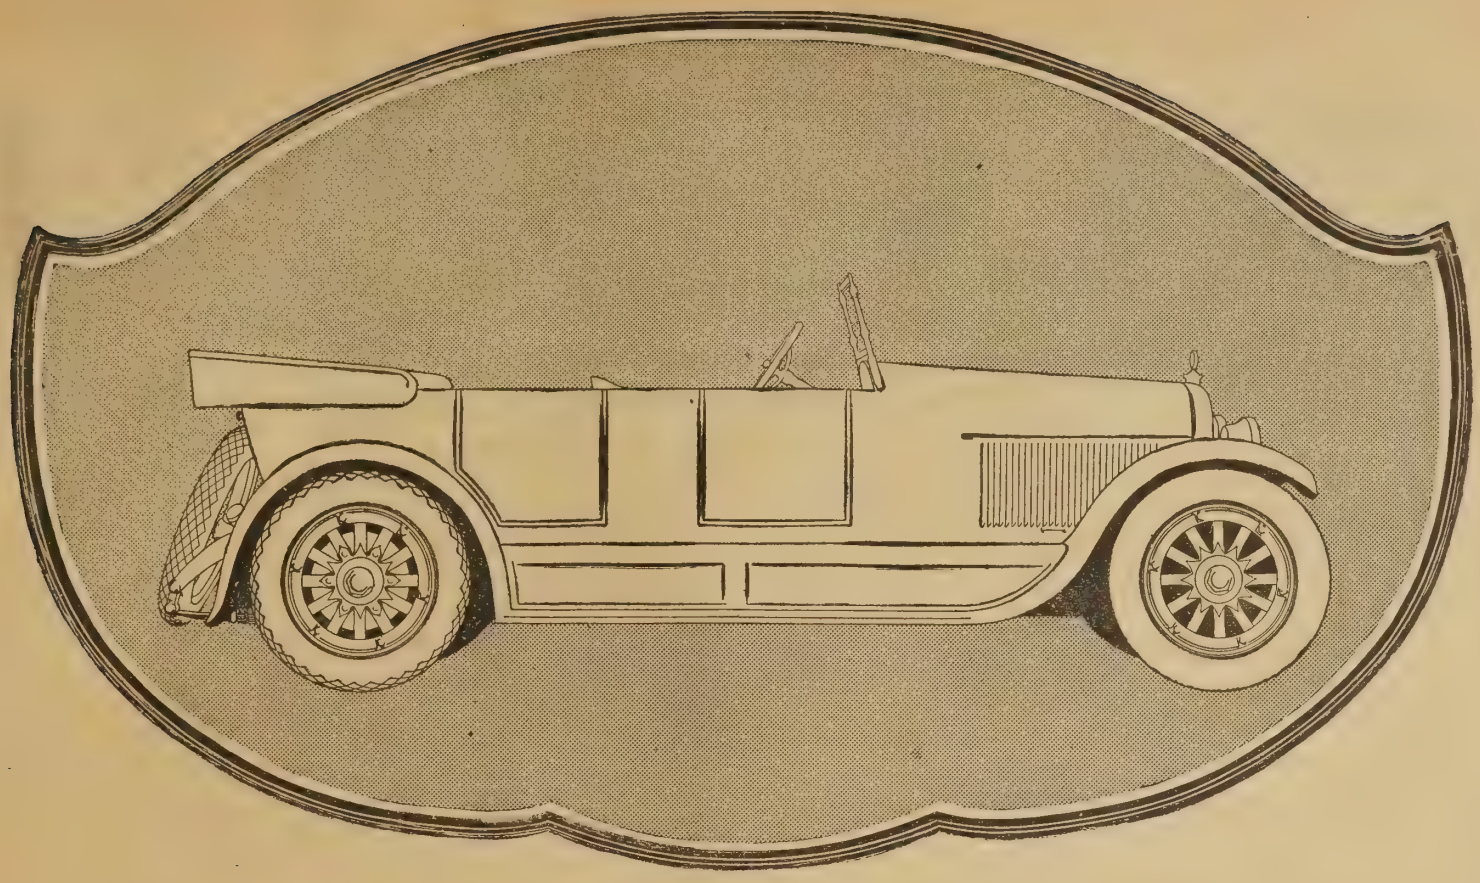
"And I," continued Harkness, the grocer, "can't complain so much of the poorer quality of things in my line as I can of the prices on some things being away out of proportion to those of other things. I have been scored for my price of sugar until I wish I would never have to weigh out another pound. But what can I do when the salesman tells me that my next order will cost me 28c a pound wholesale? I'm not making as much clear money as I was when things sold for one-half or one-third as much, for I can't increase my margins enough to cover the higher wages I have to pay and make up for the poorer class of help that I get."

"I think that you are on the right track now," returned the wholesaler, "when you speak of the poorer service that your help gives you. If you will look into this matter carefully enough I think that you will find that a whole lot of this high price and poor quality business hinges around the work that is done, or rather not done, by those who are drawing our high wages today. Our operating expense has done more than anything else to shove up our prices, for every way we turn it costs us more to handle our stuff, and it is hard to impress conservation now that the war is over. The way that our stuff is handled and balled up on the railroads now is something terrible. When such things come to be an everyday occurence, as they are now, we simply have to put our prices high enough to allow us to keep in the business. That is all that I can say to help you, gentlemen, so good-day." And he went over to where a bunch of teamsters were having an argument over who had to take a certain commodity on his load.

"Well," said Brooks, "he warded us off after a fashion, but we are far from getting satisfaction yet. Let us visit some of the big factories and manufacturing plants." And they did. There they found many excuses offered for the higher prices of things, raw materials were out of sight, they were told, help was high and hard to get, and taxes were burdensome, but little light was shed on the poorer quality of things. Some even insisted that their product was as good as ever, but Brooks laughed them to scorn. He knew better. "The farmer alone has no come-back," he finally told one of the manufacturers. "He is putting out just as good stuff as before the war or any other time. His cows give just as rich milk and his pork and beef are just as solid as they ever were. Yet he has to take whatever price he can get for his product, and buy back the manufactured article in an inferior form. He always has been the goat, and I guess will be, for some time to come. We give quality, but we do not receive the same quality in return. Where has quality gone, anyway? Where has it all leaked away to in the last two or three years? Do our animals grow poor hides now, so that they are responsible for a pair of shoes going to pieces inside of two months?"

The manufacturer gave no answer, and they went on their way. They passed many idle people on the streets, while "Help Wanted" signs stuck out everywhere. The theaters seemed to be drawing their usual large crowds, however. "Some of the many strikers, I suppose," said Brooks, as they passed knots of workmen smoking and talking on the streets. "After their dollar an hour, probably. They may need it all right by the time they get back to work. I wonder what would happen if the farmers went on a strike for a couple of weeks? There'd be a lot of cold-storage eggs and condensed milk used, eh Dunn? And it would give the railroads a chance to move some of the things that are piled up from weeks back, during the switchmen's strike. I have a fine chance of doing better farming when the grass seed I ordered early in the spring, which was shipped immediately, isn't here yet, and most of my small grain is already in the ground without it!"

"Yes, and we have a hard time to keep enough of many necessary things in stock," said the implement dealer. "For with most of the big manufacturing concerns making war munitions for two years, and machinery on the farm being used up just the same, we cannot get enough to go around now. The prices paid munition workers were so attractive that they hate to work for any less now, and the owners can't run their plants at even normal pre-war capacity in some places, I hear."



"Beats all," muttered Brooks. "It beats all that we can't locate the trouble exactly and put our finger on it. If there were only some way of making people over, so that they would be more conscientious, and do as they would be done by. If every person who has to do with the making of some thing would only picture the ultimate consumer or user of that article, and try to put their best into it, so that it would give real service. But the main idea with those selling the things that we farmers have to buy today is simply to make a sale, and the sooner the thing gives out, the sooner they can sell another."

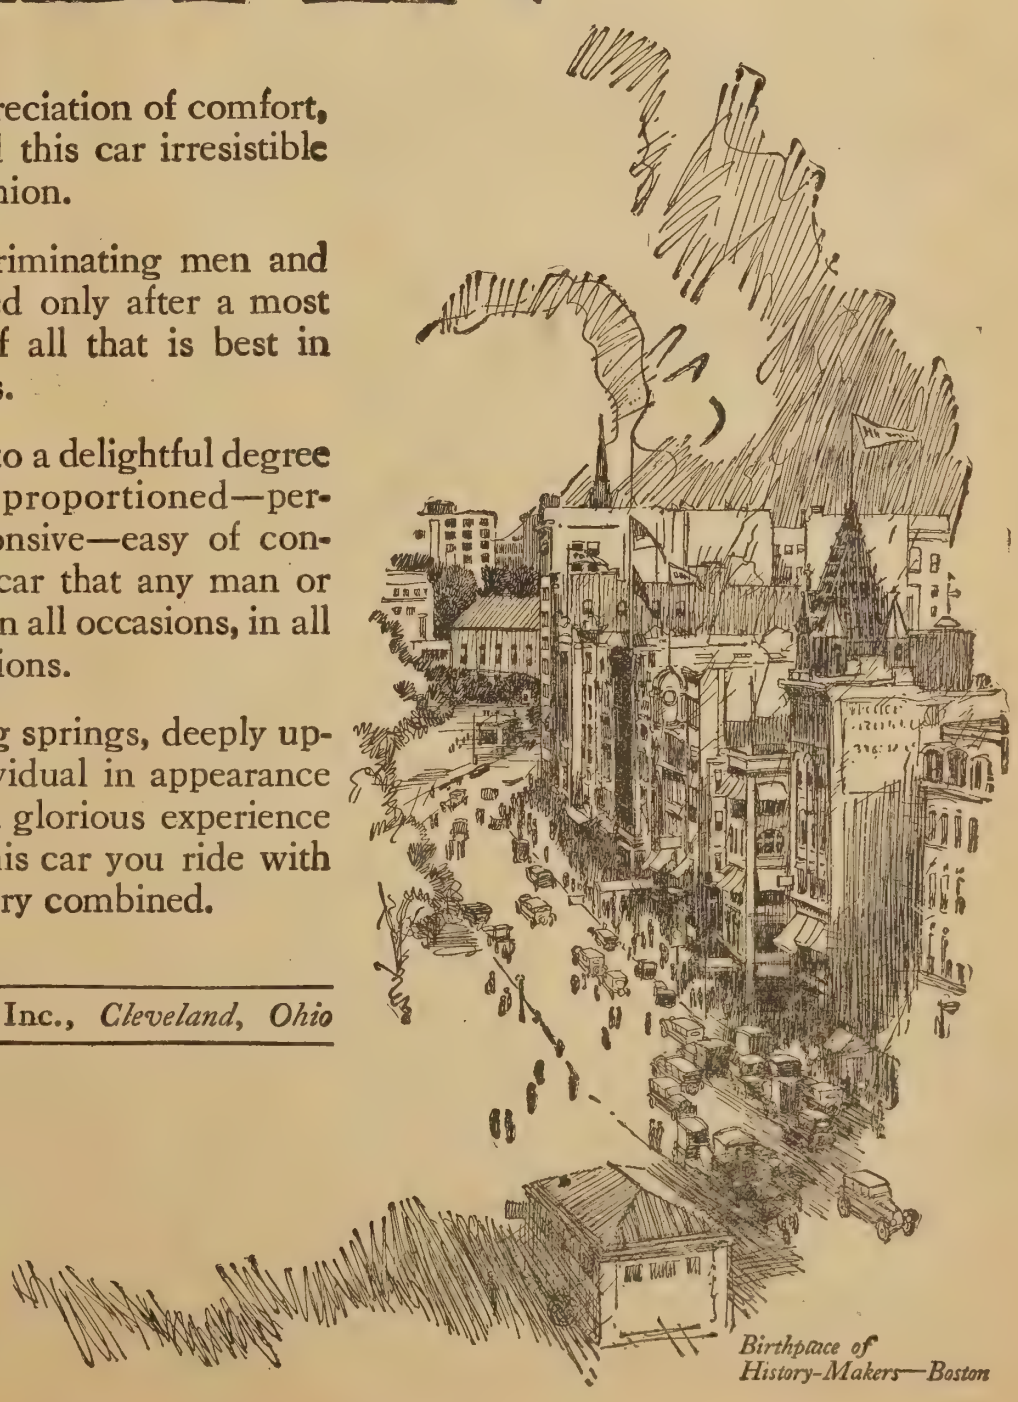
Suddenly Harkness gripped him by the arm and pointed up an alley-way they were passing. "What is that, Brooks?" he asked, "That queer figure up there?"

"I mean to find out," answered Brooks, half way to the spot before the words were well out of his mouth. But the thing that he was after floated up in the air away from him and hovered a few feet up out of reach. And a mocking voice came down from the figure, which was that of a man clad in the best of all-wool clothing and stout shoes, smoking a cigarette, and waving a poster that said, "Not over six hours work a day, and not less than $1 an hour," saying "I am that illusive element, Quality, that you have been hunting for all of this fine day. I won't come back to earth until your next president is elected. I am having too good a time up here, living on the wages I received as a munition worker and wearing the clothes I had made out of the government cloth I got away with." And waving a tiny red flag that he pulled out of his shirt, this man drifted away on the breeze to new scenes, the embodiment of this restless age.

And Brooks awoke to put on his torn shoe and ponder over his dream.

When you burn the trash after the picnic is over, keep a close watch against starting a bad fire.

The JORDAN Silhouette



WOMEN, with a natural appreciation of comfort, atmosphere and poise, find this car irresistible in its compelling colors and fashion.

To satisfy the needs of discriminating men and women the Jordan was developed only after a most exhaustive and careful study of all that is best in American and foreign built cars.

The result is a car comfortable to a delightful degree—graceful of line—correctly proportioned—perfectly balanced—instantly responsive—easy of control—quick-about. In fact, a car that any man or woman may be proud to drive on all occasions, in all circumstances, under all conditions.

Hammock swung, on extra long springs, deeply upholstered and so rich and individual in appearance that driving a Jordan becomes a glorious experience of which one never tires. In this car you ride with an ease that is comfort and luxury combined.

Wisconsin State Fair

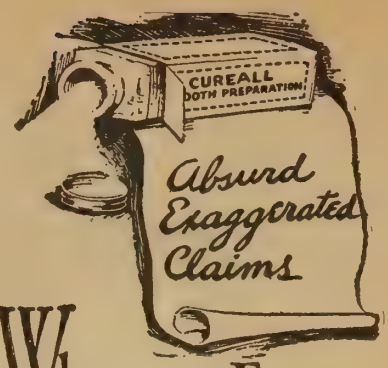
(Continued from page 343)

teresting to note that numbers two and four are both daughters of the same sire, Terracelawn Hengerveld Segis. Aaggie Nephele Hengerveld, Baird Bros.' third prize cow, is a very good one, carrying an especially well shaped udder, but she lacked a little of the splendid type and quality of the first two. Both of these were nearly ideal types of Holsteins, with number two not quite so good over the hips and lacking just a little of the scale possessed by the winner.

Doetje Nellie Concordia was an easy senior and grand champion in spite of the fact that the junior champion female, Princess Beauty Calamo, was one of the best junior yearlings that ever stood in a Wisconsin ring.

The largest class of the show, the senior heifer calves, was, we believe, the largest class of any age ever seen in a dairy cattle ring anywhere. When Mr. Moscrip was called to begin the class, 76 calves confronted him. It was a task to make any judge stop and think, but we know of no one who could have handled it better or with more dispatch than did Moscrip.

Baird Bros.' Cedar Lawn Canary Paul and Harvest Sir Ormsby owned by the Harvest Farms Co. were easy winners in an aged bull class with 12 entries. Of the two Baird Bros.' entry possessed the better body and rump and showed to just a little better advantage throughout. He was later senior and grand champion.



Carnation Stock Farm showed the junior champion, Matador Segis Walker Piebe, an excellent junior yearling. His strongest competitor was the senior yearling, a son of Iowana Sir Ollie shown by Wm. O'Leary.

When the county herds (10 animals to a herd) lined up for the special prizes offered in that class, Waukesha County was an easy first, followed in turn by Jefferson, Waupaca, and Wood. In the county calf herds, Green County took the lead, followed by Sheboygan, Jefferson, and Waukesha.

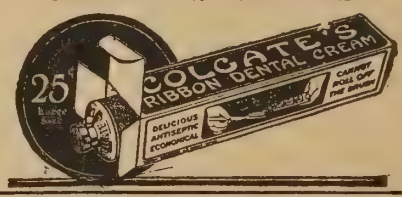
Complete awards follow:

Bull 3 years or over—1, Baird Bros. on Cedar Lawn Canary Paul; 2, Harvest Farms Co. on Harvest Sir Ormsby; 3, Hetts on King Fan Segis; 4, Kirkpatrick Bros. on Senator Johanna White; 5, Marlow and Randall on Pietertje Star Mercedes; 6, Winkler and Wiffenbach on King Pontiac Boon Artis; 7, Rust Bros. on Daisy Johanna 5th. Bull 2 years and under 3—1, Hetts on Julianna Lyon De Kol; 2, Marlow and Randall on Mankato Pietertje Ormsby Mercedes; 3, Martin and Son on Pabst Korndyke Bruno; 4, Rust Bros. on Hengerveld De Kol Beets 8th; 5, Fisher on Ashburne Sir Pietertje Segis. Senior yearling bull—1, O'Leary on East Troy Sir Ollie; 2, Bonair Farm on Hartog Gerben Colantha; 3, Garvens on Nockdair King Superba Supreme. Junior yearling bull—1, Carnation Stock Farm on Matador Segis Walker Piebe; 2, Marlow and Randall on Mankato Pietertje De Kol Orsmby; 3, Edgewood Farms on M. M. Agnes Pontiac Fobes Longfield; 4, Simons on Sir Ormsby Segis Pontiac Pietertje; 5, Harvest Farms Co. on Harvest Matador Segis; 6, Mann & Son on King Prilly Segis Alcartra. Senior bull calf—1, Wiffenbach on King Pontiac Salma; 2 and 5, Kirkpatrick Bros. on Champion Johanna Piebe and Canary Homestead De Kol; 3, Stevens, Jr. on ———; 4, Nicolai on ———; 6, Claflin Bros. on ———; 7, Becker on ———; 8, Cook on Walcowis Ollie Skylark. Junior bull calf—1, Kelley on King Bevo Ormsby; 2, McDowell on Junior Colantha Johanna Champion; 3, Hare on ———; 4, Fisher on King Segis Pontiac Pledge; 5, Cosgrove on ———; 6, Meissner on Bairdland Sir Perfection Jasper; 7, Howell on Brookvale Perfection Ben; 8, Raisler on ———.

Cow 4 years or over—1, 2, and 4, Aitken Bros. on Doetje Nellie Concordia, Doetje Nellie, and Hulda Segis Koroba; 3, Baird Bros. on Aaggie Nephele Hengerveld; 5, Rust Bros. on Ida Lotta 5th; 6, Schroeder and Sons on Huldah Soldene Princess. Cow 3 years and under 4—1, Aitken Bros. on Johanna Fern Cliff McKinley; 2, Christenson Bros. on Loretta Ormsby Mercedes; 3, Raisler on Star Netherland Johanna Bonney; 4, Marshall on Johanna Sarcastic Ormsby 4th; 5, Rust Bros. on Aaltje Salo Rosella Daisy; 6, Wiffenbach on Wisconsin Piebe Oak De Kol Watson. Heifer 2 years and under 3—1, Royce on Dinale Veeman Colantha; 2, Gafke on Jewel Posch Segis; 3, Barte on Kilka Jewel Fayne; 4, Aitken Bros. on Queen Keyes Ormsby; 5, Marlow and Randall on Edenvale Aaltje

When you Expect a Dentifrice to be a "Cure-all", you are taking too great a Risk

STRONG chemicals may make the mouth *feel* clean, but a dentist or physician will tell you that just such drugs may also harm the delicate membranes of your mouth.



So "Play-Safe"

—use Colgate's Ribbon Dental Cream twice a day (especially at night) because it cleans the teeth thoroughly, without risky drugs or harmful grit. Deliciously flavored, too—a real pleasure to use.

Colgate's is Recommended by More Dentists Than Any Other Dentifrice

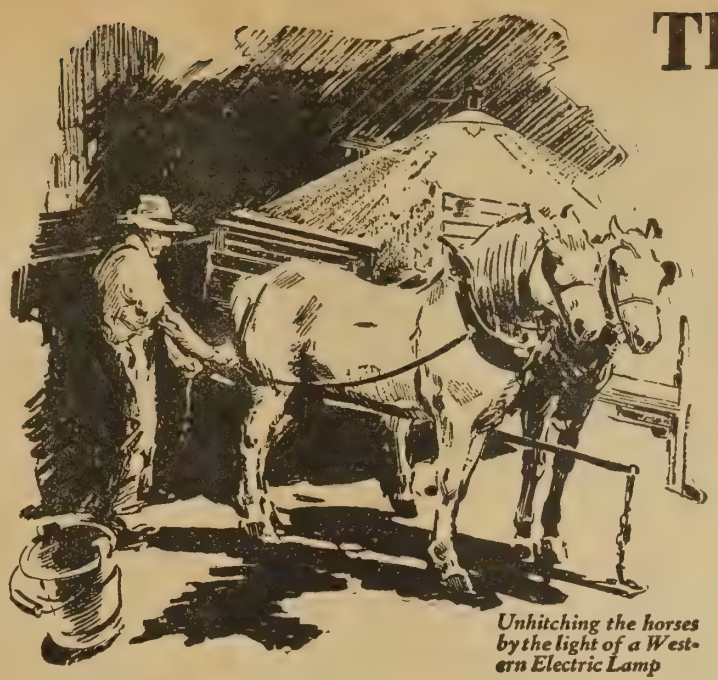
County herd—1, Waukesha; 2, Jefferson; 3, Waupaca; 4, Wood. Calf herd—1, Green; 2, Sheboygan; 3, Jefferson; 4, Waukesha.

The Guernseys

The Guernsey showing this year included 164 entries from about 30 different herds, Axel Hansen of Minnesota judging.

There was just one out-of-state herd represented, Folly Farm of Illinois. Among the Wisconsin entrants, Jones & McKerrow and G. Kingston & Son, both of Waukesha County, were the largest exhibitors. Theirs were, in fact, the only two individually owned show herds from the state and they were by far the heaviest winners. Jones & McKerrow succeeded in winning nine firsts and two championships, while Kingston took six blue ribbons and two championships, the grand championship placings being equally divided. These two herds are, we understand, out to complete the big circuit and should prove a splendid advertisement for Wisconsin Guernseys.

A good aged bull class is always interesting and that this year was one of the most interesting ones of the Guernsey showing. Eight entries, including Imp. Itchen May King owned by Fox, Kingston & Son, Bonnie Boy of Riverside and Chene King from the Jones & McKerrow herd, and Hopeful of Edgemoor owned by Kingston & Son were lined up for Judge Hansen's inspection. Itchen May King, veteran of many shows and always a strong contender, was showing in form that made him a good first. Bonnie Boy of Riverside, second in line, was good, but appeared a little too full in the thighs and lacked a little of the winner's length and dairy quality. Kingston & Son's Hopeful of Edgemoor, a son of the leader, did not show sufficient body to put him above third place. Chene King, that placed fourth, a 3-year-old, had to show to a disadvantage in aged competition but promises with two or three years more to his credit to make any of those that beat him look to their laurels.



The aged bull was senior champion and an easy grand champion over Jones & McKerrow's Navigator of Edgemoor, the winning senior calf. The latter was not an outstanding individual and the junior championship could, we believe, have better gone to Kingston's junior calf or Hoard's junior yearling.

Imp. Mildred 2nd of Les Godaines, owned by Jones & McKerrow, was an outstanding winner among 17 aged cows. She possesses the size, type, and quality that would command attention in any ring and will, we believe, be a strong contender for high honors at the National. She was a popular senior and grand champion, defeating Kingston's senior calf, Hopeful's Miss of Sunny Slope, for final honors.

Complete awards follow:

Bull 3 years or over—1, Fox, Kingston & Son on Imp. Itchen May King; 2, Jones & McKerrow on Bonnie Boy of Riverside; 3, Kingston & Son on Hopeful of Edgemoor; 4, Jones & McKerrow on Chene King; 5, Folly Farm on Allenwood King Regent; 6, Plowman on Pencoyd Autocrat. Bull 2 years and under 3—1, C. J. & W. A. Connell on Bolgrade of Beaver Ridge; 2, Claffey & Son on Dairymaid's Prince of Fox Valley; 3, Gordon, Jr., on Gold Allie's Secret; 4, Ridge and Sons on Lady's Hambro; 5, Onstad on Warcry of Edgemoor. Senior yearling bull—1, Folly Farm on Folly Noble; 2, Gordon, Jr., on Cora's Cherub of Shorewood; 3, Clark on May King's Goldseek of A. D. F. Junior yearling bull—1, Hoard on King B of Koshkonong Place; 2, Fisher on Victor's Duke of Thornhill; 3, Stark on Quaker of Koshkonong Place; 4, Jones & McKerrow on Dora's King; 5, Thielke & Son on Beauty Eagle's Prince; 6, Clark on Nelly's Goldseek the Great of A. D. F. Senior bull calf—1, 4, 5 and 6, Jones & McKerrow on

(Continued on page 350)

Unhitching the horses by the light of a Western Electric Lamp

There was once a man called "farmhand"

"If farmhands grow much scarcer, we will soon forget what the word means. Help is certainly hard to get. But I have found help in another form—an electric power and light outfit. I want to tell you what these plants can do for you, and some of the things they can't do."

H. J. Bowman

Editor's Note: *Mr. Bowman's farm is located near Ames, Oklahoma.*

"NOT being able to get any steady help, I have been doing most of my work myself. It worried me to think that every hour I spent milking cows, turning a grindstone or chopping wood was just so much time taken away from necessary work in the fields.

"Last spring I became interested in the question of a farm plant. But I delayed buying one, because those I first saw were not much more than lighting plants. They didn't show up well in a power test for heavy work.

"Now my idea of a piece of farm machinery is that it must be useful first of all.

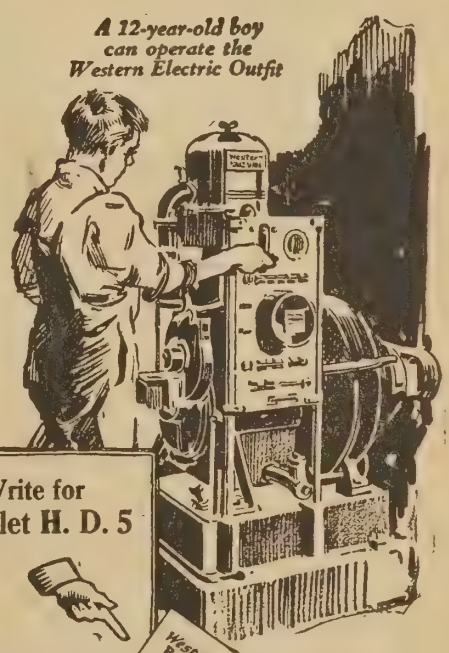
An outfit that does a man's work

"I kept on looking till I found the plant that came nearest to satisfying my need for power — A Western Electric Power and Light Outfit. I'm not saying that this outfit can mow the hay or do any plowing. But it certainly is doing some real, honest-to-goodness work for me, saving time and labor.

"In the first place the Western Electric Outfit has an engine that can operate pretty near all the machinery on the average farm. It runs my fanning-mill, feed-mixer and milking machine.

Carry the motor right to the job you want done

"Then with the generator and batteries in action—or the batteries alone—I let electricity milk the cows. The utility motor, which I can carry around and connect to any lamp socket, is mighty handy for such jobs as running the churn or the grindstone, or in fact, turning any machine I used to turn by hand.



"All this means time saved—and time is money when a man is in the middle of his planting or harvesting."

Long life to your battery

You may be interested to know that the engine to which Mr. Bowman refers is of the dependable valve-in-head, air-cooled type, burning gasoline or kerosene.

The battery lasts long because of the famous "tapering charge", a Western Electric feature. An automatic control very gradually decreases the rate of flow as the battery fills, till the current stops gently by itself. This takes all strain off the battery.

A 12-year-old boy can operate the Western Electric Outfit

How to save time and labor

Booklet H. D. 5 gives some facts and figures on how the Western Electric Power and Light Outfit helps solve the farm labor problem. For your copy write to the Western Electric Company at Chicago, or 195 Broadway, New York.

Some good territory still available for live-wire representatives

Western Electric Power & Light

Makes the battery last longer

Examining the tire layers after 15,000 miles

Tread Patented

Center tread smooth with suction cups, to firmly grasp wet asphalt. *Geared-to-the-Road* side treads mesh like cogs in dirt.

Tire Mileage Doubled

Costs us $150 for each added mile

Miller Tire experts, in the past five years, have doubled their average tire mileage. They have cut the cost-per-mile in two. That will save Miller users this year some $50,000,000.

The cost of these betterments, on the Cord type alone, has been $1,136,419. Just the laboratory and testing expense last year averaged $10,000 monthly. These thousands of added miles have cost us about $150 each.

New-Grade Tires

The result is a new-grade tire. To hundreds of thousands it has brought a new conception of good tires.

Now Miller Tires are everywhere discussed. They are used exclusively in some of the hardest services. The demand in five years has multiplied 20-fold.

Costly Methods

We keep 250 tires constantly running under observation. We destroy 1,000 tires yearly to learn how to improve them.

We separate tires after long, hard use to watch the effects on layers.

We spend $1,000 daily just to watch and test tires and materials. We sign every tire, so each returned tire teaches us its lessons.

Now Millers offer mileage which a few years ago was undreamed of. And they offer treads which, by countless tests, outlast the best of others by 25%.

You owe yourself a test. Learn what this doubled mileage means on your car. Compare the Miller Tire with others. Let the figures tell you which tire to adopt.

A maker who has made good tires twice better deserves a trial from you.

From California

Gilman Bros., of San Jose, sold 1,200 Miller Cords in nine and a half months, have only made one adjustment. One of these tires went 53,000 miles on a heavy stage. Another 49,987. And a third 38,000 and still running.

From Colorado

The La Junta Motors Corporation, La Junta, report that Millers average 15,000. They have not had one adjustment in two years.

From Florida

W. R. Link, tire dealer, of Orlando, reports four tires going over 28,000 miles on a car owned by the Hutchins Realty Company.

THE MILLER RUBBER COMPANY, Akron, O.

Also makers of Miller Inner Tubes, built layer-on-layer. Based on 24 years of fine-rubber experience. Red or Gray.

The Supreme Attainments

Converting Corn Into Meat and Milk

(Continued from page 327)

and even more cattle are fed, have been too slow in falling into line. Some states having a similar live stock population and practically the same climatic conditions as Wisconsin can boast of only one-half as many silos.

When it becomes more generally understood that silage furnishes the cheapest available kind of succulence, every farmer who keeps more than half a dozen head of cattle will feel he cannot worry along without a silo. As a supplement to the grain ration for dairy cows, silage makes possible an increase in the milk flow frequently as much as fifteen per cent or more.

A neighbor of mine in the cutover country recently built a silo where it seemed that other repairs and improvements were even more badly needed. When I asked him why he had placed the importance of the silo before everything else, he smiled.

"Well, do you know, I believe it is almost a superstition with me. Did you ever see a settler in this country fail if he had a silo? I haven't. Did you ever see an abandoned farm where there was evidence of a silo in good repair? I never have. There must be a reason. If the silo did nothing more than make easy my winter feeding, it would be worth while."

Silage has fully as an important a place in the feeding of beef cattle and sheep as in the dairy ration. Nevertheless, no more than enough silage is annually made in this country than would supply our live stock with succulent food for more than one month of the year. Disregarding the possibilities of sugar beet tops, canning factory refuse and other silage producing crops, the corn crop alone is capable of producing silage for all our live stock the whole year round, and this, too, without greatly reducing the acreage of ear corn for human consumption and for fattening cattle.

Ensiled corn provides a high quality, succulent feed for any season. In the curing process, a minimum of nutrients is lost. Whereas in the form of fodder, as much as a third of the dry feed is lost, silage is so relished that almost none is wasted. The silo permits harvesting of a crop in any weather and storage in a minimum of space. It also provides succulent feed to tide over summer droughts.

From the standpoint of economy in labor, it should be recognized that crops put into the silo are handled but once, and then under the most favorable conditions. Where a medium sized silo is being filled and the work runs smoothly, it is possible to put up from ten to fifteen tons of silage per hour. There is really no easier or better way of preserving corn for feed. Where help is limited and there is no heavy motive power available to operate the large blowers, a small cutter with an elevator chain can serve for the work. Such an equipment can be secured for half the cost of a larger outfit and it has the advantage of being successfully operated with a seven to ten horse power engine. Under good management, silage can be made for two dollars a ton and it is worth at present eight and ten times this amount of feed.

The silo also permits the full utilization of a crop of corn that has been hit by drought or frost. Again, there is hardly a season of the year in which some farmers do not find themselves with silos uncompleted when it is filling time. In these instances, in order to prevent their corn from becoming too ripe, they cut and shock it, and later put it into the silo.

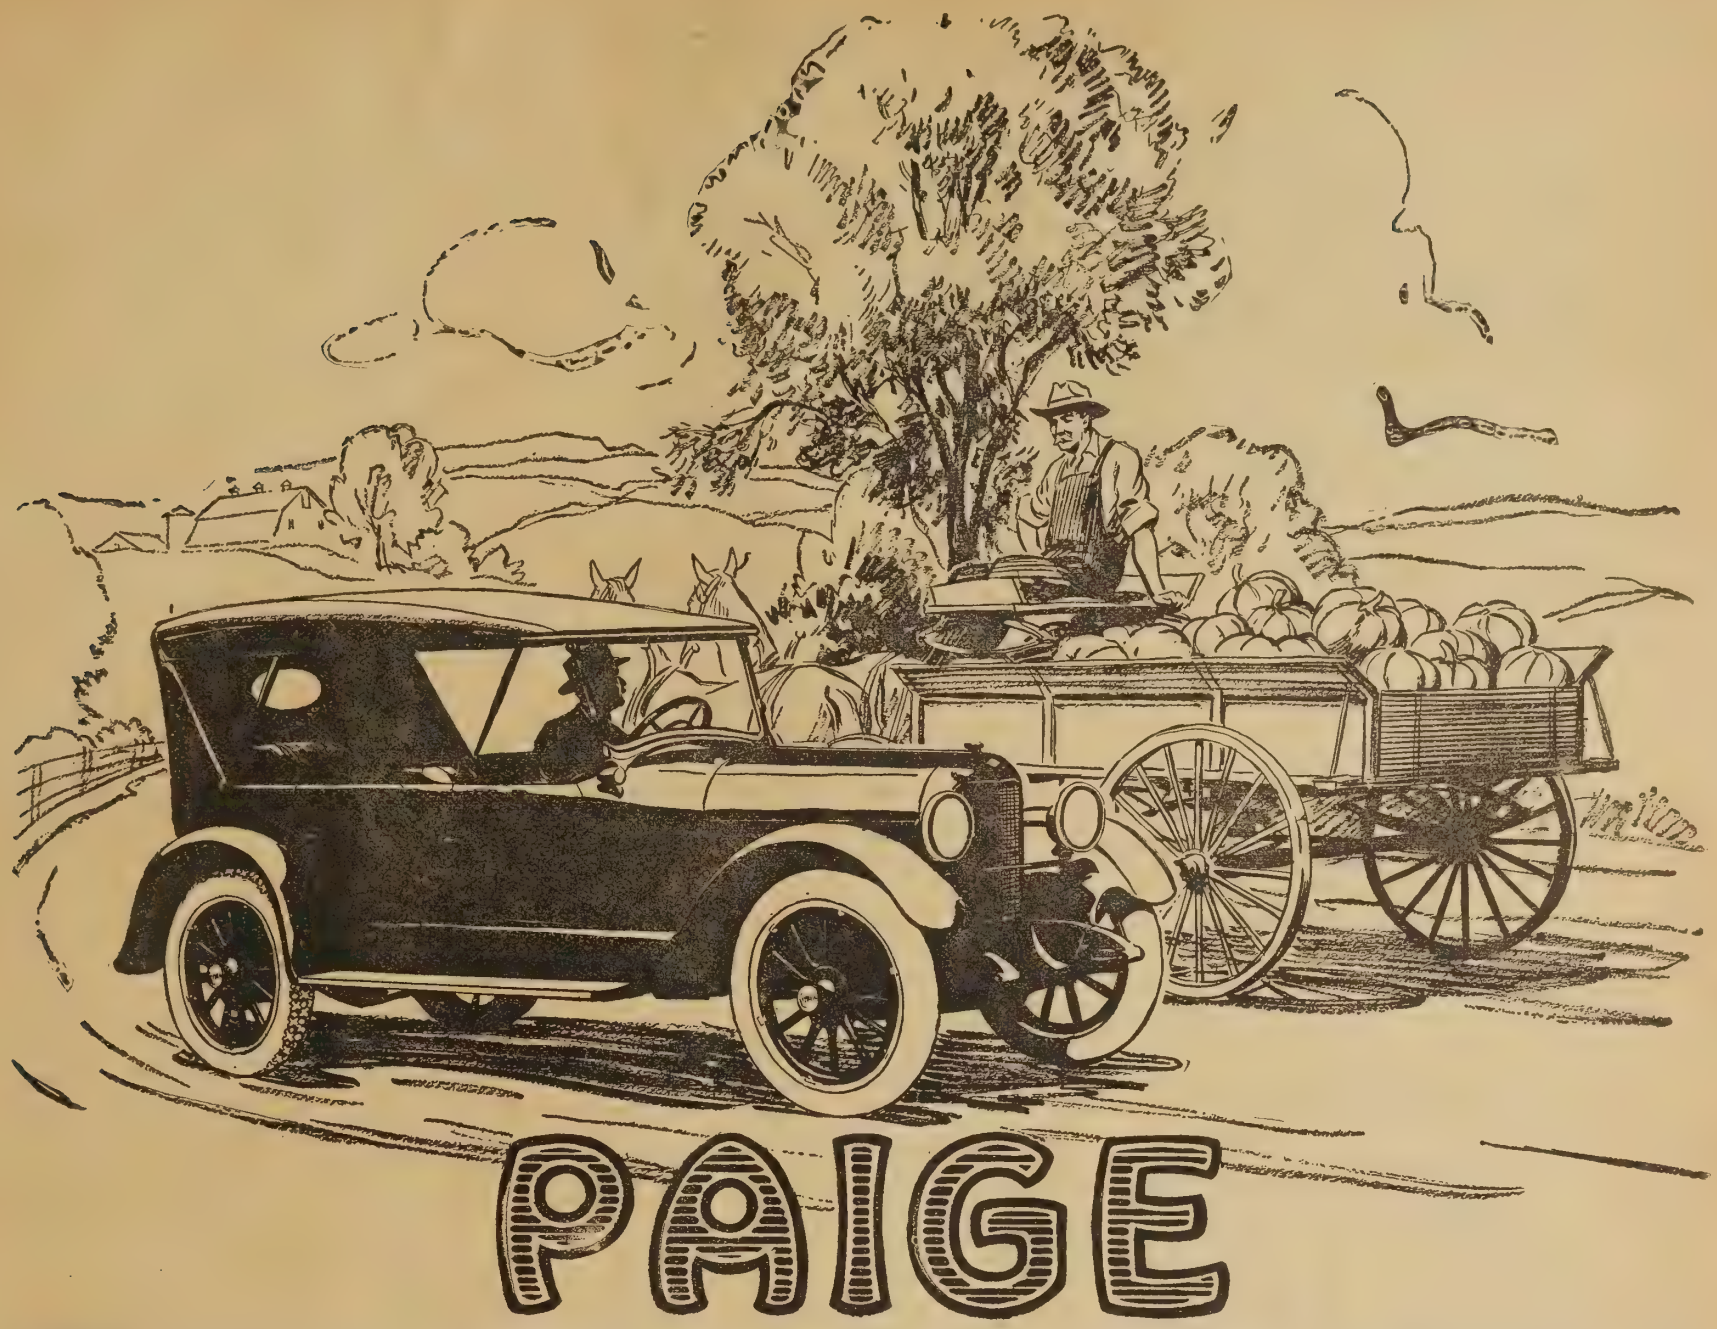
Ordinarily silage settles about one-fourth when the silo is filled rapidly. It is economy, therefore, to refill the silo after the settling has occurred. For this purpose, shocked corn may be used. It pays well to put it into the silo as late as February. It costs a bit more to ensile the shocked corn than the fresh fodder, but it pays nevertheless. As is the case when ensiling drought stricken or frosted corn, water must be added in sufficient quantity to make the material pack well. To be effective, the water must be properly applied. Where running water under pressure is available, this is most easily done. In order to get the corn well wetted, a part of the water should be applied through the blower and the remainder sprayed over the material as it is packed in the silo.

For dairy cattle, corn silage should be cut when the ears are just beginning to dent. For beef cattle, it is preferred that the ears be more fully mature. In order to prevent the material from decaying, particular care should be taken to pack it firmly, especially around the edges of the silo. Since the object of the packing is to exclude air, the silage must necessarily be slightly moist.

In a well balanced ration, the use of silage as the main roughage for steers makes them gain rapidly and reach a high finish with a minimum outlay for expensive concentrates. When stockmen of the great cattle and sheep states of the West learn how to fully appreciate the value of silage for feed, they will in many cases be able to make their cattle put on gains during the winter months and seasons of short pasture.

Where hogs are allowed to follow cattle it has been found that the returns from silage are 50% more than when the same amount of corn in shocked corn is fed. Since putting corn in a silo doubles its feeding value and permits comfort instead of drudgery in winter feeding, is it any wonder that more and more farmers are canning the crop rather than handling it from the shock?

Oldest Ohio Holstein Club Meets



The oldest county Holstein-Friesian Club in Ohio had its annual meeting July 30 at Burton and in spite of the fact that threshing and oats cutting were in full swing there was a large attendance of breeders and their families. The meeting was held at the home of Howard Ensign. Ivan McKillip of Ohio State University in charge of cow testing associations was present and after explaining the importance and value of Geauga County sending its 10 high cows to the cow testing association demonstration at the Ohio State Fair, he helped the members pick their cattle for the exhibit.

The demand for the signs "Holstein-Friesians on this Farm" was more than 100%. It is the desire of the club to have one of these signs on every Holstein farm in Geauga County. H. C. BARKER.

WALTER TOMLINSON, PRESIDENT OF THE WILLIAMS COUNTY HOLSTEIN CLUB OF OHIO

He is 77 years young and one of the livest breeders in the county. He was recently on an all-day tour with the Holstein breeders of the county when six herds were visited.

PAIGE

THE MOST BEAUTIFUL CAR IN AMERICA

IT is a matter of common knowledge that our sturdy Paige Glenbrook model marks a distinct advance in the building of light sixes. Scientifically considered, it stands as the embodiment of an entirely new conception of mechanical excellence in a car of five-passenger size.

The Paige Glenbrook, it must be remembered, is distinctively a product of the war period. Three years of constant research and ceaseless experiment were devoted to it by Paige engineers before it was ultimately perfected.

Its six-cylinder motor is a product of unusually high refinement, reflecting in every particular the standards of precision and accuracy developed by the war. And, in body and chassis also, it is a striking example of twentieth century progress in both design and construction.

The Paige Glenbrook is, therefore, in every sense of the word, a strictly modern achievement representing the best that automotive engineering has ever produced in the building of light sixes.

We ask that you give this due consideration before deciding upon your next motor car purchase. If you value true efficiency and dependability in a motor car, your choice will undoubtedly be a Light Six Paige.

PAIGE-DETROIT MOTOR CAR COMPANY, DETROIT, *Michigan*

Manufacturers of Paige Motor Cars and Motor Trucks

HUDSON SUPER SIX

Why Are Hudson Owners Indifferent to Other Cars?

Isn't It Because Contentment In Hudson Ended Inquiry Into Others?

Thousands of Hudson owners know no other make of car. Their satisfaction in the Super-Six leaves nothing to tempt them to experiment elsewhere.

Our experience gives confidence to count every Hudson purchaser as a permanent owner.

Naturally we expect men of wide motor knowledge to select Hudson. But isn't it a revelation of the convincing way Super-Six performance overshadows the field, that thousands who profess little mechanical knowledge are just as unerring in their choice?

Can Any Endorsement Rival This?

For nearly five years Hudson has outsold all the world's fine cars. And today its distinction is so wanted that we see no curb to sales except the production limitations that fine, accurate building imposes.

More than 100,000 Super-Sixes are in service. That exceeds the output of any car in its price range by many thousands.

It is a verdict—100,000 strong—for qualities and abilities no other car can share. It fixes the specific reason for dominance of a type, unlike any other car.

This chief issue is Hudson endurance. And it is exclusive, because it results from a patented principle. Others cannot use this invention, which by reducing vibration to within 10% of vanishing, made Hudson's unequalled reliability marks possible.

Its Endurance Limits Still Undiscovered

Years must elapse before we know the final limit of Super-Six endurance. We tried to establish those limits by test. Speedway trials, a double transcontinental run that no other car ever endured to finish, and the abuse of high-speed racing, failed to reveal the point at which Hudson endurance would yield. But they did establish that the Super-Six possessed greater durability than any other car ever proved.

The earliest Super-Sixes, built nearly five years ago, and still serving with undiminished satisfaction, testify how car life is practically doubled through this invention.

Hudson Motor Car Company, Detroit, Michigan

Jerseys

As at the two or three earlier shows, the Jersey exhibit was not quite up to the standard size of former years. There were only 120 shown, 21 of them calf club entries.

Two good out-of-state herds, that of W. A. Brewerton of Illinois and A. M. McClenahan's from Colorado, furnished Wisconsin Jersey exhibitors with hard competition and succeeded in winning eleven firsts as well as all championships.

Dixon, showing for McClenahan, won senior championship on the two-year-old, Majesty's Feather Lad, but was beaten for grand championship by Brewerton's junior champion, Raleigh's King Thornbury, an outstanding senior yearling.

McClenahan more than evened up when the female championships were placed, by taking them all. His aged cow, Westfield Girl, with a very well shaped, splendidly veined udder, was senior and grand champion. Majesty's Finance Oxford, a senior yearling from the same herd, was junior champion.

Hugh G. Van Pelt of Iowa did the judging. Complete awards follow:

Bull 3 years or over—1, Wyatt on Harbinger's Chief; 2, Underwood on Primrose's Raleigh's Lad; 3, Douglas & Son on Merry Lad's You'll Do. Bull 2 years and under 3—1, McClenahan on Majesty's Feather Lad; 2, Underwood on Fewacres Oxford Majesty. Bull, senior yearling—1, Knight on Majesty's Ixia's Gamboge; 2, Brewerton on Jap's Prince Thornbury; 3, Rasch on Rena's Knight. Senior bull calf—1, Melrose on Ethelwold Warder; 2 and 3, Knight on Eminent Rossette's Lad 2nd and Noble's King's Son's Lad; 4, McClenahan on Majesty's Feather Lad's Boy; 5, Rasch on Ruth's Noble Raleigh; 6, Douglas & Son on ————. Junior bull calf—1, McClenahan on Bosnian's Shy Duke; 2, Brewerton on T. N. T.; 3, Hill & Son on Rosette Ty cow; 4, Knight on Gamboge's Silver Majesty; 5, Underwood on ——; 6, Wyatt on ——.

Cow 4 years or over—1 and 3, McClenahan on Westfield Girl and Gray Cannoness; 2, 4, and 5, Underwood on Clara's Primrose, Noble's Lady Campanile, and Noble's Majestic Beauty. Cow 3 years and under 4—1 and 3, McClenahan on Western King's Flora Dora and Ruby's Financial Girl; 2, Underwood on Rivinia's Pet Imp.; 4, Knight on Oxford's Arina; 5 and 6, Hill & Son on Illinois Oxford Tosia and Oxford Houssa. Heifer 2 years and under 3—1, Knight on Eminent's Safety's Cupid; 2, McClenahan on Jubilee Oxie; 3 and 5, Hill & Son on Emmet Kathern 2nd and ————; 4, Underwood on Cid's New Year. Senior heifer yearling—1, 3, and 6, McClenahan on Majesty's Finance Oxford, Rambler's Crimson Rose, and Princely's Sweet Star; 2, Knight on Trial's Blue Bell; 4 and 5, Wyatt on Beauty and Marrburn. Junior yearling heifer—1 Brewerton on Raleigh's Bessie Thornbury; 2, Knight on Trial's Buttercup; 3, McClenahan on Princely's Sweet Rose; 4, Underwood on Fewacres Majesty Pearl; 5 and 6, Wyatt on Viscount's Fairy and Harbinger Lilly Loos. Senior heifer calf—1 and 2,—Brewerton on Miss Pennilthorpe Thornbury and Jap's Constance Thornbury; 3, Dillon on ————; 4, Houser on Ethelwold Blossom; 5, McClenahan on Majesty Cowslip Feather; 6, Knight on Majesty's Safety Belle. Junior heifer calf—1, Seyforth on ————; 2 and 7, McClenahan on Majesty's Feather Lad's Fodor and Majesty's Feather Lad's Fiz; 3, Wyatt on ————; 4, Knight on Cowslip's Golden Lucy; 5, Brewerton on Jap's Ophelia Thornbury; 6, Houser on Ethelwood Mary.

Senior champion bull—Majesty's Feather Lad. Junior and grand champion bull—Raleigh's King Thornbury. Senior and grand champion female—Westfield Girl. Junior champion female—Majesty's Finance Oxford.

Aged herd—1, McClenahan; 2, Underwood; 3, Douglas & Son. Young herd—1, McClenahan; 2, Brewerton; 3, Knight; 4, Douglas & Son. Calf herd—1, McClenahan; 2, Wyatt; 3, Brewerton; 4, Knight; 5, Douglas & Son. Get of 1 sire—1, Underwood; 2, McClenahan; 3, Wyatt; 4, Knight. Produce of cow—1, McClenahan; 2, Knight; 3, Wyatt; 4, Underwood.

Ayrshires

There are two good Ayrshire herds that one can always depend upon will be represented at the Wisconsin State Fair, that of B. B. Simmons & Son and the herd of Adam Seitz & Sons. They were the only ones this year and while Seitz succeeded in taking all of the blues, the showing was much more interesting than might have been expected considering the fact that the Seitz herd has for years been a consistent winner on the big circuit, whereas Wisconsin is practically the only state fair at which Simmons & Son have shown.

Seitz's Cavalier's Lord Rosebury, veteran of three seasons on the circuit, was senior champion and later grand champion over Cavalier's Sherry Redman, the winning senior calf, from the same herd. Their aged cow, Beuchan Lady Lifty, although dry and at a consequent disadvantage, shows as a real dairy cow and was an easy first and grand champion. Junior

championship went to Cavalier's Ella, also owned by Seitz.

Hugh G. Van Pelt placed the ribbons.

Complete awards follow:

Bull 3 years or over—1, Seitz on Cavalier's Lord Rosebury; 2, Simmons & Son on Cavalier's Gold Finder. Bull 2 years and under 3, 1, Seitz on Cavalier's Silver Mint. Junior yearling bull—1, Seitz on Cavalier's Wonder Boy. Senior bull calf—1 and 2, Seitz on Cavalier's Sherry Redman and Cavalier's Cupbeam; 3, Wilson on Oterkill Duke; 4, Simmons & Son on Cavalier's Jerry of Ayrcroft. Junior bull calf—1, Seitz on Cavalier's Ping Pong; 2, Simmons & Son on Ayrcroft White Robin.

Cow 4 years or over—1, Seitz on Beuchan Lady Lifty; 2 and 3, Simmons & Son on Cavalier's Snow Storm and Tossy of Pewaukee. Cow 3 years and under 4—1 and 2, Seitz on Barclay's Nightingale and Howie's Glen of Valley View. Heifer 2 years and under 3—1 and 2, Seitz on Cavalier's Silver Actress and Cavalier's Silver Queen; 3, Simmons & Son on Cavalier's Nancy of Pewaukee. Senior yearling heifer—1, Seitz on Cavalier's Creampot 2nd; 2, Simmons & Son on Cavalier's Snow Ball. Junior yearling heifer—1 and 2, Seitz on Netherhall Kathleen and Cavalier's Queen; 3, Simmons & Son on Cavalier's Nancy 7th. Senior heifer calf—1 and 2, Seitz on Cavalier's Dorothy and Cavalier's Lila Lee: 3, Simmons & Son on Cavalier's Snow Drop of Ayrcroft. Junior heifer calf—1, 2, and 3, Seitz on Cavalier's Ella, Cavalier's Lady Bountiful, and Cavalier's Messaliers; 4, Simmons & Son on Cavalier's Nancy 8th.

Senior and grand champion male—Cavalier's Lord Rosebury. Junior champion male—Cavalier's Sherry Redman. Senior and grand champion female—Beuchan Lady Lifty. Junior champion female—Cavalier's Ella.

Aged Herd—1 and 2, Seitz; 3, Simmons & Son. Young Herd—1, Seitz; 2. Simmons & Son. Calf Herd—1 and 2, Seitz; 3, Simmons & Son. Four animals, get of one sire—1 and 2, Seitz; 3, Simmons & Son. Two animals, produce of one cow—1 and 2, Seitz; 3 and 4, Simmons & Son.

Brown Swiss

Illinois entered the lists again among the Brown Swiss, E. W. Wilson of that state winning his share of the firsts and both grand championships. Showing against him was Wilmer Drollinger and Leonard Kimball of Wisconsin. The latter had but three entries.

Axel Hansen of Minnesota, doing the judging, gave senior championship to Drollinger on his Ethelmilitor, the only aged bull shown. Wilson's senior yearling, Milo of Walhalow, was junior and grand champion.

The best exhibits of the show were in the junior female classes and Wilson's senior calf was a popular junior and grand champion, defeating Drollinger's aged cow, Nestet, in the final competition.

Complete awards follow:

Bull 3 years or over—1, Drollinger on Ethelmilitor. Bull 2 years and under 3—1, Wilson on La France of Swiss Summit. Senior yearling bull—1, Wilson on Milo of Walhalow. Junior yearling bull—1, Wilson on Edred of Wahalow. Senior bull calf—1, Kimball on ——————; 2, Wilson on Jubilee Prince. Junior bull calf—1, Kimball on unnamed; 2 and 3, Wilson on Jubilee Trumpeter and Jubilee Victor; 4 and 5, Drellinger on ——— and ———.

Cow, 4 years or over—1, Drollinger on Nestet; 2 and 3, Wilson on Queen's Daughter and Penelope. Cow 3 years and under 4—1 and 3, Drollinger on Alta Rose and Sue's Alice; 2, Wilson on Aimee. Heifer 2 years and under 3—1 and 3, Drollinger on Valley Girl 8th Minnie and Belle's Beauty Tiny; 2, Wilson on Francis of Walhalow. Senior yearling heifer—1 and 4, Wilson on Trilba of Jubilee and Uhleen of Jubilee; 2 and 3, Drollinger on Militor's Nestet and Miss Taylor. Junior yearling heifer—1 and 2, Wilson on Elenor of Walhalow and Kathryn of Walhalow. Senior heifer calf—1 and 3, Wilson on Helena of Walhalla and Retha of Jubilee; 2, Kimball on ——————. Junior heifer calf—1 and 2, Wilson on Woodland Gird 2nd and Aimee 2nd Jubilee; 3, Drollinger on Molly of Auburndale.

Senior champion male—Ethelmilitor. Junior and grand champion male—Milo of Walhalow. Senior champion female—Nestet. Junior and grand champion female—Helena or Walhalla.

Aged Herd—1, Wilson; 2, Drollinger. Young herd—1, Wilson. Calf herd—1, Wilson. Get of sire—1, Wilson. Two animals, produce of one cow—1, Wilson; 2 and 3, Drollinger. Cows in milk—1, Drollinger.

Whether the moon has any effect on farming has nothing to do with the fact that potatoes should be dug on a clear day when the soil is fairly dry.

Those who live for gain don't have nearly as good a time as those who live for service.

HINKLEY
HEAVY DUTY AUTOMOTIVE
ENGINES

Within the short space of a single year, the performance of Hinkley-Engined Trucks has built up an enthusiastic, nation-wide Consumer Acceptance of Hinkley Heavy-Duty Automotive Engines, and a public Good Will toward this young Company shown most strikingly in new Offered Outlets for our Product.

We are surrounding this Good Will with every Possible Protection.

It is our steadfast purpose to supply these Engines only to Truck Manufacturers of high ideals and sincere desire to produce the maximum in Swift and Efficient Mechanical Transport.

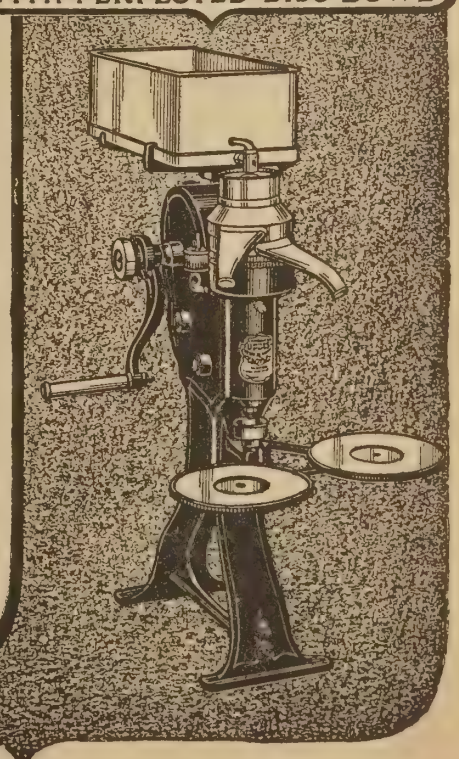
COMPARE
—Then Buy

Play safe. Compare several of the leading makes of cream separators, point for point—before you act. Any dairyman can choose right if he follows this plan. The danger comes in accepting **claims** which do not "square up" with performance.

If you start in to seriously consider comparisons, here are **some** of the commanding features that you'll quickly note about the United States—the separator that holds and sustains the world's record for close separation:



1—Perfected Disc Bowl a marvel of close skimming, easy cleaning and assembling.
2—Crank or power can be attached on either side.
3—Fewer revolutions of crank make turning easy.
4—The only practical and reliable Bell Speed Indicator.

Be your own judge and jury—you are the one who pays. We'll be glad to send you all of our booklets; write

HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

CLUB MEMBERS' TWO-DAY CAMP

Conducted in connection with Upper Peninsula Farmers' Round-up at Chatham, Michigan. Total attendance of farmers was 3,400, while 73 club members from thirteen of the fifteen counties of the Upper Peninsula were encamped on the grounds of the state experiment farm. Aside from the regular program and demonstration for farmers and club members, the junior live stock judging contests aroused great interest. First place went to Carl Johnson on dairy cattle, to Theodore Jarvinen on swine, and to Lawrence McNamara on sheep. The Gogebic County team, consisting of Carl Johnson, Leonard Nylund, and Luther Olsen, won first place in judging all three classes and will represent the Upper Peninsula at the State Fair.

Junior Letters

Hoard's Dairyman Juniors:—I have a calf nine weeks old. I put her out on grass about four o'clock and put her in about seven. It is too hot until about four o'clock in the afternoon. In the evening the mosquitoes and flies bother her.

If we stay on the farm my father will buy me a registered Holstein calf. My sister and I are going to high school this fall. She will be in the 10th grade and I in the 9th. Our teacher for our district school this year will be Elsie Rogers. My sister and I both graduated from the same teacher. Her name was Margaret Wegner.

We have 87 swarms of bees. They are not doing well. My mother, father, and I work the bees. We have two yards. My father works in the yard and mother caps honey and I extract it. We've had a couple of little showers this week which have helped us a little. Our corn is doing well for the rain that we've had.

I must close, wishing all the juniors good luck.

Ladysmith, Wis. Helen Ambrose.

Hoard's Dairyman Juniors:—Received my fob, button, and creed, and am greatly pleased with them. I am going to have the creed framed.

I am 10 years old and am in the 5th grade at school. I live on a farm of 172½ acres. We have 30 head of Holstein cattle, 21 of which we are milking. We also have 2 sheep, one lamb, and 4 horses. Their names are Fanny, Jenny, Nelly, and Blossom. We have 7 little white rabbits.

I will close wishing the juniors success. If any of the juniors wish to write to me my address is R. 1, Little Valley, New York.

Gerhard Gold.

Hoard's Dairyman Juniors:—Received my fob, button, and creed and think them fine.

My father owns a farm of 423 acres and has 35 head of stock. They are mostly Holsteins and Ayrshires with a few Guernseys and Jerseys. We have 2 pure-bred Ayrshire bulls, 2 pure-bred Ayrshire cows, and 2 pure-bred Ayrshire heifers. One of the bulls is mine. He is only about a year old. We bought him from Alta Crest farm as we did the cows, but the heifers we raised ourselves. We have also a pure-bred Holstein cow. We milk 28 cows. My father, brother, and I do all the milking as we do not hire any men.

We have 27 shoats and four sows. The shoats crossed between a Tamworth and a Chester White. They made a fair cross with the exception of one litter.

About two weeks ago there were ten cows found dead in a pasture in a neighboring town from blackleg. Blackleg is hardly ever found in the East.

I would like to have some one interested in Ayrshires write me. My address is Whittemore St., Leicester, Mass. G. T. Johnson.

Hoard's Dairyman Juniors:—I have been reading the junior letters and find them very interesting.

I will go to high school next year. We are on a farm with 150 acres of land. We have 20 milking cows, 2 pure-bred; a bull,; 2 pure-bred heifers; and four grade Holstein-Friesian calves; all of our stock is Holstein. I am milking four cows and we got four horses. I belong to the Norwich pure-bred calf club. My heifers cost $143.27.

I wish all the juniors good luck. I would like to hear from some of the juniors. My address is R. F. D. 2, Guilford, New York.

Charles Butts.

Hoard's Dairyman Juniors:—I received my fob and creed and was very glad to get them.

I live on a farm of 130 acres. We are all alone this year to do the work.

I am 11 years old and will be in the 6th grade when school starts.

I think we will have the threshers next week if the weather is nice. We are going to blow most of our straw in the barn.

We have 18 fine young pigs and 3 sows. We had 4 sows but we sold one to our neighbor with 9 pigs for $75.

This forenoon mother and I went and cut a patch of Canada thistles.

I will close for this time wishing the juniors good luck.

Capron, Ill. Eric Fors.

Hoard's Dairyman Juniors:—I found a little calf in the pasture yesterday when I went to get the cows up to milk. This makes us 5 calves. My doe I spoke of which I thought was going to have young, now has seven little rabbits. This makes 15 young rabbits and the doe.

My sister and I sold $11 worth of our ducks.

You said you thought the juniors would be interested in my goats especially and would like me to tell about the ones I have. My goats stay in the woods and pasture with our cows. They are sprout killers. They eat all the bark and leaves off the sprouts sometimes. I don't have to feed them in the summer because they live readily on the pasture and sprout leaves. I feed them in winter on hay, sometimes corn or fodder but they get some of their feed themselves such as tender twigs and bark. They sure love bark; I have seen them eat all the bark off trees as far up as they can reach it. Sometimes I see them stand on their hind feet and straddle bushes and bend them down so they can get the leaves. I ride my Billy sometimes. He is mean and tries to get me off his back. They are great jumpers. They jump upon our rail fence and walk on top of it. I forgot to tell about part of my eggs getting chilled and that is why they didn't hatch any better.

I will close, juniors. Write me. Address R. 2, Equality, Ill. Robert Blackman.

Hoard's Dairyman Juniors:—I should like to join the juniors' club. Although I live in a suburban town where dairying is not practiced I am learning it at the high school. Instead of caring for a cow like the others I am raising 60 pullets and also a garden. I started in April with 200 incubator chicks bought from a reliable breeder. I had to buy all necessary equipment such as a colony brooder. I made all feed appliances. Raised 170 from the 200 and at the present have about 60 good pullets, 10 capons, 10 small pullets and 30 cockerels. I sold 65 cockerels for 55c per pound. I did the caponizing myself under the instruction of two poultry instructors.

I have had a garden of one-fourth acre since 1917 and have been very successful. In addition to the one-fourth acre this year, I hired a plot of ground 1¼ acres in which I planted sweet corn and potatoes. I shall dispose of the corn at the summer resorts in this town at better than retail prices. They are more than glad to get fresh corn. My potatoes are doing fair considering the weeds, bugs, and lice. I expect to make a profit of $350 over and above labor cost from my garden.

I raised a pig in 1917, winning second prize in the town contest, another in 1918 for which I won a trip to Amherst, which is the county prize. In 1919 I raised two pigs and my records have been sent to be judged with 12 others for state prize.

I am a student in the Weymouth Department of the Norfolk County Agricultural School of the class of 1921. My age is 16.

It is my ambition to own a farm where I can go into the commercial poultry and fruit business with a few cows for a sideline.

Massachusetts. Herbert P. Keene.

Hoard's Dairyman Juniors:—I received the fob, button, and creed. I think they are fine.

My father owns 120 acres. For pets I have rabbits. I have 20 of them. One doe has 10 young about 5 weeks old. The rest are all old rabbits. I want to sell if I can.

My father has 14 head of cattle. We milk 8 cows. I milk 3 of them. We have 18 hogs and 7 horses.

I am 14 years old. Our school will begin the 6th of September.

Why don't the juniors put riddles at the end of their letters? Here is one: What is the difference between a piano, a bank, and a beehive? I will put the answer in my next letter. My address is R. R. 1, Box 37, Sherwood, Ohio.

Christian Bontrager.

Hoard's Dairyman Juniors:—Well, I received your letter quite a while ago. You asked me if I help with the feeding or the milking. During the summer there is no feeding to do, (that is, not the cattle), but I help milk and do the rest of the chores. In the winter I help with all the chores.

Well, I do not expect to go to school next winter, so I will have more time to myself.

Our barn is all cemented now, and I assure you it makes the chores much easier. Of course we are not through improving yet, as we have much more cement work to do.

The threshing outfits are working pretty steady now. Our grain turned out pretty good this year. I may travel with the threshing crew later on, when the blower-tender quits his job to go to school.

We sold two good heifers today, as we have more cattle than we have room for in the barn.

One junior by the name of George Austin answered my last letter which was published. I wish some of the juniors would write to me this time too. My address is R. R. 1, Box 83, Ripon, Wisconsin. Herbert Goeden.

Hoard's Dairyman Juniors:—This is my first time to write as I am a new member but I hope it will not be the last time. I live on a 64-acre farm. It is a good grazing farm. We milk five cows but they are not pure-bred. We expect to get pure-bred ones after a while. We have two horses and two mules. I own a horse and a cow which I think lots of. I have one brother who is a cripple so he and I go in as partners. I have in about an acre of tobacco. It is looking fine.

I like farm work. I like to read good books. I like to read the letters of Jimmy Greene and Bob Ramsay.

I passed the eighth grade with a good average. I expect to take up high school work this fall.

I guess I had better close for I will write too much if I don't. Wishing good luck to the juniors.

Kentucky. Voyd Jones.

Hoard's Dairyman Juniors:—I have one-tenth acre of potatoes this year. They are doing fine so far. Only the lice are on some of them but we had a rain and it killed most of them.

I am just starting to train my calf to lead and she is beginning to lead a little. After she learns to lead I am going to try to train her to drive.

I am working on our farm this year. We have about 50 acres under cultivation and about 50 more are woods. We are milking about 20 cows with a milker.

Massachusetts. Harry L. Wright.

Do You Belong to the Juniors Club?

If you are a dairy farm boy between ten and eighteen years of age, and if your father or some member of your family is a subscriber to HOARD'S DAIRYMAN, we want you to join the HOARD'S DAIRYMAN Juniors Club.

The Juniors Club consists of several thousand boys like you, banded together to help each other get more pleasure and profit from farm life, and to have the advantage of associating with other boys who live and work and think as you do.

It costs nothing to join the club—and there are no dues. All you need to do to join is just to fill out the coupon and send it to us. We'll at once enroll you as a member and send you a watch fob, a coat lapel button, and the "Dairy Farm Boy's Creed". Do it now—then you'll soon be a full fledged member of the HOARD'S DAIRYMAN Juniors Club.

COUPON

HOARD'S DAIRYMAN Juniors,
Fort Atkinson, Wisconsin.

I want to join your Juniors Club. My father's name is _____.

I am _____ years old and like _____ (name breed) cows best. Send me the watch fob, button, and creed and enroll me as a member.

Pabst Stock Farm

First Semi-Annual Sale 40 Young Holstein Bulls Oct. 9th

Since June 15th, not an animal has been sold from Pabst Stock Farm at private sale. Hereafter, the surplus, both male and female, will be disposed of through the medium of the semi-annual sales. Such a sale necessarily means the offering of the very best calves we raise as well as calves of more than average quality, thus offering a wide range to buyers. Bulls of the very highest individual quality from dams that have been bred for two, three and sometimes four generations on Pabst Stock Farm. We want buyers to come to this sale with the belief they will be able to buy as good animals as Pabst Stock Farm ever bred, and we are going to make that belief a realization.

Our First Sale Will Include:

- 12 Sons of Creator
- 12 Sons of Woodcrest Clyde
- 1 Son of Korndyke Segis Johanna
- 2 Sons of King Pontiac Champion
- 3 Sons of Pabst King Pontiac Lad

These young bulls are from dams with records up to over 34 lbs. in 7 days and in some instances are backed by two generations of 30-lb. dams. The accompanying illustration is just a sample of the young bulls that will be sold.

THERE IS NOT A HERD IN THIS COUNTRY, EITHER LARGE OR SMALL, THAT COULD NOT BE BENEFITED BY THE SELECTION OF ONE OF THESE ANIMALS. They are some of the best ever born on Pabst Stock Farm.

Sale will be held at the farm on Saturday, October 9th, and will start promptly at 10:30 A. M. Send now for descriptive circular. Catalog will be furnished at the ring side.

PABST STOCK FARM OCONOMOWOC WISCONSIN

Peverill's Ayrshire Dispersion

Sale Pavilion During the 1920 Waterloo Dairy Cattle Congress

WATERLOO, IOWA
Wednesday, Sept. 29, 1920

A Genuine Dispersion of this Prize-Winning and Milk and Butter Bred Herd! Every Animal Goes!

Fifty Head This dispersion includes the entire string of winners at the Missouri, Illinois, Iowa, Nebraska and Kansas State Fairs, the Kansas Free Fair, Topeka, and Waterloo Dairy Cattle Congress—a total of over fifty head of Ayrshires of the choicest breeding and individuality! **Fifty Head**

At the Iowa State Fair, 1920, this herd won the following championships, grand championships, and other prizes:

Champion two-year-old bull and grand champion bull of any age—Cavalier's Choice Goods;
Champion under two-year-old bull—Rosebud Buster;
First and second prize two-year-old bulls—Cavalier's Choice Goods and Cavalier's Fashion Plate;
First and second prize senior bull calves—Rosebud Carl and Rosebud Bill;
Second and third prize aged cows—Enid Lessnessock and Sylvia Good Gift;
First prize three-year-old cow—Beauty of Cloverdale;
Second and third prize two-year-old heifers—Bess Garland and Cherry Good Gift;
First and second prize senior yearling heifers—Rosebud Nellie Carlton and Rosebud Stonehouse Lucy;
Third prize junior yearling—Rosebud Financier's Violet;
Second and fourth prize senior heifer calves—Rosebud Fair Beauty and Rosebud Cherry Blossom;
Second and third prize junior heifer calves—Rosebud Nona and Bess' Pride;

Every one of these winners goes into this dispersion and sells to the highest bidder! If you want Ayrshires of quality buy at this disperison!

In this dispersion will be included the following well known young bulls:

Cavalier's Fashion Plate by Cavalier's Lord Roseberry; Rosebud Carl, sire Willowmoor Robin Hood 19th; Cavalier's Choice Goods, also sired by Cavalier's Lord Roseberry by the great Bargenoch Gay Cavalier Imp.; Rosebud Lassie Boy sired by Rosebud's Pride; Prince of Bellwood by Harperland Chief of Bonnie Brae; practically all of the bulls offered are winners at the leading state fairs the past few seasons;

In mature cows and heifers no offering in the corn belt will eclipse this dispersion. The following exceptional females are included in the offering;

Beauty of Cloverdale sired by Lessnessock's Dave, a four-year-old, who was senior and grand champion of Iowa and Minnesota State Fairs 1919; Value's Pride of Oak Valley sired by Value of Avon, with a record of 10,000 lbs. of milk; Rosebud Nellie Carlton, sired by Yankee Doodle by King of Saranac, and out of the show cow Lessnessock Carlton; Bertha Carlton sired by Willowmoor Peter Pan 26th, also out of Lessnessock Carlton, a three-year-old cow, now milking 40 lbs. a day; Sylvia Good Gift by Auchenbrain Good Gift; Lessnessock Carlton, sired by Lessnessock First Choice Imp.; first prize A. R. O. cow at Waterloo Dairy Show 1918 and 1919.

These are only a few of the choice females offered in this dispersion. There are a number of choice young heifers sired by Cavalier's Fashion Plate; Yankee Doodle by King of Saranac; Rosebud's Pride by Willowmoor Peter Pan 26th; Robert's Cavalier by Bargenoch Gay Cavalier; Dalpeddar Good Gift by Auchenbrain Good Gift; Harperland Chief of Bonnie Brae; Cyrus of Genoa; Willowmoor Robin Hood 19th.

No old worn out cattle, no defective cows, everything federal tested and guaranteed for re-test;

If you breed Ayrshires, if you need Ayrshires, if you want to strengthen your show herd, if you need milk and butter bred cattle, if you want to found a good young herd, this is the premier Ayrshire buying opportunity of the season! Positively nothing reserved.

Add winning blood to your herd! Build your new herd on winning blood! This is the corn belt Ayrshire buying opportunity—the only Ayrshire buying opportunity in which you can buy this quality of cattle!

DETWEILER'S Dispersal Sale

Management Illinois Holstein-Friesian Association

50 Head Pure-bred Holsteins including his select breeding herd, also his show herd of champions and grand champion

Dixon Sale Pavilion, Dixon, Illinois

Monday, Sept. 27, 1920

Mr. Detweiler finding himself at the necessity of remodeling his cattle barn and building a hog house for his herd of 250 registered Durocs, (with the prevailing labor conditions being so unreliable) has felt compelled to disperse his entire *Show Herd* and all of his *Breeding Herd* except Rag Apple Korndyke 8th and three or four partnership cows.

The Show Herd The Show Herd includes Prilly Clothilde De Kol, a consistent winner at the Illinois and New York State Fairs and the National Dairy show, standing second to Minerva Beets—isn't that enough, since no cow ever stood higher?

Also Lady Calamo Hengerveld, the wonderful daughter of Paul Calamo Korndyke who began winning firsts as a calf and has won consistently at Illinois, New York and the National Dairy Show ever since. Also K. S. P. Nancy Pontiac, daughter of King Segis Pontiac out of a daughter of Paul Calamo Korndyke, that won first at Illinois and Danville, etc., etc. This herd just showed twice this year and brought back 21 ribbons from Springfield and 19 from Danville, including 5 championships and Grand Championships, 9 firsts, 12 seconds and 9 thirds.

From the Standpoint of Production From the standpoint of production, there's a 31-lb. cow, a 30-lb. cow, 2 26-lb. cows, a 26-lb. 3-year-old, a 20-lb. 2-year-old, a 17-lb. 2-year-old and so on.

When it comes to breeding, you have the blood of Rag Apple Korndyke 8th, whose sire and sire's dam were by Pontiac Korndyke and whose dam and dam's dam were by Pontiac Korndyke, his sire's sire, Rag Apple Korndyke, being out of the famous former world's record cow, Pontiac Rag Apple, 31 lbs., a full sister to Pontiac Clothilde De Kol 2nd; also a former world's record cow with 37 lbs. in 7 days and 1,257 lbs. in 365 days. Furthermore Rag Apple Korndyke 8th has already 56 A. R. O. daughters, 22 being 2-year-olds that average over 21 lbs., 5 3-year-olds that average 25.7 lbs. and 5 4- and 5-year-olds that average 28.07 lbs. (leaving out the 42-lb. record). You also have daughters of Paul Calamo Korndyke, the famous show bull, winning 16 championships in one year, the only bull that won three grand championships at the National Dairy Show being a son of the renowned Korndyke Abbekerk who was by Pontiac Korndyke and out of the famous old Pontiac Abbekerk, daughter of Hengerveld De Kol, also daughters of King Segis Pontiac Alcartra, and Mr. Detweiler's former herd sire, Woodlawn Hengerveld Segis.

For Example For example—A daughter of Rag Apple Korndyke 8th out of a 31-lb. cow.

A son of Rag Apple Korndyke 8th out of a 30-lb. cow.

A 30-lb. show cow (springing) bred to Paul Calamo Korndyke.

A son and a daughter of Woodlawn Hengerveld Segis out of a 26-lb. junior 4-year-old cow.

A daughter of King Segis Pontiac bred to Rag Apple Korndyke 8th.

If breeding, records or show yard type interest you for foundation stuff, you ought to find this sale an opportunity. Everything Guaranteed and subject to a 60-day retest under management of:

How SWP cuts Painting Cost

The way to buy paint economically is to forget gallon price and figure costs by area covered and years of service. The first cost of good paint is its final cost, but cheap paint must be re-bought so often that the purchase price is only the beginning of its expense.

SWP—Sherwin-Williams Paint

covers a third more area than cheap paint, lasts twice as long without re-painting and cuts costs for material and labor in half. It gives property better protection and better appearance from the day it is applied until the end of its long term of service. So forget gallon price and think in terms of years when you buy house paint. S W P has been the leading prepared house paint for half a century.

***S-W* Commonwealth Barn Paint**
is a bright, handsome red or gray which dries with a fine appearance. Works easily with free flow, giving unusual cover even on rough lumber. Ammonia-proof, durable, economical.

***S-W* Wagon and Implement Paint**
is a thoroughly tested practical implement paint of rich, permanent colors. Brushes on easily and dries with bright gloss. Tough, water-proof, keeps farm tools efficiently protected.

***S-W* EBONOL ROOF PAINT**
A coal-tar paint with unusual covering capacity. Heavy bodied, very elastic, won't crack or run. Sticks tight on all roofing materials, seals leaks, waterproofs, is *fire retardant*.

The Independent Farmer's Wife

(Continued from page 328)

gone day. She allows, with her better half, that these, among other things, won't go any more and henceforth she'll leave her share of the chores and endless work in the lurch and beat it to the places where even a woman can demand and get a king's ransom for a few hours' congenial labor in an attractive shop or factory—provided her man should be one of the rare and unfortunate few who couldn't pull down enough of the long green in one day in any average American city to keep him and a large family in luxury and plenty for at least the remainder of that week.

So says the Department of Agriculture as regards its mighty feminine half who have labored so faithfully and hard down the years; but wait! It cannot be possible, can it, that the great Department has been just a little misled and, even as the 40,000 farmers stirred up such a commotion for our industry, has perhaps taken the shadow for the substance and so mistakenly assumes that 40,000 farmers' wives, more or less, represent us all?

When I was a little girl in school, each morning found me marching upstairs to the main auditorium where chapel exercises were held. We used to sing lustily out of a gay red song book and in that book were songs which I liked and which I disliked with a singular intensity. Among these latter was a long-winded, two-paged relic entitled "The Independent Farmer", which went on at length to picture the delights of those who remain true to the soil and who voluntarily choose the rake and hoe instead of the quill or the cap. I was not a farmer's child at that tender time but, somehow, from instinct or something, that song didn't ring true and I sternly refrained from joining in the droning chorus. But The Independent Farmer was a prime favorite with our teachers—like the rest of the world, they instinctively felt the high moral tone which mention of the farm always inspires in those who believe in letting George do it—and at least once a week we impressionable youngsters were directed to page 100 and thereupon proceeded to render the Independent one his due.

Since my school yesterdays and after nearly ten years of honest to goodness farm life, I know that the old song at the time it was written and for long years following was indeed a snare and delusion and, in so far as the grand average went, had no basis on fact. For back as far as five years ago, farmers were neither independent nor to be envied, take them by and large, and I contend with the skeptical little girl I was that the author of it was only trying by false pretenses and mixed motives, even as his descendants do today, to lure young converts into the once forbidding farm fold—in other words, to get innocent Georges to do it so that the greedy old world could turn with clear mind to more lucrative and congenial tasks.

But five years have witnessed changes on the farm which ordinarily might well have required fifty to secure. The Independent Farmer is now a fact instead of a fable in ninety cases out of a hundred, and I would like to point out that there are without doubt ninety independent wives of independent farmers today where but yesterday the ratio was but twenty or thirty out of a hundred.

The 40,000 complaining farmers made a noise out of all proportion to their size. We can admit that the hue and cry didn't hurt farming any—that is, if all of us agree that there are quite enough of us on the job, in spite of outside propaganda, to profitably feed the world—but in the case of the discontented farm women, such charges, unless absolutely backed up by facts country-wide, would seem all wrong to give out.

Out in the big West, nine farm women out of ten for several years have known the delights and rights of nice homes which compare most favorably with city ones. Farmers in the virgin West made and make more money accordingly than we of the land-worn East, and naturally the western home has reflected this rightful and moderate prosperity before it was possible for country dwellers in some other sections to enjoy it. But it would be unfair and untrue to assert that a farmer, because he lives West, is invariably successful, for all of us have read of or experienced the lean years undergone by such families when drouths, insects, tornadoes, and so on lay low the crops and labor of a year, and the question is to beg or borrow enough to tide over disaster until the recuperation.

But if the western farm woman has known a modern home for a few more years than her average eastern sister, the latter is now rapidly catching up and in five years has really made gigantic strides in the enjoyment of improved houses and all-round living conditions. She and her husband have been receiving fair prices for all they could produce, and the limit was up to them. It is inspiring and quite remarkable to ride through our eastern highways and byways today and note the homes equipped with garages first, closely followed by electric lighting plants, new verandas, cared-for grounds, and well-kept and painted buildings. I cannot believe, in the face of this local evidence and the facts and statistics submitted from other sources, that the American farm woman is going to leave the farm en masse because she thinks it holds no future for her and her children. Instead, it would seem that ninety of her out of every hundred is in a fair way to live as ideal a life from now on as is granted to the average mortal, for wise folk know that plenty of work and responsibility is a blessing, not a curse, and while the farmer's wife will continue to the end of the chapter to be busy and fully occupied, no one in his right mind could wish her a new and unnatural life of idleness and folded hands—both of which are responsible for more unhappiness and discontent in our prosperous cities, as far as many women are concerned, than work was ever responsible for on our farms.

The farmer is truly independent today where he never was yesterday, and his wife enjoys the same privilege, or rather right. But here and there one runs across a couple who have made "Blessed Be Nothing" their hopeless slogan—and they either won't or can't get out of the rut of other years and seize opportunity before she has a chance to change her mind about knocking.

I have been criticized very bitterly after the printing of various articles in this and other papers for daring to intimate that the majority of self-confessed farm failures have only themselves to blame for their inability to share in the general looking-up of agriculture. They won't have it that farming has looked up or that any of us can or should make legitimate profits today after lean, hard years of denial and hope almost lost. But it is because we have worked our passage here on one farm that I am so sure that it can be done, given the will to do in spite of discouraging handicaps. Similarly, I believe that the farmer's wife holds their united fate in her own hands in a great measure, and as she keeps up her courage and holds fast to her faith, and uses her brains and when necessary her brawn to help bring prosperity to pass, before she realizes it—today—

she will be proudly numbered among those ninety successful farmers and their wives out of every hundred, instead of deploring and questioning the "luck" which dogs the footsteps of the remaining ten who cannot cope with Nature and win out.

It goes without saying that good farms adjacent to good markets do not labor under the handicaps which are the portion of those far removed from improved roads and the demanding consumer, but such farms are not going to shut up shop just yet, nevertheless, and here it is that the farmers' wife can help doubly in thoughtful plans to circumvent those handicaps and raise crops and stock most profitable to their conditions. Such women, capable and smart, refuse to bow to a so-called fate which places them with unfertile land, perhaps, with no natural advantages, or too far from town to attract any but the naturally contented, and so they strive with every waking hour to encourage their husbands to get out of the old profitless ways and into better ones—even in the back hills—for today good crops well raised command their own price, and a producer situated far from the crowd but who gets a reputation for prize potatoes or cabbage or wheat will surely become independent, and his wife, if she was his loyal and clever adviser and partner, will deserve and reap this coveted farm independence, too.

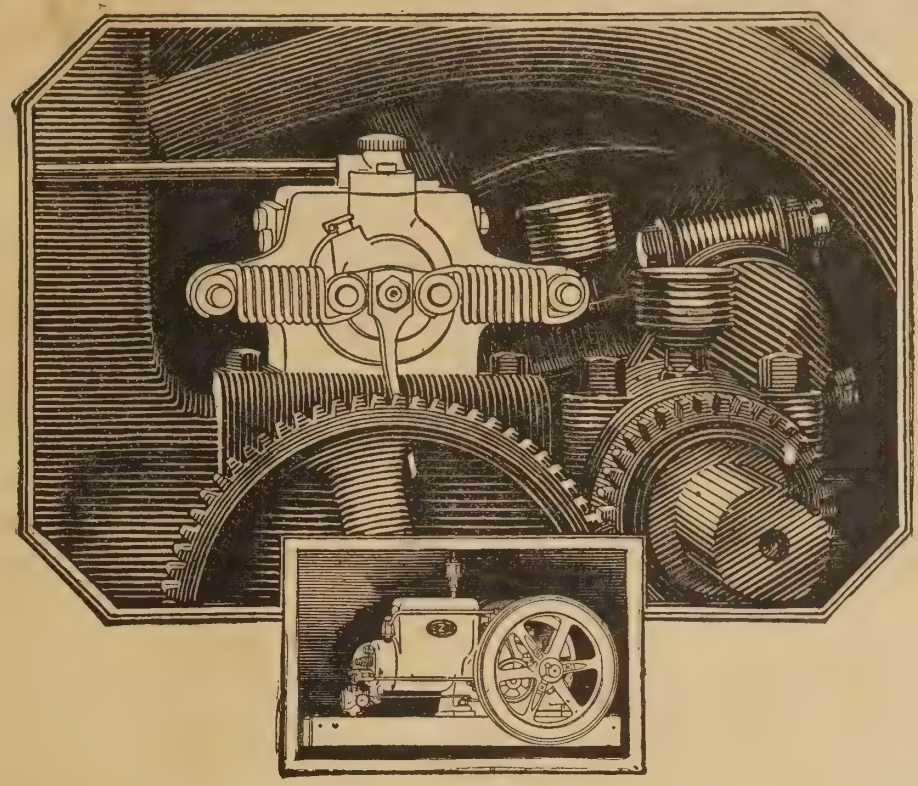
In five years average farm conditions have jumped from bad to near-enviable and this does not mean that the farmer has been a profiteer and has waxed fat and greedy on ill-gotten gains, either. It simply means that he has discovered that he is a perfectly good citizen of the United States, even as other men, and as much entitled to ordinary profits as is federated labor—and he has gone out after them and from now on will probably be busily and withal hopefully engaged in bringing them home to his good wife and the kiddies. And as for the farmer's wife, and she numbers seven million in all, I believe that she is peering carefully into the future and that she sees there a life well worth the living—busy, of course, but full of bigness and brightness on the whole, with comfortable, modern homes, fast motors to take her away for needed recreation, and, best of all, wide spaces everywhere in which to breathe and bring up young America as the latter deserves to be brought up. The 40,000 discontented farmers were not representative. I believe that the Department of Agriculture's findings as to the work-worn wives of some farmers are not representative of the rank and file of us, and although such conditions were once the rule instead of the exception, such is no longer the case and the independent farmer and the farmer's independent wife today are in the grand majority. For the world does move, even the agricultural world.

How Dairymen Benefit By Attending the National Dairy Show

When men nationally known as breeders of the best dairy cattle or as leading manufacturers of butter or ice cream, and men from the ranks of milk producers, milk dealers, and manufacturers of the leading lines of machinery stand up and give testimony of the actual money they have made by visiting the annual National Dairy Show, as some ten men recently did at a luncheon in Chicago, then we must concede that the Show is functioning. All that is needed is to spread its gospel, that more and more dairy people may each year arrange to get its benefits.

One ice cream and creamery man from California said of the last Show, that he had met one man, and had seen one machine that would enable him to go home and solve a problem that would net him thousands of dollars in one year, and that he would come back in 1920 with a lot of the dairy people from the Pacific Coast. We understand that a couple of car loads of people are already booked for the trip from California points, so he is making good.

An agricultural publication with wide circulation, interested in forwarding the best possible work for dairying, recently assigned one of its best writers to meet and talk with the leaders of the various branches of dairying, to get their views on the influence of the Dairy Show on dairy agriculture. The group of men brought together for this purpose told in turn what each branch was getting from these annual exhibits and reunions, showing conclusively that giant strides have been made in the industry in the last decade, through inspiration, enthusiasm, and knowledge gained at the great show.



The various organizations for the purpose of promoting and developing the branch of the industry to which they pertain, the dairy educational work of the Agricultural Colleges and the Extension Service of the different cattle breeds, and the constant pounding of the press, all render a powerful service each year. When this service is supplemented by the rounding up of all activities of the industry for the year, and, adding to that a real view of what the genius of man has perfected in machinery and equipment, one can get a slight glance of what is to be gained by a ten days' gathering of this sort; but no one can get the full benefit of all this endless work unless he makes it a rule to make an annual visit to this great show, October 7th to 16th, 1920, Chicago.—Publicity Department.

Replaces Inferior Birds

"I sold my inferior sires last year. They don't pay."

With this explanation a poultryman in Marion County, Ill., enrolled his poultry in the "Better Sires—Better Stock" movement. The entire flock of 210 birds is of pure breeding.

FAIRBANKS-MORSE "Z" FARM ENGINES

Built-In Bosch Magneto Insures Hot Spark

"Z" Engine ignition—positive—from Bosch high tension magneto, built into every "Z" Engine, insures intense hot spark that gives utmost power from fuel.

The high tension system is simple — just a high tension magneto with spark plug—no complications—no moving parts. Magneto is high grade—has interchangeable parts—is as accurately made as a fine watch. It gives the "Z" added power — quick starting — smooth, steady operation.

Other "Z" features are: Runs on kerosene as well as gasoline; more than rated power; parts interchangeable; clean-cut design; long life.

Call on your nearby dealer today and he will show you why you should have a "Z."

CONE-SHAPE GRINDERS

It PAYS to GRIND ALL GRAINS

Look to the Grinders. They do the work! Bowsher's Cone-Shape grinders are the correct principle in Feed Mill construction. They mean larger grinding surface close to center of Shaft; thus More Capacity, Lighter Draft, Longer Life.

"Desire to express my appreciation of the long-lasting, trouble-proof Bowsher. Have used a No. 4 ten years with less than One Dollar per year for repairs." *R.W. Watt, Jacobsburg, O.*

10 sizes; 2 to 25 H. P. Write for free catalogue.

N. P. D. BOWSHER CO., SOUTH BEND, IND.

NOTICE THE POINT

IT'S A NEW FEATURE

Found only in The PIERCEASY Bull Ring

No more tearing of the nostrils, because it is now so simple and easy. Just pass the ring thru the nostril, put in one small screw and the work is done quickly, making a clean hole thru the nostril.

CUTS A CLEAN HOLE

Made of a SPECIALLY PREPARED METAL and in SEVERAL SIZES

The Pierceasy Bull Ring is the latest and most durable ring on the market. More simple and efficient than the old style bull ring and many times more practical.

Buy them from your dealer or send $2.00 for No. R.B.3, which is our large size, postpaid.

COMPLETE DISPERSAL SALE

ROSAMAINES RANCHO RIVERSIDE CALIFORNIA

(60 Miles East of Los Angeles)

October 19-20-21, 1920

KING PONTIAC NETHERLAND SEGIS 3D
27 A. R. O. daughters. By a son of King of the Pontiacs and out of a twice 34-lb. daughter of Sir Skylark Ormsby Hengerveld.

SIR ORMSBY SKYLARK RAUWERD
By Sir Ormsby Skylark and out of a 34-lb. daughter of Prince Segis Korndyke, second dam a 29-lb. cow.

Because of the ill health of the managing owner, Mr. A. J. Stalder, one of California's greatest Holstein breeding herds and properties go under the auctioneer's hammer in this sale, in the following order:

9 A. M. OCTOBER 19—235 acres on which are more than $50,000.00 worth of improvements, figuring on normal cost when built. This is without question one of the foremost breeding plants in the West. Another parcel of 397 acres adjoining, without buildings, will be sold immediately after. Following the sale of the ranch there will be sold 50 registered Duroc Jersey hogs, 16 registered Percheron mares and stallions, 1,800 White Leghorn hens, a small herd of grade dairy cattle, all of the implements and tools, and a quantity of hay.

OCTOBER 20 and 21—These two days will be devoted to the dispersal of the splendid herd of 150 registered Holsteins, one of the choicest collections of the breed in the West, most of them bred in this herd. This herd contains more Ormsby blood than any other in the West, including females with records up to over 34 lbs. butter in 7 days, and about 25 are now on yearly test. The two herd bulls, pictured above, are high class in every respect. Every animal is positively guaranteed to be a breeder; every animal over six months old tuberculin tested and sold subject to retest by the buyer.

For further information or catalog of sale address the sale managers.

California Breeders' Sales and Pedigree Co.

AUCTIONEER — Col. Ben A. Rhoades, Los Angeles

PART OF THE BARNS AT ROSAMAINES RANCHO. (INSET) THE BOTTOM LAND PASTURE.

Lowe's

He's throwing stones at your barn too
What are you doing about it?

Day and night, the year around, Old Father Time throws stones at your barn. Every stone he throws, hits it fairly and squarely *everywhere*. First thing you know, you'll find a rotten board where some of his stones have hit. Then you'll wake up to the fact, that everywhere the building shows Time's wear and tear.

When you think what barns cost to build these days, it makes a cold chill run up your back. Happily for you, however, you can protect your barn from the biggest stones the old man wants to throw.

A film of Lowe Brothers' Paint, less than one one-hundredth of an inch thick, will do it. All paint will give *some* protection. Lowe Brothers' gives the most. We can prove it. Send for facts and figures.

Lowe Brothers' Paints and Varnishes are sold by the one best dealer in each town.

Paints

"NOW-A-DAYS"
says the Good Judge

A man can get a heap more satisfaction from a small chew of this class of tobacco, than he ever could get from a big chew of the old kind.

He finds it costs less, too. The good tobacco taste lasts so much longer he doesn't need to have a fresh chew nearly as often.

Any man who uses the Real Tobacco Chew will tell you that.

Put up in two styles

W-B CUT is a long fine-cut tobacco
RIGHT CUT is a short-cut tobacco

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Catarrh

Kindly tell me if raw linseed oil is better as a purgative for cows than Epsom salt. If not please tell me in which case raw linseed oil is to be given and in which the Epsom salt. Does it hurt or benefit cows to receive a drench of Epsom salts once in a while? Our cows dispell from their nostrils a yellowish mucous-like discharge, early mornings, which, in this country are, on account of its high altitude, cool.

Taos, N. M. R. C. P.

Epsom or Glauber salt is the standard physic for cattle. Raw linseed oil is most suitable when there is impaction of the paunch or bowels. In such a condition one first gives fluid extract of nux vomica and salol in dram doses, along with small dose of raw linseed oil every three or four hours until the cow starts belching or chewing her cud, then a full dose of Epsom or Glauber salt may be given in warm water as a drench. As the cows have a catarrhal discharge it would be well to have them tested with tuberculin, as tuberculosis could be a possible cause and is incurable. If that disease is not present the condition in all probability is induced by dust or may be incidental to the altitude of the location in which the cows are kept. That, however, would be a matter for investigation by an expert.

Contagious Mammitis

I have a herd of pure-bred Holsteins that are valuable. We have had a great deal of trouble with garget or caked bags this summer. Have lost the quarters on some of our best cows. I have used every precaution and have used poke root and vaccines without result. I have been very careful in handling the cows affected and in spite of all every now and then a cow comes to the barn in great distress with one quarter all caked up.

Randall, Ia. E. E.

Germ infection is the undoubted cause of such cases and the infection is carried from cow to cow by the milkers' hands or cups of the miking machine. It may also be contracted from floors or other places contaminated by milk or purulent discharge from affected quarters. In some instances the cows contract the disease from lying upon filth or infected ground or standing or wading in stagnant water.

Immediately isolate the affected cows and milk them last or have them milked by one who does not handle the other cows. As there is no remedy for the spoiled quarters, all such cows had better be fitted for the butcher, or they may be used for breeding, if kept apart from the other cows and allowed to raise their calves. Sometimes, however, milk from affected udders proves poisonous to sucking calves. Cleanse, disinfect, and whitewash the cow stables including the floors. Keep cows and heifers out of places such as we have mentioned. Do not let calves suck one another's teats. Treat starting cases as often advised here and the attending veterinarian also should use mastitis bacterin.

Texas News

The Galveston Co-operative Stores, Inc., of Galveston has under consideration plans for the construction of a creamery. G. A. Knapp is chairman of the committee appointed to investigate the practicability of the proposition.

The Port Arthur Dairy Farmers' Co-operative Society has been incorporated at Port Arthur, Texas, with no capital stock. The incorporators are N. L. Logan, E. T. Smith, and Edward Rake. W. D. HORNADAY.

Clean Out Abortion

From Your Herd With

Hood Farm Abortion Remedy

and

Hood Farm Breeding Powder

Hundreds of breeders have saved valuable cows and their calves by giving the Abortion Remedy promptly and freely on the first sign of abortion. Its success has been remarkable.

Injection with Hood Farm Breeding Powder every day for 21 days before service, then every day for 21 days after service, destroys abortion germs, disinfects the organs and keeps cows in a normal, healthy breeding condition.

PRICES: Abortion Remedy, prepaid, $1.25, $2.75, and $9. Breeding Powder, $1.15, $2.75, and $5. Injection Tube, by mail, 90 cents. One medium Breeding Powder, one medium Abortion Remedy, one Tube, prepaid, $5.75.

National Jersey Show

With entries already coming in, the indications several weeks before the opening of the big exposition point to a record-breaking number of exhibits in the National Jersey Cattle Show to be held in conjunction with the State Fair of Louisiana, October 28 to November 7, inclusive.

The initial batch of entries, numbering thirty-five, was sent in by Ed. C. Lasater, of Falfurrias, Texas. Mr. Lasater has made the State Fair of Louisiana before, but not on the tremendously important scale that he will be represented at the 1920 exhibition, judging by the interest he is already manifesting in the national contest.

Louisiana. D. G. FRENTZ.

Producing Clean Milk

The following suggestions for producing clear milk are taken from the monthly letter of the Flint, Michigan, Health Department to the milk producers of that section:

"You are engaged in an occupation which carries with it more or less responsibility which should be borne in mind by your employees as well as yourself. Babies and children unknowingly rely on you to produce an article which is perfectly pure and safe at all times. The ten suggestions found below are given to assist you to assume that responsibility:

"1. Keep the cow's flanks and udder free from dirt and manure. This is probably the most important single precaution that you can take. More dirt gets into milk from this source than from all other sources combined.

"2. Wipe the udder with a moist cloth before milking. This little chore will take about ten seconds of time to each animal but the difference in the quality of milk produced is more than sufficient to pay for the time spent.

"3. Use a small-top milk pail. The importance of the small-top pail cannot be over-estimated. It has been tried and proven satisfactory and practical.

"4. Use outing flannel or a cotton pad strainer. The use of cheese-cloth or a wire mesh strainer is a mistake and a false security, which should and can be remedied at once.

"5. Sterilize all milk utensils with scalding water or steam. Invert them on racks or stakes when not in use. Rinse with clean water before using. Proper care of milk utensils is necessary to insure a grade of milk which is acceptable to the market milk trade.

"6. Dispose of all tuberculous cattle. Figures collected from all over the United States show that from 5 to 30 per cent of all dairy cattle are afflicted with tuberculosis. Have you any tuberculous cattle in your herd?

"7. Keep your stable clean. It should be whitewashed and the ceiling tight fitting and kept well brushed. Don't allow manure to accumulate. It is impossible to produce clean milk in a dirty stable. That fact is plainly evident to anybody who has ever worked on a dairy farm.

"8. Milk with clean hands. Soap, water, and a towel should be convenient to the milkers.

"9. Avoid wetting the hands while milking. Wet hand milking is a filthy habit which should be discouraged. It also causes sore and chapped teats with a resulting irritation and partial loss of milk flow.

"10. Cool the milk to 60° or below immediately after milking. A tank or aerator is best suited for this purpose. The use of a dairy thermometer in this connection is advisable. The "wash tub method" of cooling is absolutely inadequate and sooner or later will cause financial loss.

"You will notice, Mr. Milk Producer, that most of the points mentioned above concern methods which require no money expenditure but can be adopted immediately. We urge you, for the sake of hundreds of babies and children, to carefully consider and then adopt them."

Suppression of Milk

I have a Jersey cow 5 years old with third calf and fresh 6 days, but she hardly gives enough milk to feed calf. I am feeding kale, green corn, and mill run and have been feeding one tablespoonful of Kow Kure twice daily. She seems to be in good health, eats and drinks well, bowels are in good shape. Please tell me the cause of trouble and give me a remedy for it.

Portland, Ore. W. W. F.

A chill at calving time is a common cause of such suppression of milk, or the lessened yield may have been induced by milking too long without rest before calving, or by an unnoticed attack of subacute mammitis after weaning a calf, or drying off the milk flow. Milk her three times daily, massaging the udder thoroughly each time and add wheat bran, dried brewers grains, gluten meal, and oil meal, or similar milk flow encouraging feeds to the ration. Medicine will not be likely to help.

HOLSTEINS

Hornless Holstein Farms, Clarks Summit, Pa.
10 Miles North of Scranton, Penna., on the D. L. & W. Railroad and Northern Electric Ry.
— ABOUT 100 HEAD —
Many of them sired by the BEST DAMMED BULL of the breed, a son of the WORLD'S RECORD SENIOR 4-YEAR-OLD, KEYSTONE BEAUTY PLUM JOHANNA, with 25,787.5 lbs. of milk, 1,294.7 lbs. of butter, strictly official in a year, 4% IN LONG TIME TEST. Daughters of cows with semi-official records from 600 lbs. of fat and up; sons of 30-lb. cows; son of a cow with 1,056 lbs. in semi-official test. 35 animals from herds under Federal supervision. Some of the consignments sold on a 60-day re-test. Many animals NATURALLY HORNLESS.
GEORGE E. STEVENSON, SCRANTON, PA.

Grandsons of S. P. O. M. and K. K. S. V.

SIRED BY

SIR PIETERTJE ORMSBY MERCEDES 41ST
The $65,000 bull that has more 1,000-lb. sisters than any other bull of the breed. He is the only son of Sir Pietertje Ormsby Mercedes and Spring Brook Bess Burke, "the greatest mother of the breed".

THESE YOUNG BULLS 4 TO 11 Months Old ARE FOR SALE

Sons of "41st"

1—A splendid young bull out of Bonny Johanna Mooie De Kol, see lower left illustration. This is one of our good foundation females that will have another and better chance on year test. The calf was born May 9.

2—Summit Alma Mercedes; born May 1, out of A. W. P. Alma Coin that made 16.48 lbs. butter and 307.3 lbs. milk in 7 days at 27 months.

3—A son of Summit Ormsby Colantha Maid, a very good prospect at her next freshening. Born May 8.

SIRED BY

KING PONTIAC ARTIS SADIE VALE
He is a 34-lb. son of the great King Korndyke Sadie Vale. His 3 nearest dams average 37.48 lbs. He already has 3 A. R. O. daughters and we have a large number of young heifers by him that will be retained in our herd and tested.

BONNY JOHANNA MOOIE DE KOL
A splendid 29.64-lb. cow that has a 305-day record of 694 lbs. butter from 18,124.8 lbs. milk. She will be tested again.

Sons of "King"

1—A 6 months' old son of Mary Segis Beets; see lower right illustration. This youngster is a splendid prospect for a real herd bull.

2—*Summit Fyke De Kol.* Born Oct. 10, '19. From Circe Fyke Canary De Kol, 16.86 lbs. butter, 424.7 lbs. milk in 7 days as a 3-yr.-old. Just finishing year test. In 262 days she had produced 16,329.5 lbs. milk and about 650 lbs. butter.

3—*Summit Rag Artis.* Born Oct. 25, '19. From Queen Rag Apple Colantha, 16.3 lbs. butter from 401.9 lbs. milk in 7 days. Now on year test as a 2-year-old and had 10,294.5 lbs. milk and about 400 lbs. butter in 212 days.

4—*Summit Korndyke Lad.* Born Oct. 25, '19. From Lady Ormsby Pietertje Paul, just finishing year test with a very creditable record.

MARY SEGIS BEETS
One of our good foundation cows. She made 32.22 lbs. butter from 684 lbs. milk in 7 days, is now on yearly test and in 4 months produced 11,854 lbs. milk.

GUSTAVE PABST, Owner, HOLLYHOCK FARMS
DOUSMAN, Fred Southcott, Mgr. WISCONSIN

Facts in BLACK & WHITE

Large Profits From Pure-bred Holstein Cattle

In the production of milk and butter the larger the cow the larger the profit, other things being equal. This principle has been established through the investigations of government experts and is generally recognized.

When a cow's milking days are over, size is still an important factor. The big Holstein-Friesian, weighing anywhere from 1,000 to 1,800 lbs. with her clean white fat well distributed through her muscular system, proves a most profitable dairy beef animal.

YOUR CHOICE OF 30 YOUNG BULLS OUT OF YEARLY RECORD COWS

FROM AN ACCREDITED HERD—325 FEMALES

OUR HERD SIRES

KING OF THE ORMSBYS

KING OF THE ORMSBYS is sired by Sir Pietertje Ormsby Mercedes (twelve 1000-lb. daughters) and out of Spring Brook Bess Burke 2d, the world's largest dairy cow and the only cow in the World with three 7-day records above 35 lbs. butter in connection with three year records each above 1000 lbs. Her best records are 38.22 lbs. in 7 days and 1290.93 lbs. in a year.

SIR INKA PRILLY SEGIS is a 30-lb. son of King Segis. He has 84 young daughters at Winterthur; 30 have freshened and 10 of these made above 20 lbs. at first freshening. At their second freshening they are coming back with from 25 to 28 lbs. 17 of his daughters have completed semi-official records, and 12 of these averaged 757.73 lbs. butter and 19,172.30 lbs. milk at an average age of 3 y. 6 m.

SIR INKA PRILLY SEGIS

KING OF THE SADIE VALES is sired by King Korndyke Sadie Vale (the only bull with a 40-lb. dam, a 40-lb. sister, and a 40-lb. daughter) and out of a 38-lb. "Sadie Vale" cow. Both his sire and dam are out of 41-lb. cows. The five nearest dams of King of the Sadie Vale each weighed over a ton and produced over 100 lbs. of milk a day. His three nearest dams average 40.19 lbs. butter in 7 days and 159.51 lbs. in 30 days.

JOHANNA KING SEGIS is out of a 40-lb. cow and sired by a yearly record son of King Segis. The dam of Johanna King Segis was the first cow to make 541 lbs. butter in 120 days and the second to make 40 lbs. in 7 days. Johanna King Segis now has 8 daughters with semi-official records and these average over 700 lbs. butter and 18,000 lbs. milk. All his daughters born at Winterthur will be given an opportunity to make semi-official records.

HALL BROS.

— A Dissolution and Dispersion Sale of —

150 Head of Registered Holstein-Friesian Cows, Heifers and Bulls

at their Western Holstein Farm, 5½ Miles Southwest of Denver
On the Morrison Road

After twenty-three years of agreeable partnership of the brothers —Carlos W. and Storrs H. Hall, by their mutual agreement they have decided to close their partnership in this very successful business, and are offering at public sale one of the great herds of the day.

The foundation blood upon which this herd was established was of the best of the breed, and under the guidance of the Hall Bros. has increased in quality, and is today recognized from coast to coast as one of the great herds of America, and its breeding is the standard of excellence in the nation's greatest live stock exhibitions and sales, and in official testing.

The herd is composed entirely of animals of correct conformation and great milk and butter-yielding qualities. The herd is healthy and high class in every way. It was established with the view in mind of creating a herd of this breed in Colorado to supply foundation stock of this breed to the fast-growing dairy interests of the Rocky Mountain States. The Hall Bros. are, in live stock circles, well known men and highly respected. After years of successful operation in the dairy interests of Denver, the Western Holstein Farm and its herd of registered Holstein cattle, the owners believe a lightening up of their responsibilities of their large business should be observed, and hence this sale.

Just once in a great while does an apportunity present itself to buy your own selection of real foundation breeding blood of any blood of the various breeds, at your own price, and you should, those who are interested in this great breed, avail yourself of this great opportunity. *Remember the date, Tuesday, October 5, 1920.*

S. A. BAIRD & SON, WAUKESHA, WIS.

Head Your Herd With a Bull!

Get a son of King Superba out of one of our good cows. King Superba's offspring won first and second in get-of-sire and calf herd at the Wisconsin State Fair, 1918. His four daughters sold in the Waukesha Sale, Nov. 1919, averaged $959. King Superba's dam was the first cow to be strictly officially tested for the entire year. She produced 1231 lbs. butter, 26,433 lbs. milk as a four-year-old. She has twice produced over 33 lbs. butter in 7 days. If you wish to combine individuality and production, head your herd with a Son of King Superba. We now offer a number of his choice sons, serviceable age and younger, out of dams with records up to 24 lbs. Several of the dams are on yearly test. Don't wait. Come and see them now.

BAIRD BROTHERS, WAUKESHA, WISCONSIN.

One of the sons of King Superba. They are all excellent individuals.

Central Wisconsin Holstein Breeders' Association

Consignment Sale

70—Head—70

Quality Registered Holsteins

60 young Cows and Heifers. 10 Bulls —ages from 3 months to 3 years. Good enough to head any herd in the world.

Sale Pavilion, Fair Grounds

Marshfield, Wisconsin

October 7th, 1920

We have picked the best individuals from the herds of the best breeders of Marathon, Clark, Taylor, and Wood Counties. Some of these animals will be bred to King Pietertje Ormsby Piebe 10th, a 1200-lb. sire, and others equally good.

One daughter of a 35-lb. sire and out of a 30-lb. cow, bred to a 30-lb. sire.

One yearling daughter of a 37-lb. sire, King Sadie Vale Hengerveld.

One daughter from a 22-lb. four-year-old, bred to a 37-lb. bull.

The Master Ormsby bull, 4 months old. His dam is a 28-lb. heifer by Prince Hengerveld Fayne.

BREEDING AND QUALITY—OUR WATCH-WORD

A real chance to get Foundation Stock for your herd. Come to this sale. Bring your wife and daughters as well as the boys.

We will make this sale amusing, interesting, and instructive. You can't afford to miss it. Remember the date—October 7th, 1920.

Marshfield, Wisconsin

Sale starts at 12 o'clock sharp.

SIR ORMSBY BEAUTY PONTIAC SEGIS

A son of that great heifer, Beauty Girl Pontiac Segis—1,112 lbs. butter, 24,924 lbs. milk in a year, as a jr. 3-yr.-old—20 world's records to her credit, while just a heifer. His sire is youngest son of Pietertje Maid Ormsby—the great foundation cow, and dam of Sir Pietertje Ormsby Mercedes, only sire of breed to have 8 1000-lb. daughters. SIR ORMSBY sires the straight kind—one of his heifer calves took first place at the Wisconsin State Fair.

Get a son of SIR ORMSBY, out of cows that are now on yearly work.

Pinehurst Farms Co., Sheboygan Falls, Wis.

Walcowis Farms

He is the $15,000 calf purchased at the National to breed on the daughters of Finderne Netherland Korndyke, son of former Champion Jr. 2-year-old; Finderne Pontiac Netherlands.

A few sons of the latter bull and out of A. R. O. cows still left for sale.

Better write or come and see us.

WM. MILLAR, JR., MENOMONIE, WIS.

5-10 WELL BRED HEIFERS

SEVERAL GOOD YOUNG BULLS

are what we are offering just now. The heifers are registered two-year-olds, bred to freshen this fall. The bulls, old enough for fall service, are from A. R. O. dams and by Sir Ormsby Homestead Butter Boy, a 35-lb. bull. One is by a 42-lb. grandson of S. P. O. M. Come and see them.

ANDREW FRANK, FOX LAKE, WIS.

ORMSBY BULL - Born Feb. 28, 1919

Sire, King Ormsby Pontiac De Nijlander, whose two nearest dams average over 30 lbs.

Dam, Aaltje Hengerveld Triomia Segis. A. R. O. 17 lbs. at 3 yrs., next dam 29.68 in 7 days. Color light, fine individual. Ready for service. Price $300.

Fairview Stock Farm Whitewater, Wis., W. G. Marshall, Prop.

We are now offering two sons of

King Pietertje Ormsby Piebe

One of the Breed's Greatest Young Sires

King Pietertje Ormsby Piebe 22nd is 4 months old and light in color. His dam, Kirby Martha 2d, as a senior 4-year-old, made 32.36 lbs. butter from 560 lbs. milk in 7 days and 978 lbs. butter, 18,347 lbs. milk in a year. Moreover, she has several year-record sisters including one above 1,000 lbs.

King Pietertje Ormsby Piebe 25th was born June 7. His dam has a year record of 1,039 lbs. butter from 20,237 lbs. milk as well as a 30.47-lb. 7-day record, both made as a four-year-old. She is one of the best individual cows we have.

Write or wire at once if you are interested.

Hargrove & Arnold Holstein Co., Norwalk, Iowa.

Ready For Service

Iowana Pontiac Homestead 267584, a son of OAK DE KOL OLLIE HOMESTEAD 85529, and therefore a brother to Piebe Laura Ollie Homestead King, (5 20,000-pound two-year-old daughters). His dam, Iowana Aaggie Pontiac Fayne, is a daughter of SIR JOHANNA FAYNE 42147, (8 20,000-pound daughters) has a record of 22.9 pounds in seven days as a four-year-old and is now doing well on yearly test. Her dam is a great foundation cow with over 750 pounds butter in a year. Buy him now as he will undoubtedly be worth more money when his dam finishes her year. Price $750; send for pedigree and photo.

Our herd is under Federal Supervision.

IOWANA FARMS, - DAVENPORT, IOWA

Do You Want

A 30-lb.—1000-lb. Ormsby Bull?

If you want one of that kind —and a real individual, write for our sale catalog. We are moving our herd to California and rather than take these bull calves we are offering them at sacrifice prices.

They are sons of Sir Ormsby Skylark, the sire of Duchess Skylark Ormsby, and they're from cows with records of from 27 to 40 lbs. that either have or are making good yearly records. (Several of those dams have over 30 lbs. and will finish the year well above 1,000 lbs.)

Better write today for that sale catalog.

Blumecrest Farm, Maple Lake, Wright Co., Minn.

BULLS—Two of Them.

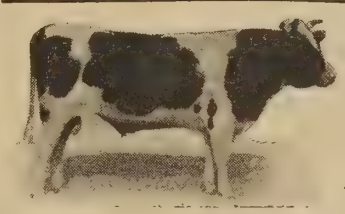
Ready for service. One light and one medium in color. One sired by our DUTCHLAND CREAMELLE COLANTHA LAD, from a good daughter of SIR WINANA BEETS SEGIS. The other sired by SIR WINANA BEETS SEGIS from a daughter of SEGIS JOHANNA GRAHAMHOLM. Both cows are on yearly test now and are making good records.

Don't buy a bull until you have seen and studied the pedigrees, pictures and prices on these youngsters. They are good ones. **GRAHAMHOLM FARMS,**

H. R. Searles, Mgr. Rochester, Minn.

LAKE SHORE HOLSTEINS

Fine service bull for sale. Sire one of the best—Dam now on yearly test and twice Grand Champion Cow at Ramsey Co. Fair. Send for pedigree if you want a good one.



E. J. OPPLIGER, Box 20, Forest Lake, Minn.

Lola Segis Pontiac Homestead

the highest record bull in southern Minnesota, heads our herd. His sire, Piebe Laura Ollie Homestead King, has more daughters that as 2-yr.-olds have produced 20,000 lbs. milk in a year than any other. His dam, a 34-lb. 4-year-old daughter of King Segis Pontiac Count, has 3 records averaging 33 lbs. and has made over 1,000 lbs. in 1 year. We have a few serviceable bulls and younger from A. R. O. dams for sale.

Clover Lea Farm, W. W. Walker, Owner. Austin, Minnesota

THE LASHBROOK HERD

Headed by SIR WALKER SEGIS HOMESTEAD, first prize yearling bull, Chicago and Waterloo, 1919. His dam, Beauty Beets Walker Segis, made 25,343 lbs. milk, 1,040 lbs. butter in one year, World's Record for Senior two-year-old heifer. Her sire, KING SEGIS PONTIAC COUNT. We have several choice bull calves, two to five months old, from A. R. O. cows or cows on yearly test. $400—$500 apiece. Send for pedigrees and photos.

A. J. LASHBROOK, NORTHFIELD, MINN.
Herd Federally Accredited

FOR SALE

A SON OF THE $65,000 SIRE

Sir Pietertje Ormsby Mercedes 41st from a 26-lb. dam. An extra good individual, ready for service. Guaranteed to please purchaser. The Grand Champion female, the 1st prize yearling, and the Blue Ribbon *Get of Sire* at the N. D. State Fair were all sisters of this young bull. Our herd is on the accredited list. For chart, pedigree and price address

Wright County Holstein Breeders

Will Hold Their

First Consignment Sale

October 5

at Howard Lake. Minn.

This is their First Sale. On it they are building their reputation for future sales, so you may be very sure that the 50 registered Holsteins that they offer will be good ones, far better ones than could be purchased at private sale in the same county.

Every animal sold will be straight and right and will be sold with a health guarantee.

The very fact that the state association has undertaken the management of it is proof of the character of the sale. Plan now to attend.

For catalogs write

The Minnesota Holstein-Friesian Breeders' Ass'n

406 Market Bank Building Minneapolis, Minnesota

The Mower County Breeders' Sale

Austin, Minn.

Oct. 7

Will include 50 high class, healthy, registered Holsteins.

We are not offering our highest record, most valuable females but we have consigned the kind that we are proud to offer as representative of our herds. They are good individuals, well bred, with creditable records, and backed by creditable records, many of them in calf to some of the best bulls in the state.

This is a sale where every animal will be exactly as represented and where nothing will be left undone to insure you a square deal.

Plan now to come. You will be welcome whether you come as a buyer or only to get acquainted.

Write for your catalog to Sec. Scott of

The Minnesota Holstein-Friesian Breeders' Ass'n

406 Market Bank Building Minneapolis, Minnesota

This Daughter of S. P. O. M.

— WILL BE SOLD AT

The Dairy Center Sale

GLEN DE KOL MERCEDES

We Have Consigned this splendid daughter of Sir Pietertje Ormsby Mercedes to the Dairy Center Sale, October 1-2 at Northfield, Minnesota. She is out of Glen De Kol Artis 3rd, grand champion female at the 1913 Minnesota State Fair, she a daughter of Homestead Jr. De Kol.

Glen De Kol Mercedes is a full sister to Lady Glen Artis Ormsby, highest priced female at the 1920 Minnesota state sale. She has a 22-lb. junior 4-year-old record and is now making a splendid year record. She will be bred to our Piebe Laura Ollie Homestead King.

We Are Also Consigning Her Son, Glen Pontiac Mercedes Homestead, born June 10, '20, and sired by Lola Segis Pontiac Homestead, a 34-lb. 1,000-lb. son of Piebe and grandson of "Count". This calf is a splendid individual and combines as closely as possible the blood of S. P. O. M., King Segis Pontiac Count, and Piebe Laura Ollie Homestead King, Minnesota's 3 greatest long distance sires.

Look for them in your catalog and write us for more complete information.

Fall Days

with their chilly winds offer a mighty good reason for giving special attention to the feed of Dairy Cows.

Start your winter program of feeding early.

Do not let any other farm work interfere with this important need.

Even though the cows may be dry, they need a concentrate to balance their ration. This prepares them for the next period of lactation.

True Value Dairy Feed

is the best feed for Dairy Cows because it produces the greatest returns for the money invested.

The actual increase of the amount of milk is only one of the returns from feeding True Value Dairy Feed.

True Value Dairy Feed also repairs the broken-down tissues of the animal's body and maintains the *vital energy*.
Our chemists are experts on the subject of animal nutrition. They are at work continually in our modern laboratory testing and examining the ingredients of our feed. We are able to absolutely guarantee the following analysis, which shows available, not total nutrients:

Protein	(Minimum)—24%
Fat	(Minimum)— 5%
Carbohydrates	(Minimum)—52%
Fibre	(Maximum)—10%

A trial will convince you that our feed will produce more and better results than any other on the market.

If your dealer does not carry True Value Feeds, write us and we will see that you are supplied.

How One Co-operative Creamery Made Good

"It Can't Be Done, Yet We Go Ahead And Do It"

JOHN BOWER, MINNESOTA

IT is a far cry from a wage of $50 to $60 a month to a salary of $3200 a year. The writer refers to the wages offered a few years ago, and salaries paid now for competent buttermakers. There are still buttermakers getting only a little more than the above wage, and there are many who are getting more than the salary mentioned; and yet, anyone who has given the matter the least consideration must concede that there is not only a potential difference in the value of the buttermaker, but a real value as well.

Given a good location and fair management with a reasonably large make, a creamery may run for years. Give that creamery the intense enveloping competition of a well managed centralized or private owned enterprise and, to use a slang expression, "it is a horse of a different color". The make is cut down, increasing costs; quality is affected because the local creamery has no longer a monopoly and the decision as to what is to be received; cash is paid on delivery; and, in general, competition is right aggressive.

The writer can recall when the farmer measured the buttermaker's value by his own. If he was better off, or if he gave any appearance of being so he was getting too much wage. One of the writer's early acquaintances was a man who had made a financial success in his business because, as he said, he never exhibited any of that wealth. He enjoyed a large patronage because his patrons felt assured he was not doing any better than they. Surely this is a very poor way to measure a man and especially now when they, the buttermakers or cheesemakers, are handling a product of so high a value.

It was therefore an agreeable surprise when, on giving a talk before an audience of farmers, they gave approval to a statement that the centralizer, and the private owned concerns, well managed, have contributed not a little to the success of the co-operative creamery. At that town they were receiving a splendid return for butterfat and the reason seemed to be that a privately owned and a co-operative creamery were engaged in a rivalry for the patronage of the district. It was a struggle of the giants, a battle royal for business.

A DAIRY FARM IN SOUTHERN WISCONSIN

Quite a number of years ago this creamery, one of the first of the state, was running along with incompetent buttermakers and still more incompetent management. Echoes of that mismanagement may be heard to this day. One of the farmers present declared that in those days his milk test did not vary from one year's end to the other. No doubt, there were other grievances which were equally unfair, and which even yet contribute to the distrust of some who once patronized the co-operative creamery. It was even declared that the directors of the creamery were given advantages in tests and weights. This was untrue, but it added to the difficulties the later management met. No doubt this same early management when it desired a buttermaker advertised, offering the munificent wage of $70 a month. Now they pay $3200 a year. What brought about the change?

How it was Done

It happened in this way. A dairy company seeing the condition of this sick creamery and wishing to establish a produce company including dairy products offered to buy the co-operative creamery. They had won over the directors who thought there was not a chance against these fellows who showed evidence of having the means of doing what they said they would do, put the co-operative out of business. A meeting was called. The offer of the new company was made and after some debate it seemed as if the deal would go through. At the crucial moment a farmer sitting in the back of the audience came to his feet. His appearance was not such as might be found in a New York fashionable restaurant, but evidently he was a man of character. As soon as he could get the chairman's attention he in a quiet way said: "I move you, gentlemen, that we run this creamery ourselves or bust." It was not what he said so much as the way he said it, but immediately the audience was on fire. His motion was seconded and carried, and the fight was on.

Advantage of Quantity and Price of Raw Material

The history of the following years need not be given here. For a time things looked blue for the co-operative. The produce company played the game fair, but they played it with sagacity. They established skimming stations in outlying districts which ate into the co-operative territory; they fought for quality in so far as it was required to maintain their premium product. They centralized somewhat and paid less at outlying stations. Later they made skimmilk powder, and bought all the milk as delivered.

But the co-operative was not idle. They changed buttermakers; they changed directors. They got some fighters on the board, but best of all they got men with some business ability. One of them, Mr. B——, was a little fellow, but a whirlwind. By appealing to the loyalty of the co-operative patrons he managed to keep the patronage, even when the produce company paid a few more cents than they. He hired one of the best buttermakers in the state. But when the competing company commenced to buy the whole milk it looked as if the

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Los Angeles Milk Scores

The Department of Health for Los Angeles, Calif., maintains a corps of nine milk inspectors who make systematic monthly visits of dairies supplying the city with milk. In connection with the regular inspection, a milk scoring contest is carried on over a period of four months.

For the contest ending July 31, the Adohr Stock Farms took first on certified milk with a score of 98.3. In Los Angeles the requirement for this grade of milk is that its bacteria limit must not exceed 10,000 per cubic centimeter.

Guaranteed milk is raw milk having not to exceed 25,000 bacteria per c. c. The Elliott—Brant Rancho took first place in this class with a score of 98.3.

Grade A raw milk is that produced by tuberculin tested cows, the number of bacteria not to exceed 100,000 per c. c. Out of 46 contestants, the Williams Dairy took first place with a score of 98.7.

Grade A pasteurized milk is milk that has been heated to a temperature of 142 degrees Fahrenheit and held for about 25 minutes, then rapidly cooled to below 50 degrees. The bacteria limit must not exceed 15,000 per c. c. after pasteurization and 200,000 per c. c. before. Out of 16 contestants, the Crescent Creamery took first place with a score of 96.5.

Grade B milk in Los Angeles is milk put out in cans for sale to the restaurant and wholesale trade. It must contain less than one million bacteria per c. c. before pasteurization and less than 50,000 per c. c. after pasteurization. In this class there were six entries, the Hansen Dairy scoring highest with 86.6 points.

Goat milk is sold by three concerns, the bacteria requirements being the same as for Grade A raw milk. Goat 'Airy ranked first with a total of 98.4 points.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

One Autumn Regret

Autumn is fast approaching,
The time of red leaves
And slow decay of the last flowers,
And the requiem of the final crops.
It is a beautiful season,
Perfumed with the incense.
Of burning brush and leaves,
And freshened by cool winds
That herald snow.
Pumpkins gleam yellow.
Across there in the hushed fields,
And the feet of the small boy
Make music amongst the dead leaves.
Little piles of summer's raiment,
Set blazing,
Burn like altar fires, here and there
Around the farm.
But I,
I have one great regret,
That somehow spoils it all
For me.
I remember that this same season
Opens the door to winter
And shuts it upon clover
And fresh, sweet grass,
And the beauties of the meadow.
And the herd
Must remain indoors.
You see, I am thinking
Of my pals, my friends,
My companions, the cows!

⚜

A lot of boys that were born on farms may leave them behind, but before long their hearts and thoughts go back, anyhow.

⚜

The Color of Gold

It is the time of year when fields,
Are plumed with yellow goldenrod,
And miles of it, like scattered wealth,
Upon the hills and roadsides nod.
The harvest days, the treasure days,
The days of hushed and baited breath
While summer dies, and autumn feels
The chill and sudden pall of death.

It is the time of year when leaves
Turn dusky, crimson, crisp, and gold,
Each tree a torch against the sky;
And oaks seem strangely sad and old.
The stacked-up cornstalks, here and there
Like bonfires burn along the way,
The grain is gold, the stubble, too,
And all the wood is weirdly gay!

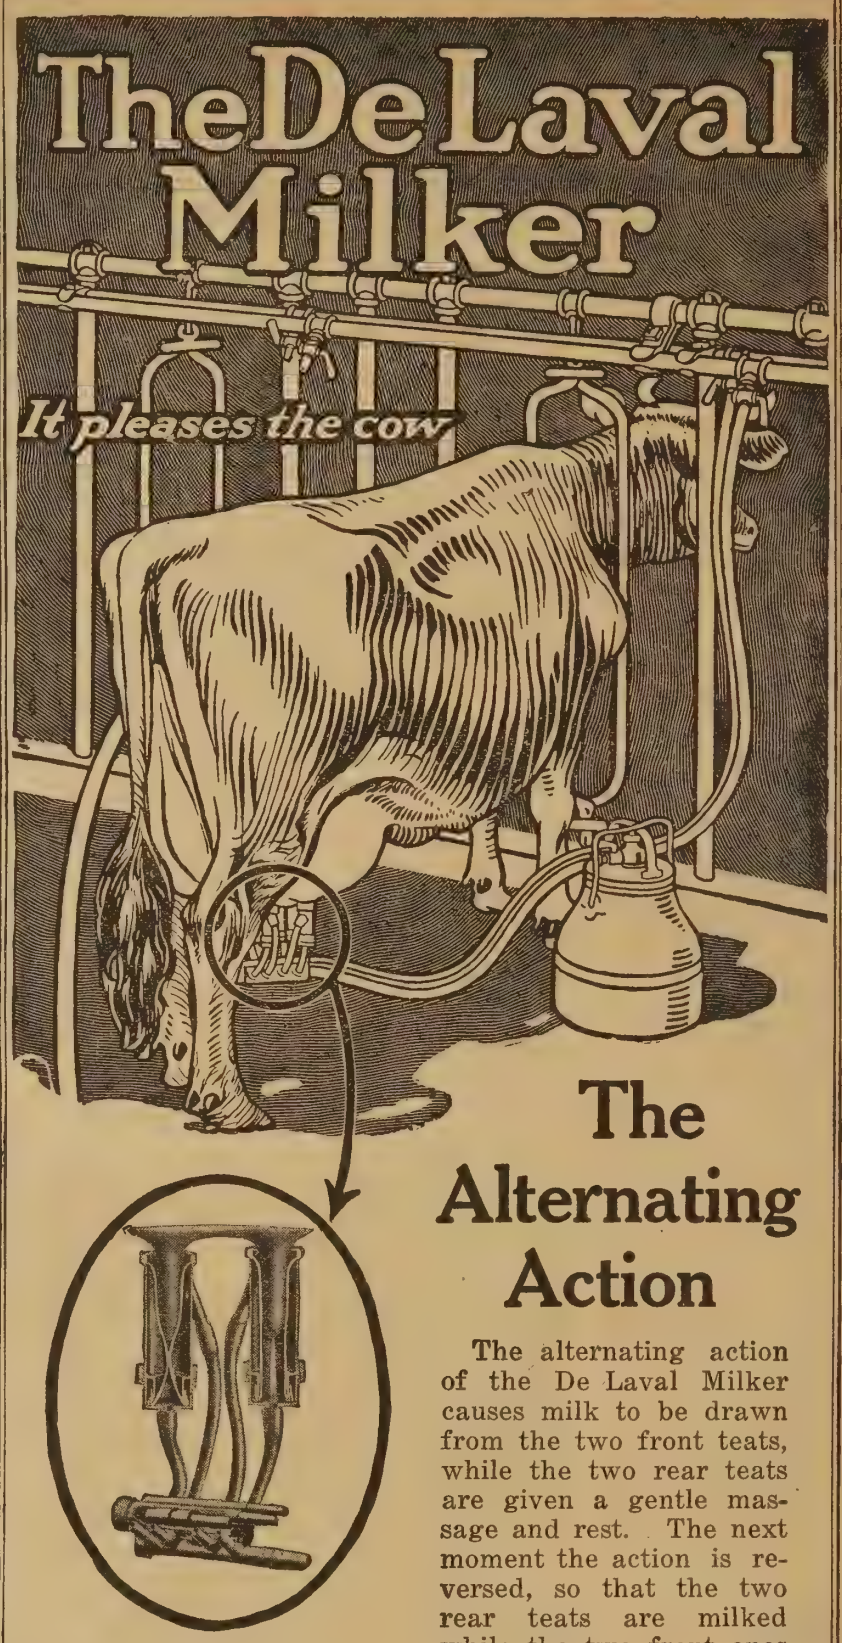
It is the time of year when globes
Of yellow orange dot the field.
When pumpkins ripen, plump and fair,
And promise pies of extra yield.
The golden time, the restful time,
The time of crops and coming play—
The time when we begin to think
Of turkey and Thanksgiving Day.

⚜

You may have thought that an old fashioned circus calliope was right musical, but a much sweeter music is the clank and clatter of milk cans in a dairy farm truck, homeward bound.

⚜

Some Record



Ottawa seems to hold the record for egg laying. And we are going to be nice about it and believe every word she says. A record yet to be beaten in continuous egg laying has, according to F. C. Elford, Dominion poultry husbandman, been made by a barred rock pullet at the Experimental Farm at Kentville, N. S. This pullet has laid 104 eggs in 104 days. As a rule, a hen lays two or three eggs and then misses a day, and some are known to have laid four or five or even six dozen without a break, but never before, in the knowledge of the Dominion Poultry Department, has a hen laid 104 eggs without a miss.

Who said production was not speeding up?

⚜

Next to seeing a new church go up, the best sight is a new silo.

The De Laval Milker

The Alternating Action

The alternating action of the De Laval Milker causes milk to be drawn from the two front teats, while the two rear teats are given a gentle massage and rest. The next moment the action is reversed, so that the two rear teats are milked while the two front ones are massaged.

In this manner an even and continuous flow of milk is drawn from the udder, harmonizing with the milk secretion process which is also continuous; and the De Laval alternating action is as uniform and positive as the power which operates the Pulso-Pump.

The De Laval Milker has a pleasing, soothing effect on the cow, causing her to give down her milk freely and quickly.

The De Laval Milker is a distinctly different type of machine, both as to design and operation, positive and uniform in action from day to day; and faster, more economical and more reliable than any other method of milking. The sanitary features are of special importance and will be much appreciated by dairymen in their efforts to produce milk having the highest market value.

An additional insurance of lasting satisfaction to users of De Laval Milkers lies in the De Laval Company's well-known facilities and reputation for service.

Write to nearest De Laval office for Milker Catalog, mentioning number of cows milked

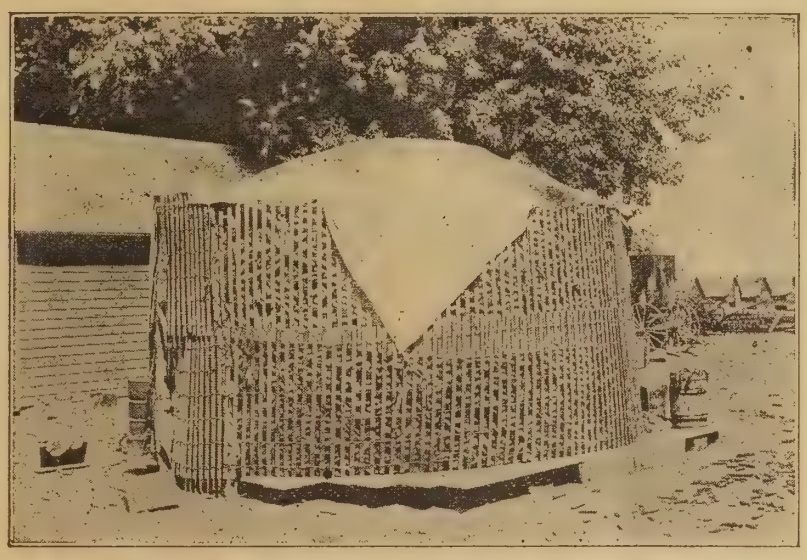
Cribbing Corn The Old Way And the New

ORIN CROOKER, ILLINOIS

WITHIN the past year an agricultural writer reports having seen on a single Indiana farm no less than sixty-eight corn cribs built of old time fence rails. Each of these cribs were filled with half-moldy, rat-befouled corn. Allowing 300 bushels of grain to each crib, there must have been, in this instance alone, something over 20,000 bushels of corn going to waste. If this 20,000 bushels of corn were all the corn so cribbed at any particular moment the fact would be worth scant attention. But the sorry truth is that indifferent, wasteful cribbing is common enough in any part of the country.

Out on the Iowa prairies there are no fence rails with which to fashion make-shift cribs. Farmers of the make-shift variety, however, hew to the line by resorting to the use of wire fencing in cribbing corn. So far as appearances go, very attractive results sometimes attend their efforts. Great circular stacks of golden grain may be seen here and there, mute evidence of nature's bounty and man's thriftlessness. In many instances of recent years the corn crop has overtaxed the capacity of farms in the way of storage. Temporary arrangements have had to be made. But this is not always to be advanced as a valid excuse for indifferent methods of cribbing. Six thousand bushels of the 1918 corn crop were found stacked in the dooryard of an Iowa farm in August of last summer by the writer.

Storage in the way of regular cribs on this place appeared limited to a couple of thousand bushels at best. It seemed evident that when the crop exceeded storage capacity the surplus on this farm was held for long periods in make-shift cribs.



The loss that is involved when corn is improperly cribbed, taken the country over, would stagger most of us if any way of getting at the actual figures were to be had. There have been plenty of estimates but such figures are perhaps under rather than over the mark and based on the value of the corn without taking into account what moldy corn may mean in other ways. The contents of the 68 cribs, of which mention has been made, were probably disposed of in some way. If unfit to command a market it is not unlikely the corn was fed to hogs, since it is a common expression that when foodstuffs get beyond the pale of respectability the hog route may be followed in reclaiming values. However, rat infested corn is often a source of porcine ills. The spread of hog cholera may well be due in many instances to these rodents carrying infection from farm to farm. As the rats visit the corn and the corn goes to the hogs the transmission of the infection is apt to be both speedy and direct.

THE NEW TYPE OF TILE CRIB CONTAINING A GRANARY IN UPPER PORTION

It is often possible on midwest farms to measure real thrift in terms of corn cribs. In days when corn was worth but fifteen or twenty cents there was scant incentive to make provision for storage of a kind such as present prices make imperative. As the price of corn moved upward, more and more of the thrift impulse was responsible for better handling of the corn crop in this particular. Of late years the necessity of providing better cribbing facilities has taken a firm hold of many farmers who had been hitherto quite indifferent in this matter.

The writer came across one farmer in western Illinois this past summer whose experience, perhaps, has been typical of many. He is a feeder, both of cattle and hogs. Side by side on his place stand the old fashioned corn cribs and a modern, permanent crib of tile. The former afford protection against the weather but make no provision against rats or fire. The new structure is of concrete and tile, circular in form and typical of the very best in modern cribs. We will let this farmer tell his story in his own words:

ONE OF MANY MAKE-SHIFT CRIBS ON AN IOWA FARM

"We never thought much about careful cribbing," he said, "until prices began to soar. Corn was the one thing of which we had the most and its market price was not such as to stir us to give it more than ordinary care after we had harvested it. But when prices went up and the state of the world became such as to indicate higher prices in the future than in the past we began to see that boarding rats and mice was an expensive business. Then, too, the factor of fire began to take hold of us. We have never lost corn in this way but a neighbor has. I never realized what a nice, hot fire good, dry corn can make until I warmed myself that cold winter's night by the blaze of his burning crib. Farmers, you know, are poorly protected against fire. If one gets started about all one can do is to stand by and watch it burn. A few thousand bushels of corn at present prices makes quite a hole in the bank account if it happens to go up in smoke. So we built the crib which you see. It is fireproof—save for the shingle roof. If I were to do it over I'd have that of metal or tile. It is moistureproof, ratproof, windproof—practically foolproof, for when the corn is once in it there is scant harm that can befall it. It holds 5,000 bushels and cost me at the time a little over 30 cents a bushel to put it up. I figure it has paid for itself already and from now on will cost me nothing for upkeep save to reshingle."

These modern cribs of circular form will become, we anticipate, quite common in the near future. Middle west farms will always produce corn. It is the staple crop like cotton in the South. Permanent storage will be counted essential. And at anywhere near present prices the cost of storage will be saved in a few years' time. The wooden crib, even when properly built, has only a temporary period of usefulness compared to the enduring crib of concrete and tile. In the case of the former the floors seem to be the first thing to give trouble. The boards become loose and decayed. Nail heads protrude and make shoveling difficult. No building made of wood can be ratproof, and when once the rodents get a foothold inside it is all but impossible to get rid of them. Someone has stated that rats consume two dollars' worth of grain each per year. They are prolific breeders. There are more profitable ways of feeding corn on the farm than by keeping a boarding house for rats.

In the construction of these permanent cribs various sorts of cellular tile are utilized. Sometimes the entire crib is walled with them. In other instances the cellular tile is alternated with tile of solid outer face. Concrete flooring is the rule. Moldy corn is unknown in this form of crib. Being regarded as permanent improvements, destined to serve for a long period, it is common to install elevating equipment in this style of crib. It becomes virtually a farm elevator, especially if a grain bin is combined with the corn storage as is often the case. Where permanent interior elevating machinery is not installed the usual outside elevator of moveable type is employed. A sheller trench is built in the base of the structure. Rats are eliminated by the installation of fine mesh wire around the base of the crib.

METAL CRIBS ARE WEATHER-PROOF, RAT-PROOF, AND FIRE-PROOF

Serving the same general purpose as the tile cribs mentioned are those made of concrete blocks or of sheet metal. Naturally, the use of concrete results in a most substantial structure but the cost is heavier than where tile is used. The various sheet metal cribs are effective and make ample provision for dry storage of corn under ratproof and fireproof conditions. The small metal crib can be had in any number of sections desired—consequently of any capacity. These cribs meet a need on many farms, especially where small amounts of corn are to be stored. Like other forms of permanent cribs they are being adopted in increasing numbers every year.

Now Comes the Traveling Dairy

HOARD'S DAIRYMAN:—The camping season in California brings about many new innovations every year. When hundreds of thousands of families pile into their Fords, or automobiles, as the case may be, with their blankets and skillets and spend a few weeks by some fishing stream far up in the mountains or deep in the redwood forests, it is to be expected that human ingenuity will devise many ways of adding to the camper's comfort. But this year marks the coming of the traveling dairy.

Families with small children have found it very difficult in these out of the way places to obtain milk suitable for children. The canned variety does well enough if the child has been inured to it by previous applications; but when the youngster has been accustomed to fresh milk he is apt to balk at using the canned cow every day during the camping trip. Small dairies in the neighborhood of the camping ground reap rich harvests every summer selling milk to the campers; but many who have found themselves at the mercy of the camp milk peddler declare that twenty-five cents a quart is quite a price to pay for spring water to which a quantity of milk has been added.

This year many a California family built a basket-shaped contraption, chucked the family goat into it, and fastened the whole thing on the running board. Arrived at the camp, friend goat is staked out to browse. She gets fat on camp scraps and hill grass and furnishes an abundant supply of milk. When the vacation is over, they put the goat in the basket again and drive home.

At least one western camper went a step farther this season and took along the family cow. When traveling, the cow rides in the trailer. Automobile dealers and dairymen predict a sharp demand for trailers and Jerseys next season.

California. L. L. D.

IOWA STATE FAIR

THE sixty-sixth Iowa Fair held August 25 to September 3 further establishes the Hawkeye state's claim to the nation's premier agricultural exposition. In the character of attendance, the quality and scope of the exhibits, and in the service to the man on the farm, "Iowa's Annual Outing" is unexcelled. Unfavorable weather kept the gate receipts below the record set last year but the 1920 offering on the fair grounds has not been surpassed.

The greatest improvement made since 1919 is the completion of the largest cattle barn on any fair grounds in America. This new structure cost $200,000 and will stall 1,600 cattle. It is in keeping with the standard and size of the cattle show, particularly of the beef breeds. It matches the immense swine barn which covered a record exhibit this year, including the largest Duroc-Jersey show ever held.

Cow Testing Association Exhibit

Garaghty and Sons furnished ten cows which enabled C. L. Blackman to bring the benefits of cow testing associations very clearly before those who visited the new cattle barn. The Garaghty herd has been built up from two cows owned in 1912, one cow in the exhibit being shown with three daughters. The Garaghty success with cows repeats the story enacted everywhere dairying is made profitable—that liberal feeding pays. An increase of thirty dollars worth of feed per cow in the testing year ending in 1920 over the cost in 1919 raised the butterfat production an average of 114 lbs. and the returns above feed cost, $88. In 1919 silage, mixed hay, and oats were fed; in 1920 the total of silage was increased 1,000 lbs. per cow and nearly three times the weight of the 1919 oats was fed of a mixture of corn, oats, and bran. To balance the ration an average of 235 lbs. of cottonseed meal was given. This additional protein did much to improve the herd's showing in profits according to Mr. Blackman but he believes a great benefit came from pasturing only five months instead of the period of six and one-half months as in 1919.

Mr. Blackman reports a revival in interest in testing associations. He says, "Iowa farmers are coming back to cows. We now have thirteen associations and can have more when the right kind of testers are available." He credits the increasing popularity of the milk cow on Hawkeye farms partly to improved marketing conditions.

Bureau of Animal Industry Exhibit

The Bureau of Animal Industry in an exhibit drew attention to the healthy progress of tuberculin testing in Iowa for the establishment of accredited herds. The statement was made that the applications for the test have increased in twelve months, July 1, 1919 to July 1, 1920, from 290 to 1,678. From results in the herds tested, it is estimated that 9 per cent of the cattle of Iowa and 23 per cent of the hogs are tubercular. On the basis of a cost of $114.72 per herd for a test, an appropriation of $500,000 to $700,000 will be sought from the next state legislature for a vigorous campaign of tuberculosis eradication.

Iowa State College

An experiment at Iowa State College was reported, in an exhibit by the college, which indicated a very high feeding value of soy bean hay in the feeding of ewes. It was shown to be equal or slightly superior to alfalfa.

The exhibit also showed that in fattening hogs, when corn has a feeding value of $1.27 per bushel, barley is worth $.83; kafir corn, $.97; milo maize, $1.20; ground oats, $.43; ground rye, $1.13; and ground wheat, $1.32.

In experimental work, the exhibit reported, success has been had in saving orphan pigs by supplying whole milk with nothing added. Feeding seven times per day is better than three times.

The poultry department had photographs of hens exhibited to illustrate that through proper breeding and selection the poor layer can be eliminated from the farm flock.

A. C. McCandlish's "Weed—Breed—Feed" exhibit was repeated from last year. Photographs were shown of the animals in work in which high producing cows were developed from scrubs through the use of pure-bred bulls. Also figures of cow testing association work were given showing that production can be quickly and markedly increased through liberal feeding. The statistics were proof of the assertion made: "Earn $10 per cow per month by giving ten minutes consideration to feeding problems."

The Dairy Cattle

The Iowa State Fair's dairy cattle showing was by no means the best which it has had. The total of three hundred seventy head falls far short of the number which should be seen and which has been shown in late years. Neither was the average quality better than average. A stronger showing of dairy cattle is required before Iowa farmers if the show ring is to give the milk breeds a larger place in the territory now so largely interested in the beef breeds.

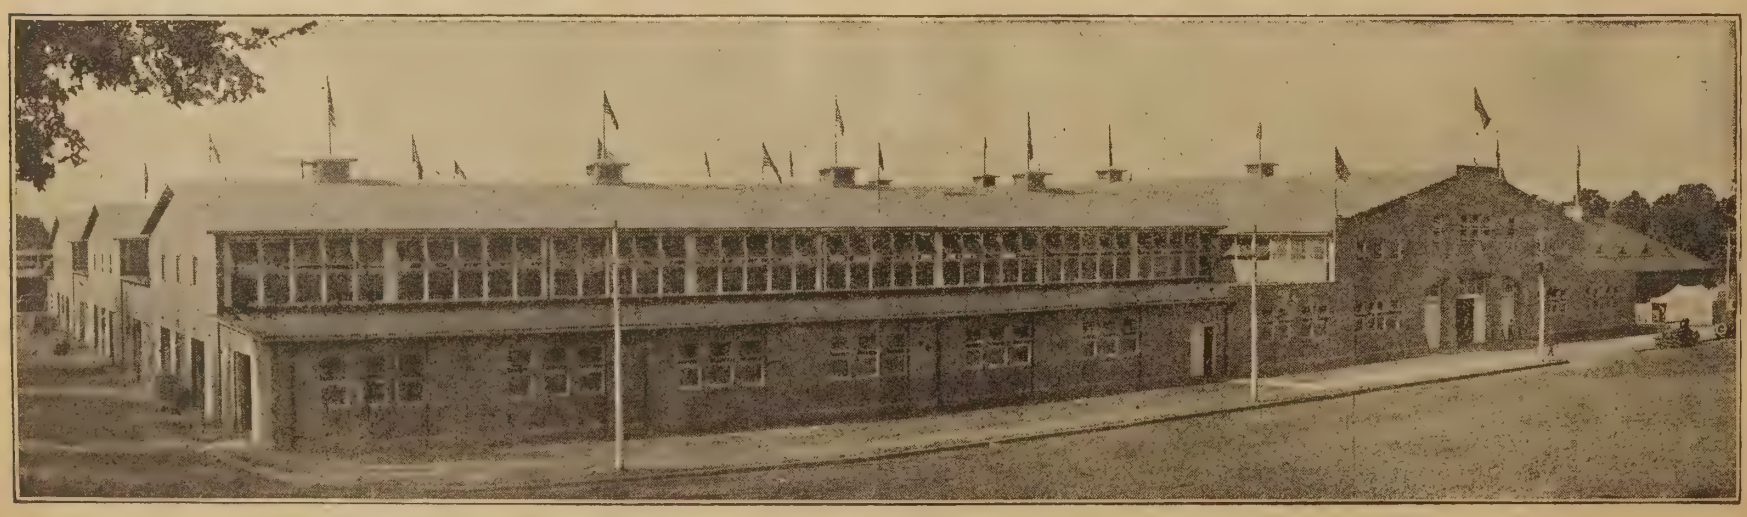
Very pleasing however was the goodly number of new exhibitors of Holsteins and Jerseys. Show yard competition accomplishes much more by setting its gauge on the merits of many beginners than when it becomes merely the battle ground of professional showmen. Its influence strikes farthest and most effectively through numbers of amateur exhibitors. The classes for amateurs serve as a worth while encouragement to the small breeder.

The far-sighted policy of the Board of Control in the breeding management of dairy herds at state institutions was well illustrated by the Holstein entries from eight of these herds. The bulls which head these are half brothers, strongly backed by production records. They will be interchanged among the herds to prevent too close inbreeding. The young shown were of such high quality as to commend this Iowa plan to the boards of control in charge of herds in corresponding institutions in other states.

Mountain Brothers furnished Guernsey showmen and herdsmen a very pleasant occasion by inviting them to spend an evening at Iowanola and divide their attention between the herd and a fried chicken supper. The marked progress made in building up the present herd of accredited Guernseys since the first were bought in 1910 is an inspiration to a beginner. In ten years a healthy, high producing lot of typy animals has been developed which ranks the herd among the best in the middle west.

COW TESTING ASSOCIATION EXHIBIT AT 1920 IOWA STATE FAIR

Holsteins



Exhibitors: Geo. B. Appleman, J. M. Chestnut and Sons, Collins and Van Horn, H. B. Cowles, Kansas Agricultural College, J. P. Mast, John Mails, W. R. Stubbs, and U. S. Disciplinary Barracks, all of Kansas; and M. Breen and Son, W. B. Barney and Son, W. J. Bopp, Cass Farm Co., John Cunningham, E. J. Erickson, Hargrove and Arnold, B. C. Hemphill, Pete Johnson, W. S. Leaverton and Son, H. O. Larsen, W. H. McIntosh and Son, Fred S. Miller, C. M. Parker, Wapsimoor Farm, all of Iowa, and eight state institution herds of Iowa.

Judge: L. S. Gillette, Iowa.

The dairy cattle exhibit came near being a Holstein show. The black and whites totaled 167 head which was near half of the offering from the five breeds and more than twice the number of the next highest breed. Thirty-two herds were represented, nine from Kansas and twenty-three from Iowa. They put up the only showing which drew worth-while attention to the dairy cattle side of the arena and battled well through every class in the division of honors between Iowa and Kansas. Judge Gillette had full classes, especially among the younger animals, and worked long and earnestly in making awards.

Kansas took the lead in the aged bull class, Johanna Bonheur Champion 2d, from the U. S. Disciplinary Barracks, defeating the Cass Farm's Illinois grand champion, King Aaggie Hengerveld, as he did under Mr. Gillette at the Missouri State Fair. He has the top and style of a winner and is better on his feet than the larger Iowa bull. He deserved the grand championship which was finally his. Wapsimoor Farm, Iowa, won with their three-year-old, Sir Wapsie

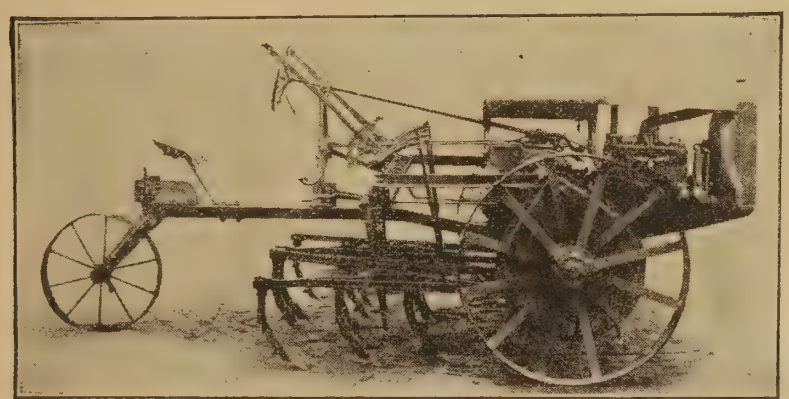
NEW CATTLE BARN ON IOWA STATE FAIR GROUNDS

Filling the Gap in Power Farming

R. U. BLASINGAME, PENNSYLVANIA

THIS is a day of specialization. Men are specializing, training themselves along particular lines of work that they may become proficient. Farmers are specializing in dairying, fruit growing, vegetable gardening, etc. To meet the demands of various kinds of work manufacturing firms are producing specialized farm machines to do particular work. The corn planter, the grain drill, the silage cutter, the grain binder, the corn husker, etc., and so on are all specialized farm machines which are not used many days during the year yet their use is indispensable in modern farm operations.



The farm tractor has been developed to handle most of the machines mentioned as well as many others which are not enumerated above. However, the average tractor is not suited to the work of cultivation of growing crops. They are too heavy and do not have the many qualities necessary to meet the demands of cultivation. The farmer is therefore forced to keep almost as many teams as he employed before the purchase of the tractor in order to meet the heavy demands during the short cultivation season.

With the coming of the motor cultivator, the gap is filled between the seeding and harvest season. While this power unit is rather a new machine to the public the tractor and farm machinery people have had the ideas of such a machine for several years, and undoubtedly the motor cultivator would have been on the market before this time, had it not been interfered with by the shortage of labor and material during the war. Even in the face of such difficulties several manufacturing concerns have been building and experimenting with a few motor cultivators for the past six years.

Probably these delays have given the manufacturer sufficient time to develop this specialized machine to a higher and more successful degree than if there had been no interference to quantity production. The manufacturer has had easy sailing in the design of the motor cultivator so far as certain features are concerned; however, there have been many difficulties in adapting the machine to agriculture. Past experience in tractor manufacture has indicated very clearly that the use of certain systems of lubrication, clutches, refinement, etc., are essential to a successful power outfit. The difficulties have been in making the motor cultivator an agricultural implement. The first difficulty was in making short turns at the end of the field. There are no head lands in a corn field; it is necessary to cultivate to the fence and then make the short turn. The three wheel type with the front wheel made in the form of a caster has been found to be successful in turning short with the aid of a brake to stop the wheel drive on the side to which the turn is to be made. The matter of sufficient clearance to prevent breaking down growing corn, for instance, had to be taken into consideration. To obviate this difficulty, the motor cultivator has been built sufficiently high to prevent damage to growing crops.

MOTOR CULTIVATOR PLANTING CORN

DETAILS OF CONSTRUCTION OF MOTOR CULTIVATOR. NOTE THAT THE CONTROL LEVERS ARE WITHIN EASY REACH OF THE OPERATOR

The motor cultivator had to be a light machine and yet have sufficient traction in operating a two-row cultivator. This feature also has been solved with the use of special cleats and wheels. The control levers are placed so that the driver is under no more strain in operating the machine than in case of driving a team. Shields and cultivator beams, shovels, and foot control of rigs are very similar to the already well developed horse drawn machine.

The variation in width of rows has been taken care of by several of the manufacturers, by so constructing the machine as to allow for adjusting the distance apart of drive wheels.

The motor cultivator is equipped with a belt pulley for operating auxiliary machines and the cultivator beams may be removed and the machine used for plowing, haying, etc.

The advantage of the power cultivator lies in the ability of the machine to work long hours—under two shifts if necessary—thus enabling the farmer to increase his volume of business and take full advantage of every hour of the day. In idle seasons the machine can be stored and requires neither food nor attention.

This is truly a day of power farming brought about by economic conditions and the earlier the farmer puts his farm operations on a mechanical basis, the more one man will be able to do with the least amount of human effort and with more satisfactory results.

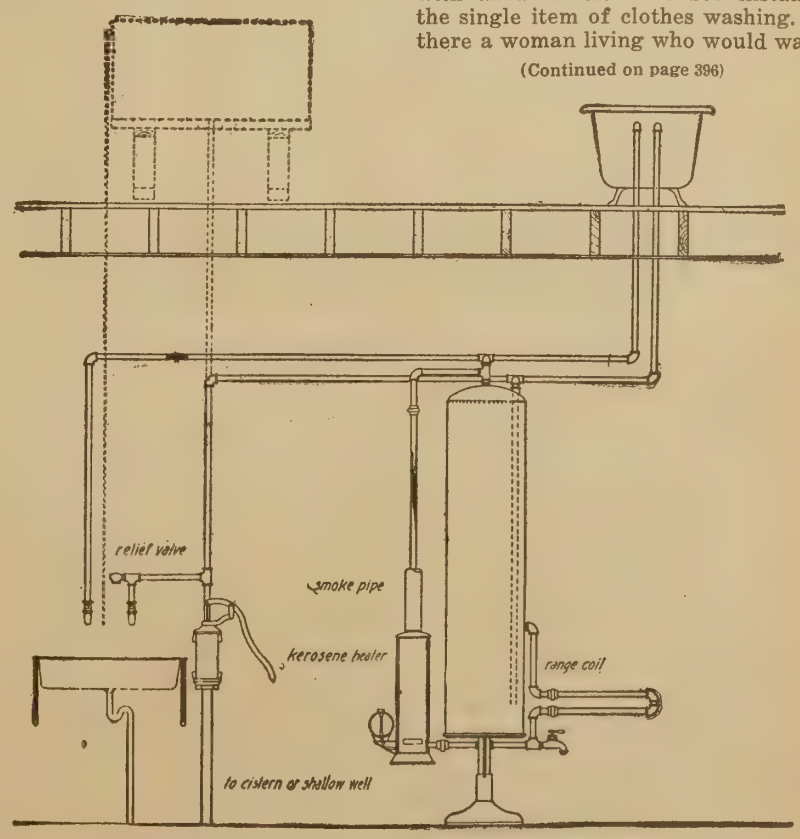
A Hint to Farm Housewives

A. C. TYLER, Minnesota College of Agriculture

RUNNING water in kitchen and particularly at the kitchen sink is a subject which appeals to every woman on the farm. If by any chance both hot and cold water are thus available the appeal is far greater.

This article is not intended to be an argument in favor of running water in the kitchen since absolutely no argument is needed, in fact there can be no argument because there is only one side to the question.

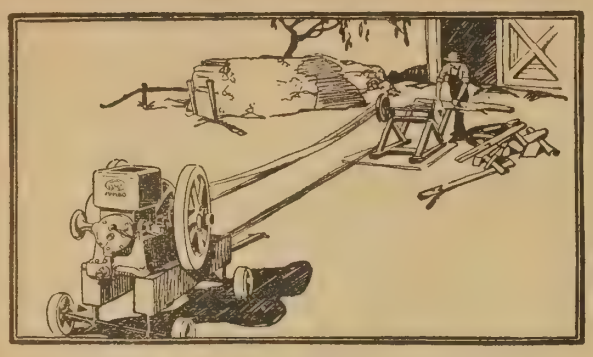
A good many people are going without the advantages of running water for one reason or another. It may be that the necessary money is not available or it may be that a new house is contemplated which will have running water in it, the same to be built at some future time; in the meantime we will get along without it. It sometimes happens that very great inconveniences are put up with because a person does not know how to get around them. If your circumstances are similar to any of the above and you would like to have running hot and cold water in your kitchen your attention is called to the sketch shown herewith.



For want of a better name this arrangement may be called "A Simple Waterworks". The cost will range from $40.00 up depending upon the amount of piping and number of fixtures. The actual work of installing the system may be done by any one possessing a little mechanical skill. The only tools necessary are a couple of pipe wrenches, a three-fourths inch stock and die, a vise, and a pipe cutter or a hack saw.

The system shown is particularly adapted to the distribution of soft water for the reason that the cistern is generally near the house and the water is within easy reach of a suction pump. Except in a few localities well water is generally too far down to be handled in this way.

A large proportion of the water used on a farm is for human or animal consumption and consequently the farm water system, if there is one, is connected to the hard water supply. At present there is only one system, the pneumatic, which will deliver both hard and soft water with one outfit and even this requires a separate pump for each kind of water handled. A water motor which uses hard water under pressure to pump soft water is sometimes employed but under the best of conditions they are rather wasteful and therefore expensive to operate.



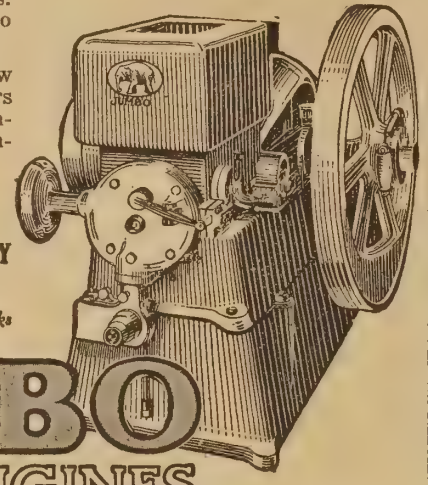
Every housewife realizes the value of soft water and will very often go to considerable trouble to obtain it even if there is an ample supply of running hard water at hand. With the exception of the water used for drinking and cooking all of the various household functions may be more easily taken care of with soft than with hard water. Take for instance the single item of clothes washing. Is there a woman living who would wash

(Continued on page 396)

A SIMPLE WATER SUPPLY FOR THE FARM HOME

If desired an overhead tank may be installed as shown by the dotted lines. This does away with frequent pumping and the relief valve may be omitted. The overflow from the top of the tank should return to the cistern.

Webster Oscillating Magneto — positive ignition — and special mixer insuring a uniform fuel, make Jumbo Engines easy to start in any kind of weather.



Get Ready for Winter

Before snowfall is the time to lay away your winter wood supply. A few hours with a Jumbo Farm Engine and a buzz saw will help clean up fallen trees and unsightly piles of waste wood.

Speed change lever adapts Jumbo Engines to special jobs without a different pulley. Positive governor gives steady, even speed under all loads. Plenty of power for the work but no waste. Saves fuel.

Built for farmers by men who know farmers' problems. Sold by dealers who stand ready to help you get unusual service from your Jumbo Engine. 1¾ to 12 h. p.

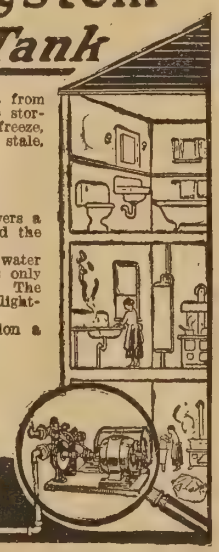
JUMBO FARM ENGINES

A Water System *Without a Tank*



This water supply system pumps direct from the well or other source of supply—no storage tank is required. No tank to leak, freeze, rot, rust, overflow or collapse. No stale, stagnant water. The

WESTCO
Tankless Water System

is marvelously simple. As you open the faucet the pump starts and delivers a full, steady stream of water under ample pressure. Close the faucet and the pump stops.

It is the lowest priced, simplest, most dependable, automatic, power water system obtainable. Easy to keep in good running order. The pump has only one moving part. No belts, no valves, no gears, no springs, no oiling. The WESTCO System can be run off the regular electric light circuit or farm lighting plant. Thousands are in daily, successful operation.

Send for bulletin C-4 and find out what a great saving and satisfaction a WESTCO will mean for you.

Association Notes

Wausau—Marathon, Wisconsin:—This association has reorganized and is ready to start its second year of testing. Five members are doing official testing. A number of farmers have started to feed grain as pastures are in very poor condition. Market milk testing 4% sold for $2.60 per cwt. and 6½c per point above. The creamery paid 61c per pound for fat and the cheese factory paid 54c. Milk retails for 14c per quart, butter for 58c per pound, and cheese for 35c per pound. July feed prices were: Silage, $6 per ton; hay, $22; bran, $46; middlings, $49; oil meal, $69; oats, $1 per bushel; barley, $1.30 per bushel; Wisconsin Balanced Ration, $70 per ton.

North Crandon, Wisconsin:—The members bought one carload of feed in July. Four members are feeding balanced rations. The association held a picnic August 18th which was well attended. Six unprofitable cows were sold to the butcher during July. The creamery paid 55c per pound for fat. Butter retails for 57c per pound. The following are local feed prices: Dairy Ration, $62.50 per ton; oats, 85c per bushel; oats and peas, 85c; oil meal, $70 per ton; bran (co-operative buying), $45 per ton.

Rutherford County, Tennessee:—Several Register of Merit testers have recently bought some unusually good cows, giving high prices for them but getting more than full value for their investment. In July fat sold for 62c per pound. Linseed meal is rated at $5 per cwt.; cottonseed meal, $3.50; corn and cob meal, $3 to $3.25; ground barley, $3.65.

Wood County No. 2, Wisconsin:—Three pure-bred sires have been purchased during August. Several more unprofitable cows have been sold.

Waterbury—Waitsfield, Vermont:—One unprofitable cow was sold and one reacted to the tuberculin test during August. A great deal of testing for tuberculosis is being done in this locality and at least five members of the association already have accredited herds. In July market milk sold for $3.36 per cwt., 6c being paid for each point above 3.7%. The creamery paid 66c to 70c per pound for fat. Milk retails for 14c per quart. As one part of the association is on the railroad and the other is 12 miles distant, grain prices vary greatly; however, these are the average prices for the month: Larro, $3.85 per cwt.; cottonseed meal, $4; mixed feed, $3.50; oil meal, $3.75; corn meal, $3.80.

Coos, New Hampshire:—July market milk sold for $3.44 per cwt. and 5.7c per point above 3.7%. Milk retails for 16c per quart.

Claremont and Lebanon, New Hampshire:—On August 25th the farmers of Sullivan and Cheshire Counties held their annual picnic at the Beaman Farm. It was a great success, the attendance being estimated at 4,000 people. Baseball and other games were played by the two counties and at noon a basket lunch was served. In the afternoon several talks were given and a band furnished music for dancing. Dairymen had ample opportunity to inspect a modern and efficiently run dairy. Mr. Beaman's pure-bred Guernsey sire and herd also held the interest of the picnickers. Two unprofitable and severable profitable cows were sold during the month of August. Only pure-bred bulls are used by members of this association. More farmers are buying their grain from the Farmers' Exchange. Market milk testing 3.7% sold for $4 per cwt. and 6c per point above. The creamery paid 75c per pound for fat. Milk retails at 16c per quart and butter for 75c per pound. Feed prices are: bran, $60 per ton; gluten feed, $77; cottonseed meal, $76; oil meal, $75; ground oats, $72; corn meal, $75; hominy, $77; stock feed, $73; provender, $70; mixed feed, $73; ready mixed rations, $83 to $86; rowen, $18; green millet, $4; green peas and oats, $6; silage, $8.

Monona—Farmersburg, Iowa:—This association, co-operating with the McGregor association, put on an exhibit at the Clayton County Fair, showing four cows and some charts and posters. Two cows showed an increased production through breeding and feeding, the daughter giving 40 lbs. more fat than the dam each of the two years tested, and each cow giving $75 more profit the second year by increased feed cost of $40. The other two cows were used for selection, one cow giving 9,700 lbs. milk containing 370 lbs. fat at a profit of $124 and the other giving 8,500 lbs. milk containing 278 lbs. fat at a profit of $82. Several thousand people visited the exhibit. Cottonseed meal is rated in this community at $70 per ton; oats, $40; bran, $50; oil meal, $80.

Western Broome, New York:—Twenty-five cows were discarded during August and ten purchased to replace them. Grain is being fed by nearly all the dairymen with satisfactory results. Cows are still decreasing in milk flow, but as winter cows are beginning to freshen the amount of milk will soon increase. Market milk testing 3% sold for $3.35 per cwt.,

and 4c per point above. Milk retails for 15c per quart, butter for 68c per pound, and cheese for 35c per pound. Local feed prices are: Gluten, $71 per ton; oil meal, $73; cottonseed meal, $74; corn meal, $73; wheat bran, $60; hay, $35; green fodder, $10.

Edgar—Marathon, Wisconsin:—Five "boarder" cows were sold in August. The members purchased co-operatively one carload of oil meal $67.50 delivered. One herd was tested for tuberculosis and no reactors were found. Some of the members had stock at the county fair. The creamery paid 57c per pound for fat and the cheese factory paid 50c to 61c.

Ellington, Wisconsin:—August milk testing 4% sold to the condensery for $3.20 per cwt. The following feeds can be purchased at Appleton: Bran, $50 per ton; middlings, $63; oil meal, $69.50; gluten feed, $69; ground corn, $67; oats, 68c per bushel.

Madison County No. 1, Illinois:—During the month of August four unprofitable cows were sold and two carloads of concentrates were bought cooperatively. One hundred sixty-two cows were dry this month. The corn failure was modified a little by late rains. Most members have their silos filled. The pastures are getting green again. The condensery paid $3.75 for 3.5% milk, and 4c per point above this test. The creamery paid 56c per pound for fat. Milk retails for 14c per quart, butter for 70c per pound. Feed prices are: Cottonseed meal $3.75 per cwt.; peanut meal, $3.90; hominy, $3.60; crushed oats, $3.30; bran, $2.65; alfalfa, $32 per ton; clover, $30.

Wausau—Marathon Association Yearly Report

The Wausau—Marathon Association, one of nine that has been in operation in this county (Marathon) the past year, completed its first year's work July 31, 1920. Twenty-nine herds having 361 cows were on test for the full year and averaged 5,967 lbs. of milk, 247.1 lbs. fat, and $115.82 profit per cow. All except four of the members had never experienced the benefits of a cow testing association and were, therefore, agreeably as well as disagreeably surprised at some of the results secured. That testing year after year is certain of raising the standard of production is clearly shown by the records made by those four members who had belonged to an association previous to joining this association. Their averages in butterfat production led all others, by being the four highest records in the association. This should support well the statement made by many that, "It pays to test".

The average records of the cows of the five highest producing herds in the association are given below:

Owner	Breed	No. of cows	Milk lbs.	Fat lbs.	Profit over feed cost
Anton Volhard	Holsteins	13	8146	328.6	$166.27
C. J. Baumann	Guernseys	15	6862	307.8	161.42
Arden Paronto	Holsteins	14	8281	303.9	126.02
B. McAdam & Son	Guernseys	10	5959	295.1	149.02
M. C. Ewing	Guernseys	10	5943	294.8	134.01

Every cow in the above named herds was sired by a pure-bred sire. A total of 224 cows was sired by pure-bred bulls, their average production of fat being 262.1 lbs., while the remainder that had no pure-bred ancestry averaged only 232 lbs. fat or 30.1 lbs. less than the former. A pure-bred sire is one of the best paying investments on the farm. With such a sire at the head of a herd the owner is most generally branded as a progressive type of farmer. The farmers belonging to this association early took heed to the advice of ousting the scrubs and replacing them with pure-breds of good breeding, making the association 100% pure-bred when only five months old. Twelve pure-bred sires were purchased the past year.

The average production of the poorest cow from each herd was 142.5 lbs. fat, while the best cow from each herd averaged 321.3 lbs.

The herd owned by Fred Heil, a Holstein breeder, was the most economical in production, a pound of fat being produced at a cost of 17 cents. A cow in this herd produced 340.5 lbs. fat at a cost of 14 cents per pound which is also a record for the association. This herd received no grain in their ration, hay and silage being their only feed during the winter and pasture only during the summer months.

Twenty-two cows were sent to the butcher, but the association saved more than this number. The cow that turned out to be the best in the herd owned by B. McAdam & Son was the cow, "that we wanted to sell for a song," as Mr. McAdam expressed it, and is a typical instance of the rescue work being done by cow testing associations.

By being a member of a cow testing association the past year, each farmer has seen the results of good and poor care given the dairy herd as well as learning the value of different grain rations that were fed. This work has, therefore, resulted in making wiser and better dairymen of those farmers who started the Wausau—Marathon Cow Testing Association.

NANDER M. NELSON,
Official Tester.

A Yearly Report

Mr. Wm. Maxfield, tester for the Arkansas, Wisconsin, Cow Testing Association, has just completed a very successful year's work and is one of the first testers to keep a complete record of the progress made in the association during the year and to have his report ready to present to the members at the annual meeting. Through his leadership and the able assistance of its secretary, Mr. Peter Krings, this association has secured the co-operation of its members in building a higher standard of dairying in the community, with results that have been very gratifying. The following is a brief summary of Mr. Maxfield's report:

The ten high herds averaged 297 lbs. fat, with a feed cost of $84.61, making a net profit per cow of $120.75. Eight of the high herds had been tested before, either through a testing association or by private testing. All of the first five high herds were tested before. All of the animals in these herds were high grades and pure-breds with the exception of one herd, which was composed of grades and natives. The animals were fed a balanced ration in amounts proportioned to their production.

The ten lowest herds averaged 191.9 pounds fat with a feed cost of $65.78 and an average net profit per cow of $64.62. The six lowest herds were all natives and showed the results of long continued use of scrub bulls, as they were all fed a ration suitable for production. The four next lowest herds were made up of grades and natives. All of the ten lowest herds had spring fresh cows

One Man Saws 40 Cords a Day

At a Cost of 1½c a Cord!

Send today for Big Special Offer and Low Direct Price on the OTTAWA, the One-Man Saw, the first made and sold direct from factory to user. Greatest labor saver and money-maker ever invented. Saws any size log at the rate of a foot a minute. Does the work of ten men. As easily moved from log to log or cut to cut as any wheelbarrow. 4-Cycle Frost Proof Engine has balanced crank shaft—pulls over 4 H-P. Magneto equipped; no batteries needed. **Special Clutch** lever controlled enables you to start and stop saw with engine running. Automatic Speed Governor. Easy to move, costs less to operate. When not sawing, engine runs pumps, feed mills and other machinery. Pulley furnished.

OTTAWA LOG SAW

Cuts Down Trees—Saws Logs By Power

Patent Applied For

Cuts Down Trees Level with Ground Leaving No Stump.

FREE
Write at once for Free Book and Low Price.

Cash or Easy Payments Shipped direct from factory.

30 Days Trial No waiting—no delay. Let the OTTAWA saw your logs and pay for itself as you use it. **10-YEAR GUARANTEE.**

See the OTTAWA at work on your farm once and you will never give it up. Thousands in use, every owner a booster. Out-saws any other on the market. Send today for FREE BOOK and Special Offer.

and all except one were fed grain in their rations.

The highest herd averaged 363.7 lbs. fat, with a feed cost of $103.21 and a net profit per cow of $150.28—a return of $2.45 per every dollar expended for feed. The lowest herd in the association made an average production of 126.7 lbs. fat, with a feed cost of $66.98 and a net profit per cow of $18.16, or a return of $1.27 for each dollar spent for feed. A herd of ten cows equal to the average production of the highest herd would pay their owner a salary of $1,502.80 for their keep, while the owner of ten cows with the average production of the lowest producing herd would only receive $181.60.

It was also found that in net returns the twelve cows in the high herd were equal to 99 cows yielding the average net returns from the lowest producing herd.

Wisconsin. ERWIN SUTTON.

New England Holstein Breeders Start Campaign for Field Secretary

The officers of the New England Holstein-Friesian Club, as well as many of the leading breeders and owners of Holsteins throughout New England, favor the employment of a competent person to act as field secretary.

The first gun of the campaign has been fired. President Aitken has written to some thirty-three hundred breeders and owners of Holsteins in New England explaining the importance and benefits of such a campaign, and asking their opinions as to its feasibility and their willingness to cooperate. The response to this letter has been exceedingly gratifying, and from the tone of the reply, as well as their numbers, the success of the campaign is practically assured.

Maine is the first of the New England States to have its preliminary plans for the campaign completed. Professor Rider of the Extension Service has just finished a ten-day tour of the state, meeting with the leaders in different Holstein centers, going over with them the objects of the campaign, as well as helping in the plans for giving it adequate publicity and securing the selection of local committees which will have charge of the final arrangements in their part of the state. There was wonderful cooperation given to this work by the Maine Holstein breeders, and the Maine State Holstein-Friesian Association went on record at its annual field day as being in full sympathy with such a campaign and voted to give its full support to the New England Holstein-Friesian Club in its effort to provide a Holstein field secretary.

Following is the proposed schedule for the campaign meetings in Maine:

Biddeford, Oct. 21; Auburn, Oct. 21; Norway, Oct. 21; Farmington, Oct. 22; Skowhegan, Oct. 23; Waterville, Oct. 23; Newport, Oct. 25; Bangor, Oct. 25; Rockland, Oct. 26; Machius, Oct. 26; Presque Isle and Houlton, Oct. 28.

From Maine Professor Rider will go into Vermont. Here similar arrangements will be perfected. Then plans will be perfected in New Hampshire, Massachusetts, Connecticut, and Rhode Island. It is thus expected that all arrangements will be completed prior to the Eastern States Exposition at Springfield September 19-25; and that the campaign will begin immediately following the National Dairy Show at Chicago October 7-16, or as soon as the Extension Service force can return east.

National Holstein Men Will Cooperate

This campaign in New England will have the support and co-operation of Holstein leaders from all parts of the United States. President Aitken and Mr. R. C. Pollock of the Extension Service will take a prominent part, as will various members of our Board of Directors and other prominent Holstein breeders. Besides these, help will be given by some of our present field secretaries of the Middle Western States. All in all this campaign, as planned by the New England Holstein-Friesian Club and conducted under the personal supervision of Professor Rider of the Extension Service co-operating with each of the six state Holstein breeders' associations, will prove to be one of the most progressive and far-reaching steps taken by Holstein owners for the building up of the dairy industry and the advancement of the Holstein breed interests in the East.—Holstein-Friesian Association of America.

After the farm implements are sheltered for the season, axe and saw help make farmers independent of the coal shortage.

Whether all signs point to a long winter or not, an abundant woodpile is good insurance. Coal is going to be higher than ever.

League Co-operative Movement

HOARD'S DAIRYMAN:—For some months now, I think since the first of April, the League co-operative has been engaged in handling milk in one way or another. It has done a big amount of business and it has developed a start on a number of other plants. Every little while we have heard of some complaint in one way or another. These have obtained but little attention for they were easily explained. All the same they have made us think. Payments to the patrons of these co-operative plants have been delayed commonly beyond the time when other farmers have had their money to use, at least that is what we are told. Possibly that may have been only in respect to part payments. Then it is said that full league prices have not been obtained. And so it goes. Not a large amount of this is circulated in outside sections but we hear something occasionally.

It is true that I am not in possession of full information relating to all these and other items of criticism, if such it can be called. I do know something about the circumstances, however, and that is why I am writing. This League co-operative movement appears to be our only salvation. It is fully as important to us outside the co-operative territory as to those who patronize those plants. It must succeed in order to save the life of the League itself, if I see the situation correctly. I believe that it is succeeding but at the same time possibly those farmers are engaged in a work that we ought to be aiding.

It takes more than a month or a quarter to determine a success or a failure. Suppose that the dairymen did not realize full League prices for June or even July, that does not prove a failure, nor does it prove that the average price for the year may not be higher than the League price. It takes the full year to determine that. With one year a little below the League it does not follow that those who patronize the creamery or the factory may not be as well off in the long run as other farmers. In some cases it may be that the dairymen might not be located rightly to get the advantage of the highest prices. I know of one factory that is not in the co-operative plan that has taken a very considerable loss all summer because of their location, and they are members of the League too.

On the other hand, we who have the advantage of location and sell direct to the large manufacturers or distributors of milk should consider whether we are not being helped by the co-operative and whether we cannot be of some assistance to them. They have as much right to prompt payments as we have. It takes some time to sell the products and collect in full. It is possible that there should be a fund from which to make these payments. They are fighting our battles in a sense and if we can make it easier for them to continue so much the better for us and for them. With a capital sufficient for them to operate as a milk company would, they are in a sense independent. Then we better remember that they are paying for the stock in the plant by deducting perhaps fifteen or maybe twenty-five cents a hundred for this purpose. True, they are expecting to get interest on that money but it is not cash in hand to do business with. Suppose we loan them something in the way of capital and take the interest on it in the revolving fund plan. It may help them and we will be more interested in their success. We have got to take an interest in the prosperity of each other if we are to continue in the League plan.

All members of the League ought to share equally in its benefits, making due allowances for distance from the big city and distance from a railroad station. There may be other allowances to make but such as are needed should be made, then divide in a proper manner. I am told that such is the case about Chicago but know nothing definite about that. Mr. Dillon had something such a plan back in '16 and I understand that Mr. Cooper wishes to see something of the sort brought about. Evidently there is much to do to perfect the League and its associates in organization. Some of us will be gray perhaps before all the problems are solved. After all, that is the interesting part. Making improvements is the way to live and there is no doubt about the opportunity for them, no matter how long we try them out.

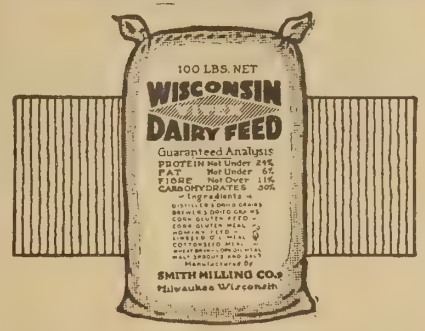
While we are about it, let us remember that if it were not for the co-operative plants and those in process of formation we could have a milk strike on the part of dealers all the time until we got tired out and ready to quit. At least that is the way it looks. We have not only got to fix our price but we must be able to take care of ourselves sufficiently to make it interesting to obstructors. You can't win out by peaceful methods unless you have the ability to win by force. At least it has been that way generally speaking in nations and with individuals. It is so in the milk business, producer or dealer. We are coming to be dealers somewhat as well as producers.

New York. H. H. LYON.

FORTUNE'S ADMIRATION, JERSEY CHAMPION OF NORTH CAROLINA. OWNED BY DIGGS FARM. HER RECORD IS 13,016 LBS. MILK, 785 LBS. FAT

Increase Production and Keep it Up!

Urging them to *"KEEP UP PRODUCTION,"* which cannot be done without feeding a grain mixture of quality to bolster up the pasture—especially in the fall, *The New England Dairyman*, official paper of some 20,000 good dairymen, says "the outlook for high prices for milk is very promising."



Milk prices have been going up generally this summer. Probably without an exception anywhere in the country, the best prices ever paid for September milk are being paid now.

With September milk bringing $3.50 or more per 100 lbs., a ton of productive grain mixture composed of BUFFALO CORN GLUTEN FEED, wheat bran or millfeed, etc., costing $75 or less, liberally fed with good roughage, is producing from good milkers $200 to $300 worth of milk.

The man who feeds BUFFALO CORN GLUTEN FEED generously, summer as well as winter, never complains of a lack of profit in dairying, nor does he say much about poor cows. BUFFALO CORN GLUTEN FEED, abundantly fed makes cows *better* cows, heavier milkers.

FEED UP! Your dealer should have BUFFALO CORN GLUTEN FEED. If he does not, write us for sample and literature, and give us his name.

OHIO STATE FAIR

CLARENCE M. BAKER, OHIO

OHIO'S seventieth annual state fair, held at the State Fair Grounds, Columbus, from August 31 to September 4, was the largest exhibition of live stock, machinery, and farm equipment ever held in the Buckeye State. The attendance reached a height of almost 100,000 on Thursday. The other days averaged approximately 30,000. Ohio's State Fair grounds are now too small to accommodate this educational exposition and plans are under foot for enlarging the grounds to provide for greater ease and comfort in live stock exhibition, as well as to give proper space to the demonstration of farm machinery.

In the educational exhibits alone, each department of the Ohio College of Agriculture at Columbus had a booth presenting timely lessons to the farmer.

In the contest as to which department presented its truth most forcibly, the department of Rural Economics was given first place. Their exhibit consisted in presenting the actual lay-out of a southwestern Ohio farm. The farm in miniature was about 15 feet square with fields, fences, buildings, and crops arranged in reality as they were found on the farm when records were taken by county agents and farm management officials. The sales from this farm of 170 acres last year amounted to more than $2,000—it paid $1,000 to the owner above expenses and an additional 15 per cent on the investment. Five points were found out as being the reason for the good results on this farm, whereas an average farm of its size and locality produced total crop sales of only $3,000. The points are: (1) Crop yields are maintained at 20% above the average; (2) one-third of the land in clover at all times and either pastured or made into hay; (3) live stock returns $127 for every $100 worth of feed; (4) employs 2 men the year around, and (5) income in percentage on farm was from hogs, 29; cattle, 25; and wheat, 22.

Entomology officials, for instance, presented facts to show work on the destructive Hessian fly in Ohio during the past season and showed what could be accomplished in the way of sowing wheat on dates so that the work of the fly could be largely controlled. The first safe date to sow wheat in Ohio for 1920 starts from September 20 in the most northern tier of counties and for each 50-mile belt southward, 2 days are added, making the first sowing dates for extreme southern Ohio about October 4. The wheat joint worm and red weevil have done very little damage to Ohio's wheat crop during the past year.

The department of dairying presented its story on the family milk supply, which in short is that each family in town pays out an average of $40.95 each year for milk, 70 gallons being the amount that is used by the average family. To produce this amount of milk the average Ohio cow, as found from cow testing association records, consumes the following amounts of feed and labor: Hay, 190 lbs.; silage, 685; stover, 106; green corn, 49; oats, 50; bran, 50; oil meal, 48; bedding, 176; salt, 3; pasture, 3-10 acres; man labor is 18 1-5 hours.

Other college exhibits show that new and improved varieties of soy beans, wheat, and oats are gaining favor in Ohio.

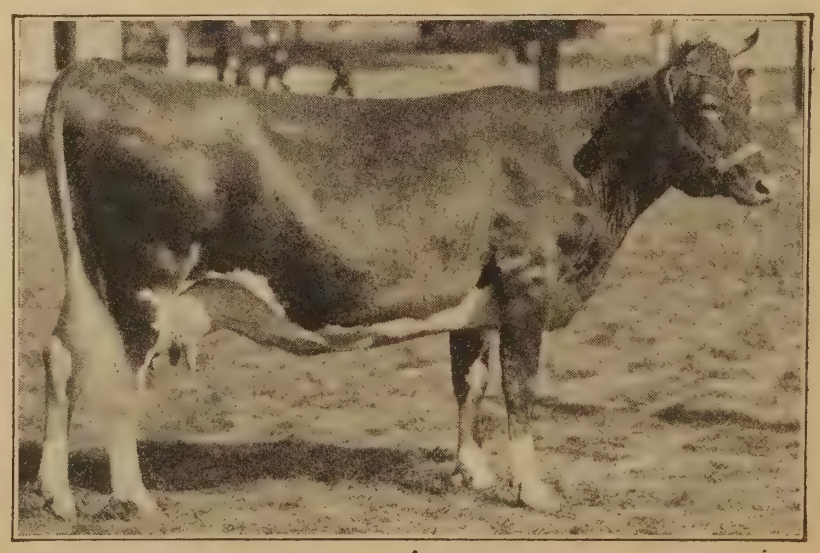
An annual feature of the fair consists in the presentation of instruction to country folk in up-to-date methods of canning by the county canning clubs, from 4 to 8 teams of girls presenting subjects daily, going through the actual operation with fruits and canning material. This exhibit was constantly watched by farm women and probably 10,000 people took the story home with them.

GRAIN EXHIBIT AT OHIO STATE FAIR

ATHALEE OF PATASKALA, SENIOR AND GRAND CHAMPION AYRSHIRE COW AT OHIO STATE FAIR
OWNED BY H. A. STALTER, OHIO

Experiment Station Exhibit

One of the newer features of experimental work presented by the Ohio Experiment Station was the fact that deep plowing is of little value in the state as compared with shallow plowing; that is, deep plowing is 15 to 16 inches and ordinary plowing about 8 inches. The differences in the yields of corn, oats, and wheat at the Ohio Station in the tests of deep plowing versus shallow plowing can only be measured in fractions of bushels, which have no significance in practical farming. The yields were maintained at normal by ordinary plowing, which was contrary to the expectation of a good many farmers who were watching the tests.



The gradual increase of crops due to the careful handling of manure was presented in graphic form. For instance, the increase for an application of 8 tons of barnyard manure to the acre for corn is 20 bushels; wheat, 10 bushels, and hay, 830 lbs. For fresh stable manure, corn, 24 bushels; wheat, 10 bushels; hay, 1,351 lbs. For fresh manure with an application of floats (raw rock phosphate), the increase is, corn, 31 bushels; wheat, 14 bushels; and hay, 1,600 lbs. When yard manure is reinforced with acid phosphate, at the rate of 40 lbs. per ton of manure, the increase for 8 tons of manure per acre on the crop is 32 bushels of corn; 15 bushels of wheat and 1,837 lbs. of hay; but when we look at the figures for the highest type of fertility conservation—that of applying fresh stable manure and acid phosphate, we see an increase of 35 bushels of corn; 16 bushels of wheat and 2,357 lbs. of hay per acre. This all goes to signify that the farmer with poor land, by the application of fresh stable manure and acid phosphate, may increase the fertility of his land and do this at a good profit on his investment and labor.

Ohio's soils need phosphorus. It was shown in exhibits that a 100-bushel yield of corn takes 40 lbs. of phosphoric acid; 100-bushel yield of oats, about 39 lbs.; a 50-bushel yield of wheat, 36 lbs., and a 4-ton yield of clover, 33 lbs. While these yields are high, yet they have been maintained at the Ohio Experiment Station. In this 4-year rotation, 140 lbs. of phosphoric acid are required. In short, 32 lbs. of phosphoric acid should be applied per year to increase and maintain

(Continued on page 407)

OHIO LIZETTE, SENIOR CHAMPION HOLSTEIN COW AT OHIO STATE FAIR
OWNED BY OHIO STATE UNIVERSITY

ROCKINGHAM'S TULIP, SENIOR AND GRAND CHAMPION GUERNSEY COW AT OHIO STATE FAIR
OWNED BY R M. COOPER, SOUTH CAROLINA

Washington, D. C., Weekly News

[SPECIAL TO HOARD'S DAIRYMAN]

Washington, Sept. 11—Manager Warber of the Washington office of the National Milk Producers' Federation who, with the representatives of the National Board of Farm Organizations, attended the sessions of that organization in Columbus, Ohio, is home, and actively engaged in laying out plans for further organization work. He reports two resolutions adopted at the general meeting there which are of interest to dairymen.

The more important one reads as follows: "We demand that all restrictions and discriminations be removed which make it impossible for the formation of co-operative associations both on the part of producers and consumers, and that co-operative associations of farmers engaged in interstate commerce be given the same opportunities in marketing their products in all respects as that enjoyed by private enterprises under similar conditions."

The other resolution deals with the importation of oriental oils urging the enactment of a protective tariff against the importation of all oils which injuriously compete with American products.

⚜

Attention is directed to the acreage percentage figures in the current Crop Estimate Report, issued September 8. The estimates show large crops of corn, potatoes, etc., but a material decline in wheat figures since August 1st, and a total of only 770 million bushels of wheat, winter and spring combined, as against a crop of 941 million bushels last year and a five-year average of 822 million bushels. But the large yields this year in general are due to weather conditions, and this is proven by a study of acreage percentages which is interesting. There was a marked decline in the acreage devoted to wheat, oats, rye, buckwheat, and white potatoes, a slight decline in sweet potato acreage, and a slight increase in corn, barley, and flax; the only material increase in acreage in any crop being in rice and sugar beets. The percentage declines are as follows: Wheat, 26.7 less than last year; oats, 3.2 less than last year; rye, 22.6 less than last year; buckwheat, 4.8 less than last year; white potatoes, 4.1 less than last year. The best proof of the influence of the season is found in the corn crop, where with only 1.5 per cent increase in acreage, the crop is estimated at 114 million bushels larger than last year.

⚜

Results in the "Milk Campaigns" conducted, under the direction of Miss Hoover, campaign specialist of the dairy division, during the past few months in widely scattered American cities, are beginning to be evident from reports received at Miss Hoover's office in the department of agriculture. The conservative estimate arrived at from these reports is an increased consumption of milk not less than 100 million gallons in all in the current year. Milk campaign work will be carried on, although handicapped by decreased appropriations. The plans call for only one campaign in a state, the selection of the location to be made only after very careful consideration of a number of problems including the sanitary situation, the availability of the home demonstration agents from a large number of counties, the whole hearted support of the community organizations of the city selected, the milk distributors, and the milk producers, the interest and the approval of the state college authorities, etc. When under way the activities of these campaigns take a very wide range, but Miss Hoover is greatly interested in the efficacy of that part of the campaign which interests first the teachers in the public schools, next the children in those schools, and through them the mothers who handle the family appropriation for food.

When the milk campaign work is resumed, a new feature will be the use of a working model as a feature display. This model is now on exhibition in the dairy division, and it has an interesting history. The model shows Fort Good Health and Fort Ill Health. Fort Good Health is literally blowing the dark, dreary lair of sickness to pieces, by a constant volley of milk bottles. Aeroplanes hover over the fort, and drop miniature milk bottles on it, which complete the destruction. The model is built after a poster, designed and handed in as a part of the work of interested boys and girls in the Kansas City schools during the Kansas City campaign. Miss Hoover reports almost unanimous approval and support of the campaign. Incidentally she is a vigorous believer in emphasizing the vital principles of dairy products at every point in the work with careful attention to scientific accuracy; and her instructions are to attack no other products, but there is a notable increase in butter sales reported in every city where this campaign has been conducted.

⚜

For the first time this season cold storage reports show declines in butter, cheese, and eggs in storage, indicating that the outward movement has begun,

An uncensored report from the Bureau of Markets received publicity here this week, stating that the butter imports into the United States were not material factors, and stating that the largest yearly importation on record was that of 1919 when the total was a little over nine million pounds. The author of this story failed to look up the statistics easily available showing imports since Jan. 1, this year, already amounting to over 22,000,000 lbs. The July figures alone as quoted last week show over eight million pounds imported. No misstatements of this kind can hide the need of tariff protection for the butter industry.

Dairies in Mexico

The federal government of Mexico through its agricutural bureau is encouraging the purchase of high grade dairy cattle in the United States and their shipment to that country. Several large dairies are to be established at Monterey, San Luis Potosi, Aguas Calientes, Tampico, Guadalajara, Chihuahua, Torreon, City of Mexico, and possibly other cities, according to authentic reports received from that country.

EDITORIAL COMMENT

HAS GOOD VOICE

A recent advertisement reads as follows: "Wanted—A steady, respectable young man to look after a garden and care for a cow who has a good voice and is accustomed to singing in the choir."

We have always been opposed to attempting to breed dual-purpose cattle, but perhaps we will have to modify our views, for we see no objection to breeding cows with good voices and capable of singing in a choir.

SAWDUST FOR FEED

Several years ago we published an article describing briefly how some of the scientists of Sweden treated sawdust to make it a palatable, nourishing feed for cattle. The past year or two the Wisconsin Experiment Station has been treating sawdust chemically and making it a nourishing cattle feed. It has practically no protein, but is rich in carbohydrates. No doubt certain sections of the country could use this feed, if it could be purchased at reasonable prices. It is rather doubtful, though, whether this feed will have any great market among farmers who raise an abundance of corn, for corn furnishes a large amount of carbohydrates and at low prices. In sections where large amounts of alfalfa and other feeds rich in protein are grown, we can see an opportunity for a market, providing freight rates and cost of manufacture do not make this feed prohibitive.

It should be remembered that sawdust untreated is worse than worthless. A large outlay of capital is required to establish an institution for treating sawdust chemically and preparing it as feed for cattle. The result in feeding sawdust in combination with high protein feed at the Wisconsin Experiment Station has been satisfactory, but it is rather early to say whether it will ever become a feed generally used in the United States.

MACHINE MILKING INCREASES

"Does the milking machine give satisfaction?" The labor situation on the dairy farm has made this a pertinent and persistent question. One of the best answers we have been able to give is that where the milking machine has been tried out thoroughly, it is in the greatest popularity.

In the last analysis, the milking machine must speak for itself as any other implement must speak for itself, and that it will so speak is indicated by the report of Mr. W. T. Meyers, tester for the Barneveld, Wisconsin, Cow Testing Association. In writing to his state supervisor recently, Mr. Meyer said: "Twenty-one of our twenty-five members own milking machines. Each of the four others have expressed an intention of purchasing next year."

But this is not the only testimony Wisconsin cow testing associations offer, and we know of no other higher authority than that offered by a group of men who are putting the test of merit against their cows and know what their cows are doing 365 days of the year. On July 1, 1920, Wisconsin had 115 cow testing associations. Statistical reports were received from 68 of these associations, showing, among other things, that of the 2,051 herds in these associations, 468 were being milked by machine. This is better than one herd out of five and is a very good proportion when consideration is given to the relatively recent introduction of the milking machine. Of the total associations reporting, there were only three that apparently had no herds milked by machine, while seventeen of these associations reported ten or more herds as being milked by machine.

But even this is not all that these Wisconsin associations have to offer concerning the progress of the milking machine. The most recent monthly report gives account of the additional installation of twenty new machines and this is significant when consideration is given to the fact that these reports were made incidentally in the letters from the several testers. The Arkansas and Mishicott associations report one new machine each. The Ellington association reports two and the Juneau, Richfield, and Rockfield associations each installed three new machines. The Stratford association, which does not appear in the annual survey, reports seven machines purchased during the year.

While reports of this character may not be conclusive evidence, yet they do indicate the drift of farm opinion. It is scarcely to be expected that several neighbors would install a piece of machinery unless it had been found practical and desirable. Visits to these several localities would convince the most skeptical that although there is now and then a failure with machine milking, due to some preventable cause in nearly every case, the large majority of users are well pleased and consider that their investment brings good returns.

CO-OPERATIVE LEAGUE MOVEMENT

Over a year ago the New York Dairymen's League organized a co-operative marketing company. The purpose of this association is to handle a considerable portion of the milk produced in the section supplying New York City with market milk. There are times when there is a surplus, that is, more milk than will be consumed in liquid form, and it becomes necessary to convert this so-called surplus into butter, cheese, condensed milk, milk powder, etc. Further, the co-operative marketing company expects to be in position to take care of a considerable portion of the producers' milk when the price offered for market milk is not in keeping with the prices of other dairy products. In short, it is an organization which endeavors to place the farmer in position to direct his own business.

We are informed by good authority that "the co-operative market association is a source of constant concern and study in order to overcome the difficulties in getting a big work launched on a proper foundation. The great difficulty with farm people is that they are content to go along in fair weather without preparing for foul weather. League prices have been fairly good this summer, with the result that the co-operative marketing company has not received the support, either in proper finances or volume of milk, which it must have in order to get started. Prices on all farm products are declining. Farmers have made the least out of the war of any class."

Our correspondent also states: "The farmers are discouraged and I fear they are going to be more so. With the farmers feeling as they do, it will be very easy for the dealers to get control again and it will be hard for the farmers to continue to stick together." It is well known that when the co-operative marketing work was started that it would be a tremendous job to establish it and that it would require sacrifice and a lot of hard work. A good start has been made but it is only a start. The marketing company is by no means out of the woods. It is to be regretted that whenever a group of farmers, willing to devote their time to assist their fellow farmers in co-operative effort, in the marketing of their products, that they are not given wholehearted support. If payments are not made quite as promptly by their organization, or if prices are not quite so good as paid by well established firms, they become discouraged and often leave their organization. Farmers will never accomplish what is so highly desirable, that of controlling the marketing of their own products, unless they learn how to stick together under adversities. These men who are easily discouraged with their own enterprises, forget that no great concern ever developed without its setbacks, without overcoming adversities, and without labor and sacrifice. Why is it that farmers cannot unite in manufacturing and in directing the marketing of their own products?

Elsewhere in this issue will be found a communication from our Mr. Lyon, entitled "League Co-operative Movement", which points out some of the difficulties of the League Co-operative Marketing Co.

FARM BUREAU TO INVESTIGATE

It has been stated that the farmer need not be concerned regarding the price the distributor asks for his products. That is, in part, true. If the farmer can receive his price for a product he is, as a rule, little concerned what disposition the purchaser makes of it. On the other hand, if the farmers have produced and are producing a large quantity of a product and the high price charged the consumers tends to restrict consumption and create a surplus, then he is concerned about what it is sold for to the consumer.

An example of this character is shown in the price which the consumers of Rock Island, Ill., are paying for milk. Farmers are selling their milk for 7½c per quart and the consumers are paying 17c. The cost of getting the milk from the farmer to the consumer in this city is 9½c per quart, while in some other cities it costs but five cents. When milk sells for 17c a quart, there is not so much consumed as when it sells for less. This concerns the farmer, especially when there is an abundance of milk. Further, the cost of 9½c per quart to deliver milk from producer to consumer, under ordinary conditions, is excessive.

The Rock Island Farm Bureau will investigate the charge of 9½c a quart for delivering milk from the producer to the consumer to determine whether it is just. This is a laudable undertaking upon the part of the farm bureau and is one of its functions.

There may be good reasons why it costs 9½c a quart to get milk from the producer to the consumer in Rock Island. If it is reasonable and just, no complaint should be made, but if it is excessive, a change should be made. The farmer is affected when his products are sold at too high prices, for it decreases consumption and leads to overproduction, when in reality there may not be enough milk produced to satisfy the demand at more reasonable prices.

SMALL EXHIBITOR AT FAIRS

The dairy cattle exhibits at the midwest state fairs this year, particularly at Wisconsin and Minnesota, have been far ahead of anything brought out at previous fairs. In one or two instances the number of entries for a single breed have been doubled or even trebled over the number shown last year. Better still, the number of exhibitors has very greatly increased, in some cases even to the extent of being multiplied by ten or more.

The small breeder is coming into his own at the ringside and is finding to his own as well as others' surprise that his best compare very favorably with the best from any herd, large or small. At Minnesota, for example, fifty per cent of the places in the Holstein bull classes were won by breeders exhibiting six animals or less and forty per cent went to exhibitors with not to exceed half that number of entries.

The county show herd idea is directly responsible for this, especially in the two states above mentioned, and the credit for it belongs mainly to state and county breed associations and county agents. Association secretaries and many of the county agents have worked early and late to get out creditable showings from their localities and no one who has attended these fairs has a question as to their success.

Such showings should be encouraged in every way possible, in every state, not only because of the direct benefit to the small breeder who exhibits, but because they stimulate a very greatly increased interest in the fair among all breeders. They serve as splendid advertisements of the kind of cattle to be found in the counties represented.

Feeding Cows on Test

I would be very thankful if you would make out a ration for cows going on Advanced Registry test. I have oats and corn, good clover and some alfalfa hay. The cows are Guernseys. I want them to finish in the double letter class. How soon after they freshen should they be bred?

Would some of the prepared feeds be good? I will buy beet pulp and molasses. How shall it be prepared? How much fed daily? I will milk three times daily. I have silage but it will not be very rich in corn. I will buy oil meal, bran, or any feeds you suggest as I want good rations as cheap as possible but the ration must be good. Would bone meal be good? One is a heifer. Is there more danger of overfeeding or "burning out" so that they won't breed, in a heifer? Would you consider it necessary to milk more than three times a day and how much milk should they produce at each milking to warrant more milkings a day?

Carver, Minn. G. W. O.

There are other things of very great importance in the making of records with cows than the mere calculation of the ration to be fed. A cow's production is influenced very greatly by the attention given to small details in feeding, which cannot be specified in any arbitrary combination of roughages and concentrates.

A splendid basis for a ration is found in the feeds which have been produced on this farm. Alfalfa and clover hay and silage make a roughage combination which serves as a most satisfactory basis for a ration. If the succulence of the silage can be combined with dried beet pulp in fairly liberal quantities our correspondent needs only to add a suitable grain mixture to have a splendid ration. The hay should be supplied as liberally as it will be consumed. This is both economical and conducive to heavy production. Silage may be fed at the rate of about 25 lbs. per day and 4 to 6 lbs. of dried beet pulp, preparing this for feeding by soaking it at least 12 hours in 3 to 5 times its weight of water, is a usual allowance. Corn and oats are an economical basis for the concentrate mixture. A combination of 300 pounds ground corn, 200 pounds ground oats, and 100 pounds oil meal or cottonseed meal will prove a valuable mixture with the average cow on test. This may well be supplied at the rate of 1 lb. for every 3 to 3½ lbs. of milk produced. The quantity should vary from this rule with different individuals, some cows consuming a larger proportion of roughages than others and therefore requiring a trifle less concentrates.

Molasses is usually an economical source of carbohydrates but its chief virtue in the test ration lies in its palatability and the fact that through its use the cow will eat increased quantities of feed rather than in the quantity of nutrients it adds to the ration.

It may be fed to test cows by diluting it and sprinkling it over the hay or wetting the grain with it. There are other concentrates which may be economical to add to the mixture suggested. There is some advantage in a larger number of feeds because of the added variety. Oats can be partially substituted with bran, the two feeds having very much the same place in the ration. Also, there are a number of commercial feed mixtures which are highly nutritious and which can be used to satisfaction if the purchase price is comparable with the cost of the other concentrates available.

There is some question about the value of bone meal in a cow's ration. It is held by some feeders that the liberal use of bone meal supplies mineral matter which tends to lessen abortions in a herd. There can be no harm in feeding it. We would supply it separate from the concentrate mixture, allowing the cows to consume as much of it as they desire.

In testing a heifer it is necessary to bear in mind that the young animal needs to grow as well as produce milk. Consequently a bit more of protein should be furnished than is necessary with older cows. It is a wise practice also to encourage younger animals to consume roughages liberally. We believe there is no more danger of damaging a young animal through heavy feeding than an older one. No feeding practice is a judicious one which risks injuring animals on test simply for the benefits which may come from a slightly increased production.

There is no question but that four times a day milking increases the quantity of milk over that which can be secured from milking three times. The increase varies with different cows and depends largely upon the quantity of milk being produced. Heavy milking cows respond especially well to the extra milking. In commercial dairies it is doubtful whether four times a day milking can be made to pay. In the making of records we believe that there is no question but that it is a great stimulus to increased milk flow.

To qualify in the double letter classes Guernsey cows must carry their calves at least 265 days during the test period of 365 days.

Straightening a Silo

We note an inquiry from one of your subscribers as to the proper way to straighten a leaning silo. This is a proposition that frequently arises in our silo department and is really a simple operation.

The first step is to loosen the guy wires and then by means of an ordinary crowbar and some blocking, pry the leaning side up into a plumb position, blocking it up there. Next step is to guy it firmly in the new position. Then loosen the hoops, and with a maul drive the elevated staves down into position on the wall. Tighten the hoops and anchors and the job is complete. It should not take over one or two hours time.

Wisconsin. A. J. MARTIN LUMBER CO.

In reply to H. M. J., advice on straightening a stave silo, I straightened one that leaned very much. I took a patent wagon jack that I had, fastened one end to a solid post and the other end to a chain placed around the top of the silo. I worked the lever on the jack until I had a good tension on the chain, then I went to the opposite side of the silo with a pole and butted the silo as high as I could reach, and when I went back to the jack I found it loose. I tightened the jack again and repeated until I had it plumb. A fence stretcher would do fine. I would not try to pull it back by main force; the jarring loosens the tongue in the grooves and gradually they slide as they would have to do.

Shelbyville, Ind. A. R. M.

I notice an inquiry about straightening a silo. I will give you our experience along this line. Our silo is 16'x26', of the two-piece stave type. We have three silos of this size in our gang and have had to straighten them all at some time or other.

When we are ready to set up the cutter, first we fasten a cable or heavy wire near the top of the silo on the side to which it leans. The other end is fastened to the drawbar of the tractor which is started slowly, being on the opposite side of the silo from where the cable is fastened, so that the silo is slightly twisted when being pulled, which makes it pull easier. Care must be taken not to pull too fast or too far. If the hoops were loosened it will be a little easier, but we have straightened them without loosening them. This method has proved satisfactory with us for several years even if the silo has been out of shape for six months or even a year.

Steen, Minnesota. V. A. P.

Size of Pulley

My milker is connected up by line shaft with engine. The 20-inch milker pump pulley should have a speed of 80 revolutions. Its line shaft pulley is 6 inches in diameter and the 8-inch engine pulley has a speed of 370. What should be the size of pulley connecting line shaft with engine?

Graham, Mo. H. R. C.

We would suggest the use of a crown face pulley having an eleven-inch diameter. When used on the line shaft this will give 268 R. P. M. (revolutions per minute) of line shaft and 80.4 R. P. M. of milker pump pulley. This should prove satisfactory as there is liable to be a slight slip between belts and pulleys.

Wisconsin. E. L. WHITE.

Plowing Under Cowpeas

We have a nice crop of cowpeas, drilled after oats were harvested, that will make about one ton hay per acre. The land is thin. Would it pay us to plow this crop of peas under and buy alfalfa at the market price to feed dairy cows?

Bentonville, Ark. J. H. L.

As to whether it will prove desirable to plow under the cowpeas or make hay of them is an open question. Consideration must be given to the needs of the field in question and the plans for next year's rotation, as well as the supply of fertilizers and humus. There is also the question as to the amount of feed now available and the price that will be paid for something to take the place of the cowpeas.

If the cowpeas can be harvested into good quality hay, it is somewhat questionable whether, under the average condition, it would pay to plow them under. Indeed, it is to be remembered that the cowpeas can be cured as hay and at least 80% of the fertility value will be returned to the soil in the shape of manure, providing good care is given to this valuable by-product of the cow. It would seem probable that if fertilizers were desirable, they might be purchased in some form cheaper than to buy alfalfa hay at the prevailing rate.

For several years we have seeded clover in all our grain, using some of it for hay and plowing under the rest. Owing to the high price of red clover seed, we have for the past two years used sweet clover and have found this a very desirable green manure crop. It makes, under our conditions of farming, a very good growth and we estimate that it is equivalent in value to a light application of manure. The same condition may exist relative to this field of cowpeas, but a decision in these matters rests so much upon other factors in farming operations that it is difficult to give an out and out opinion.

Ration With Hominy

I expect to feed my cows silage, alfalfa, and for grain feed I want to use hominy feed and either cottonseed, oil meal, or gluten. Would the hominy with either of the last three make a good ration? If not what would you suggest to add to this ration? I expect to feed one pound of grain to each 4 lbs. of milk. The cows are Holsteins.

Waukegan, Ill. A. J. D.

Hominy is a good feed and it has about the same feeding value as corn and, in view of this, supplements alfalfa hay very nicely.

Whether cottonseed meal, oil meal, or gluten feed is selected to be used with hominy depends upon the prices of these feeds. Any one of them will supplement the hominy well. If cottonseed or oil meal is selected, we would not use more than enough to supply one pound of either of these feeds per cow per day. If gluten feed is used, enough may be mixed with the hominy so that the cow gets two or three pounds.

We might suggest that more meals be used for making the mixture. We like to have, at least, three or four meals in the grain mixture for an animal's ration. With alfalfa hay and corn silage, however, it is not so essential that a large number of meals be used for making a mixture, as these roughages form the basis of a splendid ration and it is almost impossible to make a mixture that will not supplement well. It is better, however, to use corn, barley, hominy, and feeds rich in carbohydrates when alfalfa hay is on hand. It is not out of place, however, to use some feeds rich in protein.

Sweet Clover and Rape for Pasture

What kind of pasture would sweet clover and rape make for cows? How early do you think prairie grass in fall when it gets dry will dry up cows? How many cows will it take to keep ensilage down in fourteen-foot silo during summer?

Dimock, S. D. H. P. R.

Sweet clover will make an excellent pasture for cows, but we question the advisabiltiy of seeding it with rape. The latter plant has a very strong odor and unless care is exercised in keeping the cows off from pasture for several hours before milking, the taint is likely to carry over into the milk.

It is not so much the dryness of the prairie grass as it is the lack of a sufficient amount of feed that would cause cows to go down in milk flow. Cows that are not in milk will maintain themselves in fairly good flesh on dry grass if it is in sufficient abundance, but in order that a cow produce milk, she must have better feed. As to just what time this must be given is a question that can only be determined by the condition of the pasture itself and the production of the cow.

In order to feed off two inches daily from a fourteen-foot silo, it will take from 30 to 35 cows fed at the rate of 30 lbs. each per day. In cold weather or late fall and winter it will not be necessary to feed off this quantity in order to prevent spoilage, particularly if this silage has been properly made and is well compacted. Indeed, we have known of cases where very little spoilage resulted when fifteen head of stock were being fed during summer from a silo nearly sixteen feet in diameter. In the particular case to which we refer, however, the silage came from the bottom of a fairly deep silo and it was, at the time of feeding, in a pit below ground. We would say that under average conditions twenty head of stock would keep silage down in a fourteen-foot silo so that it would not spoil.

RU-BER-OID

An Assurance of Quality

You cannot determine the quality of ready-roofing by its looks or its "feel". Mere surface appearance tells you nothing. The ability of ready-roofing to meet successfully the test of service depends upon the raw materials put into it and the care with which it is manufactured.

When you buy Ru-ber-oid Roofing there need be no doubt in your mind regarding these two points.

For over a quarter century the name Ru-ber-oid on a roll of ready-roofing has been synonymous with quality. That name stands for just as much today as it did when there was scarcely a competitor in the field.

Ru-ber-oid Roofing is made to meet a standard of quality —*the Ru-ber-oid standard*—not a standard of price. That is why, after more than twenty years of service, the limit of endurance of many a Ru-ber-oid Roof is yet to be determined.

Dairy Cattle Congress Judges

The stage is set for the eleventh annual Dairy Cattle Congress to be held in Waterloo September 27—October 3. No sooner had the 1919 show closed after a most successful week than the management began to lay plans for a bigger and better show for 1920. The officers of the Dairy Cattle Congress had but one thought in mind and that was to make the 1920 event the crowning exposition and the culmination of ten previous years of earnest endeavor to produce a dairy show that would be second to none in the United States. When the final curtain is rung down on the show this fall, if all indications can be relied upon, the management will have approached nearer its ultimate aim than at any previous show.

The Dairy Cattle Congress was established for the express purpose of advancing the best interests of dairying and the breeding of dairy cattle. How well the founders of this great show have succeeded in their work can be best indicated by the attitude of dairymen throughout the country. Many of the prominent breeders who show annually at the National Dairy Show have entered their herds for the Dairy Cattle Congress and as heretofore the cattle exhibited at these two leading shows will be very similar.

Entries in the five dairy breed classes have been received from Montana, Indiana, Michigan, Missouri, Texas, Kansas, Ohio, Illinois, Iowa, Minnesota, New Jersey, and Colorado. Many other states will be represented when the final entry date arrives.

Because of the fact that breeders from many states have entered cattle in the 1920 show and because the management desires to give all a square deal in every particular, special care was used in selecting judges. The small breeder is assured an equal chance with the large breeder if his cattle can "produce the goods."

Jerseys will be lined up before Professor J. A. McLean of the University of British Columbia. Professor McLean is an authority on cattle of national reputation.

L. S. Gillette will judge Ayrshires. He was at one time connected with the Dairy Husbandry Department of Iowa State College and is now in the Holstein business at Fostoria, Iowa.

Howard C. Barker will tie the ribbons on the Brown Swiss. He is secretary of the Ohio Holstein-Friesian Association at Tiffin, Ohio, and and is a judge of considerable ring experience. He was formerly chief of dairy test association work in Iowa.

Professor J. B. Fitch, Kansas State Agricultural College, will judge Guernseys. He judged Brown Swiss at the 1919 Dairy Cattle Congress and gave complete satisfaction.

Because several states have entered state Holstein herds this year it was deemed advisable to secure a Holstein judge from a distance. C. H. Davis, North Yakima, Wash., will serve in this capacity. Mr. Davis is a Holstein breeder of note in the western section of the country.

Brown Swiss and Ayrshires will be judged on September 27th and 28th, Holsteins on September 28th and 29th, Jerseys September 29th and 30th, and Guernseys September 30th and October 1st.

Educational features of the show have been lined up to include the cow testing association demonstrations, the dairy calf club exhibits and demonstrations, feeding demonstrations, demonstrations of dairy barn and farm equipment, working cheese and milk products plants and many others. The conventions of dairymen, creamery managers and buttermakers will be an inspiration to all who attend. In short, the Dairy Cattle Congress is to be a Mecca for dairymen from all over the United States and a great exposition of dairy cattle and all things pertaining to the nation's vital and all important industry.—Publicity Department.

Dairymen's Market Threatened

Manufacturing Dealers Say They Will Close All Plants

Dairymen again face a very serious situation in the milk business. The New York Milk Conference Board has just served notice upon the Dairymen's League that on and after October 1st, no manufacturer will buy any milk at any price until such times as milk market conditions improve. This means, if carried out to the letter, that a large number of the members of the Dairymen's League will be without their regular market for their product and that the market of every other dairyman will be seriously affected.

The reason which the dealers give for this unprecedented action is that there is no market, either foreign or domestic, for manufactured dairy products and especially for condensed milk, evaporated milk, and milk powder. In American markets the dealers report that there is little or no buying of dairy products and that everyone seems to be waiting for lower prices. This situation has continued for several months with the result that dealers claim to have a great surplus on hand and enough to supply their trade without further manufacturing for a number of months. Because money has become increasingly hard to obtain from banks and interest rates are becoming higher and higher, dealers insist that they must either get rid of some of their surplus stock without accumulating more or get out of business entirely. They say that it is not a question of price now, but that they do not want the milk at any price.

The distributors of fluid milk in New York market say that there has been no shortage of milk this summer, and because there have been frequent rains throughout this territory, keeping the pastures in excellent condition, production is not declining as it usually has at this period in other years. Notwithstanding the fact that there has been a larger supply of milk produced this summer than ever before, the fluid market has been good because people are evidently consuming more milk than ever before. The increased consumption of fluid milk is probably due to prohibition and also to the various campaigns conducted by many different agencies encouraging a larger use of milk.

The situation as far as dairymen are concerned could hardly be more serious. Probably the best that can be done for a time at least, is to manufacture this unmarketed milk into butter and cheese. Some of it may be sold in fluid form but, of course, the fluid market cannot anywhere near absorb all the rest.

The dealers have said that they would be glad to keep their plants open, put in apparatus for manufacturing butter and make the dairymen's milk into butter and sell it as trustees for the farmers. What the League will decide to do cannot be told at this time and will depend upon the wishes of the membership.

This is another one of the many serious situations which are continually developing in the milk business emphasizing the need of the dairymen owning and operating their own plants and thereby providing themselves with a regular market for their product.

E. R. EASTMAN.

"Great opportunities come to those who make use of small ones."

Oregon Dairy Notes

HOARD'S DAIRYMAN:—While the outlook for the remainder of this year for the dairy industry in Oregon seems most promising, while breeders are improving their herds and creameries are bettering working conditions and upholding standards, there has been waging in Portland for several weeks what is known to the public as "a milk fight". The Oregon Dairy Council having members on both sides of the question, and knowing all of these members to be men of worth, is keeping out of the fight. A summary of the affair will be made for Hoard's Dairyman when it is over.

The first entry for the 1920 Pacific International was made by D. Brooks Hogan, manager of the Iron Mine Farm, Oregon, who has listed 20 of the finest animals of the famous Iron Mine farm herd of Jerseys. Seventeen are listed under the name of W. N. Ladd. The other three are the property of Mr. Hogan. It was Mr. Hogan who was chairman of the big Jersey jubilee held here in May and he is always a leader in dairydom and especially in any enterprise concerning Jerseys.

Entries for the stock show will close October 15. Indications point toward a 50 per cent heavier enlistment of entries than marked last year's show. "We are offering $75,000 in premiums this year," O. M. Plummer, manager of the big show, announces.

Sunflower silage this year has been a great factor in Oregon and great areas have been planted successfully and silos have been erected in all parts where formerly the feed question was a most serious one.

Banks of Oregon are co-operating splendidly. Heretofore one by one the banks were interested and helped finance the purchase of fine dairy herds. Now, through the co-operation of C. D. Rhorer of the agricultural committee of the Oregon State Bankers' Association, the signed pledges of more than 100 banks were received and as an association matter the banks now will finance the purchase of cattle. Much credit for this is due Mrs. W. P. Strandborg of the Pacific-International who put the matter convincingly before Mr. Rhorer.

Sales dates listed for the Pacific-International are: Jerseys, November 17; fat cattle, morning of November 18; Shorthorns and Guernseys, November 18; Herefords and Holsteins, November 19.

The secretary of the Oregon Dairy Council addressed the Portland Parent-Teacher Associations on the establishment of milk recesses in public schools. The teachers and parents, both, are favoring milk stations and the distributors have promised to provide the milk at cost, or even a little less. The council will have a special milk program for the Oregon State Parent-Teacher Convention.

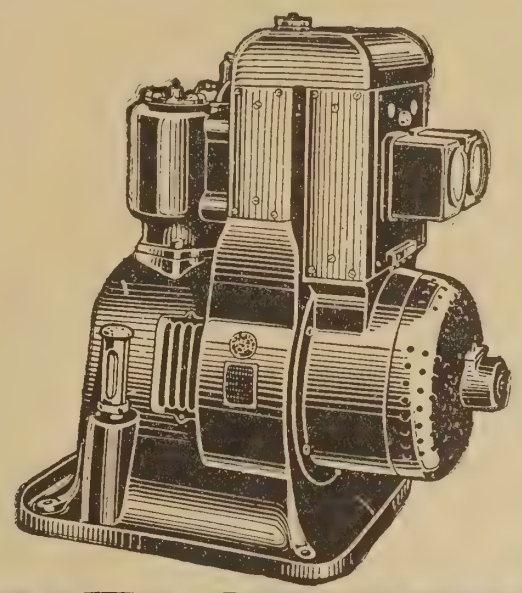
The state of Oregon has appropriated $30,500 toward the payment of premiums at the 1920 Pacific-International Live Stock Exposition.

Students in animal husbandry are preparing to enter the judging contests which are open to any agricultural college in the United States or Canada. Boys and girls, too, are interested in the show and much is done by O. M. Plummer to encourage boys and girls to study animal husbandry, form calf clubs, and generally to build up the dairy industry.

Oregon. E. K. HILL.

See The Owen Before You Decide

Learn why the Owen costs but one-third as much to operate as other units—why it gives you illumination at less per candle-power than kerosene lamps



THE Owen Light & Power Plant is the final type. It has dozens of betterments offered by no other unit. It costs one-third as much to operate as any other unit. It brings you illumination at less than the cost of kerosene lamps.

Note these perfections—superiorities absolutely exclusive in the Owen:

It is fully automatic—starts and stops itself. The batteries are guarded by a patented control. Your engine starts automatically when the batteries are partially discharged. When they are fully charged, then it stops automatically. When you require more current than the batteries should care for, the engine automatically starts.

Even more important than the convenience to you, this automatic control means a tremendous saving. It multiplies many times the life of your batteries. It overcomes costly replacements.

The Owen has a bigger capacity. It will light 1 to 100 lamps without a flicker. It will run electric motors up to one horsepower.

It has an improved engine. Silent, with a non-leak valve. It always retains its compression. Grinding and scraping carbon are ended with this engine.

These are but a very few of the dozens of betterments. We cannot describe them all here. All the features of this amazing invention are in our free booklet. A post card will bring it to you by return mail. Write today and read it carefully before you decide upon a light and power plant.

OWEN
ELECTRIC
Light & Power
For Farm and Home

Dealers: This Is Your Opportunity

The Owen is your opportunity. Once farmers know the Owen, they will buy no other. In it are combined every looked for feature. Many that farmers never dreamed of are offered in this perfected plant. For the Owen is the final type.

There are a few choice territories still open. They won't be open long. So if you are interested we urge you to write us at once. As a progressive business man you surely want to know the facts. To get them incurs no obligation. So write today.

FAIRBANKS SCALES

Your Weights Measure Your Farm Profits

THE RESULT of your every day work, be it much or little, is valued upon your farm scale.

Every cent of money—every minute of time — each ounce of energy—put into your work finally is checked by your scale.

Important to have an accurate Fairbanks Scale for wagon and stock use!

For 90 years Fairbanks Scales have been the world's standard of accuracy—a prestige maintained by quality built in at the factory.

Easy to install—at small cost. Once present, this scale becomes the standard in your neighborhood by which all other weights are judged.

Several Hundred Ohio Farms
For Sale

WE are offering several hundred of the best farms in Ohio at prices that are low in comparison to the value of the property and the income assured purchasers.

These farms are a part of the Miami Conservancy District, which is a political subdivision of the State of Ohio, and represent a surplus acreage that we own in the Miami Valley.

Rich silt loam top-soil deposits make this land very productive—practically inexhaustible.

It is our earnest desire to bring more good farmers to this community, which lies within a thirty mile radius of Dayton. Quick markets are available by rail, interurban and highway.

We Would Like to Send You Booklets Giving Detailed Information. Just Address "Farm Division"

THE MIAMI CONSERVANCY DISTRICT
DAYTON, OHIO

IOWA STATE FAIR

(Continued from page 376)

Flossmoor, and the Board of Control of State Institutions took the blue in two-year-olds with King Pietertje Fayne Ormsby. But Kansas came back in the yearlings with C. McCoy's U. S. Korndyke Homestead Segis, a bull good enough to head his class of twelve and to win junior championship, giving Kansas, at the end of the first day's judging, the three male purple ribbons, though Iowa had four of the six firsts awarded in the bull classes.

Judge Gillette repeated his Missouri State Fair decision between Irene Sarcastic De Kol, aged cow owned by Geo. B. Appleman of Kansas, and the Cass Farm's Illinois grand champion, Lulu Baby Girl. He considered the Kansas entry outstanding in the aged group, her excellence in quality, udder, and scale giving her advantage over the red ribbon Iowa Holstein and carrying her to senior and grand championship. Cass Farm won five of the other six female competitions, showing Fayne Glitka De Kol, senior calf, to junior championship. The younger female classes were the best of the dairy cattle exhibition.

The placings in each class were as follows:

Bull 4 years or over—1, U. S. Disciplinary Barracks on Johanna Bonheur Champion 2nd; 2, Cass Farm Co. on King Aaggie Hengerveld; 3, Barney & Son on Woodcrest Sir Clyde; 4, Clarinda State Hospital on Wolfspring Sethje Mooie Pontiac; 5, Board of Control on Sir Korndyke Haidee. Bull 3 years and under 4—1, Wapsimoor Farm on Sir Wapsie Flossmor; 2, Parker on ———; 3, Clarinda State Hospital on Mudcura Aaggie Ormsby De Kol; 4, Breen & Son on King Buffalo Segis. Bull 2 years and under 3—1 and 4, Board of Control on King Pietertje Fayne Ormsby and ———; 2, Stubbs on King Fobes Genista Homestead; 3, Cass Farm Co. on Aaggie Almeda Hengerveld. Bull 1 year and under 2—1, McCoy on U. S. Korndyke Homestead Segis; 2, Cass Farm Co. on Bessie Homestead Alcastra; 3, Wapsimoor Farm on Sir Joe; 4, Stubbs on King Korndyke Canary Homestead; 5 and 6, Board of Control on King Pietertje Ormsby Piebe 6th and Sir Pietertje Korndyke Johanna's Sequel. Senior bull calf—1 and 6, Cass Farm Co. on Hengerveld Walker Homestead and Fayne Mollie Walker; 2 and 4, Hargrove & Arnold on King Pietertje Ormsby 15th and King Piebe; 3, U. S. Disciplinary Barracks on U. S. Lona Hilldale Skylark Champion; 5, Board of Control on Cherokee Cornucopia. Junior bull calf—1, Cunningham on Joe Calamo McKinley Pietje; 2, Mast on ———; 3, Cass Farm Co. on King Aaggie Craddock; 4 and 5, Board of Control on King Fobes Ormsby Segis and Woodward Daphine Pontiac; 6, Erickson on Oak Dale Spring De Kol 11th.

Cow 4 years or over—1, Appleman on Irene Sarcastic De Kol; 2, Hargrove & Arnold on North River Tidy Netherland; 3, Clarinda State Hospital on May Belle Queen of Ceres 3d; 4, Breen & Sons on Princess Concordia Segis 2d; 5, Cass Farm Co. on Almeda Luecke Hengerveld 5th; 6, U. S. Disciplinary Barracks on Rijaneta Inka Hengerveld. Cow 3 years and under 4—1, Cass Farm Co. on Pearl Johanna Pontiac De Kol; 2, Clarinda State Hospital on Lady Gerben Pauline; 3, Cunningham on Lady Wielske; 4, 5, and 6, Board of Control on Pledge Korndyke 2d, Lady Daphne Pambytuning, and Oakdale Wickfield Colantha. Heifer 2 years and under 3—1 and 2, Stubbs on De Lava Mechtilde Fobes and Ben Fobes Johanna De Kol; 3, U. S. Disciplinary Barracks on Poland Beauty Hengerveld; 4 and 5, Cass Farm Co. on Aaggie Hengerveld Daisy Homestead and Aaggie Hengerveld Whitney; 6, Clarinda State Hospital on Mechthilde Dummerston Celia. Senior yearling heifer—1 and 4, Cass Farm Co. on Bessie Homestead Jewel and Queen Wanmander Beauty; 2 and 3, U. S. Disciplinary Barracks on Johanna Bonheur Juliana Inka and Johanna Bonheur Segis De Kol; 5, Larsen on Forum Aaggie Beauty. 6, Hemphill on Roadside Rosalind. Junior yearling heifer—1 and 6, Cass Farm Co. on Bessie Homestead Walker Lyons and Canary Bessie Homestead; 2 and 5, Clarinda State Hospital on Lady Pietje Mooie and Luxe Maid Pontiac; 3, Kansas Agricultural College on Canary Paul Inka; 4, Miller on Millercrest Johanna Segis. Senior heifer calf—1, 3, and 6, Cass Farm Co. on Fayne Glitka De Kol, Ormsby Bessie Johanna, and Bessie Alcartra Fink; 2, Appleman on ———;4, Clarinda State Hospital on Mercedes Korndyke Mooie; 5, Larsen on Maud Masterpiece. Junior heifer calf—1 and 5, Cass Farm Co. on Nirvana Grace De Kol Fayne and Aaggie Hengerveld Canary Pearl; 2, Clarinda State Hospital on ———; 3, Board of Control on Cherokee Sarcastic; 4, Miller on ———.

Senior and grand champion male—Johanna Bonheur Champion 2nd. Junior champion male—U. S. Korndyke Homestead Segis. Senior and grand champion female—Irene Sarcastic De Kol. Junior champion female—Fayne Glitka De Kol.

Graded herd—1, U. S. Disciplinary Barracks; 2 and 4, Cass Farm Co.; 3, Clarinda State Hospital. Breeder's young herd—1 and 2, Cass Farm Co. Breeder's calf herd—1, Cass Farm Co. Get of sire—1 and 3, Cass Farm Co.; 2, Board of Control; 4, Stubbs Farm; 5, Hemphill; 6, Clarinda State Hospital. Produce of cow—1, Kansas State College; 2, 3, and 5, Cass Farm Co.; 4, Larsen; 6, Miller.

Guernseys

Exhibitors: W. O. Bohart, Montana; and Dairyland Farm, Wm. J. Lockhart, Mountain Bros., W. W. Marsh, and H. J. Schmidt, all of Iowa.

Judge: W. A. McKerrow, Minnesota.

Five Iowa herds and that of W. O. Bohart of Montana furnished a Guernsey showing of 83 head. W. W. Marsh was the heaviest winner but divided money with Mountain Bros. and Dairyland Farm. In the male classes chief interest centered about Cherub's Prince, Marsh's three-year-old and Mountain Brothers' Imp. Kitchener's Express. The latter bull is more compact, neater, a bit showier, and is better headed. He is nearer the type of winning females, an example being Marsh's Honey Bloom of the Prairie. But he failed to break up Cherub's Prince's habit of winning, on scale, length of barrel and rump, depth, and general dairy form. The latter was then an easy winner of senior and grand championship. The Marsh yearling, Golden Laddie of the Prairie, was made junior champion, winning over a stable mate, Blossom's Prince of the Prairie, and Mountain Bros.' junior calf, Lydia's Express of Iowanola.

Ten aged cows made a ring of high quality. Engleside Pretoria Vrangue, third cow in A. R. class E. E. with a record of 582 pounds fat, won on her typiness and neatness though she is a trifle small. She made an attractive senior champion and was good competitor in the final placing. Her sister, Engleside Pretoria Queen was winning three-year-old. Marsh's senior yearling, Honey Bloom of the Prairie, was given premier honors. In six shows in 1919 and three thus far in 1920 she has been junior champion and in six has captured the grand.

A notable feature of the Guernsey show was the striking improvement evidenced in the herds of Mountain Bros., and Dairyland Farm, owned by A. Hyzer, over the animals with which they began but a few years ago. There are few better examples of the benefits which may be gained in the show ring.

The detailed awards follow:

Bull 4 years or over—1, Mountain Bros. on Imp. Kitchener's Express; 2, Bohart on Estrella's Major. Bull 3 years and under 4—1, Marsh on Cherub's Prince; 2, Dairyland Farm on Plato of 4 Pine; 3, Lockhart on Franseca's Glenwood of Iowanola. Bull 2 years and under 3—1, Marsh on Marie's Cherub of the Prairie; 2, Dairyland Farm on Hawthorn of Wiedywold; 3, Bohart on Princes' Boy. Bull 1 year and under 2—1, Marsh on Golden Laddie of the Prairie; 2, Dairyland Farm on Lalla's Prince; 3, Mountain Bros. on Simplicity's Winner of Iowanola; 4, Schmidt on Bobby Holden of Grand Home; 5, Bohart on Major Bozeman. Senior bull calf—1 and 3, Marsh on Blossom's Prince of the Prairie and Prince Charming of the Prairie; 2, 4 and 5, Mountain Bros. on Dorothy's Cherub of Iowanola, Lilly's Express of Iowanola, and Golden Master of Iowanola; 6, Dairyland Farm on Dairyland King. Junior bull calf—1 and 3, Mountain Bros. on Lydia's Express of Iowanola and May King's Cherub of Iowanola; 2, Marsh on ———; 4, Dairyland Farm on Dairyland Renown; 5, Bohart on Select's Major; 6, Schmidt on Rosette's Butternut King of G. H.

Cow 4 years or over—1 and 5, Mountain Bros. on Engleside's Pretoria Vrangue and May King's Recollection of Iowanola; 2 and 6, Dairyland Farm on Velma of Mapledell and Crystal of Floyd; 3 and 4, Schmidt on Marcus Glenwood's Daisy and Glenwood Daisy's Rouge of Grand Home. Cow 3 years and under 4—

1 and 3, Mountain Bros. on Engleside Pretoria Queen and Simplicity's Glenwood of Iowanola; 2, Marsh on Princess Bopeep of the Prairie; 4, Schmidt on High Life Victoria of Grand Home; 5, Bohart on Onward Girl. Heifer 2 years and under 3—1 and 2, Mountain Bros. on Lady Ruth of Iowanola and Imogene of Iowanola; 3, Dairyland Farm on Genevieve of Maoledell; 4, Schmidt on Glenwood Rosette's Rilma of Grand Home; 5, Bohart on P. Lela Onward. Senior yearling heifer—1, 3 and 5, Marsh on Honey Bloom of the Prairie, Golden Locks of the Prairie and Marsh Marigold of the Prairie; 2 and 4, Mountain Bros. on Dorothy Arnold of Iowanola and Florinda's Lavetta of Iowanola. Junor yearling heifer—1, Marsh on Princess Pretoria of the Prairie; 2 and 4, Dairyland Farm on Dairyland Ruth and Fancy of Dairyland; 3, Schmidt on Glenwood Daisy's Dairymaid of Grand Home; 5 and 6, Bohart on Bozeman's Pride and Major's O. L. Senior heifer calf—1 and 5, Mountain Bros. on Kitchener's Pet of Iowanola and Polly May Betty of Iowanola; 2, 3 and 4, Marsh on Sensation of the Prairie, Honeydew of the Prairie and Primrose of the Prairie; 6 and 7, Dairyland Farm on Dairyland Modesty and Snow Flake of Prairie. Junior heifer calf—1, Marsh on Mayflower of the Prairie; 2 and 5, Dairyland Farm on Cloth of Gold's Beauty and Dairyland Janette; 3, Mountain Bros. on Cherub's Grace of Iowanola; 4, Bohart on Major's Princess Lela; 6, Schmidt on High Life's Clover Blossom of Grand Home.

Senior and grand champion male—Cherub's Prince. Junior champion male—Golden Laddie of the Prairie. Senior champion female—Engleside Pretoria Vrangue. Junior and grand champion female—Honey Bloom of the Prairie.

Graded herd—1, Mountain Bros.; 2, Dairyland Farm; 3 and 4, Bohart. Breeder's young herd—1, Marsh; 2, Mountain Bros.; 3, Dairyland Farm; 4, Bohart. Breeder's calf herd—1, Marsh; 2, Mountain Bros. Get of sire—1, Marsh; 2 and 3, Mountain Bros. Produce of cow—1, Marsh; 2 and 4, Mountain Bros.; 3, Dairyland Farm; 5, Schmidt.

Jerseys

Exhibitors: H. L. Elliott, Minn.; and E. L. Reed, W. J. Campbell, M. McMurry, G. C. Sterling, Lloyd Sisson and Will Thompson, all of Iowa, the last four from Blackhawk County.

Judge: C. L. Blackman, Iowa.

The Jersey showing was the poorest which has been seen at Des Moines in many years. While the quality fell short of that at previous fairs, the small number made the breeds' representation especially weak. Seven exhibitors mustered a total of thirty-nine head, H. L. Elliott of Minnesota, the only out of the state showman, furnishing fifteen. A very pleasing feature, one which partly balanced the light showing, was the number of small herds represented, all seven being non-professional show herds.

The aged bull class failed to bring out competition for Campbell's Maxmillion You'll Do; Plymouth Noble Lad, a three-year-old, owned by Sterling, was equally fortunate; while the two-year-olds failed to appear. The three-year-old was given the senior purple. The younger groups were better, bringing out several acceptable calves. A yearling, Golden Noble's Majesty, owned by Elliott was made junior champion and easily defeated the senior for premier honors.

The cow classes had more Jersey merit. Five aged females made a very fair line-up. Among them was Fox's Lucy of Ingleside, a twelve-year-old of sufficient character that Mr. Blackman made her grand champion. Her age is evidenced in back and udder but her capacity and size with enough refinement made her clearly the breed's leader. Campbell's senior yearling, Mabel's Financial Maiden, had no competition in her class but was strong enough to acquire the junior purple and offer the aged champion the best competition the breed furnished.

The following lists the awards by classes:

Bull 4 years or over—1, Campbell on Maxmillion You'll Do. Bull 3 years and under 4—1, Sterling on Plymouth Noble Lad. Bull 1 year and under 2—1, Elliott on Golden Noble's Majesty. Senior bull calf—1, Campbell on You'll Do Bobbie; 2 and 3, Elliott on Ida's Dandy Fox and Countess Dandy King; 4, Sisson on Fin. Countess King. Junior bull calf—1, McMurry on ———; 2, Elliott on Pride's Chief Proudy; 3, Sterling on ———.

Cow 4 years or over—1, McMurry on Fox's Lucy of Ingleside; 2 and 5, Sterling on Golden Fern's Bosnia and Golden Fern's Primrose; 3, Campbell on Minnette's Golden Fern; 4, Elliott on Jolley's Easterbelle. Cow 3 years and under 4—1 and 2, Eliott on Topsy's Cupid Jewel and Mayflower's Cupid Pride; 3, Thompson on Rioter's Fancy Rose. Heifer 2 years and under 3—1, Campbell on Sweet Maria's Rhea; 2, Elliott on Jolly's Queen Lily; 3, Sisson on Fin. Thistle Belle. Senior yearling heifer—1, Campbell on Mabel's Fin Maiden. Junior yearling heifer—1, McMurry on Financial Gambogess; 2 and 5, Elliott on Ethel's Noble Beauty and Jewel's Judd Rosabella; 3 and 4, Sterling on Plymouth's Noble Fox and You'll Do's Golden Aboukir. Senior heifer calf—1, Campbell on You'll Do Lora; 2 and 5, McMurry on Fin. Countess Comity and ———; 3, Sisson on Fin. Countess Kate; 4, Sterling on Pansy's Dahlia Blossom. Junior heifer calf—1, Sisson on ———; 2, Sterling on ———; 3, Reed on ———; 4 and 5, Elliott on Brenda's Combination Bessa and Jewel's Pogis Mayflower.

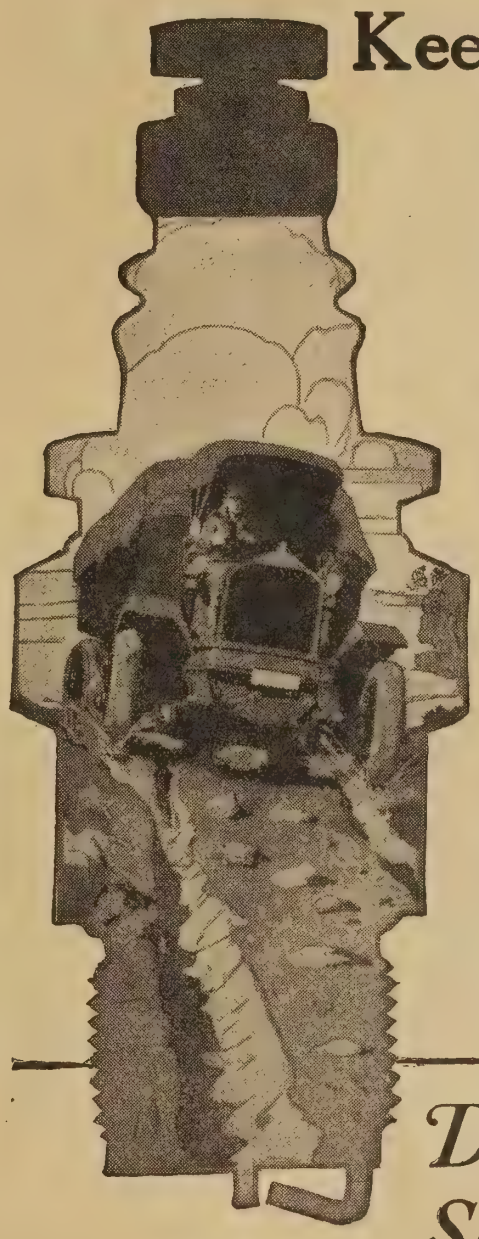
Senior champion male—Plymouth Noble Lad. Junior and grand champion male—Golden Noble's Majesty. Senior and grand champion female—Fox's Lucy of Ingleside. Junior champion female—Mabel's Fin Maiden.

Graded herd—1, Campbell. Breeder's young herd—1, Elliott. Breeder's calf herd—1, Elliott. Get of sire—1, Sisson; 2, Elliott. Produce of cow—1, Campbell; 2, 4, and 5, Elliott; 3, Sterling.

Ayrshires

Three breeders with thirty-seven Ayrshires lacked but two of tieing the Jerseys in numbers but failed to maintain the average of the breed's exhibitions at the Iowa fair during late years. Stephen Bull of Wisconsin took eight firsts and C. H. Peverill of Iowa nine. Championships were split evenly, the three females going to the Wisconsin herd and the three males to Iowa. Selmer O. Storby of Iowa exhibited a two-year-old bull.

Friendlesshead Victor, Bull's three-year-old, is making a much improved individual, showing better than as a growing bull. At Des Moines he had finish and showiness to excel his competition. Peverill's two-year-old, Cloverdale's Choice Goods, has more length, depth, and carries out better. He was given his Missouri State Fair rating of grand champion by Judge J. B. Fitch of Kansas, who credited him with superior dairy qualities. Peverill's yearling, Rosebud Buster, won over the junior classes.



The aged cows were not exceptional. The milkiest animal among them, Rosie Noxemall, went to fifth place because of faulty breed type. Mr. Fitch chose Craigley Ada from the Bull herd for first place because of her stronger heart, spring of rib, and balance of udder than the Peverill second prize winner, Enid Lessnessock. Hughina Beauty easily led the two-year-olds and brought the senior champion ribbon to the Wisconsin herd. She has the scale and capacity which pleases Judge Fitch and gives promise of making a producer. Bull's senior heifer, Aldebaran Flirt, won in a class of four and was made junior champion. The two-year-old won easily in the final contest.

The awards by classes follow:

Bull 3 years and under 4—1, Bull on Friendlesshead Victor. Bull 2 years and under 3—1 and 2, Peverill on Cloverdale's Choice Goods and Cavalier's Fashion Plate; 3, Storby on Silver Ring of South Farm. Bull one year and under 2—1, Peverill on Rosebud Buster; 2, Bull on Garclaugh Ivanhoe. Senior bull calf—1 and 2, Peverill on Rosebud Carl and Rosebud Bill; 3, Bull on Aldebaran Crest. Junior bull calf—1, Bull on Aldebaran Hugh; 2 and 3, Peverill on Cavalier's Good Gift and Rosebud Lassie Boy.

Cow four years or over—1, 4, and 5, Bull on Craigley Ada, Rosy Genevieve, and Rosie Noxemal; 2 and 3, Peverill on Enid Lessnessock and Sylva Good Gift. Cow 3 years and under 4—1, Peverill on Beauty of Cloverdale. Heifer 2

CHAMPION

TRADE MARK

Champion

Keep Your Truck Going

USE Champion Spark Plugs to cut truck costs.

They aid greatly in profitable continuous truck operation, by ending many of the costly delays for repair and adjustment.

Champion No. 3450 Insulator effectively withstands the constant shocks, heat and vibrations to which truck motors are subjected in their long, daily grind of heavy duty work.

Champion dependability accounts for Champion Spark Plugs having been adopted as standard equipment by more automobile truck, tractor, and engine manufacturers than any other make of spark plug.

There is a Champion Spark Plug for every type of motor car, truck, tractor, motorcycle and stationary engine. Order a set from your dealer today.

Be sure the name Champion is on the Insulator and the World Trade Mark on the Box.

Champion Spark Plug Company
Toledo, Ohio

DEPENDABLE SPARK PLUGS

Minnesota State Fair

ONE hundred and seventy-five thousand people attended the Minnesota State Fair on Labor Day, excelling all previous single day records excepting that for 1919. Favorable weather and the presence of the presidential candidates contributed greatly to the 1920 success, bringing many thousands through the gates and keeping up the high attendance standard of the Gopher State Fair.

This year, according to F. W. Murphy, president, nearly $1,000,000 was spent on permanent improvements and the week's program, $115,000 being given as premiums to encourage agriculture and closely related industries. The outstanding improvement is the partially completed $500,000 cattle barn which is built to house 1,000 head. The new Iowa cattle barn is larger but the Minnesota structure leads in its completeness and finish.

Besides the live stock show at least two other exhibits are worth the attention of every farmer visitor at this fair. The horticultural building showing the products of Minnesota farms is a complete show in itself. The apple exhibit is so special a feature that if the state in general could come up with it in fruit production, "Minnesota Holsteins" would find difficulty in maintaining their lead. The floricultural show, while not directly financially profitable to the live stock man, profits him well if he will but study it and appreciate the accomplishments of those who successfully breed plants rather than cattle.

The dairy building sets apart from the live stock show and is overlooked by many who would otherwise find interest in its exhibits.

A high quality dairy products show was made under the supervision of Andrew French, S. G. Gustafson, and James Sorenson judging butter and J. T. Mc Carthy and Jacob Baumgartner, the cheese. The best creamery butter, scoring 96½, was shown by Gust. Knudson. J. M. Baumgartner won on full cream cheese with a score of 97¼, G. Andrist on Swiss cheese scoring 96½, and H. C. Crever on Brick cheese scoring 96½. No cheese entered scored less than 92.

Lessons from Testing

Cows from Minnesota cow testing associations were on exhibit to illustrate the benefits from co-operative record keeping. Two cows were shown whose production indicated the value of silage in the ration; two furnished examples of good and inferior type; two gave proof of the value of the pure-bred sire, one inferior animal being sired by a poor bull and a first class individual by a pure-bred; and two were exhibited to show the difference between an animal strong in constitution and capacity and one which is weak. Three calves were on exhibit to show results from feeding a minimum quantity of milk where whole milk is sold. One calf weaned at 60 days was above normal weight at 200 days, one weaned at 45 days was above normal at 158 days, and a second weaned at 45 days was 92.2 per cent normal in weight at 146 days. A grain mixture of 4 parts ground corn, one part linseed meal, and one part bran was fed with alfalfa. Calves were put on grain and hay as soon as possible and fed all they would clean up.

Holsteins

J. D. Bacon of North Dakota was the only out of state Holstein breeder who ventured to compete with eighty-three Minnesota exhibitors. A total of close to 275 head were on the grounds and dominated the dairy show. Even with the great number of animals the quality was well maintained. The large classes drew the largest ringside of the show and kept Axel Hanson as busy as he has been for many a month. He placed the ribbons on the best Holstein show ever seen at the Minnesota fair.

Sixteen aged bulls made up a difficult class of fair quality. Piebe Laura Ollie Homestead King, the choicest individual in the group, according to Judge Hanson, was left out of the money because of his soreness. Probably the second best typed entry was Sir Hendreikje De Kol Homestead owned by Joy Bros. Stock Co. This bull is clean cut, straight, and a winner—with more size. He shows as a three-year-old but is too small to head the ring. Mayowood Farm's Johanna Glenda Lad won the class on his scale and on being the smoothest bull of size. His quality is indicated by his having been twice a first prize winner at the Dairy Cattle Congress and the National Dairy Show. H. W. Schroeder won in the two-year-olds with Sir Hengerveld Pietertje Ormsby on scale and his remarkable capacity.

Mr. Hanson chose the junior yearling, Tidy Hengerveld De Kol Aaggie, owned by Victor Lohmann, for junior champion, making the aged winner senior and grand champion.

Thirty-six aged cows made such a dairy class as is seldom seen. It took a full hour to line them up. Blue ribbon competition settled on Jessie Tritomia De Kol 4th, a large, long rumped, showy cow with a slight tendency to carry plenty of covering, and South Side Inka De Kol, a smaller animal of pronounced dairy type, clean cut, and showing a neat, working udder. The latter, owned by the Minnesota Holstein Company, finally won, to the general approval of the ringside, leaving second honors to Egil Boeckman's entry. The younger classes were large and contained numbers of splendid heifers. A junior calf, Queen Segis Piebe Mercedes, owned by C. L. Spaulding was given the marked honor of junior championship, the aged cow being accorded the grand.

This Holstein show was worthy of much praise because of its numbers and the high average quality. Its greatest value was in its large number of small exhibitors, men who are not usually represented in a show. County exhibits made it possible for even the smallest breeder to send an animal or two. Seven firsts and seconds went to exhibitors with three head or less and 24 out of 43 placings in the bull classes went to exhibitors with six head or less. Twelve county exhibits were shown, the friendly rivalry among them being a healthy stimulus to the best showing. Mower, Clay, Rice, Washington, Olmstead, Anoka, Dakota, Blue Earth, Steele, Meeker, Goodhue, and Dodge counties entered the county group class in which each group consisted of ten head and were shown by not less than three exhibitors. The first four won in the order given above.

The awards are here given:

Bull 3 years or over—1, Mayowood Farm on Johanna Glenda Lad; 2, Pagel on King Heilo Aaggie Korndyke; 3, Joy Bros. Stock Co. on Sir Heindreikje De Kol Homestead; 4, Harris & Overstrude on Sir Bess Fayne Pontiac Ormsby; 5, Simon & Son on King Korndyke Chloe Colantha; 6, Martig Bros. on Duke Pietertje Korndyke Ormsby 2nd; 7, Schroeder Farms on Pietertje Alma Marie Ormsby; Bull 2 years under 3—1, Schroeder on Sir Hengerveld Pietertje Ormsby; 2, Lashbrook on Sir Walker Segis Homestead; 3, Krabbenhoft on Sir Pietertje Ormsby Mercedes Son; 4, Boeckmann on King Pietertje Ormsby Pledge; 5, Mayowood Farm on Ondine Homestead Posie; 6, Marlow and Randall on Mankato Pietertje Ormsby Mercedes; 7, Hunter Bros. on King Echo Johanna Sylvia. Senior yearling bull—1, Tyner & Son on Sir Pietertje Ormsby Walker; 2, Slindee on King Prilly Segis Pontiac; 3, Miller on R. C. Sir Johanna Glen Ormsby; 4, Bodin on Creamelle Segis Colantha Lad; 5, Benncrotte on Sir Madrigal Inka Ormsby. Junior yearling bull—1, Lohmann on Tidy Hengerveld De Kol Aaggie; 2, Johnson on Sir Ollie Pearl Homestead; 3, Moscrip on North Star Sir June Homestead; 4, Minnesota Holstein Co. on E. C. King Pontiac Segis (twin); 5, Marlow & Randall on Mankato Pietertje De Kol Ormsby; 6, Oakdale Farms on Oakdale Segis Pontiac Count. Senior bull calf—1, Minnesota Holstein Co. on Sir Inka Superior Segis; 2, Martig Bros.; 3, Christgau and Taylor on Eskimo Ormsby; 4, Spaulding on King Pontiac Ormsby Koffijne; 5, Grahamholm Farm on Grahamholm Sir Kaan; 6, Bacon and Son on Pontiac Ollie Pietertje Netherland. Junior bull calf—1, Minnesota Holstein Co. on Piebe Inka Homestead; 2 and 3, Bacon & Son on Lilac Hedge Colantha Lubrod Watson and Lilac Hedge Pontiac Elmdale De Kol; 4, Mayowood Farm; 5, Munson on Ted Korndyke Pontiac Segis; 6, Holmes.

Cow 4 years or over—1, Minnesota Holstein Co. on South Side Inka De Kol; 2, Boeckman on Jessie Tritomia De Kol 4th; 3, Heifort on Eona Aaggie Tidy; 4, Brosious on Elizabeth Korndyke Hengerveld; 5, Schroeder Farms on Burke Mercedes Ormsby; 6, St. Olaf College on Lady Glen Artis Ormsby; 7, Ridler on Lady Oakwood Butter Queen. Cow 3 years under 4—1, Schroeder Farms on Lizziee Pietertje Ormsby; 2, Miller on Canary Lunde Pontiac; 3, Bacon & Son on Lilac Hedge Fay Colantha Bismarch; 4, Spaulding on Watson Segis Pontiac Lady; 5, Grahamholm Farm on Grahamholm Colantha Kaan Marie; 6, Boeckmann on Lilly Beets Banostine. Cow 2 years under 3—

ROSE'S ELMHURST JOLLY, SENIOR AND GRAND CHAMPION JERSEY BULL AT MINNESOTA STATE FAIR
OWNED BY H. C. WAGNER, MINNESOTA

SEVEN FIRST PRIZE AGED HOLSTEIN COWS, STANDING IN ORDER PLACED
From left to right: South Side Inka De Kol, owned by Minnesota Holstein Co. (later senior and grand champion); Jessie Tritomia De Kol 4th, owned by Dr. E. Boeckman; Eona Aaggie Tidy, owned by E. A. Heifert; Elizabeth Korndyke Hengerveld, owned by E. J. Brosius; Burke Mercedes Ormsby, owned by E. C. Schroeder Farms; Lady Glen Artis Ormsby, owned by St. Olaf College; Lady Oakwood Butter Queen, owned by G. W. Ridler.

FIRST PRIZE GUERNSEY GET OF SIRE AT MINNESOTA STATE FAIR
OWNED BY JONES & MCKERROW, WISCONSIN

1 and 3, Schroeder Farms on Heilo Pietertje Piebe and Fytje De Kol Ormsby; 2, Minnesota Holstein Co. on Fair Oaks Miss Homestead Rue; 4, Hunt on Pietertje Elgin De Kol Mercedes; 5, Boeckmann on Korndyke Quality Lass; 6, Mayowood Farm on Avanella Canary Ondine; 7, Miller. Senior yearling heifer (dry)—1 and 2. Minnesota Holstein Co. on Fair Oakes Inka Homestead and Far Oaks Fannie Homestead; 3, Johnson on Beaver Oak Prilly Mercedes; 4, Lunde on Delilah Jewel of Lundewood; 5, Oakdale Farms on K. S. P. Lady Rue; 6, Crane on Miss Aaggie Johanna Mercedes; 7, Graham and Hanson on Grahamholm Silver Gloss. Junior yearling heifer—1, Bacon and Son on Princess Pontiac Ollie Homestead; 2 and 3, Grahamholm Farms on Grahamholm Cornucopia Segis Lad and Grahamholm Colantha Segis Kaan; 4 and 5, Minnesota Holstein Co. on Fern Segis Pontiac Countess and Star Segis Pontiac Superior; 6, McDonald Bros. on Woodville Jessie Burke Ormsby. Senior heifer calf—1, Grosser on Lizzetta Beauty Segis Korndyke 2d; 2, Minnesota Holstein Co. on Miss Inka Homestead; 3, Mayowood Farm; 4, Spaulding on Mercedes Ormsby Mabel; 5, Boeckmann on Echoland Lilly Ormsby; 6, Bacon & Son on Lilac Hedge Pontiac Colantha 1st; 7, Schroeder Farms on Beautiful Josephine 3d; 8, Carleton College Farm on Mabel Abbekirk Pontiac Segis. Junior heifer calf—1, Spaulding on Queen Segis Piebe Mercedes; 2 and 3, Grahamholm Farms on Grahamholm Pauline and Grahamholm Winana Beets; 4, Schroeder Farms on Jenny Wren Burke Ormsby; 5 and 8, Minnesota Holstein Co. on Miss Ideal Homestead and Pelagie Wayne Homestead; 6, Tyner & Son on Miss Colantha Tidy Johanna; 7, Boeckmann on Echoland Pava Ormsby.

Senior and grand champion bull—Johanna Glenda Lad. Junior champion bull—Tidy Hengerveld De Kol Aaggie. Senior and grand champion cow—South Side Inka De Kol. Junior champion cow—Queen Segis Piebe Mercedes.

Graded herd—1, Minnesota Holstein Co.; 2, Boeckman; 3, Schroeder Farms; 4, Bacon & Son; 5, Mayowood Farm; 6, Spaulding; 7, Marlow & Randall. Guernseys

The Guernsey showing this year was not what it should have been either in numbers or in point of quality. Minnesota has some very good Guernsey herds within her borders and should have a better exhibit of them at her state fair.

One of the good features of the showing was that it represented 18 different herds, all but one of them from within the state. Jones & McKerrow of Wisconsin, the only out of state exhibitor, were also the largest exhibitors with 20 head.

The aged bulls made the best showing among the males with 5 entries including D. D. Tenny's Ladysmith's Cherub, 3 times grand champion at the National and Jones & McKerrow's Bonnie Boy of Riverside, that has been well up in the money wherever shown this year. The Wisconsin entry has a better back and top line, carries an excellent body but he was too plain and heavy through the thighs to beat Tenny's entry. Ladysmith's Cherub was senior and grand champion, the junior championship going to Dot's Cherub of Shorewood, a junior yearling from the same herd.

Fourteen aged cows made the largest and best class of the entire Guernsey showing. Imp. Mildred 2nd of Les Godaines, the Wisconsin entry that has been grand champion at both Illinois and Wisconsin, duplicated at Minnesota, an easy senior and grand champion. Ultra Rosie, a senior calf also owned by Jones & McKerrow, was junior champion.

H. H. Kildee of Iowa did the judging.

Complete awards follow:

Bull 3 years or over—1, Tenny on Ladysmith's Cherub; 2 and 3, Jones & McKerrow on Bonnie Boy of Riverside and Chene King; 4, Olson & Krans on Ingleside King Chesterbrook; 5, Simon Kruse on Polly's Anchor. Bull 2 years under 3—1, Hughes on Betty's Prince of Prospect Hill; 2, Hageman & Sons on Merry May King. Senior yearling bull—1, Kruse on Pride of Radderon Farm. Junior yearling bull—1 and 2, Tenney on Dot's Cherub of Shorewood and Cherub's Pearl Royal of Shorewood; 3, Jones & McKerrow on Dora's King; 4, Street on Governor Jess Weshpi; 5, Skaar on Glen of Cor-Alfa Farm; 6, Bragg on Adelaide's Chief; 7, Crouse on Beda's Golden Lad of Lakeside. Senior bull calf—1 and 5, Jones & McKerrow on Ultra's Proud King and Coral Jerry King; 2 and 7, French on Polly's Pet of Fair Meadows and Jewel's Oliver of Fair Meadows; 3, Hageman & Sons on Floridale May Day Prince; 4, Skaar; 6, Fuissell on Frissdale King Susie. Junior bull calf—1, Hageman & Sons on Floridale General Washington; 2, Tenney on Cherub's Dean of Shorewood; 3, Skaar.

Cow 4 years or over—1, 3, and 4, Jones & McKerrow on Imp. Mildred 2nd of Les Godaines, Imp. Bordeau of Courtil Bree and Imp. Governor's Ella of McKerrow's Farm; 2, 5, and 7, Frissell on Susie of Skillet Creek, Raymond of the Priel's Val Rose, and Cherrys Trixie of City View; 6, Bragg on Aspara 2nd. Cow 3 years under 4—1, Hageman on Adell of Burnham Beach; 2, Jones & McKerrow on Kate of Aurelian Farms; 3, Shepard on Gerar Rose; 4, Kruse on Trickery Rose of Mukwonago; 5, Frissell on Strandford's Butter Maid of Chippewa. Cow 2 years under 3—1, Jones & McKerrow on Century Girl of Edgemoor; 2 and 3, Olson & Krans on Alvira of Oakley and Kings Charmeese of Oakley. Senior yearling heifer, dry—1 and 6, Jones & McKerrow on Eidelweiss of Edgemoor; 2, Kruse on Gloriana of Edgemoor; 3, Frissell on Ruth Yeksa of Bush Lake; 4 and 8, Hageman on Floridale Princess; 5, French on Flora's Beauty of Fair Meadows; 7, Nelson on May Primrose of Fairy Falls. Junior yearling heifer—1, 2, and 5, Jones & McKerrow on Dancing Girl of Edgemoor, Spring Maid of Edgemoor and Ultra Governess Chene; 3 and 4, Skaar on Rosette of Cor-Alfa Farm and Valentine of Cor-Alfa Farm. Senior heifer calf—1, 3, 5, and 7, Jones & McKerrow on Ultra Rosie, Ultra Pearly Ultra's Elizabeth Beauty, and Topsy's Ultra Lily; 2, Steele on Lassie of Maplewood; 4, Frissell on Morning Star Corolore; 6, French on Dairy Maid's Queen of Fair Meadow. Junior heifer calf—1, Jones & McKerrow on Chene King Northern Lady; 2, Tenney on Shorewood Lady LaVerne; 3, Skaar; 4, Shepard on Mabel Pride of Green Acres; 5, Street; 6, Kruse on Beauties Perfection of Raddiron.

Senior and grand champion male—Ladysmith's Cherub. Junior champion male—Dot's Cherub of Shorewood. Senior and grand champion female—Imp. Mildred 2nd of Les Godaines. Junior champion female—Ultra Rosie.

Graded herd—1, Jones & McKerrow; 2, Olson & Krans. Young herd—1, Skaar. Calf herd—1, Jones & McKerrow; 2, Skaar; 3, Nelson. Get of sire—1, Jones & McKerrow; 2, Tenney; 3, Skaar; 4, Olson and Krans; 5, Nelson. Produce of cow—1, Jones & McKerrow; 2, Hageman; 3, Skaar; 4, Bragg. County Group—1, Washington; 2, Anoka; 3, Freeborn; 4, Meeker.

Jerseys

Exhibitors: C. R. Brackett, W. Clarkson, Z. M. Cole, H. L. Elliott, R. A. Fox, J. W. Love, M. D. Munn, Geo. S. Taylor, and H. C. Wagner, all of Minnesota.

Judge: J. B. Fitch, Kansas.

Nine Minnesota breeders made up a Jersey show of about seventy head. While the quality throughout was not exceptional the exhibit received less than the attention it deserved because of the crowded ring. J. B. Fitch of Kansas made the awards making consistent placings and picking the best which was furnished him. The younger classes brought out a number of good juniors but the older ones were not overcrowded with worthy individuals.

In Wagner's aged bull, Rose's Elmhurst Jolly, Mr. Fitch found his grand champion male and as showy a Jersey as was led out. He was junior champion in the same ring in 1917 and grand champion in 1919. J. W. Love exhibited one bull, a junior yearling, Count Noble, which won his class of six and was made junior champion. From among six aged cows Mr. Fitch chose Noble Forfarshire owned by C. R. Brackett. In the final competition against M. D. Munn's junior champion, Majesty's Morn Merline, the aged cow won on her maturity.

The detailed awards follow:

Bull 3 years or over—1, Wagner on Rose's Elmhurst Jolly; 2, Munn on Signa's Raleigh Majesty; 3, Taylor on Gamboge's Defender; 4, Brackett on Moreton Fields Oxford Owl. Bull 2 years and under 3.—1, Clarkson on Androces; 2, Fox on Nerissa's Jolly Noble. Senior yearling bull—1, Munn on Crocus' Royal Majesty. Junior yearling bull—1, Love on Count Noble; 2, Elliott on Golden Nobles Majesty; 3 and 5, Brackett on Victoria's Noble Dandy and Maids Noble Forfarshire. Junior champion female—Majesty's Morn Merline.

Graded herd—1, Munn; 2, Brackett; 3, Taylor. Young herd—1, Munn; 2, Brackett; 3, Elliott. Calf herd—1, Munn; 2, Brackett; 3, Wagner; 4, Elliott; 5, Taylor. Get of sire—1, Munn; 2, Fox; 3, Brackett; 4, Wagner; 5, Taylor. Produce of cow—1, Munn; 2, Brackett; 3, Elliott; 4, Clarkson; 5, Taylor. County group—1, Washington, 2, Hennepin.

IN GOOD COMPANY AT MINNESOTA STATE FAIR
Senator Warren G. Harding, Republican candidate for President, visited the cattle barns after speaking at the Minnesota State Fair and is here shown with one of the prize winning Holsteins.

Brown Swiss

Minnesota and Iowa split the Brown Swiss prize money, F. P. Minette and Son and John Minette and Son, of the former, showing eighteen head against the seventeen brought out by Mooney and Larrabee Bros., Hawkeye breeders. H. H. Kildee of Iowa made the awards.

The bull classes failed to bring out strong competition. Hefty Boy of Valley Grove, aged sire in the Iowa herd, was made grand champion. He is round rumped, heavy over the back, and less inclined to dairy type than the Minnesota bull, Esther's College Boy, but has the heart girth and capacity to make him a winner. Carl the 6th, Mooney and Larrabee Bros. three-year-old, was entered out of class and disqualified.

The best under two bull was Czar L which brought the junior purple to Iowa.

The four aged cows were all worthy representatives of the breed. In the class was Believe, owned by F. P. Minette and Son, and the outstanding individual shown. Few Brown Swiss have equalled her character of head and neck, her clean shoulder and top and her square rump. She had strength and capacity and would look good under any color of hair. She was not in close competition. The junior champion was Little Egypt, a senior calf Iowa entry.

The awards follow:

Bull 3 years or over—1, Mooney & Larrabee Bros. on Hefty Boy of Valley Grove; 2, F. P. Minette & Son on Esther's College Boy. Bull 2 years under 3—1, Mooney & Larrabee Bros. on Carl the 6th. Senior yearling bull—1, Mooney & Larrabee Bros. on Czar L. Senior bull calf—1, F. P. Minette & Son on Emmett of Lake View; 2, Mooney & Larrabee Bros. on Ceylon 2nd; 3, John Minette & Sons on Paula Walla. Junior bull calf—1, Mooney & Larrabee Bros. on Howard Carl.

Cow 4 years or over—1 and 3, F. P. Minette & Son on Believe and Nagilla; 2, Mooney & Larrabee Bros. on Salley Verbegge; 4, John Minette & Sons on Calhoun Maiden. Cow 3 years under 4—1, Mooney & Larrabee Bros. on Chalfonte; 2, F. P. Minette & Son on Lamark's Girl; 3, John Minette & Sons on Velnora M. Cow 2 years under 3—1, F. P. Minette & Son on Lady 2nd of Tarpleywick; 2 and 3, Mooney and Larrabee Bros on Jeanne L. and Marie Gronzer; 4, John Minette & Sons on Nancy of Sedgeley. Senior yearling heifer—1 and 3, Mooney & Larrabee Bros. on Little Anne 2nd and Eiffle 2nd; 2, F. P. Minette & Son on Believe of Farview; 4, John Minette & Sons on Maiden of Farview. Junior yearling heifer—1, F. P. Minette & Son on Dorothy Believe of Farview; 2 and 3, Mooney & Larrabee Bros. on Doddy Robbins 2nd and Jeannet 2nd. Senior heifer calf—1, Mooney & Larrabee Bros. on Little Egypt 2nd; 2 and 4, John Minette & Sons on Betty of Farview and Velnora M. Girl; 3, F. P. Minette & Son on Pussy of Farview. Junior heifer calf—1, F. P. Minette & Son on Lady Dell; 2, 4, and 5, Mooney & Larrabee Bros. on Rowina 2nd, Yuly 2nd, and Janette L. 2nd; 3, John Minette & Sons on Orphalia Pansy.

Senior and grand champion male—Hefty Boy of Valley Grove. Junior champion male—Czar L. Senior and grand champion female—Believe. Junior champion female—Little Egypt 2nd.

Graded herd—1, Mooney & Larrabee Bros.; 2, F. P. Minette & Son. Young herd—1, Mooney & Larrabee Bros.; 2, F. P. Minette & Son. Calf herd—1, F. P. Minette & Son; 2, Mooney & Larrabee Bros.; 3, John Minette & Sons. Get of sire—1, Mooney & Larrabee Bros.; 2, F. P. Minette & Son. Produce of cow—1, F. P. Minette & Son; 2, Mooney & Larrabee Bros.; 3, John Minette & Sons.

The Small Exhibitor at the State Fair

The dairy cattle exhibits at the mid-west state fairs this year, particularly at Wisconsin and Minnesota, have been far ahead of anything brought out at previous fairs. In one or two instances the number of entries for a single breed have been doubled or even trebled over the number shown last year. Better still, the number of exhibitors has very

(Continued on page 394)

A Much Roomier Roadster

Seating *three* instead of two

It is easy for you to know how much more your money brings when you buy a New Mitchell. You can appreciate quickly the over-values. Throughout there is evidence of a generous policy.

Roominess, for instance, means that Mitchell is not compelled to skimp. We design and build our own bodies. So we can afford to put into Mitchells the money that would otherwise have to be paid as outside builders' profits. The entire car is Mitchell-built, not assembled.

A car of lasting service

Another example is Timken Thrust Bearings on *all* four wheels, not on two. The braced frame, the extra-long cantilever springs with shock-absorbing rebound leaves, the drop forgings instead of stamped steel or castings, steering knuckles with castor bearings—all prove added values.

Examine the New Mitchell models. Prices are as follows: *six* passenger Touring Car, $1750; *three* passenger Roadster, $1750; *six* passenger Sedan, $2900; and *four* passenger Coupe, $2800. F. o. b. Racine, Wis.

See if you can find any car at the price, *or more*, that offers so much for your money.

MITCHELL MOTORS COMPANY, INC., RACINE, WISCONSIN

How One Co-operative Creamery Made Good

(Continued from first page.)

game was lost. The co-operative creamery was on the run.

But they reckoned without Mr. B——. Opportunity came when a salesman dropped in to sell the co-operative company supplies. The traveling man suggested a casein factory. To think was to act with Mr. B——. A meeting of stockholders was arranged, and in a short time a casein factory costing $8000 was established and again the co-operative creamery was more than holding its own. The produce company was making skimmilk powder out of skimmilk, the co-operative creamery was making casein.

A Hard Luck Story

But it looked as if fate were against the co-operative. Casein prices began to tumble, due, no doubt, to the fact that a few large centralizers had by purchasing expert advice been able to convert large quantities of buttermilk into casein. There being a limited demand for this product, prices began to slump, and the co-operative creamery management were again up against it. What should they do next? A demand for high grade buttermilk found them supplying that demand, but it was an uncertain market subject to changes as violent as the weather. It looked pretty bad. Patronage dropped off though the loyal patrons stuck. It was up to the creamery to make the next move. They could go into milk powder manufacturing like their competitors. This involved a good deal of capital and technical knowledge of a kind not familiar to the directors of the co-operative creamery. They had behind them their experience in the making of casein which had not been too satisfactory, but what else could be done?

Mr. B—— went to some of the districts where the produce company was getting cheaper fat and by showing the farmers they were getting much less than the same company paid at their factory he succeeded in organizing and establishing two co-operative creameries which succeeded so well that the produce company was forced out of the two best districts in its territory, but they still held an advantage in the value of the by-products manufactured. In the meantime they had increased their territory, and soon made up the loss of the two organized points by receipts from other districts.

Winning Out

About this time there commenced a campaign throughout the country to use more dairy products, particularly cottage cheese. A large distributing plant from a neighboring city that had been using a small amount of the co-operative products sent a representative to inquire as to the possibilities of supply. Mr. B—— saw his opportunity. By inquiry he found out the name of the man who had captured first prize in the cottage cheese contest. To know was to act: he hired him. Pretty soon cottage cheese was being shipped out in daily increasing quantities. Again the co-operative creamery had an even break or better and patronage began to increase. The new buttermaker at $3200 a year was making them money.

The last year, 1919, report of sales was as follows: butterfat sold, 220,317 lbs.; cottage cheese, 331,921 lbs.; and casein, 54,220 lbs. Average price for butterfat was 69.24 cents and for skimmilk, 60 cents per cwt.

From the figures it can be seen that the make of the co-operative is not large. That they have succeeded in the face of the keenest of competitors is certainly to their credit. It is encouraging to other co-operative plants. What one can do another can.

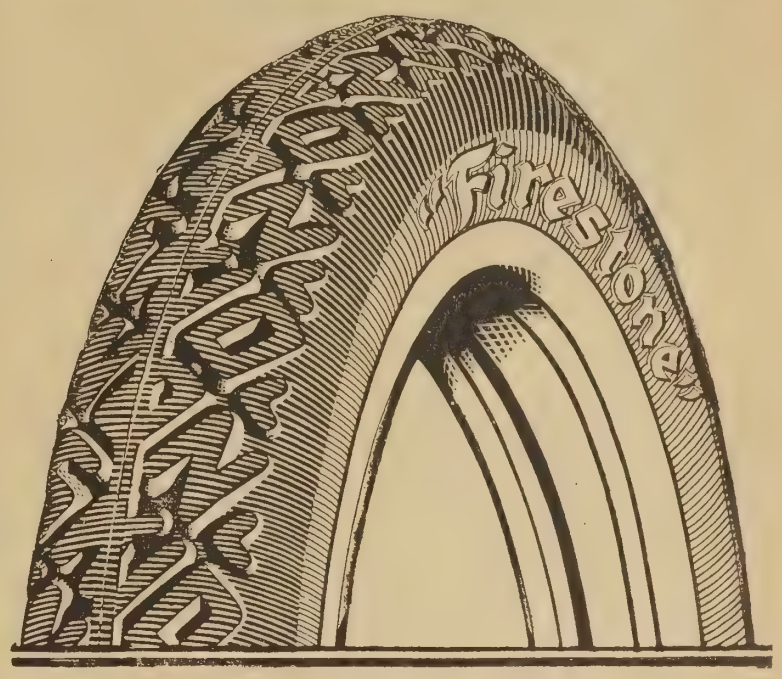
The above story would not be complete if certain deductions could not be drawn. Competition develops business acumen. This has affected both plants to the advantage of the patron. On the other hand the patron, because he was getting a good price for his products, was not forced to exert himself to produce economically. Those who did were making splendid returns. One thing that should not be forgotten is that the co-operative creamery was really setting the pace in price, even if the produce company did stimulate the latent business ability of the directors of the co-operative company. Because of this, the patrons of the district were morally bound to support the co-operative at least sufficiently to give it enough strength to meet its competitor. A well organized co-operative plant with sufficient volume of business may, loyally supported, meet any competition however keen. It is a matter of using brains, and hiring brains when needed. There is no business where brains and intellect and skill count more than in the dairy industry. Thirty-two hundred a year seems large, but there are cases where it would pay to give the present buttermakers that much to stay away from the creamery and hire a competent man at an even higher figure.

Hogging Off Corn Gives Big Returns

While corn usually is considered not as a money crop but one to clean up the land, yet the North Dakota Agricultural College received a return of $45.54 per acre by using 48 shotes to hog off 16 acres of flint corn in 1918, according to J. H. Shepperd of the Experiment Station.

"The hogs were turned in the field September 6, when they averaged 109 lbs. in weight, and left there until Nov. 12, making an average gain of 94 lbs., or a gain of 281.75 lbs. per acre. They were marketed at 16.31 cents, which, allowing for shrinkage, gave a return of $45.54 per acre."

A pure-bred Holstein heifer, Colantha Ormsby Korndyke, bred and raised at the State University Farm, St. Paul, has just completed a year's milking record as a junior two-year-old. During the year she produced 15,228.6 pounds of milk, containing 567.45 pounds of butterfat. This production entitles her to third position in the state for heifers of her age.



Firestone

LAST year Firestone lifted the 30x3½-inch tire out from all the sizes made and focused attention on it—as the *only tire size capable of quantity production*. And not only the tire user but the whole tire industry responded.

Firestone built an exclusive factory devoted to this size—and worked out a specialized way of manufacturing this tire in quantity—without a backward move—every tire good.

Today—while others are centering on the tire for owners of small cars, the Firestone 3½-inch is out in front with a highly specialized and bedrock economical method of manufacture.

Firestone is two years ahead because Firestone saw two years ahead—and you owners of light cars get the benefit.

Minnesota State Fair

(Continued from page 391)

greatly increased, in some cases even to the extent of being multiplied by 10 or more.

The small breeder is coming into his own at the ringside and is finding to his own as well as other's surprise that his best compare very favorably with the best from any herd, large or small. At Minnesota, for example, fully 50% of the places in the Holstein bull classes were won by breeders exhibiting 6 animals or less and 40 per cent went to exhibitors with not to exceed half that number of entries.

The county show herd idea is directly responsible for this especially in the two states above mentioned and the credit for it belongs mainly to state and county breed associations and county agents. Association secretaries and many of the county agents have worked early and late to get out creditable showings from their localities and no one who has attended these fairs has a question as to their success.

Such showings should be increased in every way possible in every state, not only because of the direct benefit to the small breeder who exhibits, but because they stimulate a very greatly increased interest in the fair among all breeders, and they certainly serve as splendid advertisements of the kind of cattle to be found in the counties represented.

Current Feed and Hay Prices

[From Reports by U. S. Bureau of Markets]

Because of the continued unsettled condition of the feed market the demand continued dull during the week ended September 11. Prices eased off considerably. The trade is reported as buying sparingly and does not seem inclined to anticipate wants. In New England stocks of feed with the exception of cottonseed and linseed meal are said to be light. The farmers are reported to have plenty of roughage and are buying as little feed as possible. The trade in this section has not as yet bought for fall requirements, feeling that prices will go to a lower level as soon as production increases. The Seattle feed market is reported as demoralized on account of a price cutting campaign being carried on by dealers. Retail prices on most commodities are less than wholesale prices.

Although the flour run is below normal, both bran and middlings showed decines of $1 to $5 during the week ended September 11. At Minneapolis the quotations were $38.50 for bran and middlings at $46.50, but they varied from $2 to $3. Bran averaged $42 at Chicago, $50 in New York, and $65 in San Francisco. Further arrivals of Argentine bran at Philadelphia met a limited demand and tended to depress the eastern markets, Canada millers also offering it at lower than domestic prices.

One of the large gluten feed manufacturers reduced prices $5 per ton during the week in order to meet the lower corn prices. Demand continues light, with quotations ranging from $58.75 in Chicago to $67 in Boston.

The alfalfa meal market is dull, the price in Kansas City being $35, with $38 at Chicago, and $50 at New York.

Linseed oil meal advanced to $66 in Chicago. In Buffalo the market shows weakness at $60 per ton, while Philadelphia quotes $53.50 and Minneapolis $63.

Cottonseed meal shows little change from last week: Demand is light and bookings for future shipment are small. Forty-one per cent meal is quoted at $57 in Kansas City, $63 in Philadelphia, and $64.50 in New York. Thirty-six per cent meal is priced at $52 in Memphis, $57 in Cincinnati, $59.75 in Chicago, $60.50 in New York, and $63 in San Francisco.

Hominy feed is quoted at $60 by Chicago jobbers, while brokers were reporting sales at $56. The average price is around $57, with Minneapolis quoting $56 and Boston $66. In San Francisco rice bran was being offered at $45, rice polish at $65, and beet pulp at $51.

Hay prices are still on the decline. Alfalfa has dropped to an average of about $31 per ton, which is $3 lower than the corresponding time last year and within $4 of the low point reached about the middle of June, 1919.

For the week ending September 11 timothy ranged from $28 in Kansas City to $34 in Chicago, with old hay going as high as $48.50 in New York. Mixed clover and timothy ranged about $4 under these prices, with straight clover one to two dollars still cheaper. No. 1 alfalfa is quoted at $26 in Omaha and San Francisco, $28.50 in Kansas City, $30 in Minneapolis, $33 in Chicago and Memphis, and $41 in Atlanta. Standard alfalfa is $2 to $4 under these prices, with No. 2 alfalfa trailing $2 to $6 still lower.

Scarcity of Fine Butter Keeps Market Firm

Medium and Undergrades Share but Slightly in Upward Price Trends —Production keeping Up

[Report by U. S. Bureau of Markets]

Butter trading improved over the Labor Day holiday as was generally expected, and the firmness of the markets had little or no setback during the week ending September 11. Prices continued their upward swing and support was not lacking after advances had occurred.

As had been the case for weeks past, strength centered on the fancy grades with medium and undergrades scarcely included, but buyers have had to ease up their standards in some cases or go unsupplied, because of a shortage of really fine butter. It is reported that some chain-store buyers have been forced to use 91 score butter for their best trade, which ordinarily is supplied with nothing under 92 score.

Demand for Fancy Print Butter

The demand for fancy butter continues, partly on account of the heavy print trade. Buyers report inability to keep up with their orders which generally call for the better grades of butter. Withdrawals from storage are being used to relieve the shortage, but prices will have to go a little higher before any large part of current holdings can be made available at a profit. On the other hand, much of a price advance will be made at the risk of curtailing consumption or inducing further importations of foreign butter.

Undergrades continue to show a surplus, which has been increased by reason of the fact that some factories are turning from the manufacture of medium grade sweet butter to salted butter. Metallic, oily, and fishy flavors cause the chief complaints regarding quality, and butter showing any of these defects is difficult to move.

Reports of production show very little shrinkage, and apparently more butter is being manufactured than at this time last year. Regardless of this fact, however, receipts at the four principal eastern markets are running lighter.

The average wholesale prices on 92 score butter at five of the principal markets for the week ending September 11, were as follows: New York, 58.3 cents; Chicago, 56 cents; Philadelphia, 58.95 cents; Boston, 58.9 cents; and San Francisco, 66.19 cents. A year ago the average prices at these markets were: 57.4c, 54.9c, 57.9c, 57.4c, and 60.2c, respectively.

Cheese Price Advances Receive Temporary Check

Markets Remain Firm but Activity Drops Off—Slight Downward Tendency Noticeable

[Report by U. S. Bureau of Markets]

The gradual advance in cheese prices which has been occurring during the past month was at least temporarily checked during the week ending September 11. Markets still appear firm, but a review of the week's prices shows that advances occurred on some styles, also that in a few scattered markets the local feeling was firm and prices were a trifle higher, but that as a whole business was not so active as during the previous few weeks. In spite of the fact that a fairly firm tone has been maintained, many dealers have realized that their asking prices have been too high to attract active buying interest, nevertheless, they have not been forced to sell, and in fact buyers who have run short have had to purchase for current needs at the high prices which have continued to prevail. A slight tendency to lower prices was noticeable toward the end of the week, although average prices show little actual change.

Demand Develops for Larger Styles

With the approach of cooler weather some markets are turning more to the larger styles. In Philadelphia, for example, current arrivals of Daisies and Longhorns have been of higher cost to dealers, and this has resulted in slight advances on these styles. However, dealers have been free sellers, because with a difference of almost a cent per pound in favor of larger styles, and with the weather in their favor for handling them, retailers have bought the larger styles more readily.

The general scarcity of New York State cheese continues, and in those markets where it is in special demand prices are being well maintained. This shortage has been responsible for a fairly good movement of Wisconsin cheese at places where the demand has heretofore been for New York make. Supplies of Wisconsin cheese seem to be ample, and many sales are being made at prices lower than present replacement costs.

Sales of Larger Lots

At primary markets in Wisconsin trading was active all week at practically unchanged prices. Sales were for larger amounts than has been usual since the season opened. Some dealers report that orders have been plentiful at a good margin of profit and that only a lack of cheese to sell prevented more business. Others, however, continue to appear willing to shade prices, especially on large lots. Regardless of the check in price advances, the tone in all markets remains firm, and the trade seems to feel that the general outlook is bright. A heavier demand is anticipated from both domestic and export buyers.

The average wholesale prices on American cheese, style Twins, for the week ending September 11, were as follows: New York, 27.57 cents; Chicago, 26 cents; Boston, 27.65 cents; San Francisco, 30.56 cents; and Wisconsin primary market, 26.35 cents. The corresponding average for a year ago showed 30.25 cents, 27.95 cents, 31.45 cents, 31.79 cents, and 27.52 cents, respectively for these markets.

Jersey Cattle Notes

For week ending Sept. 3:

Number of animals registered: Bulls, 283; cows, 610; total, 893. Number of transfers recorded: Bulls, 208; cows, 637; total, 845.

"My 13 year old son milks the cows with the Perfection as well as I can and is back in the house in one hour from the time he leaves it." —V. D. CUMMINGS.

Interest Your Boy In Milking

DID you ever notice the interest your boy takes in fine machinery? Why not use that interest to solve your milking problem?

With a Perfection your young son can save you the wages of one or two men. Perfection more than pays for itself each year in the wages it saves.

Get a Perfection and interest your boy in being an up-to-date dairy farmer. He will like the farm and be glad to stay when the drudgery is gone and he has the best labor-saving machinery to work with. And he will do a better job of milking when he milks the Perfection way, because Perfection milks nature's way.

Perfection's gentle suction followed by a downward squeeze and a period of rest duplicates perfectly the action of the calf.

Send for Catalog

Write for the names and addresses of Perfection owners near you. We'll also send you a free copy of our book, "What the Dairyman Wants to Know." Why milk by hand?

Perfection Manufacturing Company

PERFECTION MILKER

Your Husband is a Busy Man, Mrs. Farmer!

THERE isn't any doubt that he has had it in mind to instal a modern lighting and cooking plant in the home some day—to give you and the family the comforts and conveniences you deserve. Other matters have caused him to overlook this important item.

That is why *you* should know all about the

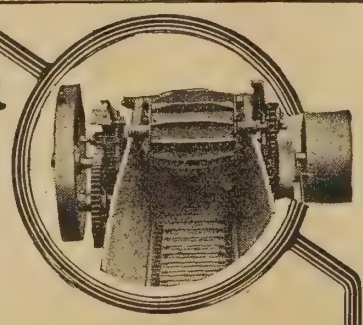
COLT TRADE MARK.

CARBIDE LIGHTING AND COOKING PLANT

Just think of having a flood of bright, mellow light in any room in the house at a mere twist of the fingers! And carbide gas is the nearest light there is to actual sunlight,—bright, mellow and easy on the eyes. Best for reading and sewing, it makes the home cheerful and cozy and saves the children from eye-strain over their lessons. Think how convenient such light will be to your husband in the barns before sun-up and after night-fall!

The plant is easy to instal and requires no expert attention. In fact, it needs very little looking after of any sort. Takes up no more room than a couple of apple barrels and operates only when gas is actually being used for cooking and lighting. Between times it doesn't cost a penny.

In your kitchen, carbide gas will furnish the hottest known cooking flame. No more keeping a fire going all through the hot summer days; no more ashes to dirty your kitchen. It can be as clean and as cool as any room in the house. A carbide gas-burning iron will take the drudgery out of Tuesday.



There are over 300,000 country homes using Carbide Cooking and Lighting Plants. Many have been in use for years and years without costing one penny in repairs!

Wouldn't you like to have these city conveniences in your home? Then write us for full particulars so that you may remind your husband of this important matter.

Safety Head

This feature places the Holstein Safety in a class by itself, eliminating all hand-feeding and accompanying dangers. This head automatically juggles the stalks into perfect alignment so that they enter the cutting head more evenly arranged than is possible with even the most perfect hand feeding.

HOLSTEIN SAFETY

really means what the words imply. No need for operator to put his hands where they could be injured.

The cutting blades are also insured against damage from foreign substances by the automatic shearing-off of wood pins, permitting the cutter head to stop but continuing the action of the blower and so cleaning out all silage.

Free Booklet

will be mailed on request to any farmer interested in modern ensilage cutting equipment. A postcard will bring it.

A Hint to Farm Housewives

(Continued from page 377)

with hard water if soft water were available?

The arrangement shown herewith should not be considered in any sense a makeshift since it is a perfectly workable water system. The water pipes may be hidden in the partitions (not outside walls) if so desired or they may be fastened to the walls by pipe straps. If a new house and comprehensive water system is contemplated at some future time every single article in this arrangement may be again used.

Every young man likes to exercise his ingenuity by creating something new and useful. Why not get mother to take a week's vacation and surprise her with a brand new water system?

The individual installation will depend very largely upon the individual conditions. The simplest arrangement would consist of a pump, a range boiler with a range coil and the necessary pipe and fittings. If an oil or gasoline stove is used during the summer months the kerosene heater can be used to very good advantage. The hot and cold water pipes may be run to the bathroom, the washroom, or anywhere else as desired.

The operation of the system is as follows: Suppose the cold water faucet over the sink is opened. If the pump is operated a stream of cold water will immediately run out of this faucet. If hot water is wanted at the kitchen sink and there is hot water in the tank, open the hot water faucet and pump the same as for cold water. The cold water forced into the bottom of the range boiler forces out an equal amount of hot water from the top of the tank. The same thing will apply to any hot or cold water faucet wherever located. It should be remembered that the system is or should be at all times full of water. If the pump is worked when none of the faucets are open a considerable pressure will be produced, or if the water in the tank should ever get hot enough to turn into steam a rather dangerous condition might prevail. The principal difficulty, however, is liability of the water expanding to such an extent when it is heated that it will burst the tank or one of the pipes. To avoid any of these conditions a relief valve should be placed somewhere in the system. It is here shown connected to the cold water faucet over the sink. It might just as well be connected to the hot water faucet or at any other convenient point. The probabilities of steam forming in the ordinary home installation are rather remote but the possibility should be guarded against.

If a little more elaborate system is wanted an overhead tank may be put in as shown by the dotted lines. The bottom of this tank should be a little higher than the highest faucet in the system. There should be an overflow pipe which may lead to the kitchen sink; if this is done the person pumping can tell when the tank is full. If the overhead tank is used the relief valve may be omitted. The advantage of the overhead tank is that Willie may pump it full before going to school so that mother will not have to pump during the day. Avoid wooden tanks or barrels upstairs as they are bound to shrink when dry. Do not fail to put a faucet at the lowest point in the system so that it may be drained if every one goes away during cold weather. If it is a rain water system the water may just as well be drained back into the cistern as wasted. It should also be remembered that a hot fire in the stove will be apt to crack the empty hot water-back. Pump in enough water to fill the coil or water-back and then build the fire. Cold water on a hot water back is almost sure to ruin the back.

It will be very evident to everyone how impossible it is to estimate the cost of such a system but a list of approximate prices is given for what it may be worth:

30-gallon galvanized range boiler with stand	$21.00
House force pump	10.00
Kerosene water heater	25.00
Faucets (Fuller or compression) each	2.50
Malleable iron fittings, each	
¾-inch elbows	.10
¾-inch 45 degree elbows	.12
¾-inch tees	.12
1 inch-¾-inch bushings	.06
boiler couplings	.50
¾-inch Unions	.35
¾-inch Black pipe per foot	.14
1-¼-inch black pipe per foot	.30
¾-inch relief valve	2.50

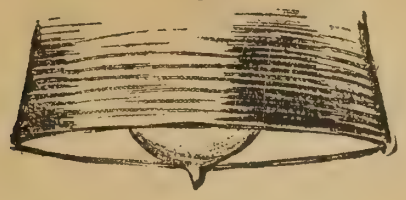
Trimming Hoofs

HOARD'S DAIRYMAN:—In a recent issue I note an inquiry is made as to what is the best tool to trim cows' hoofs with. The best instrument for such use that I have ever seen is a pair of large nippers used in clipping limbs off of trees. They work on much the same principle as a dehorning clipper. A cow's hoof is usually so hard that a knife or nippers used by blacksmiths will not give satisfaction. The long handles on the nippers or shears give a good purchase for cutting.

Wisconsin. MANLY SHARP.

August Condensery Prices

Prices paid producers for 3.5% milk delivered at factories during August are based on reports made to the U. S. Bureau of Markets by condensed and evaporated milk firms operating approximately 71% of the total factories in the United States.



Geographic sections	No. of firms reporting	Price per cwt. Range	Price per cwt. Ave.
New England	4	$3.45—3.99	$3.80
Middle Atlantic	95	2.60—3.89	3.43
South Atlantic	5	2.60—3.57	3.09
East North Central	98	2.66—3.90	3.21
West North Central	12	2.45—3.70	2.86
South Central			
North Central	20	2.45—3.73	2.74
South Western	14	2.45—3.42	2.71
United States	248	2.45—3.99	3.22

The wholesale prices given below are based on reports made by manufacturers covering actual sales of condensed and evaporated milk delivered to jobbers, wholesale grocers, and similar buyers at manufacturers' distributing points on basis of cash short time credit. Foreign prices are given as f. o. b. or f. a. s. points of export in section in which sales were made:

Geographic sections	Sweetened condensed per case* 14 oz. cans		Unsweetened evaporated per case* 16 oz. cans		Sweetened condensed bulk per cwt.		Unsweetened evaporated bulk per cwt.	
	Domestic	Foreign	Domestic	Foreign	Unskimmed	Skimmed	Unskimmed	Skimmed
New England	$10.29	$10.35	$6.39	$7.00	$22.03	$16.50	$10.32	$5.10

*Case contains 48 cans.

Every Farmer Runs a Factory

The farmer's "factory" consists of his barn, dairy, tool room and other equipment. Just as in the big city factories, time must be made to count and one of the greatest time savers is good lighting! One of the first investments on a modern farm should be an electric lighting plant. Nine-tenths of the plants now being sold are equipped with NATIONAL MAZDA lamps. There must be a reason for this, and you will find it wise to buy the same kind—NATIONAL MAZDA. You can secure them from the man who sells the lighting plant or from the lamp agent where you see the Blue Carton displayed.

NATIONAL LAMP WORKS *of* General Electric Company
67 Nela Park, Cleveland, Ohio

Each of these labels represents a Division of National Lamp Works equipped to give a complete lighting service

NATIONAL MAZDA LAMPS

"America's Quality Herd"

—is Sending Three of its Choice Animals to the Chicago Sale, October 13-14

SCHILLING COLANTHA LANGTRY 222523

This 33-lb. Cow—

"Schilling Colantha Langtry"

Butter 33.81
Milk 602.90

Butter (4 yrs)..28.00

This beautiful cow is now on year test and will finish with approximately 1,000 lbs. butter and 20,000 lbs. milk.

Bred Feb. 16, 1920, to KING PONTIAC DIONA JOLIE ONA, a bull backed by three direct generations of 1,000-lb. dams. Consider the value of the calf of this combination.

—And this beautiful Son of a 33-lb. dam

"King Valdessa Pontiac Artis"

Born November 25, 1919

A very handsome young bull. One of the finest individuals we have ever bred.

He is sired by King Valdessa Pontiac, son of Mabel Segis Korndyke (40.32 lbs.) and sire of Echo King Sylvia. 45 daughters of King Valdessa Pontiac are in our herd for development.

The dam is Carrie Colantha Artis, a most perfect individual cow, with 32.51 lbs. butter from 503 lbs. milk and now making a year record, has 605 lbs. butter from 15,797 lbs. milk in 8 months.

The two nearest dams of this calf average over 36 lbs. butter. A youngster worthy of heading most any herd.

KING VALDESSA PONTIAC ARTIS 289704

Also—

BELL FARM LADY, a yearling daughter of Mr. Moscrip's herd sire, Bessie Fobes Oak Homestead, from a 22-lb., 4-year-old granddaughter of Sir Ormsby Hengerveld De Kol, second dam our old foundation cow, Juneau Segis Homestead. A very attractive heifer in every way.

Bell Farm asks that you carefully consider its representation in this sale. We always guarantee in every way every animal we sell.

HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

Boys and Girls Serve Refreshments

Eighteen months ago the boys of Bartholomew County, Indiana, who were members of the cow and calf and pig clubs, decided that they needed a supervisor for their club work.

No sooner had they decided that a supervisor was needed than they set out to get one. As a result of their efforts, announcement was made early this week that such a supervisor will be employed, beginning next spring. Here's how the boys brought it about.

First they determined to have a refreshment stand at the county fair. Like most everyone else they had discovered that the food which is generally served at county fairs is not of the highest order and therefore they decided that there would be a good market for refreshments made from farm products.

Next the boys enlisted the support of the members of girls' clubs of the county, who agreed to help with the work in the stand and to furnish pies and bread for sandwiches.

When the fair season opened last year the boys' and girls' clubs of the county announced through the local papers that they would serve refreshments at the county fair of the kind that "mother used to make". Ice cold milk, taken from the Jersey cows on exhibition at the fair, country cured ham sandwiches, fresh baked country pies, pressed and fried chicken, sandwiches went to make up the menu offered fair goers.

People, long tired of the usual food served by the fair concessionaries, flocked to the "club stand" where they ate plenty and often. The project was a decided success and after all bills had been paid, it was found that $170 had been cleared from the stand.

With this amount as a nest egg and the experience gained from the previous year, the boys began early to plan for the 1920 stand, determined to make enough from it to "put over" the supervisor idea.

On the first day practically everything was sold out by noon and although larger amounts were provided for each succeeding day, the shelves of the stand were bare long before night. Needless to say the stand was a success for announcement has been made by County Agent C. M. Job that the supervisor will be employed in time to begin his work in the spring.

Although the boys have attained the goal towards which they started, they declare that the refreshment stand idea must not be abandoned. Next year they will have a stand and if the profits aren't needed to pay the supervisor's salary, something else will be undertaken.

Indiana. Y. C. CLINE.

A Health Calendar for the Junior Poultryman

KINDS OF LICE—1, body; 2, head; 3, feather. Habits—1, Live on the hen; 2, Eat body waste; 3, Feed any time. Treatment—1, Equal parts of blue ointment and vaseline; 2, Louse powders: Cresol, one part; gasoline, three parts; Plaster Paris, enough to make a thick paste; dry and powder; 3, Sodium fluoride.

KIND OF MITE:—1, red; 2, scaly leg; 3, depluming. Habits—1, Live in coops; 2, Suck the blood; 3, Feed at night. Treatment—1, Clean up thoroughly; 2, Spray house and paint the roosts.

Missouri's Junior Judging Team Selected for National Dairy Show

One of the additional features of the Missouri State Fair this year was a Junior Dairy Judging Contest open to teams from every county in the state. The contest was a success in every way, with seven teams competing. The contest was under the management of F. L. Wright, assistant State Boys' and Girls' Club Leader and was judged by E. M. Harmon, Dairy Extension Specialist for the University of Missouri.

The sweepstakes teams were: 1, Livingston County; 2, Holt County; and 3, Pettis County. The Livingston County team, consisting of Arthur Bennett, Lowell Forbus, Francis Gwin and Arthur Gwin will represent Missouri in the junior judging contest at the National Dairy Show in October. They were coached for the state contest by J. A. Wisdom, instructor in vocational agriculture at Chillicothe. He and E. M. Harmon of the Dairy Department of the University of Missouri will coach the team for the National contest.

E. M. HARMON.

A Letter from Connecticut

HOARD'S DAIRYMAN JUNIORS:—I want to write a letter for the Junior Department of Hoard's Dairyman, though I have long ago passed my childhood. On my farm is a little boy, named Harold Raymond Stacey, four years old. He is a very bright, happy, lovable child and every one likes him. Like all children of that age, he watches others to see what they do, and then he tries, like a parrot, to copy their actions. I am enclosing some photographs that his sister took of him. In one of them he is trying to use a hoe; in another he is trying to help by carrying a bushel basket back to the barn where it belongs. He is not old enough yet to know that there should be a place for everything, and everything in its right place, but he knew that this basket's right place was in the barn so when he saw that the pears were all picked, he started to help by carrying the basket back.

Harold likes calves, too. One day he was found sitting on a heifer's back as she was lying on the ground. He had never seen any one do this before, but had probably seen his father on horse back, so, like a child copying what he sees others do, he tried to have joy on a heifer's back. Just before this he went up to the heifer to fondle her and he put his little hand in her mouth. When she brought her teeth together it hurt him and he came into the house crying. Probably he will know better next time. The other children have to be very careful what they say or do, for this little fellow is sure to imitate them. They have to be very careful about the words they speak so Harold will not learn any bad words. That great and wonderful book, the Bible, says that "even a little child is known by his ways". When stones are being gathered out of a field after plowing, Harold goes out with his little express wagon, fills it with stones, and his father hitches it on the back of the big wagon and draws it along to the dumping ground.

As I see this little boy frequently mimicing or copying others, I feel impressed with the great power of good and evil example, and how very careful we all ought to be that our example is always for the good, so that no one can ever copy anything that we do, and yet do wrong in the sight of God, who loves righteousness and hates sin.

Connecticut. GEORGE W. SMITH.

Five Cent Piece Starts Boy on Road to Success

Van Palmtree is a 13-year-old boy who lives in Panola County, Mississippi. Van belongs to one of the many boys' agricultural clubs in that state. Many of the Mississippi club boys have had unusual success with their club projects, but Van's success is noteworthy because of its small beginning.

In April, 1916, 5 cents was given him by his teacher as a reward for unusually good lessons and good behavior one day at school. With this money he bought a chicken. It was crippled, hence its low price, but much coddling on his part saved its life, and it grew to maturity. The next summer she raised a brood of chickens which were sold for $1.50. With this money Van bought a pig. It was a runt pig, but care and good feeding for a few months made it well worth the $9.36 for which its owner sold it.

Immediately the young financier bought a heifer calf with the price paid him for the hog. Last year and again this she presented her owner with a heifer calf, so he now has a little herd of three, all the outgrowth of that one nickel which he invested four years ago.

The club boy's cattle are scrubs, but he is hoping to have something better some of these days, and with a boy of his kind, to plan is to do. So it would not be surprising if the nickel continued to grow and become a pure-bred herd before Van is 16—Weekly News Letter, U. S. Dept. of Agr.

Junior Letters

Hoard's Dairyman Juniors:—I received the watch fob, button, and creed and like them very well. This is my second letter to the juniors.

I live on a 105-acre farm. We have four heifers and four bulls that will be one year old and three heifers coming two years old and seven cows between three and five years of age. Our herd sire's name is Tobe Segis Korndyke.

It is raining here now for the first time in three weeks. Our corn needed it badly, not only the corn but all the other crops. We have had the best early potato crop ever known in this territory. We are hauling gravel at the present time as threshing is almost over. We intend to concrete our barnyard a block about twenty by sixty feet.

It is getting near trapping time in this state. Muskrat law came in in August last year. I caught three skunks and a few rats last year but I expect to catch more this season because there are more rats and skunks this year.

I have no calf but would like very well to have one. I have a sow that will have pigs soon. She is a Poland-China. I also have about fifteen gray and white rabbits.

Our county fair was this week. There weren't any dairy cattle there but there was one Shorthorn cow and about 50 head of horses. They were most all Percheron horses and over one hundred race horses.

Well, I will close for this time and would like to see more juniors from Ohio. The nearest junior to me lives at Sidney, Ohio.

Ohio. Eugene Hanawalt.

Hoard's Dairyman Juniors:—My chickens are getting along fine now and I am expecting the pullets to lay soon. I did have fourteen, but I sold two cockerels. There are ten pullets in the bunch.

They have organized a grange here since I wrote to you last. We had a picnic Sunday and the men here started the grange hall. I am going to join soon.

We have nine pigs now, but they aren't grown. The mother died when they were quite young, from over feeding. One of them is my youngest sister's. She calls it "Nig".

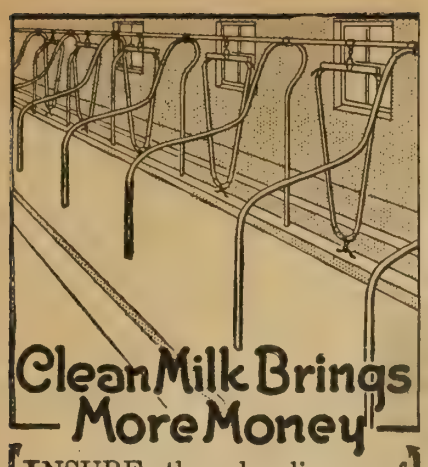
We have all of our grass hay and oats in now, but there are about three loads of wheat not quite ready yet. We will have quite a bit of hay this year.

We have only five calves this year. Their names are Bo-Peep, Peaches, Cream, Janet, and Muggins. Bo-Peep is mine.

Oregon. Grace McHargen.

Hoard's Dairyman Juniors:—I received my fob and creed today. This is my first letter to the juniors and I am proud of my fob and button.

I have a red heifer but am thinking about trading her off for a Jersey.



I am nine years old and passed into the fourth grade of school. I have passed every year.

I am leaving Sunday for Roseville, California.

Good luck to the juniors.

Kansas. Elmo Hardison.

Hoard's Dairyman Juniors:—We are now living on our own ranch that dad bought last winter. We own sixty-two acres of land here and it is almost all cleared. We have nineteen milk cows, two heifers, and five calves here. We also have two sows and seventeen little

Clean Milk Brings More Money

INSURE the cleanliness of your milk supply. Increase the yield. Give your cows safety, quiet and pasture comfort in the barn. Save feed, time and labor, eliminate trouble and expense and **make more money** by installing

pigs. We had bad luck with our stock last winter. Two of our horses and two cows died.

It is mighty dry here this summer. Everything is drying up on the high land. Some farmers up there hardly got any hay for their stock next winter. Down in the river bottom where we live it isn't quite as dry but soon will be if it doesn't rain. We have lots of hay for this winter and expect to sell some. I think hay will sell at a high price next winter because there is so little. Some farmers were buying it this summer at $25 a ton in the shock.

Wishing all the juniors good luck. I would like to have some of the juniors write to me. My address is Lynden, Wash. Bert Brune.

Hoard's Dairyman Juniors:—Our cows are holding up good this summer. I bred one to a pure-bred Jersey and one to a pure-bred Holstein. The last calf we had was a freak. It was born without a tail and was stiff legged and ran like a jack rabbit.

I received a letter from Raymond Gardner, one of the juniors, and would like to hear from others.

My brother and I keep 3 cows and sell about 30 qts. daily. I live on a poultry farm. We keep about 1,200 layers and about 1,500 young stock. My father and another man are starting a hatchery. They are going to have 50,000 eggs capacity.

Well, I will close, wishing the juniors good luck. My address is R. F. D. 1, Box 214, San Diego, Cal. Meredith E. Owen.

Hoard's Dairyman Juniors:—I am very well pleased with the button, watch fob, and creed you sent me.

I live on a farm. We milk seven cows. I milk two of them about every evening.

I am 11 years old. We have two calves, Bob and Jersey. Sometimes we tie them out in the field together. I have a patch of my own. I have corn, potatoes, melons, cucumbers, cabbage, peanuts, and tomatoes.

I have two brothers. Their names are Paul and Leslie.

The weasel killed all of our chickens. We have another bunch of thirteen. They are not very big. They are about three weeks old. We have a sow three years old. She had her leg broken once but it is all right now.

Ohio. Ruth Switzer.

Hoard's Dairyman Juniors:—I am glad to say that I have just been admitted to the junior club, of which I am very proud. I was 15 the 12th of August. We live in Linn Co., Oregon. We keep registered Jersey cows and raise most all our own feed, including corn, beets, roots, kale, clover hay, wheat, and oats.

I am going to the state fair at Salem, Ore., as a caretaker for a neighbor who raises Percherons, 20 head in all.

I thank the editor very much for my fob, button, and creed which I believe in to the bottom of my heart. I also stand for our America first.

Will close with best regards to all juniors.

Oregon. I. Nathan Quick.

Hoard's Dairyman Juniors:—I received my creed, fob, and botton. Many thanks. I surely like to read the juniors' page.

We have two horses, two pigs, and four cows. I also have one cow. We have one 3-year-old heifer and three 1-year-old heifers.

Wishing the juniors good luck.

Oregon. Victor Wolf.

Hoard's Dairyman Juniors:—I have just joined the juniors' club. I received my creed, watch fob, and button. I have joined the Oneida County Calf Club, too. I expected my pure-bred calf the first part of this week. I have one large pig. My brother and I own a registered gilt.

I wish some juniors would write to me and tell about their calves and pigs. My address is R. D. 1, Vernon Center, N. Y.

Stanley E. Skinner.

Hoard's Dairyman Juniors:—Received your fob, button, and creed and thank you very much. I believe every word on the creed.

We are milking 15 cows at present. I milk 2 cows every night and morning. We have pure-bred Holstein cattle.

They organized a boys' and girls' calf club out here. I joined it and have a heifer calf. I am going to take it to the fair and hope to win 1st prize. I have 3 guinea chickens and 9 young ones.

As my letter is getting long I think I have to close. I wish some of the juniors would write to me. My address is R. R. No. 2, Dyersville, Ia. Wm. L. Pape.

Hoard's Dairyman Juniors:—I received the creed, fob, and button and like them very much. We have 6 cows, 2 horses, 21 little chickens, 2 pigs, 4 rabbits (1 pair is mine), and 25 sheep and lambs. Our farm is 61 acres. I wish some of the juniors would write to me.

New York. Reginald Goodrich.

Hoard's Dairyman Juniors:—I have not written for so long I suppose you have forgotten I am a junior.

We have been very busy lately. We threshed quite a while ago. Our wheat made 21 bushels to the acre and our oats 36. I helped shock it.

We are through cutting millet. We cut it with the binder and shocked it. I helped do the shocking. Now we are cutting the cane with the binder. I am helping shock it, also.

My chickens are doing fine. My hen hatched every egg she had but I have only a third of the chickens left. Some died and the coyottes got some.

We are only milking four cows now. We are not getting much milk.

We are having a cool, rainy August. The other day the temperature dropped to 67 degrees.

My letter is getting long so I will close.

Oklahoma. Mildred Reynolds.

Hoard's Dairyman Juniors:—I did not see my last letter in print but that does not discourage me for I don't become discouraged that easily.

We have our haying all done. We had 84 loads, 72 of which we put in the barn and the other 12 were put up on shares by my uncle. We haven't threshed yet but will start soon.

We have a milker now and like it fine. We couldn't get along without it when papa has to go away threshing. We have a 1½ horse power engine to run it with.

Our corn will average 14 feet high in all of the fields. One man had some oats go 80 bushels to the acre but don't think ours will be that good.

We turn the cows in on the clover now to keep them up on their milk because the pasture is so short. We are milking 20 cows now and get about 45 to 50 gallons of milk a day. They are all starting to go dry now because they freshen in October and November.

Wisconsin. Agnes Seamans.

Hoard's Dairyman Juniors:—I guess it is about time I was answering your last letter. We have been pretty busy since then with haying, grain harvesting, and threshing. Our first crop of hay was fine, only most of it got wet. We cut 23 loads from 11 acres. It was medium clover. The second crop is pretty short, due to dry weather.

We threshed out 681 bus. of oats from 11 acres, 348 bus. of barley from 9 acres, and 24 bus. of wheat from 1¾ acres. Our oats yielded second highest in the entire neighborhood and the barley was not far behind.

The weather has been so dry that some fellows are cutting corn. Potatoes will be quite light around here this year. Ours look better than most of them through the country.

We had some rain the last two days and started plowing today. For winter wheat we will have three acres. Winter wheat runs about 25 to 30 bus. per acre around here; spring wheat was less than half that this year.

You asked me in your letter if we feed our cows grain. Yes, we feed them ground oats in addition to clover hay and it sure does pay. We are milking eleven and stripping two.

School starts September 13.

I wish the juniors good luck.

Wisconsin. Paul Krippner.

Hoard's Dairyman Juniors:—I live on a farm of 175 acres. We have 25 head of milking cows and 17 head of young stock. We have 5 horses. We are working another farm of 65 acres. We had 140 acres of hay. Most of it is pretty good.

I read the juniors' letters every week and I think they are interesting. I have a calf and a nice team of horses. They weigh 2,900 lbs. We bought a manure spreader this summer. It saves labor and time. Men are very hard to get around here.

The corn looks good around here. The wheat was pretty good, too. It is not very good haying weather now. We have nine little pigs. They are nice ones. I would like to hear from some of the junior members. My address is R. F. D. No. 1, Canastota, N. Y.

George Welch.

Hoard's Dairyman Juniors:—I received your nice watch fob and lapel button, also farm boys' creed and believe every word in it is true. I am ten years old. I belong to the Buffalo Valley Pig Feeding Club. My pig is a Berkshire. There are three other Berkshires, two O. I. C. pigs, one Duroc Jersey, and four grades.

We started May 19th and will have the annual round-up Oct. 8th, which will make 140 days. The round-up will take place at the Union Co. fair grounds and then we are going to select the best pigs for competition with the other pig clubs, at the Union Co. fair, which will be held from Oct. 12th to the 15th.

I have written this letter on the typewriter which I got last Christmas.

Pennsylvania. Philip K. Frederick.

Hoard's Dairyman Juniors:—Well, don't forget I am a junior though I don't write very often.

I have three pet lambs which I am going to sell to papa for fifteen dollars or five dollars apiece.

I am raising chickens. I have about 65 and I will sell the roosters this fall and mamma will pay me for the pullets. She will pay me 20 cents for every chicken I raise.

I mailed a letter to Gerald Spaulding of Oconomowoc, Wis. The first Spaulding I noticed on the junior page.

I am 10 years old and in the 6th grade at school.

We have eleven milk cows and feed one calf. We have about thirty sheep, two horses, and seven or eight pigs.

I hope to hear from some of the juniors. My address is R. F. D. 1, Box 164, Buchanan, Mich. Agnes Spaulding.

Do You Belong to the Juniors Club?

If you are a dairy farm boy between ten and eighteen years of age, and if your father or some member of your family is a subscriber to HOARD'S DAIRYMAN, we want you to join the HOARD'S DAIRYMAN Juniors Club.

The Juniors Club consists of several thousand boys like you, banded together to help each other get more pleasure and profit from farm life, and to have the advantage of associating with other boys who live and work and think as you do.

It costs nothing to join the club—and there are no dues. All you need to do to join is just to fill out the coupon and send it to us. We'll at once enroll you as a member and send you a watch fob, a coat lapel button, and the "Dairy Farm Boy's Creed". Do it now—then you'll soon be a full fledged member of the HOARD'S DAIRYMAN Juniors Club.

Creamery Butter in Cold Storage

The preliminary tabulation of the monthly cold storage report shows 115,600,000 pounds of creamery butter and 6,410,000 cases of eggs in cold storage on September 1.

The holdings of creamery butter are 15,800,000 pounds less than on September 1, 1919, but 16,300,000 pounds more than on the same date in 1918. The average September 1 holdings for the years 1916 to 1920, inclusive, are 112,100,000 pounds. The net increase in holdings during August was 15,200,000 pounds compared with 7,900,000 pounds in 1919 and 11,000,000 pounds in 1918.—U. S. Market Reporter.

Honor and Profit for Mr. Dayett

We have said that a large number of leaders in cow testing associations are Unicorn users.

J. Irvin Dayett is one of these. He is a member of the Diamond State Cow Testing Association of Delaware.

For the year ending August 1, 1920, his herd stood first in average yield of both milk and fat for less than ten cows:

Milk . . . . . 12,271.0 lbs.
Fat . . . . . 416.4 lbs.
Average profit per cow, $186.63

His herd contained the champion producers of both milk and fat:

	Milk	Fat
Cow No. 7 . .	15,101	488.2
Cow No. 9 . .	13,691	519.1

Mr. Dayett feeds Unicorn and gives it much credit for his success. Credit is equally due to his good cows and to his skill in feeding.

From the annual report of the Association we copy the following:

"The question of whether or not it pays to feed cows heavily when the price of grain is so high has been answered through this year's work. In every case where heavy feeding has been practiced a good profit has resulted"

It pays to feed Unicorn to your cows.

CHAPIN & COMPANY, Chicago

"BetterSires—BetterStock"

We will award a money prize of $1,000 to the county that first eliminates its inferior sires.

This prize will be awarded under rules provided by the Bureau of Animal Industry, United States Department of Agriculture.

Detailed information on request.

"Just Between You and Me"

says the Good Judge

Here's genuine chewing satisfaction for you, hooked up with real economy.

A small chew of this class of tobacco lasts much longer than a big chew of the ordinary kind—that's because the full, rich, real tobacco taste lasts so long.

Any man who uses the Real Tobacco Chew will tell you that.

Put up in two styles

Junior yearling heifer—1 and 2, Bull on Aldebaran Blossom Again and Aldebaran Delightful; 3, Peverill on Rosebud Financier's Violet. Senior heifer calf—1 and 3, Bull on Aldebaran Flirt and Aldebaran Clementine; 2 and 4, Peverill on Rosebud Fair Beauty and Rosebud Cherry Blossom. Junior heifer calf—1, Bull on Aldebaran Victoria; 2 and 3, Peverill on Rosebud Nona and Bess's Pride.

Senior and grand champion male—Cloverdale's Choice Goods. Junior champion male—Rosebud Buster.

Senior and grand champion female—Hughina Beauty. Junior champion female—Aldebaran Flirt.

Graded herd—1, Bull; 2 and 3, Peverill. Breeder's young herd—1, Peverill; 2, Bull. Breeder's calf herd—1, Peverill. Get of sire—1 and 3, Peverill; 2, Bull. Produce of cow—1, 2, and 3, Peverill.

Brown Swiss

W. O. Bohart of Montana and Mooney and Larrabee Bros. of Iowa exhibited forty-four Brown Swiss. Professor J. B. Fitch of Kansas made the awards. The Iowa herd won eleven of the seventeen firsts and four of the six champions. Hefty Boy of Valley Grove was an easy winner in the aged sire class and brought the senior and grand championships to Mooney and Larrabee Bros. Beauty 2nd's Dick, Bohart's senior calf, was made junior champion over two other Montana blue ribbon winners, one of them being Tassa M's Nick, Bohart's previously undefeated junior champion yearling bull. The Iowa entries won in all the milk classes, the two-year-old, Jeanne L, being made senior champion. Each breeder took two blue ribbons in the junior female classes, the purple going to Bohart on Nick's Alice C which was defeated for the grand.

The awards by classes follow:

Bull 3 years or over—1 and 2, Mooney and Larrabee Bros. on Hefty Boy of Valley Grove and Carl the 6th; 3 and 4, Bohart on Sunny Hill Bob and Beauty 22d's Master. Bull 2 years and under 3—1 and 2, Bohart on Zell A. W. and Beauty C's N. M. Bull one year and under 2—1, 3, and 4, Bohart on Tassa M's Nick, Tassa's Bob and Nick's Master 2nd; 2, Mooney and Larrabee Bros. on Czar L. Senior bull calf—1 and 3, Bohart on Beauty 2nd's Dick and D's Dick; 2, Mooney and Larrabee Bros. on Celoyn 2nd. Junior bull calf—1, Mooney and Larrabee Bros. on Howard; 2, 3 and 4, Bohart on Bozeman Boy, Master A's Bob and Little Nick's Dick.

Cow 4 years or over—1, Mooney and Larrabee Bros. on Sally Verbruge; 2 and 3, Bohart on Master's Bernice and Master's Beauty C. Cow 3 years and under 4—1, Mooney and Larrabee Bros. on Chalfonte; 2, Bohart on Bowney's Perfection. Heifer 2 years and under 3,—1 and 2, Mooney and Larrabee Bros. on Marie Gronyer and Jeanne L.; 3 and 4, Bohart on D's Tassa and Beauty D. Senior yearling heifer—1 and 4, Mooney and Larrabee Bros. on Little Anne 2nd and Eiffie 2nd; 2 and 3, Bohart on Bob's Mascott and Katherin's Heifer. Junior yearling heifer—1 and 4, Bohart on Nick's Alice C. and Nellie Deer; 2 and 3, Mooney and Larrabee Bros. on Doddy Robbins 2nd and Jeanne 2nd. Senior heifer calf—1 and 3, Mooney and Larrabee Bros. on Little Egypt 2nd and Janette L. 2nd; 2 and 4, Bohart on Dick's Charm and Dick's Gallatin Girl. Junior heifer calf—1 and 3, Bohart on Dick's Nellie B. and Bole's D. 2nd; 2 and 4, Mooney and Larrabee Bros. on Yuly 2nd and Rowina 2nd.

Senior and grand champion male—Hefty Boy of Valley Grove. Junior champion male—Beauty 2nd's Dick.

Senior and grand champion female—Jeanne L. Junior champion female—Nick's Alice C.

Graded herd—1 and 3, Mooney and Larrabee Bros.; 2 and 4, Bohart. Breeder's young herd—1 and 4, Bohart; 2 and 3, Mooney and Larrabee Bros. Breeder's calf herd—1, Mooney and Larrabee Bros.; 2, Bohart. Get of sire—1 and 3, Mooney and Larrabee Bros.; 2 and 4, Bohart. Produce of cow—1 and 3, Mooney and Larrabee Bros.; 2 and 4, Bohart.

The Dairy Councils' Exhibit at the National Dairy Show

One of the most outstanding and attractive exhibits scheduled for the National Dairy Show this year is that of the National and State Dairy Councils. One of the largest rooms in the entire show building has been secured, it being 162 feet by 59 feet in dimensions. This large room will be headquarters for all organizations holding meetings in connection with the Show. Also headquarters for all agricultural county agents and many other organizations.

The National and State Dairy Councils' exhibit should attract the attention of every person attending the National Dairy Show this year. There will be rest rooms for the weary, milk drinks for the thirsty, and most attractive and educational booths concerning the dairy industry

One end of the large room will be partitioned off in which meetings will be held. Besides the meetings there will be picture shows scheduled; also the revised Milk Fairy Play will be staged every afternoon so that the many visitors can receive a real treat by attending this little play. The Detroit newspapers, speaking of the Milk Fairy Play, said it was the most unique play that had ever been put on by children in their city.

M. O. MAUGHAN.

Whatever is worth doing on the farm is worth doing well.

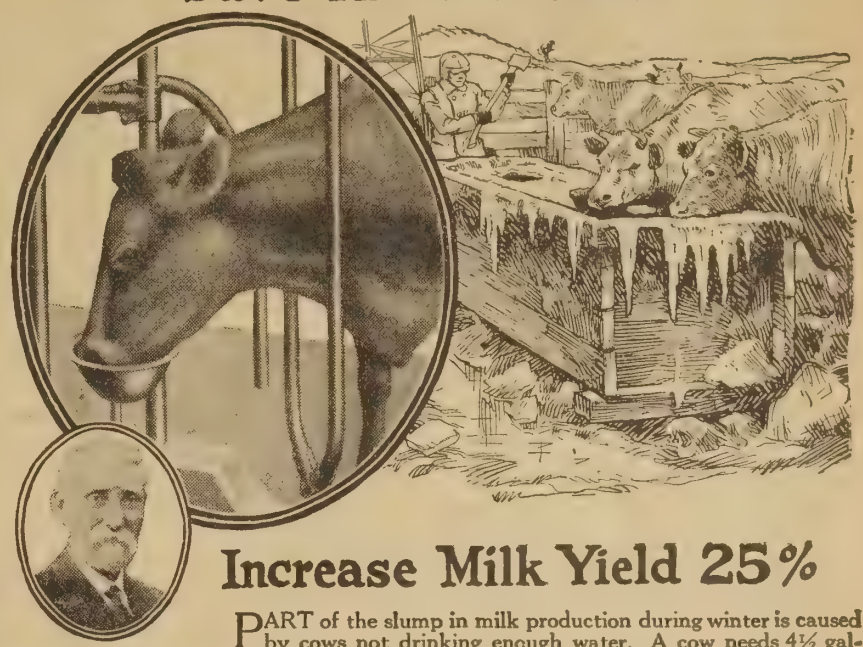
A Plan to Move The Wool Crop

A. F. B. F. Will Push Credit Plan to Enable Germany to Buy Surplus

When Congress reconvenes in December the American Farm Bureau Federation will urge immediate passage of a bill establishing a credit with Germany and her former associated countries equal in amount to the net proceeds of the sale of alien property in this country during the war. The money received by the Alien Property Custodian during the war amounted to nearly a billion and a half dollars and the remainder now in the United States Treasury, after various claims and expenses are allowed, will run well up toward a billion dollars. Sooner or later this money must be turned over to Germany and her associates and now is the time the central European countries can use it to best advantage. The raw materials which this money would buy in this country are the very things needed by Germany to start and operate her factories.

A careful survey of the world's wool supply gathered from the best available sources—some direct by cable—shows that the world's wool stocks are somewhat greater than usual. Where the usual holdings prior to 1919 amounted to about half a year's supply, or around a billion and a quarter pounds, the stocks now available seem to amount to about a full year's supply. But nearly all of this surplus is of the coarser grades. Apparently there is no real surplus of the finer grades of wool—the kinds which we use in this country to manufacture our clothing. The accumulation of coarse wool stocks seems to be a direct result of the inability of Germany and Austria to buy and consume their usual quotas. These markets have been practically closed for a long time now, and as a result coarse wool stocks have accumulated in all parts of the world to depress the fine wool market also. Sending large quantities of coarse wool into the German mills, where it is badly needed, would have a very wholesome and stimulating effect upon both the coarse and the fine wool markets the world over.

Mr. Gray Silver, Washington representative of the American Farm Bureau Federation, first proposed this plan of rehabilitating the wool market in a speech made before the Farm Bureau officials and wool producers at a conference at Salt Lake City, August 20. The plan is based upon a careful analysis of the world wool situation worked out by the Federation in cooperation with market experts of the U. S. Department of Agriculture.



Considerable progress was made last spring in getting this German credit bill favorably before Congress, but the sudden adjournment stopped further action at that time. Prompt legislative action last spring would in all probability have prevented the serious break in the wool market. The plan will be pushed with renewed vigor with the reconvening of Congress and with special reference to its benefits to wool producers.

LOUDEN
WATER BOWLS
Save All the Labor

WM. LOUDEN
Over 53 years inventor of Modern Barn Equipment

Increase Milk Yield 25%

PART of the slump in milk production during winter is caused by cows not drinking enough water. A cow needs 4½ gallons of water for each gallon of milk produced. No cow drinks enough when watered only once or twice a day.

With Louden Automatic Water Bowls, cows drink frequently—get all they want, day or night. The result is a big increase in milk yield that more than pays for the water bowls in a single season. Any farmer can install them in any barn. They are easily cleaned. Cannot get out of order.

Frank W. Morrison, prominent Massachusetts dairyman, writes us that his cows gave 40% more milk after Louden Water Bowls had been installed.

Louden Bowls *save all the labor* of watering—give cows water of right temperature—eliminate expense and trouble of heating water in winter.

Write for 224-Page Catalog

Tells all about Louden Water Bowls and other labor-saving, profit-making barn equipment—stalls and stanchions, animal pens, litter and feed carriers, manger divisions, barn and garage door hangers, hay unloading tools, power hoists, cupolas, ventilators—"*Everything for the Barn.*"

If you expect to build or remodel a barn write for Louden Barn Plans, a 112-page book devoted entirely to barn building. Our barn building experts will give you plans and suggestions to meet your needs. No charge or obligation.

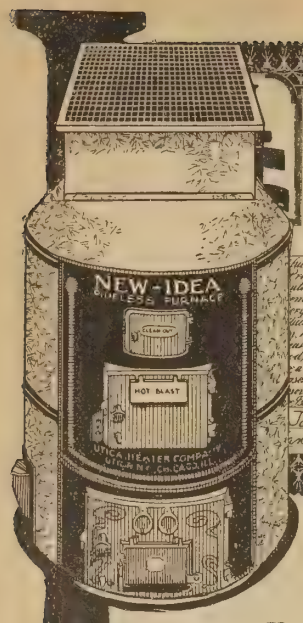
Cow Waters Herself

with this wonderful new Libbey Automatic Water Bowl. Animal moves lever, opening water valve, when it starts to drink. Lever swings back, closing valve, when animal stops drinking.

15% More Milk



Milk is 87% water, and cows cannot give their greatest yield unless they have plenty of water constantly within reach. Farmers who use Libbey Bowls report an increase of 15% to 20%, which soon pays for the bowls.

Libbey Automatic Water Bowls

are the most sanitary and successful ever invented. Each bowl controls its own water supply, operated entirely by cow, and may be put at different heights, or in any stall or pen. No float tank required. Cannot overflow; cannot get out of order. Almost no water left in bowl to become stagnant. They save labor and feed and increase milk. Prevent spread of contagious diseases, as each cow has her own bowl and no water can pass from one to another, as with old-style bowls. Very simple and easy to install. Write for circular and prices, also FREE DAILY MILK AND FEED RECORD.

If interested in Stanchions, Stalls, Carriers, etc., ask for free General Catalog.

GUARANTEE
THE WONDERFUL NEW IDEA PIPELESS FURNACE
DESIGNATED AND MANUFACTURED BY
UTICA HEATER COMPANY
UTICA, NEW YORK
(INCORPORATED 1900 UNDER LAWS OF STATE OF NEW YORK)
This Certifies that Frank C. Edwards
of Jamestown, N.Y. has purchased a
New Utica Pipeless Furnace and when properly installed, under suitable approved flue, chimney etc., the manufacturers of Utica Heater Company, Utica, N.Y. guarantee quality proper and satisfactory working of said Heater.
All claims secured are not satisfactory, the purchaser agrees to promptly notify the manufacturers an opportunity to correct or rectify all causes of complaint.
Every month are not then eliminated, and the Heater itself determined, to be in the Heater itself - Utica Heater Company agrees to promptly refund the Purchase Price of the Heater.
The Utica Heater Company guarantees for a period of five years, under normal conditions, the Heater will not burn out or crack, if properly installed and given proper care and attention in the ordinary use of the same as may be reasonably required.
This instrument does not cover a sixty-day trial, but is a Lifetime Guarantee, designed for the protection of the purchaser and provides that the purchaser shall be the sole judge of whether the Heater is unsuitable or unsatisfactory and the expense of the purchase price. This is the Most Liberal Guarantee Covering Heating Equipment.
Utica Heater Company

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Milklessness

On August 22nd I had a pure-bred Guernsey heifer a little over two and one-half years old, freshen; we made arrangements to put her on test. For the first time she made an excellent bag and is very healthy and a good feeder. There is no abortion in the herd nor any tuberculosis.

On Monday morning, I noticed that the calf, which was very healthy and lively, very gaunt. Upon examination of the heifer I found that she had not a particle of milk in the bag. We immediately called the veterinarian and he told me that there was no milk in her bag; he took her temperature which was normal. We put the calf on another cow and then put her back with the cow and kept her there until the present time. Her bag is now going down and there has never been any milk at all in her bag. Will this calf, which is a heifer, be affected by this, or if she is kept over until she freshens again will she have the same experience?

Cairo, N. Y. L. S. W.

It is quite unlikely that the heifer calf will, when mature and "fresh" have a similar attack of agalactia or suppression of milk if the dam on both sides sprung from "performing" stock. The attack in question probably was due to chill or the shock of calving. Hypodermic treatment with pilocarpin and strychnine should have been given at once and possibly might have helped. Another plan in such a case is to dissolve 4 grains of pilocarpin hydrochlorid and 2½ grains of strychnine sulphate in a pint of water. Divide into 3 doses and give these at intervals of 3 hours. We fear treatment will not now avail.

Lame Heifer

A neighbor of mine has a young heifer about two years old which was bred about in April and was in the very best of health until about a month ago. One day it returned from the pasture (it running at large over cutover land) acting as if it were not well, the time being just after that big hail storm which we had on the 6th of August. The heifer was out in the storm and being very fat was beaten up pretty badly. Now it is all swelled up and can not hardly walk and does not eat and when it breathes it just pants and its nose is so hot and dry. It is all swollen in front of the udder and around the navel also the jaws and throat and the breast is very hard. Was it the beating of the hail that caused this condition or has it some disease and what shall they do for it as they have done all that they know how to do?

Pembine, Wis. H. G.

This is a most unusual case. One naturally would suspect pneumonia as the disease present and the cause exposure to the rain and hail storm, but such an attack would be likely to prove quickly fatal. That also would be the result of an attack of hemorrhagic septicemia or of blackleg or anthrax, diseases which might cause symptoms similar to those described. We are therefore at a loss to account for the present condition, so long after exposure to the storm, but pneumonia certainly is to be suspected as the heifer does not eat and has fever.

It would of course be best to employ a veterinarian to examine and treat the animal, but if that cannot well be done we should advise you to give the heifer 5 drops of tincture of aconite in a little water every 4 hours, along with a dram of fluid extract of gentian root and 2 drams of sweet spirits of niter. Also dissolve a tablespoonful of powdered saltpeter in the drinking water twice daily. Support strength with gruels, milk, and raw eggs, if the heifer will not eat.

It may be added that a drench of medicine given in such a way that it got into the lungs might cause symptoms such as you describe and would be likely to prove fatal.

Seed corn selected in the field where it grew can be judged on how it performed in competition with neighboring stalks.

Barren Cows

Must Be Made to Breed or Your Dairy Business Will Be a Failure. They

Can Be Made to Breed

By the use of

Hood Farm Breeding Powder

We say this confidently because it has been used with such marvelous results by so many breeders. Every cow at Hood Farm is treated with the Breeding Powder, and we know that it does make barren cows and heifers breed; we know that it checks and prevents abortion; we know that it makes cows clean quickly, thereby saving us hundreds of dollars annually.

Order today, mentioning this paper.

Prices prepaid $1.15, $2.75 and $5.00. Flexible Injection Tube, by mail, 90c. Mammoth size Breeding Powder and Tube, prepaid, $5.75.

Ohio State Fair

(Continued on page 382)

crop yields; or, to interpret in practical terms, 200 lbs. of acid phosphate should be applied to every crop grown.

Live Stock

Ohio's claim as being the "Mother of Durocs" was vividly brought forth by the exhibition of 400 head of swine, this being one-fourth of the entire number of hogs exhibited on the grounds. Many of the Durocs came from southwestern Ohio, while northeastern Ohio furnished a classy exhibit of Berkshires. Herds of Chester Whites and Poland-Chinas came from all over the state, while another popular breed—the Hampshires — came mostly from central and western portions of Ohio.

Many Ohio swine breeders brought their herds to the Ohio State Fair in trucks, this being a cheaper and more satisfactory way to travel. Some breeders had several trucks and transported the pigs up to a distance of 100 miles. Many advantages are found in trucking as the hogs stand the trip well and the congested railroad situation may be avoided. The trucks are packed heavily with straw, but only a few hogs are crated for these trips.

Dairy Cattle Show

County co-operation prevailed in the showing of dairy cattle more than ever before. A large Jersey and Holstein show was presented with an increasing number of Ayrshires and Guernseys shown. The feature of the Ohio State University dairy cattle exhibit was the old cow, Ohio Colantha Bakker. This "long distance" cow has produced 105,000 lbs. of milk and 4,687 lbs. butter in her lifetime. With Holsteins, a junior heifer calf "Zerhinghurst Mercedes Lass", was made grand champion female of the show. This calf was reared by one of the calf club boys of Ohio. The Holsteins were placed by W. H. Standish of Ohio; the Guernseys and Jerseys by Professor J. C. McNutt, Amherst, Mass.; and the Ayrshires by Professor C. S. Plumb, Ohio.

Machinery Exhibit

Ohio farm women are giving more attention to the selection of farm machinery, for the household exhibits of power washing machines, both gasoline and electrically driven, attracted more attention than usual, while electrically driven dish washers for country homes promise to be as popular as the washing machine. More than a score of different makes of tractors were exhibited on the grounds and much attention given to the reducing of farm help by operating small threshing machines, hay balers, and ensilage cutters with the farm tractor.

Labor Day Farm Bureau Picnic

On Labor Day the Farm Bureau of Rock County, Wisconsin, held a most successful picnic which about 1,500 attended. C. P. Norgord, Wisconsin Commissioner of Agriculture, addressed the members and urged them to free the herds of the county from tuberculosis, taking advantage of the law which provides that if fifty per cent of the farmers of a county petition to have their cattle tested for tuberculosis, a county program of testing can be started.

A pig feeding demonstration was given by M. H. Scott. It was shown that 19 pigs which averaged 100½ pounds August 1st were made to average by September 5th 149 pounds. In the 35 days they made a profit of $40.26, gaining 48 2-3 pounds each, or 1.39 pounds daily. The ration fed was made up of 3,000 pounds of corn, 235 pounds of barley, 185 pounds of oats, and 50 pounds of tankage.

The Labor Day picnic will be made an annual event.

Wisconsin. R. T. GLASSCO.

Shows Dairy Cattle Feed Needs

Successful dairying in any community is dependent upon an all-year supply of highly nutritious succulent feed, green or silage, and properly maintained meadows and pastures. No effort, therefore, has been spared by the United States Department of Agriculture in its search for and study of such crops as will best serve the dairymen in all sections of the country. As part of its exhibit at the National Dairy Show, the Department will present a series of transparent colored photographs illustrating the value and utilization of important forage crops. Many of the crops were introduced into this country by the Department.

MORE PORK IN LESS TIME

Duroc-Jersey hogs have a tendency to put on great amounts of pork at an early age. They are easy-feeding animals, and raise large families. These hogs were introduced less than 50 years ago, and yet in 1918, 51% of all the hogs marketed in the country were "Duroc-Jerseys." They are uniformly red in color. Increase your profits by raising Duroc-Jersey hogs.

Write for "DUROC-JERSEY HOGS ARE PROLIFIC AND PROFITABLE"—sent free to hog-raisers by the largest swine record association in the world. Over 12,000 members.

The National Duroc-Jersey Record Association. Dept. 300 Peoria, Ill.

For Sale—Three-Year-Old Cow

Majesty's Brown Bess 400192, dropped July 1, 1919, solid fawn color, bred to Golden Renown's Majesty 168983, due to freshen Sept. 26, 1920. She is sired by a grandson of Royal Majesty 79313, and her dam is a R. of M. granddaughter of Noble of Oakland. Price $200.

W. M. KNIGHT, OAK GROVE JERSEY FARM. Eagle, Waukesha Co., Wisconsin.

Registered Bulls — $100 and Up

W. C. BROOKOVER, Route No. 1, Chandlersville, Ohio.

Something New in Cattle Clubs

HOARD'S DAIRYMAN:—Scrub bulls got a terrible wallop and the eradication of tuberculosis a big boost when the dairymen of Central Vermont got together on August 10, and formed the Central Vermont Cattle Club. Nobody can be a member who does not use pure-bred sires exclusively in his herd, and who does not place his herd under state and federal supervision for eradication of tuberculosis. This is the first dairy club of the kind to be organized in the country, according to the county agent of Washington County, Vermont.

The object of this club is to "promote the breeding of more and better dairy cattle; to advertise properly in the buying states by centralizing information regarding cattle for sale; to encourage selling in carload lots, thereby obtaining prices that will encourage raising of better dairy stock for market; to promote community ownership of pure-bred bulls of the best possible breeding; to wage unceasing warfare upon bovine tuberculosis and contagious abortion; to banish the scrub sire; to do all that is possible to make farm life attractive to the boys and girls and encourage them to remain on the farms; to encourage the spirit of goodfellowship, unity, and co-operation among members of the club and to promote the dairy interests of the state."

A paid secretary will keep complete information regarding stock for sale by members, and will advertise such stock for sale. Thus, the dairymen will have a clearing house for first class stock. There will be an annual field day for exhibiting stock.

The directors are: E. H. Bancroft, Barre; W. E. Tucker, Orange; J. P. Davis, Chelsea; W. H. Moody, Waterbury; O. L. Dow, Cabot; Arthur White, West Topsham; Neil Smith, Williamstown; G. M. Jones, Waitsfield; F. B. Catlin, Randolph.

Pennsylvania. MARTIN GLEN.

Guernseys for Sale

Twenty females, cows and heifers, a number of May Roses. Mostly bred to Laverna's Ultra May King 24660 and Gerar Pearl's Royal 58411, who is full brother to three class leaders. NANCY'S MINT MASTER

Idlewood Farm offers at private sale these Ayrshires

The great bull, NANCY'S MINT MASTER No. 20151, junior and grand champion at National Dairy Show in 1918, and first prize senior calf in 1917 (was not shown last year) said to be the most perfect type Ayrshire bull ever bred in America.

FIVE FRESH COWS, with four heifer calves and one bull calf at sides, the five calves sired by this grand champion bull. One cow is a Roll of Honor cow and a great show cow as a heifer, and the others are highly bred young cows ready for test.

Eleven Head in All

Nancy's Mint Master, undefeated in the show ring in America, was sired by Howie's Mint Master, also grand champion bull in America and Scotland, with a long line of undefeated ancestors, sire of A. R. daughters. This wonderful bull, only four years old on August 14, 1920, was purchased by Idlewood Farm at the 1919 National Ayrshire Sale at the highest price ever paid for an Ayrshire bull at public auction. He is easy to handle—a child can lead him about—and is in excellent, practical breeding condition. In August births, four of his five calves were heifers. If you want to build up a herd with the best bull in America, here is your chance. Price and other information desired will be furnished on application.

T. J. Murphy, Owner, Devon, Pa.

Middlesex Meadows Ayrshires

No matron stays in the herd that does not make an A. R. record of 10,000 lbs. or better. Most of them have records far exceeding this standard. Their bull calves by our herd sires are for sale.

20 2-yr.-olds average 11,885 lbs. milk, 495 lbs. fat.
PENSHURST FARM, NARBERTH, PA.

Without Skimmilk

The dairy division at University Farm, Minnesota, has been conducting some experimental work whereby the dairyman who sells whole milk may find a solution for calf feeding problems. The results of the experiments indicate that calves can be raised successfully on a grain mixture of four parts ground corn, one part linseed meal, one part bran, and a legume roughage—alfalfa hay—after being weaned from their milk diet at the early age of 50 to 60 days.

The hay and grain should be placed before the calves when they are very young, the object being to get them started on dry feed as soon as possible and to give them all the feed of this kind they will clean up. Best results are obtained by feeding the hay and grain in about equal quantities.

One of the calves in these experiments was weaned at the age of 60 days and thereafter fed grain mixture and alfalfa hay. At the end of the trial this calf weighed 377 pounds and was 104.1 per cent normal. Another calf weaned at the age of 45 days was raised on 461 pounds of milk and a grain mixture and alfalfa hay. At 158 days old it weighed 335 pounds and was 106.3 per cent normal.—Minnesota College of Agriculture.

It is said that about four-fifths of all the poultry products in the country are the result of the work of women. An inquisitive person might like to know whether women get four-fifths of the money returns.

Ayrshire Cattle For Sale

Choice Registered Ayrshire cows, heifers, and calves of either sex. Single animal or carload. Herd tuberculosis free accredited.

F. D. Stowell, Black Creek, N. Y.

When writing advertisers please mention Hoard's Dairyman.

Shows Result of Community Development

Before the community-development work was begun at Grove City, Pennsylvania, practically no dairy products were shipped to outside markets. What has been accomplished will be shown by the United States Department of Agriculture exhibits at the National Dairy Show. The following figures show the extent of dairy production in the last year:

For the year ending June 30, 1920, 505,909 pounds of butter were manufactured; 828,065 pounds of skimmilk were condensed; 30,773 pounds of casein were made; 112,927 pounds of Swiss, 7,737 pounds of Camembert, 12,378 pounds of Roquefort, 21,393 pounds of Cheddar, and 230,968 pounds of cottage cheese were manufactured.

The exhibit contains samples of the butter, condensed milk, and the other products of the creamery. Information as to methods and cost of manufacture and the prices received for the products are available.

Make yourself necessary to the world and the world will give you bread.—EMERSON.

Show Type HOLSTEINS Production

Six state yearly record champions 1918-19.

We offer bull calves by Sir Paul Veeman Hengerveld and Sir Ormsby Skylark Fredericka, out of yearly record dams with type.

Edinboro, Pa.

4 Holstein Bulls for Sale

All by King Segis Pontiac Cor-Will, 190512, whose sire is King Segis Pontiac, 44444, and whose dam is an A. R. O. daughter of Pontiac Korndyke. Also two fine young registered cows, one a granddaughter of Pontiac Korndyke. Wm. N. Osborn, Wanatah, Ind.

12 BULLS FOR SALE

Seven are ready to use. All are good individuals and nicely marked. Sires: King Segis De Kol Fayne 8th, a 25,63-lb. grandson of King Fayne Segis and Peldora De Kol Pontiac Pietertje, a 29.52-lb. grandson of King of the Pontiacs. Some have A. R. O. records. For pedigrees and prices write C. I. Reamer, North Liberty, Ind.

Maaikenshof Holsteins

We are now offering for sale some very choice sons of *Dutchland Creamelle Colantha 230137*. Colantha breeding is prominent in these calves. *Dutchland Creamelle Colantha* is out of Dutchland Colantha Denver, the highest record daughter of Colantha Johanna Lad in both 7-day and yearly tests. Her records are 7-day, 36.25 butter, 702.30 milk; year, 1,315.15 butter, 25,431 milk.

If you want a future sire of this excellent breeding write us immediately as we have priced these calves to sell in quick order.

We are pleased to send out our circulars if you are interested.

MAAIKENSHOF, R. E. Buell, Supt.
Bedford Hills, N. Y.

Double King Segis Breeding

Here is a show bull born in March, whose sire is a son of *King Lyons*, out of a 35-lb. daughter of *King Segis*. His dam is by a son of *King Segis Pontiac Alcartra*, who combines in the closest degree the blood of all the great foundation bulls.

We also have two heifers born in June whose sire is by a son of *King Segis Pontiac Alcartra*.

Write for prices and pedigrees.

G. BURLINGAME, - - CAZENOVIA, N. Y.

Young Bulls Backed By Yearly and Seven Day Records

We have for sale a few young bulls, up to 11 months old that are sired by our senior herd sire Finderne Pride Johanna Korndyke. He is one of the best sons of King Segis De Kol Korndyke and from Finderne Pride Johanna Rue, former world record cow with 1470 lbs. butter in 1 year. These youngsters are well grown and are all from A. R. O. dams with records up to 30 lbs. Write us for full information. We will answer promptly.

ANTRIM FARMS, - - - SYRACUSE, NEW YORK.

FOR SALE AND EXCHANGE

25 head of Holstein cows, 23 of which are high grade and 2 are registered. Also herd bull, a grandson of K. S. P. A., the fifty thousand dollar bull. This bull is from a 27-lb. cow. Most of these cows bred to this bull. All young cows and well marked, good heavy producers. Price $200 per head if the herd is bought together. Will take two good teams of draft mares or mules as a partial payment. Might consider a good automobile as a partial payment.
G. A. HIGGINBOTHAM, ROSSVILLE, KANSAS.

Two-Year-Old Sire

His two nearest dams average for 7-day production nearly 34 lbs. butter. For yearly production they average better than 1,000 lbs. butter.

He is well grown, a show animal, and free from disease. Worthy to head a top notch herd. Priced for quick sale.

He has been used in a small registered herd the past year. We want him placed in a herd where his daughters will be tested. If you need a herd sire, with 7-day and yearly production, combined with good individuality, here is your chance.

Don't delay, write us.

Hargrove & Arnold, Norwalk, Iowa

SIR JOHANNA FAYNE

42147

now has 9 daughters 20,000 pounds or over. All of his yearly tested daughters, 3½ years old or over average 21,465.1 pounds milk and 831.45 pounds butter. 17 daughters average 20,000 pounds. A few young sons left at reasonable prices. Herd under Federal Supervision.

IOWANA FARMS
DAVENPORT, IOWA

Do You Want

A 30-lb.—1000-lb. Ormsby Bull?

If you want one of that kind—and a real individual, write for our sale catalog. We are moving our herd to California and rather than take these bull calves we are offering them at sacrifice prices.

They are sons of Sir Ormsby Skylark, the sire of Duchess Skylark Ormsby, and they're from cows with records of from 27 to 40 lbs. that either have or are making good yearly records. (Several of those dams have over 30 lbs. and will finish the year well above 1,000 lbs.)

Better write today for that sale catalog.

High Grade Holstein Calves

This is the ideal time of year to start them and have them ready for pasture next spring. ⅞ pure-bred Holstein calves, $20 and $25 each. Ship C. O. D. if you wish. Safe arrival and satisfaction guaranteed. Everything in the line of registered heifers. Write your wants.

ELM GROVE STOCK FARM,
Box 253. Cortland, N. Y.

Sons of a 37-Lb. Ormsby Bull

whose dam, full sister, three-fourths sister and maternal sister have all held state records. Herd under Federal supervision.

BLUEBELL FARM. RICEVILLE, IOWA.

Last Chance to Get a Son of Sir Veeman Hengerveld

Sir Veeman Hengerveld Dodo 299077, born Dec. 26, 1919. A large, well grown fellow, fine individual, in color a little more than half white.

Sire—Sir Veeman Hengerveld, who now has 120 A. R. O. daughters, 17 of them with records above 30 lbs., and for the opportunity that he had in his younger days he has proved himself to be the greatest sire of the breed.

Dam—King Segis Alcartra Dodo Jessie. A. R. O. at 2 yrs. 10 mos., butter 19.24, milk 389.80. She is a granddaughter of King Segis Pontiac Alcartra. She is in my herd at the present time and a prospect for a large record in the future.

This bull has been Federal tested. Price $500.

W. D. ROBENS, Poland, New York.

YOUR CHOICE OF 30 YOUNG BULLS OUT OF YEARLY RECORD COWS

FROM AN ACCREDITED HERD—325 FEMALES

OUR HERD SIRES

KING OF THE ORMSBYS

KING OF THE ORMSBYS is sired by Sir Pietertje Ormsby Mercedes (twelve 1000-lb. daughters) and out of Spring Brook Bess Burke 2d, the world's largest dairy cow and the only cow in the World with three 7-day records above 35 lbs. butter in connection with three year records each above 1000 lbs. Her best records are 38.22 lbs. in 7 days and 1290.93 lbs. in a year.

SIR INKA PRILLY SEGIS is a 30-lb. son of King Segis. He has 84 young daughters at Winterthur; 30 have freshened and 10 of these made above 20 lbs. at first freshening. At their second freshening they are coming back with from 25 to 28 lbs. 17 of his daughters have completed semi-official records, and 12 of these averaged 757.73 lbs. butter and 19,172.30 lbs. milk at an average age of 3 y. 6 m.

SIR INKA PRILLY SEGIS

KING OF THE SADIE VALES is sired by King Korndyke Sadie Vale (the only bull with a 40-lb. dam, a 40-lb. sister, and a 40-lb. daughter) and out of a 38-lb. "Sadie Vale" cow. Both his sire and dam are out of 41-lb. cows. The five nearest dams of King of the Sadie Vale each weighed over a ton and produced over 100 lbs. of milk a day. His three nearest dams average 40.19 lbs. butter in 7 days and 159.51 lbs. in 30 days.

JOHANNA KING SEGIS is out of a 40-lb. cow and sired by a yearly record son of King Segis. The dam of Johanna King Segis was the first cow to make 541 lbs. butter in 120 days and the second to make 40 lbs. in 7 days. Johanna King Segis now has 8 daughters with semi-official records and these average over 700 lbs. butter and 18,000 lbs. milk. All his daughters born at Winterthur will be given an opportunity to make semi-official records.

HALL BROS.

— A Dissolution and Dispersion Sale of —

150 Head of Registered Holstein-Friesian Cows, Heifers and Bulls

at their Western Holstein Farm, 5½ Miles Southwest of Denver
On the Morrison Road

After twenty-three years of agreeable partnership of the brothers —Carlos W. and Storrs H. Hall, by their mutual agreement they have decided to close their partnership in this very successful business, and are offering at public sale one of the great herds of the day.

The foundation blood upon which this herd was established was of the best of the breed, and under the guidance of the Hall Bros. has increased in quality, and is today recognized from coast to coast as one of the great herds of America, and its breeding is the standard of excellence in the nation's greatest live stock exhibitions and sales, and in official testing.

The herd is composed entirely of animals of correct conformation and great milk and butter-yielding qualities. The herd is healthy and high class in every way. It was established with the view in mind of creating a herd of this breed in Colorado to supply foundation stock of this breed to the fast-growing dairy interests of the Rocky Mountain States. The Hall Bros. are, in live stock circles, well known men and highly respected. After years of successful operation in the dairy interests of Denver, the Western Holstein Farm and its herd of registered Holstein cattle, the owners believe a lightening up of their responsibilities of their large business should be observed, and hence this sale.

Just once in a great while does an apportunity present itself to buy your own selection of real foundation breeding blood of any blood of the various breeds, at your own price, and you should, those who are interested in this great breed, avail yourself of this great opportunity. *Remember the date, Tuesday, October 5, 1920.*

HOLSTEIN BULLS AND HEIFERS!!

To make room in our barn we offer a dozen or more heifers from 1 month to 3 years of age. They are backed by some of the best families of the breed. Also a few bulls sired by King Korndyke Veeman, whose two nearest dams average over 37 lbs. butter in 7 days. Come and see them or write to

WISCONSIN STAR STOCK FARM, ED. M. SHULTZ, HARTFORD, WIS.

BUY A BULL

That carries the blood of Colantha 4th's Johanna, Sir Pietertje Ormsby Mercedes and Spring Brook Bess Burke. These represent, we believe, the very best producing combination of the breed. We are just now able to offer sons of S. P. O. M. 38, carrying just this combination and backed by excellent A. R. O. records.

If you want one, write at once. We don't have them long.

W. J. Gillett & Sons, Rosendale, Wis.

Young Bulls $200 to $500

I have for sale a few splendid young bulls 6 to 7 months old sired by Sir Aaltje Pontiac Hengerveld, my 33.68-lb. herd sire. They are very good individuals from A. R. O. dams with records of from 17 lbs. as 2-year-olds to 28-lb. aged cows. Can also offer a few good cows bred to "Sir Aaltje". Satisfaction guaranteed.

J. D. McDONALD, - - WEST SALEM, WISCONSIN

Yearly Records

Pabst Stock Farm

First Semi-Annual Sale

OCTOBER 9th, 1920

Sale will start at 10:30 A. M.

Oconomowoc, Waukesha County, Wis

OCT. 9th—PABST

Breeders Wanting A New Sire Should Read—

STOCK FARMS FIRST SEMI-ANNUAL SALE

PABST CLYDE MECHTHILDE
A ten-months son of a 33-lb. sire from a 28-lb. 4-year-old daughter of King Pontiac Champion.

PABST CREATOR ORMSBY
A Creator son from a 32.55-lb. senior 3-year-old. Now on year test. Four dams all year record cows.

PABST CREATOR VON HOUTTEI
A Creator son from a 27.53-lb. daughter of King Pontiac Champion. Note the quality.

A compilation of all of the animals in the association prize list for the year 1919-20 brings out the fact that Pabst Stock Farm was leading breeder of prize winning animals during the past year, and won third place as owner of prize winners. This means that we are putting forth our best efforts to develop the animals we own and since the dams of the young bulls we are to sell at our first semi-annual sale are for one, two and three generations of Pabst Stock Farm breeding, means the bulls you select will increase in value very much during the next few years.

40 Bulls

Some of the finest young bulls we have ever bred will be included in this first semi-annual sale. Look over this list.

PABST KORNDYKE CLOVER KING—a 22-month-old son of Korndyke Segis Johanna (12 20-lb. 2-year-old daughters, two 21,000-lb. 2-year-old daughters)—from the **highest milk record daughter** of King Pontiac Champion—she made 768 lbs. in 7 days and in 10 months made 923 lbs. butter and 22,337 lbs. milk. Inside of twelve months she made another 32-lb. record and promises to make over 1,000 lbs. for the year. She weighs a ton and is a great prospect.

PABST CLYDE MECHTHILDE—an eleven-month-old son of Woodcrest Clyde (his dam with 33 lbs. in 7 days—over 970 lbs. in year)—from a 28-lb. senior 4-year-old daughter of King Pontiac Champion, now making a great year record. She is a full sister to a 31-lb. cow with over 725 lbs. milk.

PABST WOODCREST PONTIAC—an eleven-month-old son of Woodcrest Clyde from our most perfect individual daughter of King Pontiac Champion. This dam made over 800 lbs. in a year and now on her second test has over 828 lbs. butter and 18,000 lbs. milk in 7 months. A grand individual whose two nearest dams will surely average well over 1,000 lbs. butter in a year.

PABST CREATOR ORMSBY—a ten-month-old son of Creator from Pabst Inez Ormsby, a 27-lb. senior 2-year-old (27.97 lbs. to be exact) and then came back as a senior 3-year-old with 32.55 lbs. She is now making a splendid year record. Her dam is a 24-lb. daughter of King Ormsby. **A most wonderful son of Creator.**

PABST CREATOR MUTUAL DE KOL—a ten-month-old son of Creator—from Pabst Sweet Clover with two records above 30 lbs., making 34.78 lbs. during her best period from 667 lbs. milk. She is one of the high record daughters of King Pontiac Champion and sold for $3,500. Two nearest dams of this bull average over 36 lbs. butter and 730 lbs. milk.

PABST KING PONTIAC LAD 33d—an eight-month-old son of Pabst King Pontiac Lad from Pabst Maplecrest Arrowhead that as a junior 4-year-old made 33.90 lbs. butter and is now making a good year record. Her dam has a record of over 28 lbs., while she is sired by a son of Friend Hengerveld De Kol Butter Boy, from a Pontiac Aaggie Korndyke dam.

PABST PONTIAC WOODCREST—an eight-month-old son of Woodcrest Clyde from a 25-lb. senior 3-year-old daughter of King Pontiac Champion, now on year test. She is a full sister to Pabst Kinnickinnic with over 35 lbs. Her dam is a 26-lb. cow with four 25-lb. daughters.

The West Concord Security Sale

At the Sale Pavilion, WEST CONCORD, MINN.

70 Registered Cows and Heifers 70

These sale animals will go out as advertisements of the herds of West Concord breeders, so you may be very sure that nothing has been entered that will not be a credit to this community.

Individually they are good, they represent the best breeding obtainable in this section of Minnesota and most of them are bred for fall and early winter freshening.

Why You Should Attend This Sale

It is a sale of strictly high class, registered females. No old animals or cull stock will be offered.

70 animals of this quality are not for sale at private treaty in the entire county. They are the kind we like to keep.

Every animal is guaranteed healthy.

The state association is managing it. That guarantees you a square sale.

Mower County Holstein Breeders'
First Annual Sale
October 7, 1920 Austin, Minn.

This is a sale of 60 of the best ones that could be selected from the herds of Mower County—the county that showed the best herd at the State Fair in the county herd class.

Piebe Laura Ollie Homestead King, known the country over as a sire of phenomenal producers, Lola Segis Pontiac Homestead, a 34-lb., 1,000-lb. grandson of "Count" Sir Hengerveld Pietertje Ormsby, a double grandson of S. P. O. M. and others of similar quality will be represented here by sons and daughters or by foundation females bred to them.

This is the first consignment sale the breeders of Mower County have ever held and they have selected the very best to be obtained from the herds of their association members. They have selected the kind of Holsteins they believe you want, large, individually good, well bred, and guaranteed healthy.

Sit down today and write Secretary Scott of the state association for a catalog. See for yourself just what will be offered. You will be interested in it.

This Daughter of S. P. O. M.
— WILL BE SOLD AT —
The Dairy Center Sale

GLEN DE KOL MERCEDES

We Have Consigned this splendid daughter of Sir Pietertje Ormsby Mercedes to the Dairy Center Sale, October 1-2 at Northfield, Minnesota. She is out of Glen De Kol Artis 3rd, grand champion female at the 1913 Minnesota State Fair, she a daughter of Homestead Jr. De Kol.

Glen De Kol Mercedes is a full sister to Lady Glen Artis Ormsby, highest priced female at the 1920 Minnesota state sale. She has a 22-lb. junior 4-year-old record and is now making a splendid year record. She will be bred to our Piebe Laura Ollie Homestead King.

We Are Also Consigning Her Son, Glen Pontiac Mercedes Homestead, born June 10, '20, and sired by Lola Segis Pontiac Homestead, a 34-lb. 1,000-lb. son of Piebe and grandson of "Count". This calf is a splendid individual and combines as closely as possible the blood of S. P. O. M., King Segis Pontiac Count, and Piebe Laura Ollie Homestead King, Minnesota's 3 greatest long distance sires.

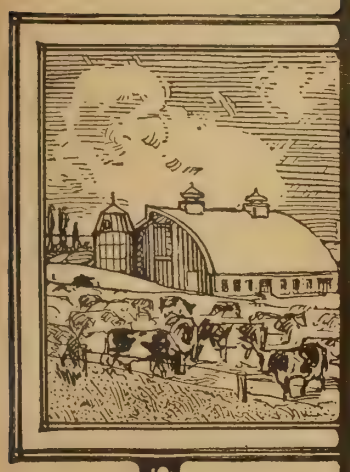
Look for them in your catalog and write us for more complete information.

Minnesota Holstein Co.

V. S. Culver, Sec. and Mgr. AUSTIN, MINN.

Wright County Holstein Sale
Will be Held
October 5 at Howard Lake, Minn.
60 Registered Holsteins 60

The sale will be made up mainly of young cows and heifers, many of them bred to freshen this fall and winter and bred to some of the best sires in the state. Only a very few young bulls will be offered and these few will be good ones.



If you want one or a dozen well bred females of the very best type, be at the Howard Lake sales pavilion on that date. You will find them at the sale and if you do not succeed in getting as many as you want on October 5th, association members will give you every assistance in buying others from the good herds in the county.

The state association is back of this sale and the fact that they have accepted the management of it is a guarantee that everything will be exactly as represented.

Find out just what is offered from your catalog. You can get it by writing.

Makes New Holstein Record

Let Mr. W. F. BRAATZ tell you his own story:

"I am using the Pine Tree Milker on my herd of pure bred Holsteins and wish to say that it is a wonderful machine. I am not only milking my two times a day cows with it, but also those that are on test. These are milked four times a day with very satisfactory results. In fact, we have broken the state record on a junior four year old, in the eight months after calving division. The winner is Prospect Johanna Posch 331115.

"I have never had any udder trouble and can say my cows are doing better work with the Pine Tree Milker than they ever did before."

Yours sincerely,

W. F. BRAATZ,
Maple Grove Stock Farm, Brandon, Wis.

We have always said "Judge It by What It Does". That is all we ask. The wonderful record Pine Tree is making for the country's greatest dairymen is the best guide in choosing a milker for your herd. Judge by results and you are certain of satisfaction—of getting the most milk from your cows and keeping them free from udder or teat trouble.

Farmers struggling with labor troubles and high wages realize that a milking machine will save much time, money and worry—but some still ask, "Do machines milk as well as men?" Here is a machine that milks *better*. Enthusiastic Pine Tree owners the country over tell you so. You can no longer afford to milk by hand. Now is the time to investigate.

See your nearby Pine Tree Dealer and let him show you everything. Or write today for our big free book on machine milking. Get all the facts before you buy.

Subscription Rates

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

What the Bank Does at Grove City

Making capital immediately and easily available to the farmers has been the function of the Grove City, Pa., National Bank in the development of the dairy enterprise in its community. A representative of the bank, which will have a booth at the National Dairy Show, as a part of the exhibit of the United States Department of Agriculture, will be glad to tell those interested how other banks may aid in developing dairy communities. Here are some of the things the bank has done that are applicable to other communities:

Since 1916 it has assisted in the purchase and distribution, among farmer patrons of the creamery, of 12 carloads of pure-bred tuberculin tested dairy cattle. In the immediate vicinity of Grove City there are now more than 250 farmers owning one or more pure-bred dairy animals. The bank has financed the somewhat extensive purchase of the best available bulls. It provided prizes for the local stock show; aided the boys' and girls' club work; gave support to an accredited herd association; and encouraged thrift clubs among school children. In addition the bank publishes a dairy newspaper sent free to every farmer in the community.

New Georgia Jersey Record

Raleigh's Corinne, a Jersey owned by J. R. Humphries of Georgia, has broken all records for the state for butterfat production. In a record begun at three years and eight months, she has produced 13,917 lbs. milk containing 772 lbs. butterfat. This cow was bred, developed, and tested in Georgia. Her record gives her fifth place in her class for the breed.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

Dairy John's Philosophy

I wouldn't give two shucks for a pedigree bull that had a temper like a bunch of for-get-me-nots. Fire in his eyes is as necessary as meat in a mince pie.

A fine young heifer on the farm, with a family name written on its papers, is as much a promise of prosperity as changing from mud roads to concrete.

The milkmaid has not gone out of fashion—it's just that she does it all by electricity.

The County Fair

Once again the apples,
In a handsome row,
Once again the ribbon crops,
Prettied-up for show.
Pictures made from kernels
Of the golden corn.
Farmers proud and happy.
They weren't city-born.

Tractors under canvas,
Some exhibiting,
Motor cars and trucking cars
Fine as anything!
Sows that grunt and sniffle,
From their weight of fat.
Handsome cows and mild-eyed cows
Leave it go at that!

Flags on tents a-flying,
Trotting races, too.
Lemonade that's crimson,
Lots of things to do.
Little babies crying,
Side shows quaint and queer;
But th' fair seems better
Every passing year.

"Has Eb Brown a new lighting plant on his farm?"

"You bet he has. And since electric lights have been put in the rooms of the help, everybody stays up reading so late, they can't start work next day till around nine. When Eb has her going full strength, the neighbors think a circus has come to town."

The Lonely Life

"Poor man," said the city feller to the big dairy farmer, "What a lonely life you must lead all winter, snowbound and with no place to go. Do you find trouble arranging for entertainment?"

"Yep," was the answer, "already we have sixty-three big dances arranged for December, and it's a mighty hard job to plan a schedule without missin' one of 'em."

October

The shocks of corn in the field.
The bright yellow pumpkins in and around them.
The bumper crops of everything.
The knowledge that the big jobs are almost over.
The cutting of the ensilage.
The cattle grazing over what's left behind.
The bulging barn that won't hold any more.
The song of the cider mill.
The jams and jellies and preserves that mother put up.
The time to stop and enjoy your pipe.
The oiling up of harness.
The smile the country banker gives you.
The knowledge that your credit was never better.

Some folks think that there is no difference in milk—it's all just milk. What about folks? Some have more breeding than others, haven't they?

There's Just One 100% Efficient

CREAM SEPARATOR

And That's The

DE LAVAL

For Forty Years

The World's Standard

There may be a half-dozen plows, wagons, tractors, autos or other farm equipment to choose between, but no would-be imitator or utilizer of expired De Laval patents has yet produced a cream separator comparable with the De Laval.

First in the beginning, De Laval machines have led in every step of cream separator improvement and development. Every year has presented some new feature or betterment, and the 1920 machines are still better than they have ever been before.

If you haven t seen or tried a new 1920 De Laval machine, any local agent will be glad to afford you the opportunity to do so.

If you don't know the nearest De Laval local agent simply address the nearest main office as below.

Dr. Entz, Friend of Children

FRANK M. CHASE, KANSAS

FIVE CHILDREN MAKING THE GREATEST GAIN IN LOST SPRINGS SCHOOLS

They gained from 1½ to 3 lbs. in ten weeks. One pound is normal gain for children of this age in this length of time according to chart prepared by Dr. Thos. Wood, Bureau of Education, Washington, D. C.

THE country doctor is proverbially the friend of children. Dr. J. J. Entz of Kansas is particularly so. He might in fairness be called their "wholesale" friend; for, besides sharing the peculiar love of the physician for the babies whom he helps to enter this world and the confidence of the young folks who have learned to trust him in illness, he is helping the children of a whole county to grow up into better men and women. His friendship extends be-

DR. J. J. ENTZ

yond telling stories to bribe the taking of distasteful medicine, into a service that will bring them returns throughout their lives.

As the medical officer of Marion County, Doctor Entz directed an examination of the children attending the rural schools, including those in towns of not more than 500 inhabitants. Data was obtained on 3,704 children; though the survey was as thorough as possible, it was estimated that about 400 pupils were missed through absences and other causes.

The age, weight, and height of every child was taken. By comparing this information with a standard chart showing the correct weight and height for children of a certain age, it was possible to tell whether the child was normal in weight. Such physical defects as bad tonsils, adenoids, and eye strain were also noted. Miss Cora Gui, a public health nurse employed by the Red Cross, assisted Doctor Entz in making this investigation.

The information relative to the weights of children especially revealed conditions needing attention. Sixty-nine of every hundred were found to be 2 per cent or more underweight, 19 were overweight, only 12 being normal. Among the youngsters carrying too much flesh, the average percentage of overweight was 9.5. Overweight children were most numerous in the ages between 10 and 15 years. So far as the investigation showed, the physical condition of neither the underweight nor overweight children improved as they grew older.

Striking as the foregoing statistics are, a more distressful fact is, that of the 69 underweight children in every hundred 34 of them did not come within 8 per cent of weighing what they should. As by child welfare standards a condition of 8 per cent or more of underweight is considered alarming, this group certainly needed a friend. And they found one in Doctor Entz, as we shall see.

An unfortunate thing about many surveys is that they end with the gathering of a lot of data. But this investigation in Marion County was not of that kind. The information obtained through the examination of the school children indicated to Doctor Entz the pressing need for some corrective measures in the diet of the children, and he decided to act upon the facts in the case.

Now regulating the diet of school children is not an easy matter for the county medical officer, or for anyone else outside their homes. He can advise and recommend and suggest to his heart's content, but when it comes to compelling the pupils as to what they shall or shall not eat he is not likely to get very far—not in America anyway. Accordingly whatever action was decided upon had to be taken with the full knowledge and consent of all persons concerned.

The results of the health survey were placed before Miss Rena Faubion, a specialist in milk utilization representing the Kansas State Agricultural College and the United States Department of Agriculture. A consultation followed, to consider the case of the Marion County school children. This was attended by Doctor Entz, Miss Faubion, another milk utilization expert, the county public school nurse, county superintendent, and the county agricultural agent; and when the "doctors" ended their diagnosing and consulting and finally wrote the prescription, it called for plain, ordinary cow's milk.

How to administer the "medicine" constituted the next problem. To solve it Miss Faubion remained in Marion County four weeks, during which she visited 30 schools, presenting the plan and asking for the co-operation of teachers, parents, school boards, and children. She asked that some arrangement be made whereby children could have milk to drink at school at regular intervals. The children were to be weighed at the beginning of the test and at the end of every month thereafter, so that the effect of the milk feeding could be noted.

Five schools agreed to carry out the experiment. Four of these were in rural districts, the other being in a small town. Pupils of the first and second grades only were included in the trial.

The expense of the milk feeding was met in several ways. Some of the schools had money on hand which could be used for buying bottles, bottle caps, and straws, the children bringing the milk from their homes. In other schools the parents provided all the equipment that was necessary, while one school board voted to purchase all the supplies, including the milk.

Each child in the test consumed one pint of milk daily, drinking one-half pint just before the morning and afternoon recesses. Some exceedingly interesting and valuable results were obtained from this use of milk. In one rural school the smallest gain in weight the first month was three pounds, while one boy gained 15 lbs. In another school the milk caused an average gain of 1¼ lbs. the first month, and 1.1 lbs. the second.

The milk also was found to be a corrective for overweight children, as well as for those weighing too little. One overweight child lost 2 lbs. the first month. In another case a boy who was 20 lbs. overweight, disposed of his surplus at the rate of a pound a month. The improvement in the overweight children was probably due to the fact that the milk replaced the rich food which they formerly ate between meals.

At Lost Springs the school board became so interested in the milk feeding project that it bought all the necessary utensils. These included a tin cup for every child in the first and second grades; a large pan in which the cups of milk could be carried to the children and in which the cups were washed; an electric hot plate for heating water; a teakettle and a dipper.

Though the foregoing supplies cost $21, this progressive school board considered that a small investment indeed to make in the children's health. While the experiment was in progress last spring, therefore, the board purchased 3½ gallons of milk every school day, at a cost of 40 cents a gallon, and had it delivered at the school house. The girls of the eighth grade assisted the teacher in serving the milk and in washing the cups.

In the primary room of this school were 25 small children. Twenty-eight per cent of them were 10 per cent or more underweight. Then along came Doctor Milk's twice-daily trips to the

THE CHILDREN IN THE PRIMARY ROOM IN LOST SPRINGS SCHOOL DRANK MILK MID-MORNING AND MID-AFTERNOON

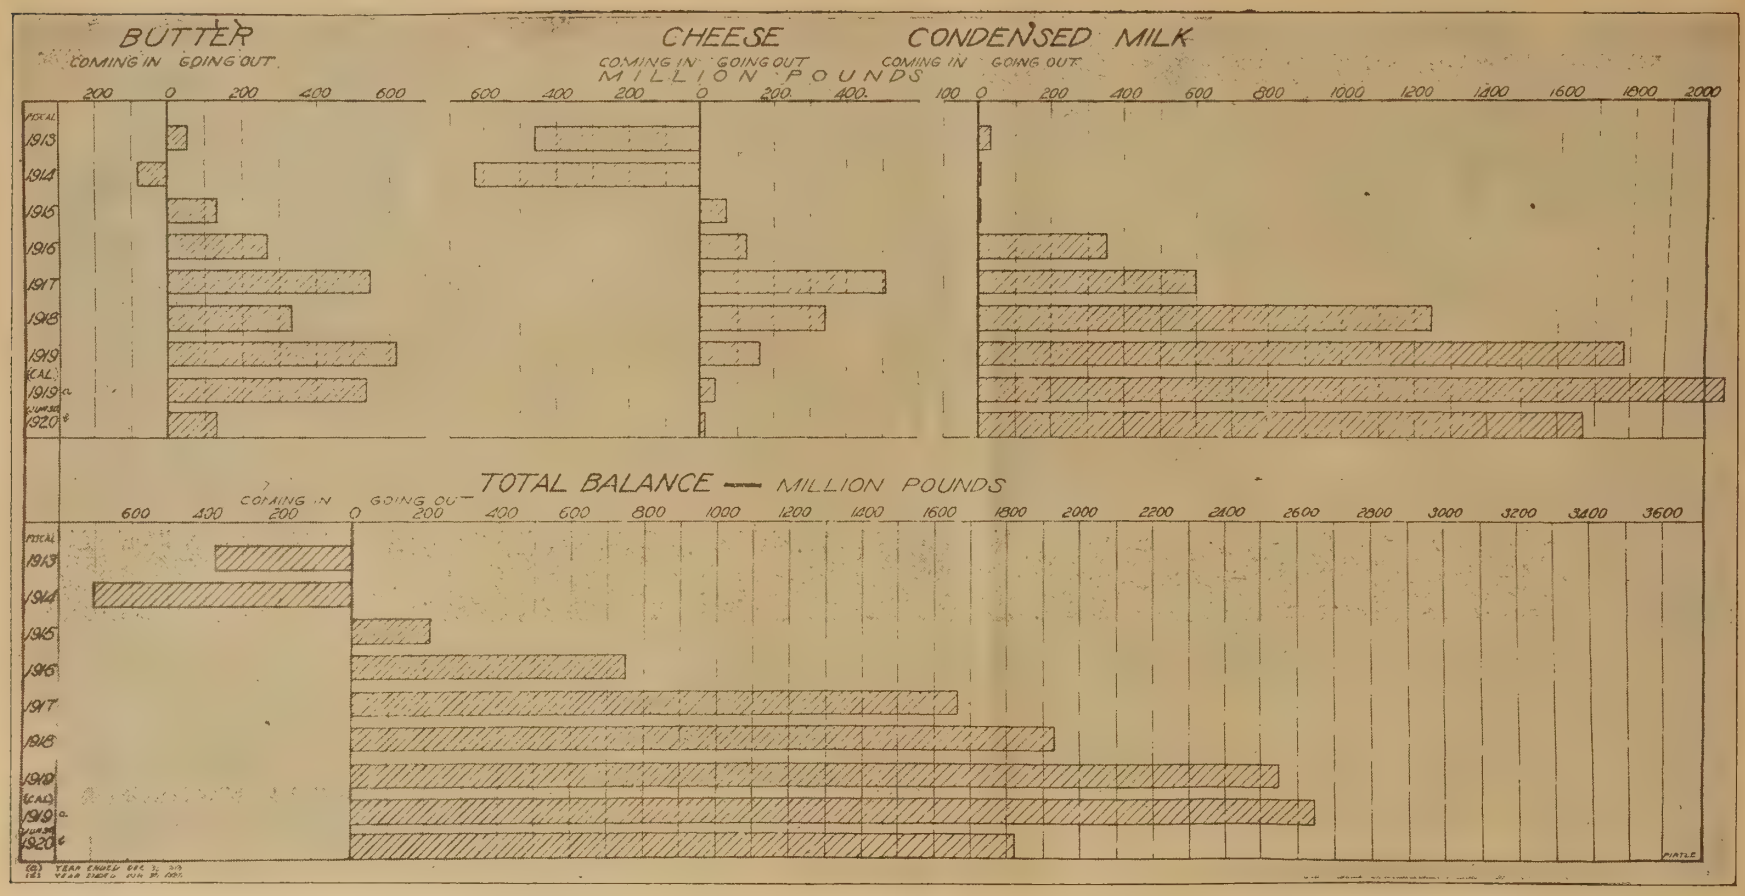
DR. ENTZ AND PUBLIC HEALTH NURSE WEIGHING, MEASURING, AND EXAMINING SCHOOL CHILDREN

undernourished bodies. Though the underweight children gained the most rapidly, the average gain of all the pupils in the room the first month was 1½ lbs. This is more than double the normal gain. The largest gain of any child in the room that month was 3 lbs. Do not these results justify every cent which this wide awake school board spent for milk?

The work of Doctor Entz in bringing about these object lessons in the importance of milk to children is resulting in a better appreciation of this food in the homes of Marion County. Many boys and girls are going to have better bodies and keener minds because of him. Both children and parents should be very thankful for a friend like Doctor Entz.

Seeding Grass Seed in Autumn

HOARD'S DAIRYMAN:—There are farmers everywhere who cling most tenaciously to the notion that fall seeding of grass with fall grain is the best; that they get a better "stand" and a better yield of hay crop than from spring seeding. This fact only explains that the business of farming is not one of absolute but relative achievements. The kind of soil, lay of land, and condition of weather—all these play an important part in the production of the crop. What may successfully be carried out in one locality and one field will not do in another field.



The fact that frequently better and more hay may be obtained through fall than spring seeding may be attributed to the following causes: It may happen that the soil is of loose texture and is easily workable, a soil that otherwise cannot long retain moisture in the early summer and in times of drouth. If the grass is seeded in the spring, continued drouth in the early summer may dry up the little grass plantlets.

By seeding grass seed in the fall, the seeds of weeds as well as those of grass will germinate and the early frost will then largely kill the early germinated weed seeds and not hurt the germinated grass seeds. In this manner many weeds that might otherwise do positive injury to young grass are put out of the way altogether. It should be remembered that grass seed and cereal grain will germinate and grow at much lower temperatures than most of the really hurtful weeds. Those weeds that do not germinate will not cause annoyance to the grass plantlets when they have once become established. Fall grain seeded with grass will help to hold a covering of snow upon the land during the winter and so work to shield the grass from harm.

Wisconsin. J. F. WOJTA.

Reward the vegetables that behaved well this season by saving the seed for next season's planting.

Balance of Trade in Dairy Products

THIS chart was plotted by the United States Dairy Division to show the differences in the exports and imports of the three major dairy products in terms of whole milk, assuming that one pound of butter equals 21 lbs. milk, one pound of cheese equals 10 lbs. milk, and one pound of condensed or evaporated milk equals 2½ lbs. milk.

The total imports and exports of these products for the year ending June 30, 1920, are shown in the following table, but attention is drawn to the fact that this is given in pounds of each of the three products themselves and not in their milk equivalent as in the case of the chart:

	Imports, lbs.	Exports, lbs.	Net exports, lbs.
Butter	20,770,959	27,155,834	6,384,375
Cheese	17,913,682	19,398,158	1,464,476
Condensed milk	19,080,642	638,463,187	669,382,545

N. Y. Farmer—Business Conference

H. H. LYON, NEW YORK

NEW YORKERS are quite in earnest in relation to the betterment of farm conditions. Among the various activities there has just been held a conference under the direction of the Council of Farms and Markets, at which W. E. Dana, president of the council, presided. In the morning four somewhat notable addresses were given. Commissioner Hogue of the Department of Agriculture, Commissioner Porter of the Department of Markets, Dean Mann of the state college, and President Strivings of the State Federation of Farm Bureaus were the speakers at that session.

Mr. Hogue asserted that at no period has so much of applied science reached agricultural activities as during the past few years. With less labor available there has been much greater production. It might almost seem from Mr. Hogue's arguments that production has outstripped the facilities of business to handle the products, as indeed is the opinion of farmers. The reason for the meeting was to find methods of relief in the way of financing agriculture, of making transportation of better avail, affording means of storage, and perfecting marketing conditions.

⚜

Commissioner Porter asked for refrigerator trains for fruits and vegetables, and for the various cities to encourage co-operative marketing and similar means to secure foods at lower costs. Cold storage is needed for farmers to hold products over times of surplus and so avoid waste, at the same time stabilize prices. He went further and said that the present returns to farmers are not such as to encourage the present generation sticking to the farm. The cities of the state have increased in population by 25 to over 200 per cent. Every rural county shows a decrease.

⚜

Dean Mann also thinks the present is a time for action. It is a time for co-operation, not alone among farmers or groups of citizens but for all those who are interested in the public welfare to get together and come to some understanding relative to the duty that confronts all. He advised the appointment of a committee to consist of representatives of bankers, shippers, traffic managers, farmers, and the Council of Farms and Markets to work out some adequate plan as an agricultural program to better the present conditions.

⚜

Mr. Strivings is very optimistic as to the future of organized agriculture, especially as shown in the farm bureau movement. He believes that the business of the farmer is to produce, but thinks that there should be compensation for production. It is there-

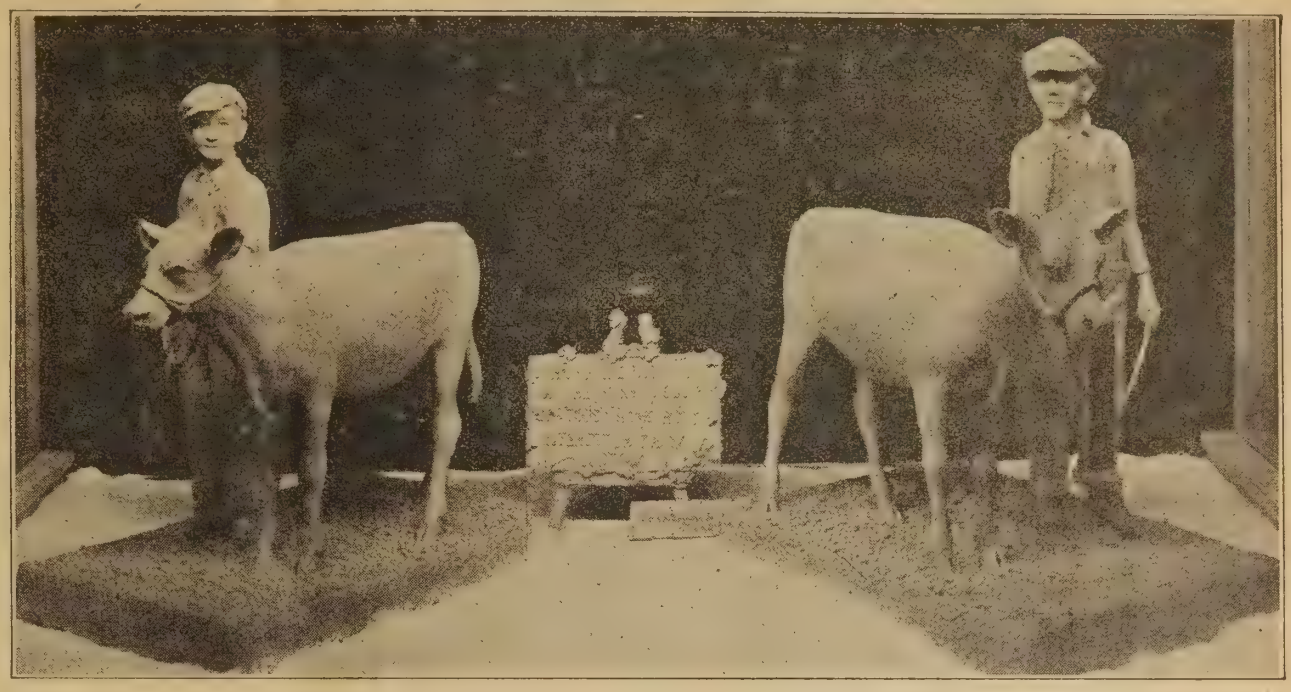
OUTAGAMIE COUNTY, WISCONSIN, GUERNSEY ENTHUSIASTS RECENTLY TOOK AN AUTO EXCURSION TO VISIT PROMINENT HERDS OF GUERNSEYS IN NEIGHBORING COUNTIES. ONE OF THE STOPS MADE WAS AT THE FRED INGALLS' FARM, WHERE THE ABOVE PHOTOGRAPH WAS TAKEN. THE FOND DU LAC GUERNSEY BREEDERS' ASSOCIATION SERVED DINNER TO THEIR GUESTS ON THIS FARM

Nebraska State Fair

W. A. DOBBINS, NEBRASKA

THE 1920 Nebraska prosperity fair broke former records for total attendance and for the volume of the exhibits. Approximately 300,000 visitors passed through the gates. The immense crops of all kinds raised in the state this year were reflected in the great displays. The horse exhibit was not as large as other years, but Secretary E. R. Danielson of the state fair board said that the horse will come back in spite of the keen rivalry of the automobile.



The Nebraska dairy exhibit at the state fair this year was up to its usual high standard. Perhaps the outstanding feature was what was called a "cow's pantry". Here was displayed the milk and butter ability of the Nebraska champion Holstein cow, Tulip Pietertje Konigen 2d, owned by Starke Brothers. She produced 26,721 pounds of milk and 1,066 pounds of butter in twelve months. It required 315 ten-gallon cans to hold the milk she produced, and this was shown in a striking way by that number of cans filled with milk. Alongside the cans were samples indicating the kind and quantity of the feed consumed for the year covering her remarkable record.

Huge quantities of alfalfa, corn, and other feed brought home forceably to city men and women what it costs in money to produce milk in these days of the high cost of living. A complete record kept of what the champion cow ate showed that she consumed 498 pounds of oats, 2,312 of wheat bran, 1,790 of ground corn, 463 of ground barley, 1,352 of oil meal, 1,254 of beet pulp, 4,680 of corn silage, 4,068 of alfalfa, and 9,645 pounds of sugar beets.

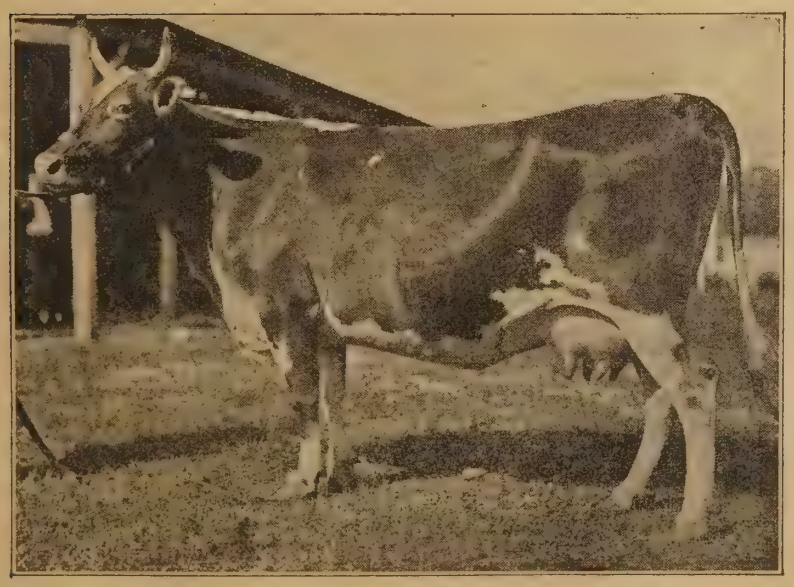
The butter statue this year emphasized the importance of the boys' and girls' club work. It was considered a beautiful creation of art as well as utility, fashioned with great skill and fidelity. It represented two prize-winning calves and two equally perfect boys. It was exhibited under the auspices of the Nebraska Creamery Association, and according to Professor J. H. Frandsen, head of the University of Nebraska Dairy Department, it was one of the best of the long list of butter statues which has made the Nebraska State Fair famous.

The university dairy exhibit was in charge of Professors Hendrickson and Boeher. The general dairy display was financed by the Nebraska State Dairymen's Association and was under the direction of a committee consisting of J. E. Palm, secretary; H. A. Morrison, president; and Professor Frandsen of the University Dairy Department. The latter said that the hearty support and financial assistance of the state dairymen's organization and the excellent work of Professors Hendrickson, Boeher, and Thompson and the young women of the University Dairy Department contributed to the best dairy exhibit ever shown at a Nebraska State Fair. He expressed the hope that the state

(Continued on page 442)

THE BUTTER STATUE EXHIBITED AT THE NEBRASKA STATE FAIR UNDER THE AUSPICES OF THE NEBRASKA CREAMERY ASSOCIATION. IT REPRESENTS TWO PRIZE WINNING CALVES HELD BY BOYS

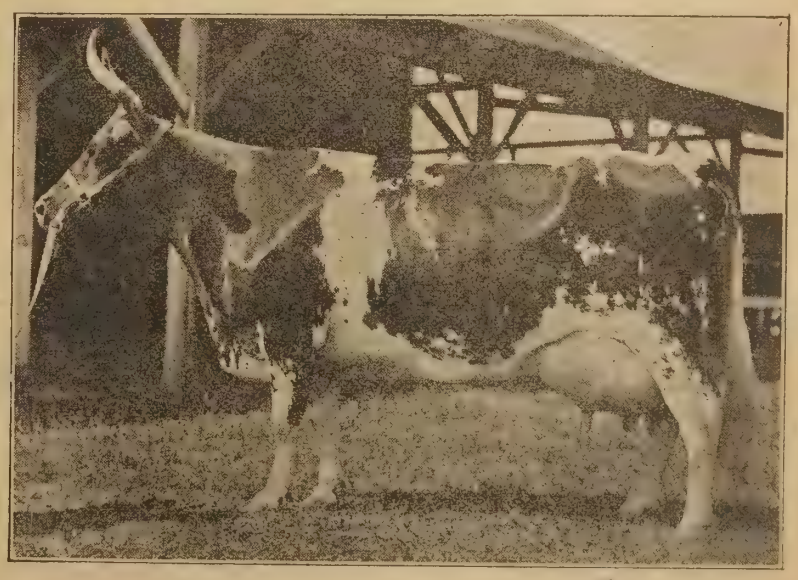
THE ALFALFA MARKET



SANDERS SOSLAND, MISSOURI

WITH the passing of summer, dairymen, are scrutinizing the position of alfalfa markets preparatory to accumulating supplies for their stock during the fall and winter seasons. Many milk producers have profited by buying their deferred needs of alfalfa and clover during September, or about this time, though occasional losses also have been suffered by consuming interests when markets failed to follow seasonable price movements. The trend of values during the fall and winter seasons of the past three years resulted in profits from the purchase of alfalfa on a liberal scale in the early autumn. Demand and supply conditions today, however, are unlike those which prevailed during the late summer and early fall of the last three years. For this reason, the consuming trade is more reluctant to take hold.

Alfalfa hay is in a very weak position at the present writing, the weakness following an extended period of remarkable strength and sharp advances in prices. It is not unusual to witness an easy tone in alfalfa during September; in fact, under normal marketing conditions the legume frequently recedes to the lowest level of the season during this month. Whether the absence of important buying power will permit declines of a material character before the market reaches a firm basis is questionable. The influences which brought about the upturns in prices were largely artificial, and having since almost entirely disappeared, the trade is naturally more friendly to the bearish side.



Immediately after the public announcement by the Interstate Commerce Commission of the advances in railroad freight rates, a great wave of buying developed, which gained momentum rapidly during the twenty-six days preceding the date when the new schedule of tariffs became effective. The buying of hay was not the result of an exhaustion of stocks in hands of consumers, nor was it based on any particular bullish theories which the trade in alfalfa entertained. But dairymen, cattle feeders, alfalfa millers, and other consuming interests saw approaching an increase in freight rates which markets could not easily offset. From Kansas City, the largest alfalfa market in the United States, to the dairy districts of the East and to points in the Southeast, the increase in freight rates under the

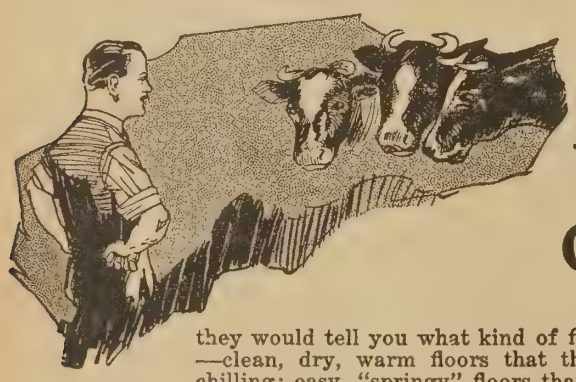
Dandelion Butter Color" Is Big Prize Winner

Be sure and use Dandelion Brand Butter Color and give your butter that June golden shade which brings top prices —pleasing the eye and tempting the palate.



The High Scores of 1920

In many of the State Buttermakers' Shows, first awards were won by users of old reliable "Dandelion Brand." You can't miss by giving a trial to the butter color which helps 90% of the successful buttermakers of America.

Never gets rancid. Doesn't affect flavor.
Doesn't color the buttermilk. Leaves no sediment.
Colors more butter to the gallon.

Dandelion Brand Butter Color is purely vegetable and fully meets requirements of all Food laws—State and National. Ask your jobber for prices.

WELLS & RICHARDSON CO., Inc. BURLINGTON, VERMONT

If Your Cows Could Talk

they would tell you what kind of floors to put in their stalls —clean, dry, warm floors that they could lie on without chilling; easy, "springy" floors that wouldn't hurt their feet and make their knees stiff; safe floors that they could step on without slipping. And they would promise to give more milk and to have less need for the veterinary if you would provide stall floors like this.

Your cows do their best for you. Why not reciprocate and give them warm, safe and comfortable floors to stand and lie on during the long winter months?

The 28-page illustrated book, "Better Stall Floors", tells you exactly what your cows need—Circle A Cork Brick. Send for your copy today. It and a sample of Circle A Cork Brick will be sent free of charge on request.

Vermont Ayrshire Club Meeting

HOARD'S DAIRYMAN:—The fourth annual meeting of the Vermont Ayrshire Club was held with Mr. and Mrs. F. B. Catlin, at the Green Mountain Stock Farm. Local showers kept down the attendance but representative breeders from over the state were present and a good meeting held. The forenoon was spent in inspecting the herd of Ayrshires which Mr. Catlin has and in meeting and getting acquainted with other breeders present.

After a basket lunch supplemented by hot coffee furnished by Mr. and Mrs. Catlin, the business meeting of the club was held. The report of the year's activities of the club was made by C. N. Smith, secretary-treasurer, and accepted. The report of the sales committee, of which C. W. Wilson of Vergennes is chairman, was made. This sale will be held October 26th in Rutland and will be a representative sale of selected Ayrshires from some twenty-five Vermont breeders. The election of officers for the ensuing year resulted in Geo. H. Dunsmore, St. Albans, president; C. N. Smith, Brandon, secretary-treasurer; F. B. Catlin, Randolph, auditor; with C. W. Wilson, Vergennes, and B. F. Butterfield, Derby Line, additional members of the executive committee. Vice-presidents were elected from each county.

Commissioner of Agriculture E. S. Brigham, gave a talk on "Tuberculosis Eradication in Vermont". He stated that $265,269.77 had been spent in the fiscal year to June 30, 1920, that 36,741 animals had been tested in co-operation, of which 9,769 were purebreds. To date 52,616 animals have been tested representing 14% of the cattle in the state. The results have been very satisfactory. The department has tested 1,343 herds which have passed one test without a reactor and had over 1,900 herds under supervision July 1st, 1920. These results have created a demand for Vermont bred animals and the ultimate results of tuberculosis eradication is assured. He asked for the co-operation of breeders in carrying on the program of eradication work.

J. G. Watson, secretary, National Ayrshire Breeders' Association, asked the support of breeders in tuberculosis eradication work and emphasized the increased value added to dairy cattle of the state and nation through the elimination of this disease, for the co-operation of breeders in showing at local fair throughout the state one or more representative animals bringing publicity to the Ayrshire and the individual herd represented and to the dairy industry generally. He called the attention of breeders to the necessity of growing young stock to early maturity and the demand for animals of good scale irrespective of breed. Publicity to available and surplus stock through advertising is a necessity which breeders must give consideration. He also gave a judging and scoring demonstration on three animals emphasizing the need of constitution, capacity, and udder development, in the dairy cow.

A pleasant and profitable day was spent by those present and a vote of thanks was given Mr. and Mrs. Catlin for their hospitality during the day.

CLYDE N. SMITH,
Sec., Vermont Ayrshire Club.

AYRSHIRES AT PASTURE ON GREEN MOUNTAIN STOCK FARM

This herd produced milk the cheapest of any of 2,500 herds in New England under investigation by the Boston Chamber of Commerce. Mr. Catlin was described as "The Best Farmer in New England" in the report.

The New York Outlook

HOARD'S DAIRYMAN:—For some months we have been congratulating ourselves that we can make a little money this winter in the dairy business. Now that the price making season is almost at hand we find that there is a propaganda looking to lower prices on all that we have to sell, but it does not hit hard much that we buy. Dealers tell us that anything that has steel will not decline for some time. Sugar is down a little but still remains far beyond the general price level. It may return towards its month-ago rate as soon as the farmers have disposed of the beets for the sugar. Groceries still sell at high prices almost everything. Why should we not get a good price for milk?

Now to look for a moment at the shadows that are crossing our path, uninvited and unexpected. Milk dealers, some of them, say that they will close plants the first of October because they are overstocked with goods. It is true that this comes from those that have sent out some apparently false impressions in the past. It may be that it is all for effect but I am afraid that there is some basis for the action.

For some weeks it has been apparent that work is slackening in the big cities. Not until today did I know that it had hit our little villages. Within an hour I met a workman who said that he is out of a job tonight and is going back home. He told of business concerns that advertise for a helper and get over thirty applications. We are in for a hard winter he said. Others in town say the same. This may not make it easier for farmers to get help for some time, and it certainly does not yet, but if continued there will be a difference on the farm. However it may affect the help on farms, it is not going to make for high milk prices. Is it possible that milk can be depressed as low as last winter? We have been sure that it could not. Propaganda and a little

fact can be made to go a long way. There will be propaganda in fixing the price but I am afraid that there is a little fact also. Our league officials are studying the problem closely and can be depended upon to make as good a bargain as circumstances warrant.

The fall growth for feeding is fine and many farmers have turned into the meadows. I do not approve of that practice generally speaking. There are cases, however, where it may be wise to pasture down some aftergrowth. Commonly we like to mow off some and feed in the barn. Alfalfa is too particular a crop for general use but fields can be found on most farms where it can be grown. On the home farm second growth is being fed direct from the field and during the past month since feeding alfalfa there has been an increase of nearly fifty per cent in milk and no additional grain until within a few days. There could not have been so large an increase under all conditions, but this feed is the best that has been tried. Better let it wilt a little before feeding. That is true when feeding "sowed" corn, oats, and peas, etc. Alfalfa is worth while even in this section but it is no slouch of a job to make grow and do well.

Grain has been fed for nearly or quite two months, but generally speaking farmers have not fed as much as formerly on account of the high price of grain feeds. One dairyman told me a day or so ago that he wanted to get his feed 23 cents a hundred less than the milk brings and then he can afford to feed it. We haven't been getting it for that, yet it probably is best to feed some grain as soon as the pasture feed drops back, say in July. Now we are getting that much margin and there ought to be some profit to make up for the loss on the grain fed in July and August. Not entirely encouraging to be sure when we cannot figure a profit on the grain for the three months, yet we believe in feeding some grain. It will have an after affect. Some are figuring on $65 grain feed for the winter.

New York. H. H. LYON.

Wisconsin Dairy Council Membership

During the month of August twenty-one members joined the Wisconsin Dairy Council, among these members are two condenseries, two manufacturers of dairy barn equipment, one breed association, ten creameries, six cheese factories, and one farm bureau. The Rock County Farm Bureau subscribed $200 to general Dairy Council fund and set aside $200 to be used as the basis of an advertising campaign fund for Rock County. A committee of the farm bureau has been appointed to meet with distributors in Rock County to raise a $1,000 fund for advertising the food value of dairy products in Rock County.

At the Wisconsin State Fair the Dairy Council had three exhibits, two featuring the food value of dairy products and one featuring our membership. Pamphlets were distributed from the latter booth as well as from the Dairy and Food Commissioner's booth, where high quality cheese and butter were given away on a cracker or rye bread. It seems a shame that so few creameries and cheese factories are supporting the Wisconsin Dairy Council. Representatives from many firms called at the Dairy Council booth and secured a list of our membership, therefore we hope our members supply them with high quality dairy products when the prospective patrons write for trial orders. Many called to get a set of our attractive posters for exhibition purposes but they failed to leave their membership or even ask for charges on same, therefore it is quite evident that the dairymen want to advertise but they want the other fellow to pay the bill.

Remember, gentlemen, that it takes money to advertise and if you expect great results from the Dairy Council you must put considerable money into the council treasury. Your help is solicited for the good of the dairy industry. Interest your friends and neighbors in this progressive work that costs so little, yet means so much to the health, wealth, and happiness of our people and state.

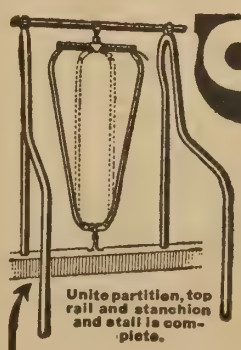
J. F. THOMAS, Field Secretary.

When the Cow Kicks over an open pail the milk is spilled and lost. This cannot happen if you use a Non-Spill Sanitary Dairy Pail. This new pail is spill-proof. An automatic valve is your protection against spills. This simple device saves milk and money for you.

The Pail Pays for Itself several times over during the summer season when the flies and heat cause the cow to kick. It is a protection against costly milk waste by spills.

The Non-Spill Pail is absolutely sanitary. It is made of heavy charcoal tin plate. Its seams are smoothly soldered, leaving no crevices where germs can lodge. Its capacity is 3 gallons. A closely woven brass sieve, protected by a non-splash rim, strains the milk and keeps dirt and foreign substances out of the pail.

Your local dealer sells it or will get it for you. It's a Schlueter metal product.



Dealers: Write for our special proposition. Your customers will want Non-Spill Sanitary Dairy Pails.

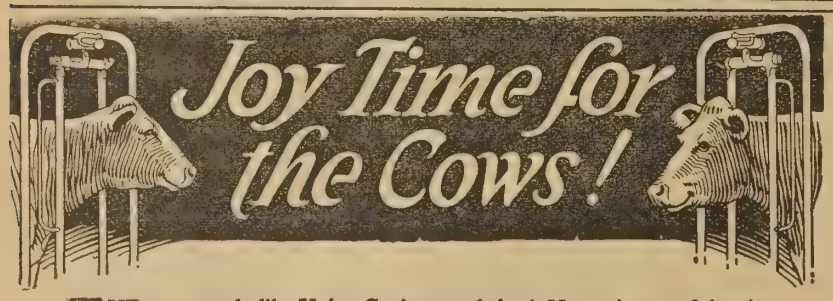
Insist upon a WEBSTER MAGNETO *Equipped Engine*

WHEN you buy your next farm engine, insist upon getting one that is equipped with a *Webster* Magneto. For a *Webster*-equipped engine will give you better service.

It will be longer lived. It will be easier to start and it will require less attention.

85% of the manufacturers of farm engines, using make-and-break ignition, now equip their engines with this sturdy, dependable Magneto, because it renders the most efficient service — always — under all conditions. Just as over 600,000 *Webster*-Equipped Engines are now doing.



WEBSTER MAGNETO

The *Webster* is water-proof; its permanent, rigidly fixed, one piece windings will stand repeated soakings. It is oil proof. It has no brushes or rubbing contacts. Its unwound inductor permits the use of a solid shaft and lighter springs. ***This means quick, sure spark action.***

There are over 46 *Webster* magneto service stations in the country. We also maintain a field force of magneto specialists. A specialist, a service station man or a dealer selling *Webster*-equipped engines is ready at any time to aid you in securing better results from your magneto.

If you now own a engine that is not *Webster*-equipped, *write* us and we will see that you are supplied.

THE cows surely like Union Grains—and that's Nature's way of showing that it's good for them. It contains just the right elements to make cows happy and healthy, with the big flow of milk that it is sure to bring.

Hundreds of the most successful dairymen who are feed experts themselves use Union Grains because in careful tests in which they weighed the milk and figured the cost of feed—Union Grains proved itself more economical.

It saves the time and trouble of mixing, too, and makes it possible to use that time to better advantage. Feed Union Grains and you know the feed is always right. Know where you make and where you lose money by keeping a Ubiko Cost Sheet. It will tell you which feeds and which cows pay best. Write for it. It's free.

We also make Ubiko Calf Meal, Ubiko Stock Feed, Ubiko Pig Meal and Ubiko Poultry Feeds.

Association Notes

Southern Blair County, Pennsylvania:—August market milk testing 4% sold for $3.88 per cwt. and 4c per point above. Feeds have varied little in price since last month.

North Branch, Pennsylvania:—There is an increased interest in balanced rations and home mixing of feeds. Market milk in August, testing 3%, sold for $3.85 per cwt. and 4c per point above. Milk retails for 14c per quart and butter for 75c per pound. Feeds are charged as follows: oats, 65c per bushel; corn, $1.45; middlings, $65 per ton; bran, $60; cottonseed meal (36%), $85; linseed meal, $77.

Canyon County, Idaho:—In this association there were nine silos and eight milking machines being used. Two men are trying out sunflowers for silage. The August price for butterfat was 68c per pound at the creamery and 74c per pound at the condensery. Hay is rated at $12 per ton.

Johnstown, Colorado:—One dairy purchased a 13-month-old registered Holstein bull during August. Another farm has improved its dairy barn with a coat of whitewash. August milk sold at the condensery for $3 per cwt. The condensery and the creamery each paid 75c per pound for fat. Milk retails for 15c per quart. Feed prices are: Silage, $7 to $10 per ton; alfalfa, $12 to $15; dried beet pulp, $1.75 per cwt.; bran, $2.55; cottonseed meal, $4; oil meal, $4.40; crushed oats, $2.80; crushed barley, $2.70; milo maize, ground, $2.25; chopped corn or corn meal, $3.15.

Platte, Boulder, St. Vrain Valleys, Colorado:—Four unprofitable cows were replaced with three registered ones. One Guernsey sire was purchased. The dairymen in general are beginning to feed better rations. The condensery paid 75c per pound for fat in August, and the creamery paid the same price. Milk retails for 12½ to 15c per quart and butter for 60c per pound. The following are the local prices for feed: alfalfa, $14 to $16 per ton; corn silage, $7; corn chop, $3.50 per cwt.; barley, $4; oats, $4; dried beet pulp, $1.75; cottonseed meal, $4; linseed meal, $4.50.

Dodge County Central, Minnesota:—There were twenty-two unprofitable cows sold in August. Many members are feeding grain to their cattle because of low pasture. The creamery paid 66c per pound for fat and the cheese factory paid 50c to 58c. Milk retails for 11c per quart, butter for 66c per pound, and cheese for 24c. Oil meal is rated at $65 per ton; bran, $48; cottonseed meal, $80; oats, 50c per bushel; corn, 98c; barley, 86c.

Bourbon County Co-operative, Kansas:—All feedstuff is coming down. There will be an abundance of silage this fall, due to the large amount of rain in August. Many members have been unable to build silos due, it seems, to a scarcity of material. Several unprofitable cows have been weeded out. August market milk testing 4% sold for 27c per gallon. The condensery paid 86¼c per pound for fat. Milk retails for 15c per quart, butter for 60c per pound, and cheese for 40c per pound. Feed prices are: bran, $2.20 per cwt.; cottonseed meal, $4; oil meal, $4.25; oats, 50c per bushel.

Butler Road, Ohio:—This is a one hundred per cent pure-bred sire association. Its members are buying feed in carload lots. During Aug. 27 cows and heifers were sold to an Oklahoma breeder. Market milk testing 3.5% sold for 35½c per gallon. Oil meal is rated at $70 per ton; cottonseed meal, $82; bran, $60; Larro, $78.

Empire, Wisconsin:—The last grade sire was recently sold for beef and this association now stands one hundred per cent in the use of pure-bred sires. Owing to the scattered location of members, co-operative feed buying is not practical in this association; however, farmers are stocking up on oil meal, bran, etc., before winter prices begin. The crops of home grains and hay are splendid this year. The condensery paid 75c per pound for fat in August, the creamery paid 65c per pound, and the cheese factory 61c. Milk retails for 12c per quart, butter for 64c per pound, and cheese for 25c per pound. Feed prices are: Oil meal, $70—$75 per ton; bran, $45; corn meal, $80; wheat middlings, $65; barley, 90c to $1 per bushel; oats, 60c per bushel.

Otero County, Colorado:—The association in general shows a falling off in production, but two members show an increase in production due to the addition of grain to the ration. The condensery paid $3.10 per cwt. for 3.5% milk during August. Feed prices are: alfalfa, $17 to $20 per ton; corn chop, $5.50 per cwt.; oats, $3; bran, $2 60; shorts, $2.95; linseed meal, $6.50; cottonseed meal, $4.

Douglas County, Colorado:—Seven unprofitable cows were sold in August and 12 head purchased. One cement silo was completed. The association is planning an exhibit at the county fair. During August the creamery paid 75c to 85c per pound for fat. Feed prices are: alfalfa, $20 per ton; silage, $10; bran, $2.75—$3.35 per cwt.; cottonseed meal, $6; linseed meal, $6.50; oats, $4—$4.40; barley, $4; corn chop, $3.25—$4.

Arkansas Valley, Colorado:—At present the dairy situation is very bright and much interest is taken by dairymen. There is an immediate demand for good cows and herdsmen.

About 70 head changed hands in the last few days, 40 averaging $215 and 30 springing heifers $118. The condensery paid $3.20 per cwt. for milk. Alfalfa is rated at $17—$20 per ton; silage, $10; beet pulp wet, $4; bran, $2.10 per cwt.; oats, $2.25; barley, $1.85; corn chop, $2.35; shorts, $2.10.

Canadian Dairy Notes

HOARD'S DAIRYMAN:—We on this side of the International boundary are just completing the most bountiful harvest we have had in four years. In the early part of the season the weather was droughty and all crops got off to a poor start. The hay crop, as a result, was short. Since July 1st, however, rains have been frequent and grain, roots, and corn have made almost a record growth. I have just completed a tour of some of the leading dairy districts of Eastern Canada, and everywhere the grain and corn were a treat to behold. In Western Canada, too, the crop is the most satisfactory in years. Our dairy farmers are figuring on a more plentiful supply of mill feeds and a smaller demand as home grown grains will make the farmers less dependent on the feed dealers than they were last year. Lots of straw and a good corn crop will overcome, to some extent, the drawback of a short hay crop.

Alfalfa has demonstrated its merit this year as never before. The only men with lots of hay are the alfalfa growers. The first cutting was heavier than either red clover or mixed hay and the second cutting is even heavier than the first. Many will have a good third crop as well. I have seen many fields that will yield five tons to the acre this year and few fields will return less than three tons. In most cases, if the crop were sold, it would bring in more money than the selling value of the land. Mr. Scott, an Ontario farmer, sold the standing alfalfa from 15 acres for $1,050 and will have the third crop for himself. The Grimm variety is becoming more and more popular every year because of its hardiness and yield. The great problem is to secure reliable seed of this variety. There are many fakirs to capitalize on its popularity.

Winter Price for Milk

The milk producers' associations have decided that the winter price shall start this year on Sept. 1st, instead of Oct. 1st as heretofore. At a well attended meeting of the Toronto Milk Producers' Association it was decided to ask $3.25 per 80-pound can delivered at the dairies and 84 cents a pound butterfat for sweet cream on a f. o. b. basis, cans supplied. The distributors have accepted this price. The same price will prevail at Hamilton. The price last year was fixed at $3.10 by the Board of Commerce, the producers asking $3.25.

For three years past, city milk producers have worked at a disadvantage. They asked for a price that seemed fair in the fall but rising costs of production often left the balance on the wrong side of the ledger before spring. This year opposite conditions may prevail but if the producer finds price charges working to his advantage he will consider it as no more than his due. On the whole, the outlook for the milk producer this winter is more satisfactory than for four years at least. Cheese factories and creameries have also been paying a fair price for milk although cheese has not been selling as high as in the fall of 1919.

Scrub Bull Legislation

Hoard's Dairyman has evidently been misinformed regarding scrub bull legislation in Ontario. We have no laws compelling a man to keep a pure-bred sire. If a farmer is foolish enough to prefer a scrub to a registered sire he is perfectly free to keep one and always will be so long as the spirit of the people remains what it is. The government of the province is in the hands of the organized farmers with a farmer premier and a cabinet also largely composed of farmers and there is no danger of such a government becoming quite so autocratic. The agricultural representatives referred to in your editorial asked that legislation be enacted forbidding a man keeping a scrub bull for service in neighboring herds. They desire that the owner of a scrub sire keep his trouble at home. Such legislation is already in effect in Ontario in connection with stallions and the results have been beneficial. In Nova Scotia the use of a scrub or grade sire is permitted for use outside of the owner's herd only when a pure-bred sire is not available within a reasonable distance.

Personally, I am not in favor of even this measure of anti-scrub bull legislation and doubt if it will be sanctioned in Ontario. It is, as you state, too great an interference with the liberty of the individual. At the present time, however, Ontario is waging a vigorous campaign for the elimination of the scrub sire, but this is purely educational.

Farm Labor

One of the largest and most influential daily papers in Canada, and one that takes an intelligent interest in agriculture, has recently raised the

Does Mrs. Housewife Demand Your Butter?

She is the judge of butter value. *She knows* sweet, clean butter must be protected from dirt, dust and bad odors.

And *she is only too glad* to pay extra for good butter wrapped or covered with

Paterson Pioneer Parchment Paper

It is *worth* more. Your brand stamped on it stands for *quality*. She learns to demand it by name. *You profit.*

Made in rolls, sheets and circles, to suit all methods of marketing.

Write for free samples and book "Better Butter". It points the way to better butter prices and bigger business.

THE PATERSON PARCHMENT PAPER COMPANY

Passaic, N. J.

Growing up with COLGATE'S *contest!*

AT least one of the stores in your neighborhood will have a window display of Colgate's Ribbon Dental Cream. These windows will be ready to photograph beginning October 1st.

Anyone not over seventeen years of age may try for generous money prizes, which will be given for the best photographs of a Colgate display.

$1005.00 in Prizes

Look for a store window with the Colgate pictures and packages in it. The dealer will gladly let you take a picture of his window.

Look on the back covers of some of the October magazines where you will find all the rules of the contest. Or write to Colgate & Co., Dept. 69, 199 Fulton Street, New York, for particulars.

Ask an older friend who takes pictures or the man from whom you buy films to advise you how to photograph windows. Taking pictures through plate glass is a tricky operation and one that you may never have tried before.

And let parents remember, too, that by encouraging the boys and girls to enter this unique contest, there is not only added zest to Kodak-ing, but a fresh interest in the importance of brushing the teeth regularly, night and morning. The delicious flavor of Ribbon Dental Cream is an important help in forming that habit for health.

115 CASH PRIZES

Enter your photographs in the contest, for which prizes will be awarded as follows:

For the best photograph . . . $100
For the 3 next best . . $50 each
For the 10 next best . . $25 each
For the 101 next best . . $5 each

Prizes will be awarded before January 1st, and winners will be announced in an early 1921 issue of this magazine. In case of a tie, each will receive the full value of the prize tied for.

Colgate's—the safe dentifrice—is indorsed by more dentists than any other dentifrice.

NO PUNCTURES

Dayton Airless Tires can not puncture nor blow out. Put four of them on your car and drive anywhere—over bad roads, nails or glass, winter or summer—without a minute's delay. No pump is required; no spare tubes; no spare tires; no patches; no repair outfit. They give you perfect service from the time you put them on until they are worn out.

Dayton Airless Tires

are easy riding and protect your car and yourself from the jar and jolt of rough roads.

If you own a Ford, Maxwell, Chevrolet, Overland Four or any car using 30x3, 30x3½ or 31x4 inch tires, mail the coupon and find out about the low cost and unusual service of Dayton Airless.

BIG PROFITS

We have a splendid proposition to offer to dealers in territory where we are not now represented. Wire or write for details.

Lowers Record 22 hours, 13 min.

Third Essex
San Francisco to New York—4 days, 21 hours, 56 min.
Lowers Record by 5 hours, 35 minutes

Fourth Essex
New York to San Francisco—5 days, 6 hours, 13 min.
This car took a longer route and also ran into storms. Yet it broke the former record by 11 hours, 19 minutes.

A Proof of Reliability Never Equalled

The first test of an automobile carrying U. S. Mail across the American continent was made with the light weight, moderate priced Essex. And it resulted in establishing the Essex as holder of the trans-continental record both ways.

The performance while of momentous importance in the world of speed and automobile sportsmanship—is of greater value to the motorist. For it removes all doubt about the reliability of light weight in the most difficult and hardest road service.

Also Holds These Noted Records

Many other unmatched Essex records forecast its ability to break the transcontinental records at will. For instance it holds the official 50-hour endurance record of 3,037 miles in 50 hours. It holds the 24-hour dirt track mark of 1,261 miles, made by an owner-car, which had previously seen over 12,000 miles service. And it holds the world's 24-hour road mark of 1,061 miles, made over Iowa country highways.

Yet these records are significant only because they show the endurance and reliability of every Essex car. They speak for the ability of any Essex to duplicate these feats.

Essex Motors, Detroit, Michigan

The "STAY THERE" Aluminum Ear Markers
are the best. Being made of aluminum they are brighter, lighter, stronger and more durable than any other. Fit any part of the ear. Nothing to catch on feed trough or other obstacle. Your name, address and any series of numbers on each tag. Sample tag, catalog and prices mailed free. Ask for them.
Address Wilcox & Harvey Mfg. Co., 668 W. Randolph St., Chicago, Ill.

question: "Is dairying on the decline?" Help has been tremendously scarce for years. Men who work for a living have been flocking to the cities with their eight-hour day and easy working conditions. This has been accompanied by a changing attitude toward excessively hard labor and long hours on the part of the farmers themselves. "Why should we work long hours in order to feed cheaply a lot of city people who are working shorter and shorter hours?" asks the farmer. There is also a growing conviction that other industries deliberately restrict production in order to maintain prices. "Why shouldn't we do the same?" is the farmer's question.

Such an attitude, were it to become at all general, would first make itself felt in dairying, which requires close application and long hours. The daily in question believes that these factors are already restricting dairy output. Recently one of their correspondents investigated conditions in the Lindsay District of Ontario. This investigator found that on most farms only one-half as many cows were being milked as a few years ago. In another district with which I am well acquainted I could name farm after farm where eight or ten cows were once milked and where now only one or two are milked to supply family needs. At the same time the best statistics available from Ottawa show that the cow population is increasing. The explanation, I think, is found in this: In both districts mentioned the cows usually kept are grade Shorthorns and it is very easy to shift from dairy to beef. In recent years the combination of scarcity of labor and record prices for beef has transferred their interest to beef and the calves have sucked the cows. Beef is now on the down grade, labor promises to be more plentiful, and when conditions warrant a transfer will be made back to dairying.

In the dairy districts, on the other hand, I find no indications of decreased production. In one district in Oxford County, in fact, the manager of the milk shipping station assured me that several farmers who had stayed with fat cattle were now planning to go in for dairying. Where dairying is well developed and the steady returns have come to be taken for granted, farmers are naturally slow to return to a less remunerative, even if easier, system of farming. It is possible that in the Prairie Provinces, however, the good grain crop this year may tend to switch some interest away from dairying.

The Dairy Industry

It is some years since I have mentioned in these notes the almost phenomenal development of the dairy industry in British Columbia. This development has been not so much in the increasing number of cows kept as in their quality and in the perfection of the marketing system. British Columbia breeders of Holsteins, Jerseys, Guernseys, and Ayrshires are making new records in Record of Performance out of all proportion to the number of registered cattle owned in that province. One breeder, Mr. Shannon of Cloverdale, B. C., predicts that in a few years all top records will be held in his province. This is a strong statement, however, as eastern breeders are still going strong. Undoubtedly, however, the mild climate of the Pacific coast is conducive to maximum production.

The milk producers are well organized and in Vancouver control the retail distribution of their product; "The Milk Trust" as the citizens call the producers' association. Such an organization, if the monopoly enjoyed is not abused (and it has not been) is invaluable to the dairy industry. British Columbia dairymen seem to be setting the pace for the rest of Canada.

Ontario. F. E. ELLIS.

What Farmers Say

HOARD'S DAIRYMAN:—At the various state meetings there are about as many things of interest obtained in conversation as from the public addresses. Of course, these matters show more of the trend of opinion than of actual announcements yet by a little selection much of real value is secured. Men come together from different points and bring their reports.

There are many sections where canning crops are not being purchased and the canneries are not operated. It looks, from reports here and there, as though this season is to see the most waste of foodstuffs that has been known for many years. Of course, these news items may be a little exaggerated, yet one feels that there is too much of truth in them.

As for fruits, out here there is a surplus. Some feel that there will be less competition from the West on these on account of the increase in freight rates and that possibly prices may be such as to save producers from loss. That remains to be told. Much the same is said respecting potatoes, but there may be less gain in this line. Both fruits and vegetables are likely to bring producers low prices this fall.

Occasionally we hear of action taken to save producers. In one county in the southern tier a potato warehouse has been purchased for $40,000 by farmers for the storage of potatoes until prices become better adjusted.

The wool pool in this state has not been given up. Marketing conditions are bad, but it is still thought that a half million pounds will be held in storage in a pool in Syracuse for better markets. This may be less than forty to fifty per cent of the wool clip of the state, but it is a considerable amount.

The G. L. F. Exchange

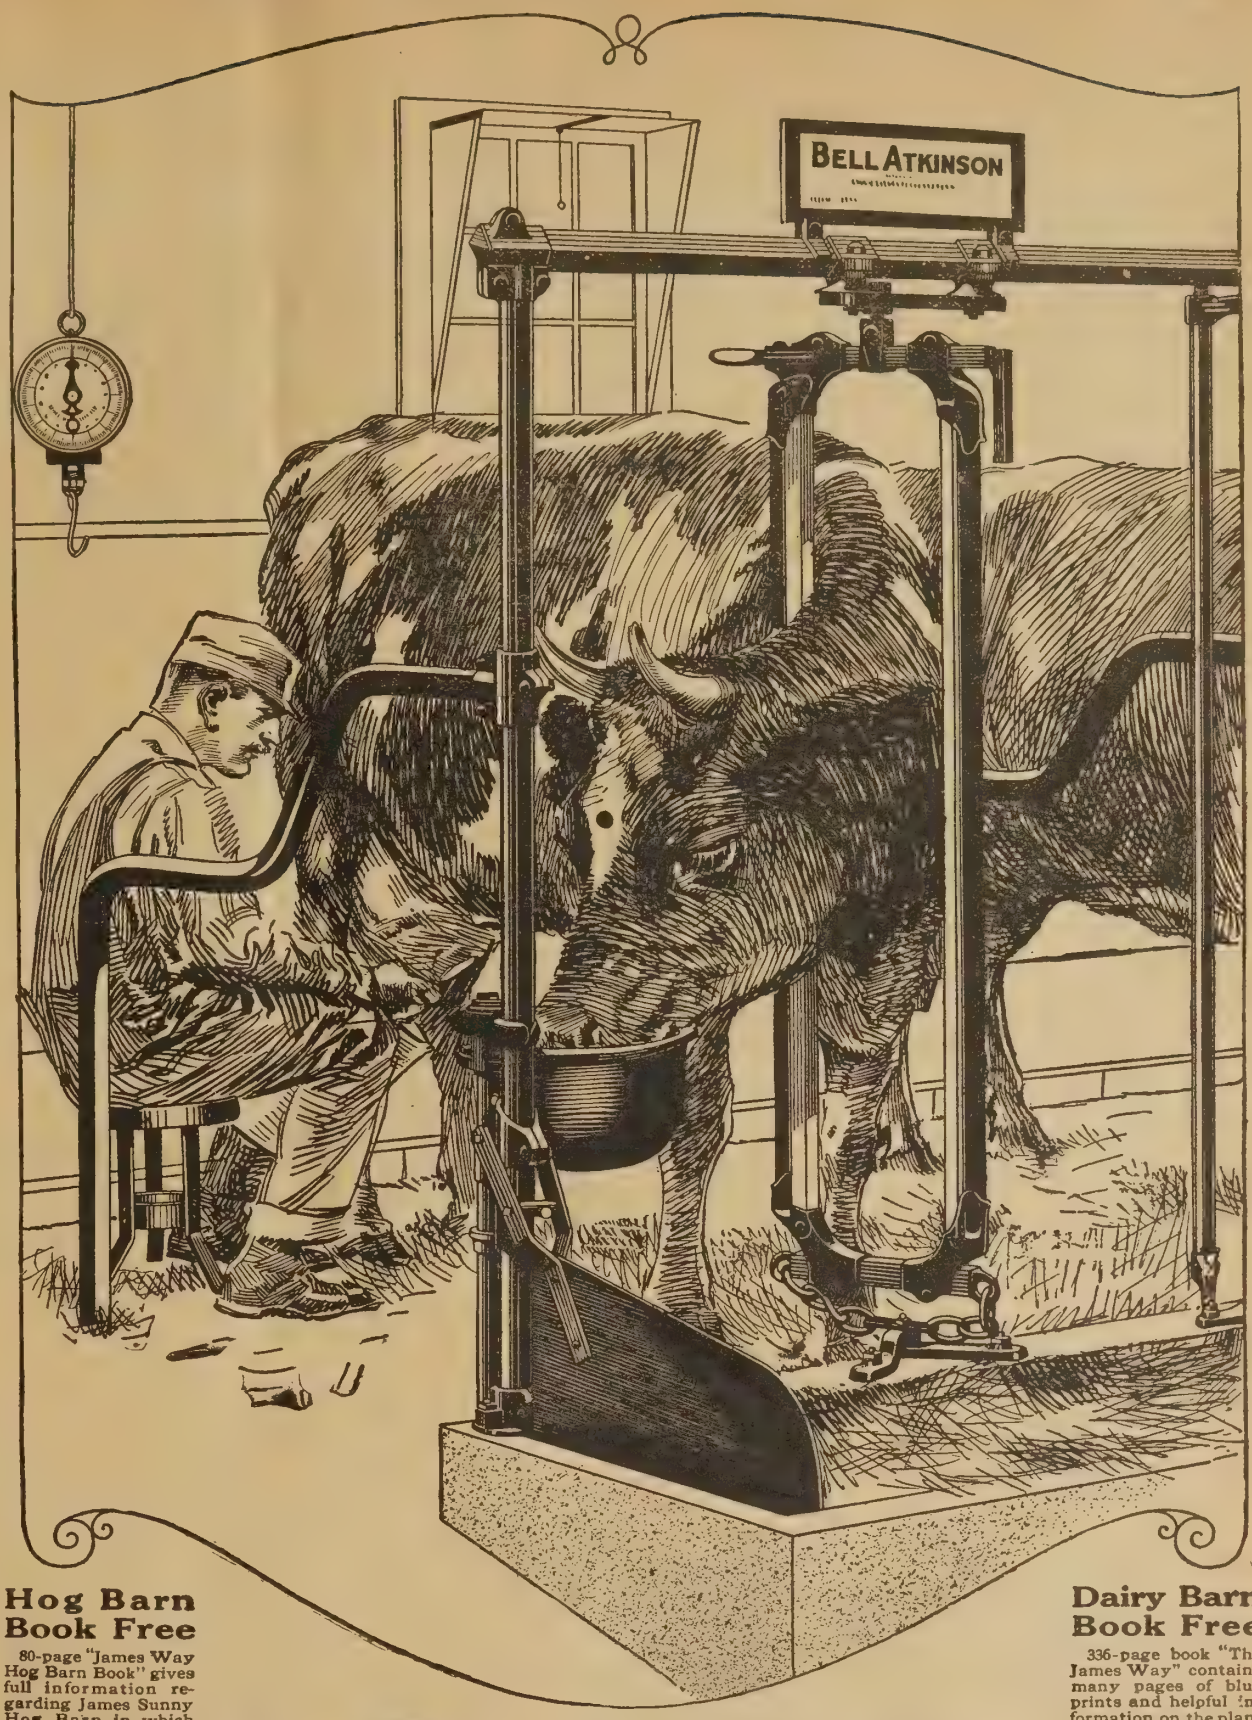
This organization is going ahead. More than seventy per cent of the million dollars wanted is in sight and the remainder is undoubtedly coming. When it comes to the purchase of real estate it is possible that another million may be needed. The management is firm in the belief that if needed the money will be forthcoming. An experienced feed man has been employed. His reputation is first class, and he has already made big money for employers. He has had charge of some of the largest concerns in the country.

Arrangements are already made to start activities in each county. The county president of the Dairymen's League, president of Farm Bureau, and the master of the Pomona Grange will take the initiative. County meetings will be called of representatives from the various school districts to determine county action. A manager may be selected for the county and each town may establish a warehouse if thought best. That and other details are still to be worked out.

Syracuse Dairymen Build Milk Plant

At Syracuse there is now nearing completion a fine, large milk station owned by a dairymen's organization. The association has a capital of about $400,000 and I understand that provision has been made for practically the whole payment. The manner of organization is interesting. Five hundred dairymen in the county gave notes for $300 each or paid that amount in cash. The banks took over these notes as fast as the cash was needed. If these are not redeemed in cash then they are to be paid from milk delivered when the plant starts. Each of these 500 men is obligated to deliver milk, I was told, and in case of failure to do so he forfeits his $300. This gave the initial $150,000. Then bonds were issued and these have been sold as fast as more cash is needed.

The matter of surprise to me was that for the most part farmers have bought the bonds. The average amount purchased is between $200 and $300. It will be seen that these are pretty well distributed. The management of the finances seems to have been in the hands, not only of the board of directors and manager of the association, but has had the active co-operation of the farm bureau and of banking and business interests of the city. Indeed it appears that the farm bureau has much direction from business men. In this particular case it is possible that this may be the best plan.



The plant is expected to be in operation in the course of a month. It is supposed to have a capacity much beyond a hundred thousand pounds of milk daily. Milk wagons are being made ready and, for that matter, I saw quite a number that are ready to start. Milk is to be delivered in the city.

The present dealers were offered milk at wholesale from this plant, but the offer was refused. There will be some competition when the farmers commence to deal direct with the consumers, but I have an idea what effect that will have on prices. Now the price of milk is 16 cents. Equipment is being installed to handle any surplus or the entire intake if necessary. The city is said to be a sufficient market to take all the products. There will be more to say when the venture commences to operate. It is only one more example of farmers doing their own business.

New York. H. H. LYON.

Feeding Stock in Transit

When the distance is such that a live stock shipment to destination can not be made within the time provided under the Federal 28-hour law, animals must be unloaded, fed, and watered. The railroads which have the heaviest long-distance shipments provide feed-in-transit stations for this purpose at intervals along their lines. Railroads which do a small live stock business often are without feed-in-transit stations, and the shipper patronizing these lines must make his own arrangements for feeding and watering.—Weekly News Letter, U. S. Dept. of Agriculture.

Hog Barn Book Free

80-page "James Way Hog Barn Book" gives full information regarding James Sunny Hog Barn, in which there is a spot of sun warmth on the floor of every pen two-thirds of the sun-lit hours. Also describes labor-saving equipment for hog barns.

Ask for catalog 28-23.

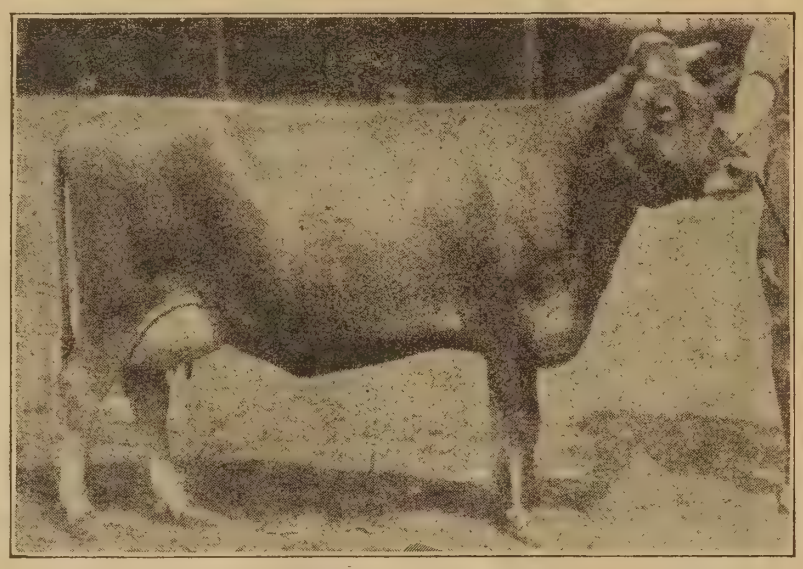
INDIANA STATE FAIR

C. R. GEORGE, INDIANA

ASIDE from the fact that Indiana lacks the physical equipment that is necessary for a really great fair, the 1920 show was all, yes even more, than could reasonably be expected. When at the 1919 show temporary lean-to sheds and tents had to be erected to accommodate almost one-half of the cattle and hog exhibits it was felt that the old equipment had done its best and that before a larger show could be staged new buildings would be necessary. However, building conditions were such during the past year that the board did not feel justified in a further building program and when the exhibitors began to arrive they found Cattle Superintendent Tom Grant with his old sheds all in place and more being constructed, for entries at the fair were never so great as this year.



In spite of the crowded conditions there was a fine spirit among the exhibitors. The weather was good through Friday when the live stock exhibits broke up and the downpour on Saturday morning fell over empty pens and stalls. No small factor in the spirit of the stockmen was the promise that ere another year shall pass a new cattle barn will grace the grounds. This addition will place the management well along in their building program and by replacing the unsightly cattle sheds that are located in the very center of the grounds, will add much to the looks of Indiana's agricultural show ring.

The live stock exhibits were a true expression of the great growth of Indiana's live stock industry. And this was a growth not only in quantity but in quality. The porkers completely over-ran their quarters; the horses served a comeback notice that their day was not yet past by a larger entry than for several years; the dairy cattle exhibits were larger than ever before seen at an Indiana fair, but there was a noticeable shortening in the lines of beef cattle that have always been an outstanding feature of the Indiana show.

The Purdue Exhibit

The agricultural exhibit of the Agricultural Extension Department of Purdue University was an outstanding feature of this year's fair. More and more the Indiana farmer is coming to consider the two Purdue buildings on the fair grounds as headquarters for the most up-to-date ideas on improved agriculture. More and more they are coming to see the results of experiments and demonstrations that have been conducted during the year and usually every one who comes can carry away ideas that will be of great value to them on their farms. This year's exhibit was rather unique in that each division specialized on one problem and gave all of their space to featuring it in a big way. The dairy division featured the value of pure-bred sires, the horticultural division showed the results of hill selection of potatoes, the poultry division featured their culling work, and so throughout the entire exhibit one big idea was presented for each line of work. It proved to be a most effective way of reaching the people, for on every side those who have been regular visitors to the Purdue exhibit for several years pronounced this the most valuable exhibit they had seen.

The dairy division featured the value of a pure-bred sire by a small herd of Guernseys from the herd of Robert Black, a member of the Posey-Gibson County Cow Testing Association. The herd bull, Royal Trislettes Lord, with two of his daughters and their dams told a story that would mean thousands upon thousands of dollars to Indiana dairymen and farmers would they but hearken to it. The females had been tested in the cow testing association during the past year. The two daughters, Lord's Pearl and Lord's Alice, produced an average of 374 lbs. of butterfat and 7,120 lbs. of milk as two-year-old heifers. Their dams under the same care and management only made an average of 282 lbs. of butterfat and 5,793 lbs. of milk even though they were mature cows and at an age that they should be doing their best. The two-year-old daughters produced 92 lbs. of butterfat and 1,327 lbs. of milk more than their mature dams. To do this they consumed some $49 worth of extra feed but they paid for this feed and returned an additional income of $84.80 or $42.42 per cow more than their dams. Records from the cow testing associations were used to show that this increase of approximately 100 lbs. of butterfat per cow would reduce the feed cost of producing a pound of butterfat by at least ten cents.

ROCHETTES NOBLE NINA, SENIOR AND GRAND CHAMPION JERSEY COW AT INDIANA STATE FAIR
OWNED BY LONGVIEW FARM, MISSOURI

Four young bulls, one from each of the bull associations that have been organized during the past year, were included in the exhibit to demonstrate how the average Indiana farmer with a small herd of cows could purchase and have good bulls available for use at a reasonable cost.

Other divisions also featured work of great interest to the dairymen. The farm management workers showed the rearrangement of a southern Indiana farm to include more dairy cattle and produce larger returns, and the home economic workers featured in a very clever exhibit the food value of milk by showing enlarged pictures of two boys together with the food they ate, one including a plentiful supply of dairy products and the other a generous amount of substitutes. It presented the choice of the "coffee pot or the cow" in a very striking way.

Dairy Cattle Exhibit

When a very prominent live stock official, sitting in the judging arena at the state fair, asks why beef cattle were not so plentiful at this year's show, a very shrewd observer of the trend and progress of Indiana agriculture turned to the long lines of Holsteins and Guernseys that were showing in the arena and pointed to them as the reason. It was a good characterization of a change that is taking place in the cattle breeding business in Indiana.

The outstanding features of this year's show were the community exhibits in Guernseys and Holsteins and the Boys' and Girls' Calf Club exhibits in the Guernsey barn. Porter County brought two carloads and Lake County one carload of Holsteins and both counties made excellent exhibits, the quality of their exhibits being an outstanding feature. For the third year these counties have come with their Holsteins, first with poorly grown and unfitted calves for the futurity show, last year with more cattle in a condition that showed they had profited by the lessons of the previous show, and again this year with outstanding sires and well fitted cattle that were worthy of any show ring. It stands as a wonderful example of what can be accomplished by co-operation and community breeding.

The futurity show of calves and yearlings, limited to Indiana breeders, had taken its place as a permanent part of the dairy cattle show. It was but three years old at this fair but no three-year-old ever showed better form and more development. Among Holstein and Guernsey breeders, especially, it has accomplished wonders and the large showing and great interest in these classes are due to the influence of the futurity show quite largely. For some reason the Jersey breeders have not supported this feature as other breeds have and it is having its effect upon the Jersey show.

Holsteins

One hundred thirty-two head of Holsteins, 109 of which were exhibited by Indiana breeders, made a most excellent showing for the black and whites. The Cass farm herd was the only out of the state exhibitor but their 23 head took a goodly share of the premium money. The Porter County Breeders' Association exhibited 29 head and Lake County 23 head, most of these animals representing a number of smaller breeders rather than a few larger breeders. Purdue University made her debut into show ring circles with dairy cattle at this fair and with two Holstein bulls, a two-year-old and a junior calf, won two first prizes and a junior championship.

Exhibitors: (Out of state), Cass Farms, Iowa. (Indiana exhibitors), Morgan Bros., T. R. Keene, Francis Bushore, Chas. Ohlfest, C. M. Bottema, Glenn Reed, Ray Meeker, Miller Purviance, Schillo Bros.; M. J. Seberger, Mathias Seberger, Purdue University, I. F. Kiesling & Sons, Jacob Rosenbaum, Ed. Maybaum, Sam B. Woods, Dan Haxton, L. Neal Buchanan, Clark & Iddings, Otto Childress, Chas. Buckley, Albert Ziese, Geo. H. D. Schearer, Francis J. Hein, Peter Jensen, and Howard Burkley.

Judge: L. S. Gillette, Fostoria, Ia.

The awards follow:

Bull 3 years old or over—1, Cass Farm on King Aaggie Hengerveld; 2, Clark & Iddings on Sir Urmagel Beets Segis; 3, Morgan on King Korndyke Isabelle Veeman. Bull 2 years old and under 3—1, Purdue on Paul Febes Butter King; 2, Cass Farm on Aaggie Almeda Hengerveld; 3, Bottema on Fair Crest King Pontiac Gerben. Bull one year old and under two—1, M. Seberger on King Colantha Lyons Fraud; 2, Cass Farm on Bessie Homestead Alcartra; 3, Burkley on Rag Apple Posch De Kol. Senior bull calf—1 and 3, Cass Farm on Hengerveld Homestead Walker and Fayne Mollie Walker; 2, Woods on Woods Juperees Lyons. Junior bull calf—1, Purdue on King Segis Walker of Purdue; 2 and 3, Keene on Oakway Creamelle Champion and Oakway Creamelle Korndyke.

Cow 4 years old or over—1, Cass Farm on Lulu Baby Girl; 2, Ziese on Wythe Flossie De Kol 2nd; 3, Ohlfest on Jenny's Segis De Kol Burke. Cow 3 years old and under 4—1, Cass Farm on Pearl Johanna Pontiac De Kol; 2, Bushore on Unaland Pet; 3, Childress on Beauty Hengerveld Colantha Girl. Heifer 2 years old and under 3,—1, Bottema on Zelderrust Colanthus Segis 2nd; 2, Cass Farm on Aaggie Hengerveld Daisy Homestead; 3, Reed on De Kol Maple Crest Belle. Senior yearling heifer—1 and 3, Cass Farm on Bessie Homestead Jewell and Queen Waudande Beauty; 2, Reed on Kathleen De Kol Segis. Junior yearling heifer—1, Cass Farm on Bessie Homestead Walker Lyons; 2 and 3, Bottema on Butter Bred Fay Gladi and Zeldenrust Johanna Segis 2nd. Senior heifer calf—1, 2, and 3, Cass Farm on Fayne Giltha De Kol, Bessie Alcartra Pink, and Ormsby Bessie Johanna. Junior heifer calf—1 and 3, Cass Farm on Mervana Grace De Kol Fayne and Aaggie Hengerveld

FANCY FANNY OF BOONE, FIRST PRIZE JUNIOR HEIFER AT INDIANA STATE FAIR
OWNED BY MORRIS CRANE, INDIANA

Canary Pearl; 2, Rosenbaum on Rose Alcartra Pontiac De Kol.

Get of sire—1 and 3, Cass Farm; 2, Meeker. Produce of cow—1 and 2, Cass Farm; 3, Bottema. Graded herd—1 and 2, Cass Farm; 3, Bottema. Breeders' young herd—1 and 2, Cass Farm; 3, Bottema. Breeders' calf herd—1, Cass Farm; 2, Bottema; 3, Meeker.

Senior and grand champion bull—King Aaggie Hengerveld. Junior champion bull—King Segis Walker of Purdue.

Senior and grand champion cow—Lulu Baby Girl. Junior champion heifer—Fayne Giltha De Kol.

Futurity Classes for Indiana Breeders

Senior bull calf—1, Woods on Woods Juperees Lyons; 2, Bottema on Zeldenrust Mona Ormsby; 3, Meeker on Oaklawn Tidy Prince. Junior bull calf—1, Purdue on King Segis Burke of Purdue; 2 and 3, Keene on Oakway Creamelle Champion and Oakway Creamelle Korndyke. Junior yearling heifer—1 and 2, Bottema on Butterbred Fay Gladi and Zeldenrust Johanna Segis 2nd; 3, Keene on Beauty Creamelle Lass. Senior heifer calf—1, Ohlfest on Cloverleaf Colantha Ormsby; 2, Morgan on Bonnie Brae Lillia Pauline; 3, Keene on Oaklawn Princess Sadie.

County Breeders' Association herd (Five counties showing)—1, Lake County; 2, Porter County; 3, Marion County.

Guernseys

As visitors entered the Guernsey barn in which all of the Guernseys shown by Indiana breeders were exhibited, they were greeted with two pleasing features. The barn was well decorated and kept neat and clean, and on either side was an exhibit from the Boone County Guernsey Calf Club with the boys and girls from the club in attendance. They were showing 12 head, six yearlings from their second importation and six calves from their original calf club heifers. With these well grown and fitted calves they won their way to the head of one open class and stood at the head of two of the futurity classes for Indiana breeders. They took home with them some $250 of premium money and made an impression on visitors at the fair that will mean much toward the sale of stock in the future. In addition to this there were calf club exhibits from the Marshall and Huntingdon County Calf Clubs and a county exhibit from Hendricks. One hundred eight cattle all from Indiana except the Kingston and Cooper entries competed for the premiums.

Exhibitors, (Indiana Breeders):—R. R. McNagny, W. O. Mills, Norman E. Parsons, F. F. & L. L. Johnson, C. R. George, Jesse Hurdle, Clem Hershberger, Sol Johnson, R. D. Knight, R. & C. Nelson, Lyle Miller, Morris Crane, Arthur VanHuss, Areva Van Huss, Omer Lewis, Orpha Batton, Geneva Clark, Otis Reed, Lowell Denney, Dorothy Couchman, Howard Adair, Mrs. M. C. Johnson, Theodore Smith, Frank Thomas, Myrtle Hahn, Fred Halt, Robert Shirk, and C. Nunemaker. Out of state:—Goodhand Kingston & Son, Wisconsin; R. M. Cooper, South Carolina.

Judge: O. E. Reed, Martinsville, Indiana.

The awards follow:

Bull three years and over—1, Kingston on Hopeful of Edgemoor; 2, Cooper, on Lord Mar of Elmendorf; 3, McNagny on King Edward of Bellmont. Bull 2 years and under 3—1, Cooper on Senebel's Raymond; 2, Knight on Corporal of Mineral Home. Bull one year old and under 2—1, Cooper on Mars Sequel Boy; 2, Hurdle on Almira Prince of Clear Creek; 3, Mills on Meteor of the Ridge. Senior bull calf—1, Kingston on Steadfast of Muskego; 2, George on Waddington Captain; 3, Areva Van Huss on Dividends Kitchener. Junior bull calf—1 and 2, Kingston on Aristocrat of Muskego and Warrior of Muskego; 3, Cooper on Mars Kelsey of Minosa.

Cow four years old or over—1, Cooper on Rockingham Tulip; 2, Kingston on Imp. Violet of Tol Val; 3, McNagny on Gemsie O. K. Cow 3 years and under 4—1, Cooper on Mars Miss Violet; 2, Kingston on Raiders Surprise of Muskego; 3, McNagny on Colleen of Killarney Farms. Heifer two years old and under three—1, Kingston on Itchen Queen of Edgemoor; 2, McNagny on Sheila on Killarney Farms; 3, Parsons on Spotswood Sequels Isabel. Senior yearling heifer—(20 entries)—1, Kingston on Lillian of Edgewood; 2 and 3, Cooper on Tulip of Guernsey Home Farm and Dora of Minosa. Junior yearling heifer—1, Kingston on Wonder Girl of Muskego; 2, Cooper on Mars Lady Dixon; 3, Couchman on Boone's Princess Valentine. Senior heifer calf—1, 2 and 3, Kingston on Hopefuls Miss of Sunny Slope, Polly of Shady Gulch 2 and Mary Sumac of Edgemoor. Junior heifer calf—1, Crane on Fancy Fanny of Boone; 2, Cooper on Primrose of Minosa; 3, Kingston on Wonderful Dame on Muskego. Get of Sire—1, Kingston on get of Hopeful of Edgemoor; 2, Areva Van Huss on get of St. Austell Dividend; 3, Cooper on get of Lord Mar of Elmendorf. Produce of cow—1, Kingston on produce of Butterwich Surprise; 2, Cooper on produce of Imp. Francis Clara; 3, McNagny on produce of Gemsie O. K. Graded Herd—1, Kingston; 2, McNagny. Breeders' young herd—1, Cooper; 2, Mills. Breeders' calf herd—1, Kingston; 2, Cooper.

Senior and grand champion bull—Hopeful of Edgemoor. Junior champion bull—Mars Sequel Boy.

Senior and grand champion cow—Rockingham Tulip. Junior champion heifer—Hopeful's Miss of Muskego. Premier breeder—Kingston.

Futurity Classes for Indiana Breeders

Senior bull calf—1, Areva Van Huss on Dividends Kitchener; 2, George on Georgeland Hambro's Ace; 3, McNagny on Mr. Dooley of Killarney. Junior bull calf—1, George on Georgeland Hambro's Aristocrat; 2, Lewis on Boones Valentine; 3, McNagny on McNeely of Killarney Farms. Junior yearling heifer—1, McNagny on Patricia of Killarney Farms; 2, Sol Johnson on Ferns Bessie of Warren; 3, F. F. & L. L. Johnson on Hambro's Mist of Guernsey Farm. Senior heifer calf—1, Nelson on Boones Pansy; 2, Miller on Ruby Sunrise; 3, Arthur Van Huss on Dividends May Rose.

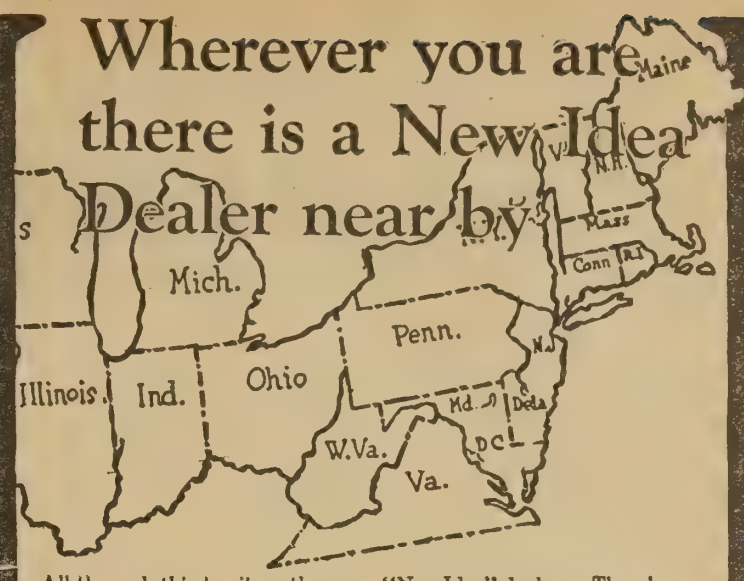
Jerseys

One hundred nine Jerseys passed before the decision of Judge C. I. Hudson, but of this number eighty head were shown by exhibitors from outside the state. Longview made the best showing of exhibitors taking all the firsts in the female classes and the groups and dividing those in the bull classes with the Reynolds' entries after MacGill's Indiana entry in the two-year-old class had taken the odd one. The MacGill bull, Fern's Golden Raleigh 2d, was made senior and grand champion while the Reynolds' yearling, Raleigh's Fairy Sultan, won junior championship. The championships in the female classes went to the Longview cow, Rochettes Noble Nina, and their junior yearling heifer, Raleigh's Royal Fairy, the older cow taking the grand champion award.

Exhibitors—Longview Farm, Missouri; F. S. Reynolds, Ohio; Myrtle & Earl F. Pyle, Ohio; A. M. McClenahan, Colorado. Indiana exhibitors: R. A. MacGill, C. R. Hinkle & Son, Edw. E. Zike, H. O. Shaw, H. C. Huber, M. E. Jones, Dearborn County Jersey Bull Association, Dearborn County Manchester-Hogan Jersey Bull Association, Jefferson County Jersey Bull Association, Perry Hunt.

Judge: C. I. Hudson, East Norwich, Long Island, N. Y.

The awards follow:



Bull 3 years old or over—1, Longview Farm on Chief Raleigh; 2, Zike on King Melia Anne's Jolly Boy; 3, Pyle on Sans Alois Niece's King. Bull 2 years old and under three—1, MacGill on Ferns Golden Raleigh 2nd; 2, Longview on Fairy Raleigh. Junior bull calf—1, Reynolds on Perfect Raleigh. Bull one year old and under two—1, Reynolds on Raleighs Fairy Sultan; 2, Pyle on Sans Alois Greatness; 3, Longview on Manoras Fairy Lad. Senior bull calf—1, Longview on Wolff's Chieftain 2nd; 2, Shaw on Togo's Golden Oxford. 3, Reynolds on Flowers Fair Raleigh. Junior bull calf—1, Reynolds on Bella's Perfect Raleigh; 2, McClenahan on Bostian Shy Duke; 3, Longview on Stars Fairy Lad.

Cow four years old or over—1, 2, and 3—Longview on Golden Matron, Queens Raleighs Nimay, and Raleighs Star of Peace. Cow three years old and under four—1 and 2, Longview on Rochetts Noble Nina and Fairy Flag; 3, McClenahan on Western Kings Floradora. Heifer two years old and under three—1 and 3, Longview on Raleighs Fairy Finance and Raleighs Queen Monora; 2, McClenahan on Jubliee Oxie. Senior yearling heifer—1 and 2, Longview on Raleighs Blue Feather and Raleighs Queen of the Night; 3, McClenahan on Majestys Financial Oxford. Junior yearling heifer—1 and 2, Longview on Raleighs Royal Fairy and Raleighs Golden Brightness; 3, Zike on Jerry's Prize Baby. Senior heifer calf—1 and 2, Longview on Raleighs Pretty Maiden and Raleighs on Raleighs Miriam; 3, McClenahan on Majestys Cowslip Feather. Junior heifer calf—1 and 2, Longview on Raleighs Royal Maid and Raleighs Starling; 3, McClenahan on Majesty's Feather Lads Friz.

Get of sire—1 and 2, Longview on get of Flora's Queens Raleigh; 3, Pyle on get of Sans Alois Nieces King. Produce of cow—1, 2 and 3,—Longview on produce of Royal

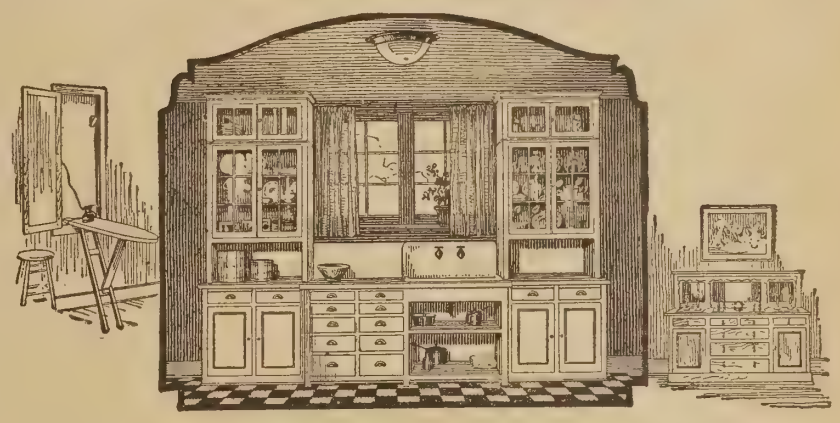
Wherever you are there is a New-Idea Dealer near by

All through this territory there are "New-Idea" dealers. There's one in your neighborhood. That means quick delivery and good service. Send for the "New-Idea" catalog today and we'll tell you the name of the nearest dealer. Ask him to show you the New-Idea written guarantee—the binding money-back assurance that the New-Idea will do all we claim for it. It is absolute insurance of satisfactory heating for a life time and an old reliable company stands back of it.



The New-Idea frameless hot-blast feed door, found on no other furnace; the cup-jointed construction; the patented non-clinker grate that burns any fuel; the big dust and gas-tight register—all these and many other advantages make the New-Idea the furnace you will select when you know about them and make comparisons. Expert advice on heating free.

UTICA HEATER COMPANY
Box 25 UTICA, N. Y.
Also manufacturers of "Superior" Warm Air Furnaces and "Imperial" Steam and Hot Water Boilers.

NEW-IDEA
Pipeless Furnace
"The One You've Heard So Much About"

Excellent proposition for the right kind of Hardware dealers, implement men, etc. New Idea dealers everywhere are "making good". 20-7

Isn't this the KITCHEN you have wanted?

THE attractive kitchen dresser illustrated here suggests the beauty and utility of all Curtis Woodwork. Curtis Woodwork throughout will add much comfort and character to the home you build.

Are you acquainted with the Curtis service to those who are interested in Better Built Homes? If not, here is the opportunity to find out all about this remarkable service, which is as available to you as your lumber dealer is accessible.

Curtis entrances, porches, windows, stairways, bookcases, sideboards, kitchen dressers, buffets, chests of drawers, clothes closets, and other permanent built-in furniture will give your home that charm you most desire. All Curtis Woodwork is created to be beautiful as well as convenient and economical, and has been designed by Trowbridge & Ackerman, New York architects.

The Curtis Companies also retained Trowbridge & Ackerman to design over two hundred artistic, practical houses. Pictures, plans, and descriptions of them are offered you as the initial step in the selection of your new home. Ask your Curtis dealer to have us send you FREE a portfolio of "Better Built Homes."

If there is no Curtis dealer in your town, send 25c in stamps (50c in Canada) and the portfolio you desire will be sent you direct. Ask for "Better Built Homes" Volume VI, if you are interested in houses of three, four, and five rooms; Volume VII, for houses of six, seven, and eight rooms; Volume VIII, for houses especially designed for farm use. Get acquainted now with Curtis Woodwork and Curtis Service, so that when ready to build, you will not be overlooking the many possibilities that this woodwork and service offer you.

CURTIS SERVICE BUREAU, 5059-6059 So. Second Street, Clinton, Ia.

EDITORIAL COMMENT

THE Twin City Milk Producers' Association has been wise in establishing creameries, cheese factories, or milk plants in the section supplying the Twin Cities with milk. Its plan gives the farmer an opportunity to take care of all so-called surplus milk and to turn his milk into dairy products which will return him the most money. It is the aim of this association to have the farmers in position to control their own business, direct their own affairs, and to be able to market their products to the best advantage.

During the month of August the Twin City Milk Producers' Association received a total of 7,617,965 lbs. milk. This was about 1,600,000 lbs. less than July, 1920, and about 300,000 lbs. greater than August, 1919. The distributors took 6,843,942 lbs. of this milk. This is about 12,000 lbs. more than the highest previous month and 1,700,000 lbs. more than August, 1919. Eight hundred fifty thousand pounds were sold to the condensery or put into butter and cheese in August as against 2,300,000 lbs. in August last year.

The present situation of those patrons in New York supplying the condenseries and the milk powder plants emphasizes the wisdom of the farmers having their own institutions whereby they can take care of their own products when the occasion demands.

A QUESTION

Who knows of even a single case in which adequate damages have been secured where a cow, pure-bred or grade, has been served by a neighbor's bull that has broken into the pasture? Inquiries as to what should be the settlement or how settlement can be secured are not infrequent.

Most states have laws requiring the safe confinement of the bull and establishing penalties for their violation. This does not help the farmer whose pure-bred dairy cow has been served by an inferior sire or a bull of another breed. He may institute suit for damages, but how can he prove to the satisfaction of a jury the amount of his damages? In most of the cases that have come to our attention, the only satisfaction the aggrieved owner gets is the language he is able to use in describing the event.

Again, can any one cite a case of where damages have been secured? If so, give us the details as to how they were secured, that we may pass it on to others.

NEW YORK MILK SITUATION

New York dairy farmers who have been supplying milk to condenseries and powdered milk plants have been advised by these institutions that after October 1st they will not buy their milk at any price. Market conditions for condensed, evaporated, and powdered milk products are such that these companies feel unwarranted in continuing their business. This condition places the patrons of these plants in a rather serious position for many of them have no other market.

This situation emphasizes the necessity of the development of more farmer co-operative enterprises. Dairymen are not placing themselves to take advantage of market conditions unless they own their plants where their milk may be manufactured into butter, cheese, powdered milk or some other product which may be in demand. It is only good business that the dairy farmers should have a place to take care of their milk when the price of market milk does not warrant them to sell it or when such emergencies arise as now confront the New York dairymen.

The board of directors and county presidents of the Dairymen's League of New York are doing everything they can to assist the members of their organization to take care of their milk and to provide a suitable market for it. The best they can do will not be satisfactory or will it return them as much for their milk as they could get if they had already established, throughout the section which supplies New York with milk and the whole state for that matter, institutions capable of handling the milk produced by the farmers. The milk question will never be settled rightly and satisfactorily until the farmers do place themselves in position to handle their own products.

NATIONAL DAIRY SHOW

The annual dairy exposition is an important event for the dairy industry of this country. It is an educational institution; it brings together the best dairy talent in this and other nations; it presents to the dairy farmers their achievements; gives opportunity to study all the various branches of this great industry and to behold its magnitude and its importance. Those who visit the Dairy Show will not only find useful information which can be applied to their business, but keen enjoyment and wholesome recreation.

The dairy farmer owes himself a vacation and opportunity to meet his fellow dairymen. His work is very confining and he finds it hard to leave his duties for a few days, especially now when there is an acute shortage of labor. We believe it is a mistake for anyone to apply himself so closely to his business that he does not embrace occasions that will help him to do his work better; to give him something to reflect upon and to give new inspiration and renewed courage. Life is something more than work, and every busy man must lay plans that will take him away from his work each year, even though it be only a few days.

The Dairy Show has been for several years a well developed institution and provides unusual opportunities for dairy farmers to see the best dairy cattle in the country; the numerous machines and devices for handling milk; to observe demonstrations of practical value to his business; to attend meetings where various dairy topics are discussed; in short, there is opportunity for the dairy farmers to interest themselves in many things of importance and value to them.

A trip to the Dairy Show will not be regretted.

A DECLINING AGRICULTURE

Some men hold that agriculture is on the decline because in the early days nearly all the people were engaged in this industry, but during the past fifty years the percentage of people engaged in farming has been constantly decreasing.

We see nothing serious in the fact that there are relatively fewer people engaged in agriculture now than 50 or more years ago. At the close of the Civil War great tracts of fertile land were opened for settlement and a large number of our citizens took advantage of this and secured good farms for themselves. A tremendous overproduction of farm products followed, and everything the farmer produced was sold at a ridiculously low price. Too many were engaged in agriculture. Agricultural implements were crude, requiring relatively more people to produce food and material for clothing than now with our labor saving machinery. It was but natural that some should leave this industry to engage in commerce as farm machinery improved and because of the overproduction of farm crops. Large cities sprang up everywhere in this country because of cheap food and because of better opportunities for making money than in farming.

Those who hold that agriculture is on the decline because not as many people, relatively, are engaged in farming now as there were 50 years ago, fail to take into consideration that with improved machinery less labor is required to produce a bushel of wheat or corn or any other commodity. Many of the men who have left the farm are helping to manufacture farm machinery and various other labor saving devices, and no one would deny that a harvester is a far better instrument for cutting grain than the sickle. This comparison may be carried throughout the entire improvement that has been made in machinery for preparing, seeding, harvesting, and marketing farm commodities.

We appreciate that the farmer, especially the farmer's wife, needs more help and farmers are working under rather annoying conditions because of incompetent help. Notwithstanding this, the stubborn fact remains that there has been produced in this country one of the largest corn crops, the fourth largest wheat crop, and the production of other cereals are exceptionally large. We have on hand over a billion bushels of wheat, which is nearly enough to supply us for two years. If there is anything serious about agricultural conditions, it is the fact that our crop is so large that the prices for agricultural commodities are likely to be relatively lower than other commodities. If agriculture is on the decline, it is not due to people leaving the farm so much as it is that the farmer has sold soil fertility and, because of the low prices of farm products, has not restored it to the land. He has been mining his soil which is not a commendable form of agriculture.

Agricultural conditions will be serious when our soils become so impoverished that the yields of farm products are below requirements to feed and clothe the people. We feel that those who hold that agriculture is on the decline fail to appreciate that improved methods of farming and improved farm machinery require relatively fewer people on the farm now than fifty or more years ago.

FORCING CO-OPERATION

Several weeks ago we discussed the undesirability of a law compelling every farmer in a community to support a co-operative enterprise which the majority might favor. We pointed out the advantages of co-operation but condemned any effort to force a farmer to co-operate in the support of any co-operative project which he did not desire to support.

One of our subscribers takes some exceptions to this editorial. He asks, "How about forcing a thief or a burglar to be good and quit thieving or burglarizing?" The thief or burglar is engaged in an industry to relieve others of their property. He is appropriating something for his use which has been created by another. It requires no argument to prove this is wrong and that laws are needed to protect society from thieves. The farmer, on the other hand, produces his milk. He owns it. It is a creation of his own labor and he is entitled to sell it on the market of his own choosing. It is clear that there is no comparison between the law providing penalties for a person who steals and one who would force a person to co-operate with another to sell his product to a co-operative enterprise favored by a majority.

Our correspondent also asked this question: "Why wouldn't it be all right to force a dairyman to patronize a pure-bred bull for breeding his cows?" We all agree that it would be better for the dairyman to breed his cows to a good pure-bred bull but it would be wrong, to our way of thinking, to force a dairyman by law to breed his cows to a pure-bred bull. This would be interfering with personal rights.

The trouble is so many of our people do not comprehend the difference between personal rights and public rights. A person who steals becomes a public menace; he is interfering with public welfare. The person who breeds his cows to a scrub bull is only carrying out his personal liberty, the right to conduct his business in his own way, and it does not directly affect his neighbor or society.

Again our subscriber questions, "Wouldn't you force a neighbor to co-operate in killing his thistles?" Yes. The neighbor's thistles become a public menace like the thief. If the thistles were to be confined only to the neighbor's land then it is an open question whether society would have a right to force the neighbor to clean his land of thistles. Another question, "Wouldn't you compel him to co-operate by sending his children to school?" Yes. Ignorant people, those unable to understand our government and to respect our laws, interfere with public welfare. We compel the education of

children that we may develop good citizens, that they may have regard for other people's rights and be capable of making and respecting law. A republic must have intelligent citizens.

We have laws which inflict penalties upon persons who violate the rights of society. We have no laws compelling persons to do right with themselves, but invariably these people pay a greater penalty by not doing right than the law inflicts upon them. We must have effective laws to protect society, to secure its progress, and to safeguard life, property, and the pursuit of happiness, but we can carry laws governing personal matters so far as to become positively injurious to the welfare of the nation.

Feeding Calves

Please give me a ration for calves about 5 months old.

Bloomer, Wis. H. T. M.

If there is a supply of skimmilk on hand we would advise feeding the calves 7 or 8 pounds of this twice daily. We know of no better way of developing strong, vigorous animals than through the use of a liberal quantity of skimmilk. If it can be spared, we consider it a good practice to feed skimmilk until the calves are at least one year old. The calf should be supplied with roughage, preferably alfalfa or clover hay. If legume hay cannot be supplied, then give it a liberal amount of whatever kind of hay is fed to the cows.

Calves at a very early age will eat considerable silage. It is well at first to give them the leafy portion until they become accustomed to silage and old enough to eat the stalks and pieces of ears as well as the finer portions.

There are a number of meal mixtures which may be suggested for the calf. Until the calf is six weeks old it can be fed whole corn and whole oats, equal parts by weight. After that time, both these grains should be ground. The calf will chew whole oats and corn when under six weeks of age very well and there will be very little, if any, waste. After this period the calf will not chew them so well and there follows a large waste of feed. In view of this fact, it becomes desirable to have these feeds ground. Whole grains fed to cows will cause a waste running as high as 20 to 25 per cent.

Bran is a good feed to mix with corn and may be used instead of oats. A mixture of 200 lbs. corn, 100 lbs. ground oats, 100 lbs. bran, and 50 lbs. of oil meal would make a very good mixture for young calves. At the age of five months, the calf can be given all the grain it will consume. It is the practice of good feeders to keep grain before the calf all the time until it is six weeks of age. After that it is well to feed what is necessary to keep the calf in good growing condition. At the end of two months the calf will consume one pound of grain per day, and a month later two pounds per day. At no time up to six months is it necessary to feed more than this amount, although, if it is desired to push the calves along rapidly, they may be given more up to the limit of their appetite.

Best Depth to Plow

Please inform me whether it is a good thing to plow deep. My soils are clayey and some are quite sandy. I have heard that deep plowing should be profitable.

New Denmark, Wis. C. N.

It has been abundantly proved that it is not good to plow a field the same depth from year to year. By plowing shallow or at a uniform depth, the soil cannot become mixed well and a hard bed is formed at the bottom of the furrow, which neither the air, water, nor the roots of plants will penetrate readily. A little subsoil turned to the surface occasionally allows the elements to act upon it freely, thus liberating food as it mingles with the surface soil and vegetable matter. In this way more valuable plant food and greater depth of soil is furnished the plants which grow upon it.

One quite frequently observes soils containing much plastic clay. In times of rain, the clay from the surface of these soils is washed away either into streams or it percolates through the soil and is deposited into the subsoil below. It happens in this way usually that subsoils contain more finely divided clay than do the loam which overlay them. Clay tends to retain moisture.

It is also true that these clayey soils appear dry at the surface at the same time when the subsoil is perhaps too moist for affording best condition for plowing. Plowing under such conditions may form a layer of puddled clay as it slips across the wet subsoil and in so doing brings about a very undesirable condition of the plowed soil.

For deep, rich soil, deep plowing, say from six to nine inches, is best in the fall of the year. The depth should be increased by one-half inch each succeeding year until the required depth is reached. Then return to the normal by gradually diminishing the depth from year to year. Light working soils, those running into sandy loam and sand, it is safer to plow shallower. For thin, clayey soils, and equally light subsoil, plow from five to seven inches; for small grains it is perhaps better than very deep plowing, because it does not turn the compact clay to the surface and it loosens the soil to a good depth. Of course, where root crops are intended to be raised, it is profitable to occasionally subsoil and plow deeper. Some farmers practice plowing a little deeper each year for several years in succession and then for one season plow at about half the depth of the deepest plowing in a series of years.

Wisconsin. J. F. WOJTA.

Storing Apples

Kindly inform me regarding the best way of keeping apples over winter. Would you advise pitting?

Alabaster, Mich. F. Y.

We take it that your Michigan subscriber wishes to store apples on the farm for use during the winter. It is difficult to state what is the best method for him to follow without knowing some of the conditions under which he is operating. Taking it for granted that he has a basement in the house, we would advise against "pitting" as a desirable method of storing fruit. Apples can be kept successfully in pits but they are practically unavailable for use during the winter. A room in the cellar, preferably without a floor, which has an outside window so as to aid in keeping the desired temperature and which can be kept at a temperature of from 32° to 40°, would make it possible to store apples and keep them in first class condition during the entire winter. Sometimes apples in storage in cellars shrivel. This is due to insufficient moisture in the atmosphere. This difficulty is easily overcome by occasionally putting a quantity of water on the floor. If the floor is of earth there will be less difficulty from the insufficient atmospheric moisture than if the floor is of cement or wood. The same method, however, can be used in overcoming the difficulty in either of the conditions.

Another method is to set a tub of water in the fruit storage. This not only assists in keeping the atmospheric moisture conditions right but also has a tendency to prevent the temperature from falling below the freezing point of the fruit. In cellars in which there is no furnace it may be necessary in very cold weather to take precautions about the temperature falling below the freezing point of the fruit. The temperature can go three or four degrees below the freezing point of water without injury to the fruit. If the temperature is falling too low, method of preventing the occurrence of injurious temperatures is the use of water as previously suggested. Spraying of water on the floor will also help. A lighted lantern may be used. As a rule, however, this special precaution will not be found necessary in the ordinary cellar. JAMES G. MOORE.

Wisconsin College of Agriculture.

Ration With Mixed Hay and Silage

Please balance a ration for me from the following feeds: Wheat bran, ground oats, ground barley, ground corn, linseed oil meal. We have plenty silage and good mixed hay of red clover and timothy. I am just going into the pure-bred Holstein stock and am not very well versed in feeding. Would you also tell me the amount of feed per pound of milk produced to give each cow?

Frazee, Minn. L. S. McC.

We suggest that each cow be fed daily about 30 lbs. of corn silage, or about 3 lbs. for each 100 lbs. of live weight, and all the clover and timothy hay she will consume without waste.

A mixture consisting of 200 lbs. ground corn, 200 lbs. ground barley, 200 lbs. wheat bran, 100 lbs. ground oats, and 100 lbs. oil meal will make a very good mixture to supplement the roughage. About 1 lb. of this mixture for each 3½ lbs. of milk produced will be required.

If oats is worth considerably more than bran, it may be omitted from the ration. If it is considered more advisable to use either corn or barley, then double the amount of corn or barley suggested.

It should be borne in mind that no hard or fast rules can be given in the feeding of animals. The feeder must vary the amounts of grain according to the needs and the uses the animals may make of the concentrates. Our suggestion is about the average practice which can be followed.

How Much Hay?

A question came up as to the average amount per day an 800-lb. Jersey cow would consume of alfalfa hay; no other feed and cow giving milk.

St. Joseph, Mo. F. P. H.

It is somewhat doubtful whether a Jersey cow weighing 800 pounds will consume to exceed 25 pounds of alfalfa hay per day. This amount of hay would scarcely be sufficient for the production of 20 pounds per day of average high testing milk.

We have had records of cows consuming very much more hay daily than given above, but they were not only larger animals but it is also quite probable that there was a greater or less amount of hay wasted. The amount of hay actually consumed by an animal, or rather fed her, will vary considerably according to its quality and as to whether the cow has been accustomed to this kind of feeding.

We do not recommend a dairy ration composed entirely of alfalfa hay. Although under certain conditions it may produce milk and butterfat somewhat cheaper, it will seldom bring the largest production. We feel quite certain that over a series of years such feeding will not produce milk as economically as a somewhat more mixed ration.

Resisting Improvement

HOARD'S DAIRYMAN:—One of the most striking observations that came to me during my first year as a dairy improvement agent, is the great indifference that most dairymen have towards their dairies. It is either indifference or lack of initiative, but either one is bad enough when a herd of cows is to be looked after.

Month in and month out, I have seen the old scrub bull, or worst yet, a pure-bred sire, stanchioned in the most convenient part of the barn, manure high on both sides of him, his bones prominent, and his skin tight and his whole being unsightly. Yet these very men have read and have been told time and time again that the herd sire affects every animal in that dairy and should, therefore, receive the best of attention.

Cows were retained that had for a long time proven themselves eligible for the stock yards. There was a small amount of money tied up in that scrub that was losing her owner money when he could have added a little to her value and had something that would make him money. Think of the hundreds of dollars that were wasted and the many hours of labor that were lost in raising calves from cows that had no place in the herd, and on calves that were given a flying start and neglected finish among the flies and in dry pastures.

Many of these acts we were able to reform during the first year, but as an agent I was discouraged because they were not 100% reformed. I could not understand why a dairyman, when once he knew that every part of his dairy was not up to standard, would not take the initiative to bring it up to standard.

East Aurora, N. Y. F. B. M.

Cutting Third Crop Alfalfa

I would like your advice in regard to a piece of alfalfa. We have taken off the first and second cutting of alfalfa not intending to cut it the third time. The third crop is very thick, stands about eighteen inches high, and has commenced to blossom. What would be the best for us to do?

Hartford, Wis. A. C. E.

Under Wisconsin conditions we hesitate to recommend cutting the third crop of alfalfa after the first week in September. If timely rains should come and fairly warm weather ensues, it is permissible to cut alfalfa later than this. However, there is always an element of danger in having either poor growing weather or an early winter without a good snow covering to protect the alfalfa.

If the field can be cut by the middle of September, it might prove highly practical and desirable to cut the third crop for hay. We are inclined to think that if the problem were ours and we felt the need of this extra hay, we would run a chance of unfavorable weather conditions. However, we suggest that the cutter bar be raised an inch or two so as to leave a somewhat longer stubble.

Almond Growers Act Like Real Business Men

They Fix Prices and Control Their Product and Have Run the Speculators to Cover

HERMAN STEEN, ILLINOIS

DURING the ten years from 1901 to 1910 the average retail price in the United States for almonds was 35 cents per pound. This varied little from year to year. The California farmers who grew the almonds received an average of eight cents per pound for them. The producers' share of the consumers' dollar was 22 cents.

That was before the almond growers organized. The low prices prevailing for almonds year after year so discouraged the growers that many groves were pulled out and the farmers turned their energies to endeavor that promised a profit. There had been no profit in the almond business—except for the fellows who bought for eight cents per pound and sold for 35.

Everything to Gain

It did no good to protest over the low prices for almonds, so some of the leading almond growers in 1910 took one desperate last chance and formed an association to market their product. "We had everything to gain and nothing to lose," says Geo. W. Pierce, now president of the California Almond Growers' Exchange, and a leader back in 1910. "We would have all gone busted anyway under the system then prevailing so we decided to take the one chance left to us."

During the eight years from 1911 to 1918 consumers still paid 35 cents per pound for almonds. The retail price remained practically the same from year to year. The almond growers received an average of 17 cents per pound for their product. The producers' share of the consumers' almond dollar was 47 cents. The 1919 crop was moved at a higher figure, due to a tremendous demand, the almond growers receiving about 27 cents and the consumers paying 45.

Growers Fix the Price

Since 1910 the price received by the growers for almonds has been determined by the growers themselves. The California Almond Growers' Exchange, which is nothing more or less than an organization of 3,700 almond growers whose purpose is to market the almond crop, each year fixes the price which the farmers receive for their crop.

Note that statement in the preceding paragraph—fixes the price. That does not refer to the steel trust, nor is it a mistake in print. The almond growers themselves, through their representatives on the executive committee of their organization, decide what their product is worth and then go ahead and sell it for the figure they fix. No, my dear corn belt reader, you are not dreaming nor am I telling a fairy story—the almond growers have been doing this for 10 years.

The Almond Grower's Dollar

A comparison of the figures for the 10 years before organization and 10 years after organization are illuminating. Consumers paid practically the same price for almonds during the whole 20 years (except in 1919, when everything, including almonds, was higher than ever before). The growers' slice of the consumers' dollar expanded from 22 cents before organization to 47 cents after organization. In other words, without charging the consumer a penny more for their product, the almond growers have doubled their returns. If that is not a proper line of activity for a farmers' marketing organization, I'd like to have somebody specify a better one.

What have been the general effects upon the almond industry from organization? I will let Geo. W. Pierce, president and a leading almond grower himself, answer: "The acreage devoted to almonds in California has increased between six and seven times since 1910," he says. "I have figures in my office to show that. In 1910, when we organized, the industry was on the decline. Many groves were abandoned, and many others were neglected, simply because none of us were skillful enough to make a profit in growing almonds for eight cents per pound. We were absolutely under the domination of a group of almond packing concerns which bought the crop as cheap as they thought they could get by with. Growers all over California were thoroughly discouraged, and in spite of the fact that it takes years to develop a good almond orchard they were quitting the business.

Profitable Price Insures Supply

"By organizing, the almond growers have been enabled to fix a price for their product which yields a fair return on their land and labor and pays a reasonable profit besides. That is the reason why there has been such a tremendous increase in the acreage devoted to almonds. Let me impress upon you that that principle applies to every product which will give the producer a fair profit and you will never need to have any fears about the supply."

There are 3,700 almond growers in the organization, or 90 per cent of all the almond growers in California. They are scattered all over the state, but usually in clusters in the areas suited to almond production. They are organized into 24 local associations which are organized on the nonprofit plan without capital stock. Each local association elects one director, and this body of 24 directors elects an executive committee of five who have the direction of the affairs of the California Almond Growers' Exchange.

How the Crop is Handled

When the almonds are harvested the growers deliver them to the warehouses belonging to their local associations. The nuts are there graded, processed, packed, and prepared for shipment. When they leave these local plants they are ready for the world's market.

Note that I said in the preceding paragraph, "the growers deliver them"—they don't sell the almonds to the association. The job of the local association is to prepare the almonds for market. Neither the grower nor the local association has one word more to say about selling the almonds than you and I have—except as he has a vote for director in his local association.

When the local association has the almonds ready for market, it ships them to any place indicated by the general manager of the California Almond Growers' Exchange, which is the central organization of the 24 local associations, and which is the only body with a word to say about the sale of the almonds. It is primarily and solely a selling organization, whose business it is to secure a good price for the growers' almonds.

Setting the Price

Each year there is a meeting attended by the directors from the 24 local associations, the general manager of the exchange, and a few experts hired by him. The meeting is held about the time the almonds are ready to move on to the market. These men, after taking into account the probable demand for almonds, the size of the crop, the size of the foreign crop, general business conditions, and a few other things of lesser importance, set the price on the almond crop. The general manager has authority to raise or lower this price at any time. Should demand prove greater than expected, he can increase the price, or should it prove less, he can lower it.

"We pay no attention to the cost of production," said T. C. Tucker, general manager of the exchange, in discussing the fixing of a price. "We set a price that we think will move the crop. For years we have maintained a salaried expert in Spain to report on the almond crop there. California produces only 20 per cent of the almonds used in this country, the rest coming from Spain. We depend on the information he sends, and upon our own information as to the size of the crop, probable demand, general business conditions, and then decide upon a price which we think will sell the crop for us."

The Same Price to All for Firsts

Here is another all-important point; Every grower gets the same price for the first grade of almonds of each variety. There is a considerable variation in the prices paid for different varieties. The uniform price within the variety is accomplished through what is called a pool. Each variety is a pool by itself, and all the first-grade almonds of each variety are pooled together. Second-grade almonds are not pooled, but are kept separate and sold for the account of the man who grew them.

Suppose an almond grower has 3,000 lbs. of Imperial almonds. When he delivers them to the local association he is credited with them. The central exchange sends him a sum of money equal to about half the sale value of these almonds; this money has been borrowed from the banks. Later, when enough Imperials have been sold to pay back the loan made to pay the advance and money begins piling up in the treasury, a further payment is made. Later as more Imperials are sold another payment is made, until all the Imperials are sold, then a final payment is made.

The past few years the harvest advance has been 10 cents per pound—

THESE HOLSTEIN ENTHUSIASTS OF OUTAGAMIE COUNTY, WISCONSIN, RECENTLY TOOK AN AUTO TRIP TO VISIT THE HERD OF JOHN ERICKSON, WAUPACA COUNTY. FIFTEEN GALLONS OF HOLSTEIN ICE CREAM, SERVED AT A PICNIC DINNER BY THE WAUPACA COUNTY HOLSTEIN BREEDERS' ASSOCIATION, EXPRESSED A WELCOME FROM THE WAUPACA BREEDERS

more than the growers formerly received altogether before the exchange was organized. At first, the directors had to borrow this money on their personal notes, but now the banks recognize the strength of the exchange and loan to it as they would to Armours or any other large borrower on its own note. Last year one bank loaned $1,040,000 to the almond exchange.

90 Per Cent of Growers in Association

Ninety per cent of the almond growers of California are members of the organization and turn their almonds over to it. The exchange does not guarantee any price; all it does is to take these almonds and sell them for the best available price and return that, less the cost of operation, to the growers. These growers must sign the by-laws which require each member to turn his almonds over to the exchange.

The almond industry is a small industry, but the lessons taught by the California growers who organized and put it upon a more solid foundation than it has ever known before are worthy of study by all whose thoughts run toward co-operative marketing.

This is the second of a series of 10 articles on co-operative marketing systems developed in California. The third will appear next week.—Copyright 1920. Standard Farm papers Inc.

Washington, D. C., Weekly News

(Special to Hoard's Dairyman)

Washington, Sept. 23—The newest feature which is of interest and a disturbing factor in the American butter market situation is the closing of the English contracts for Australian and New Zealand butter, and the effort which has been in evidence for the past ten days of the Australian exporters to seek an American market for their surplus. Cables have been received by a number of leading American houses seeking an American outlet, and the intimation is understood to have been given very broadly that the former English figure, which is approximately 45 cents at present rates of exchange, will secure the goods, carriage prepaid, to American ports. This figure is understood to be named as a minimum in requests for bids, purchaser to pay all duties.

There is a general feeling that this will prove an unsettling factor in the market for some time to come. There continue to be evidences of Danish and Holland imports, the best relief from this situation being the fact that these shipments thus far have gone into storage in the main, and the further fact that in spite of a gain in storage for the past month, with the exception of a single week, the amount of butter in the commercial storage plants is still below normal.

⚜

The Washington office of the National Dairy Union is putting out a statement this week reviewing the various government publications dealing with the subject of the food values of butter and dairy products. The best single document found, according to this statement, is the publication of the Children's Bureau of the Department of Labor, Care of Children's Series, No. 4—"Milk, the Indispensable Food for Children". It is recommended that this little circular be used generally by dairy interests seeking increased markets for milk and its products.

⚜

Announcement is made at the Department of Agriculture of the organization of a new division in charge of publications and information, to be in charge of E. B. Reid, who has been chief of the division of publications. Harlan Smith, well known to the agricultural newspaper fraternity, becomes head of the special information service, and Dixon Merrit of the Press Service. John E. Sanford, a former Detroit newspaper man, is added to the news service force by this change. This change, which increases the efficiency and activities of this publicity department is a direct result of the recent visit here of the Agricultural Association, and of Secretary Meredith's vigorous campaign to popularize the department and make it more generally effective in the broadest and best possible way.

"Nothing is ours until we share it."

EAST—West—North—South—wherever dairy cows are raised—there is ONE combination of feeds that has proven its right to be the acknowledged *best* feed for dairy cows of *any* breed.

36 World's Champions—cows of every breed have made their world's records with the help of these result producing feeds. A record that cannot be equaled by all other feeds in the world combined.

The Secret of This Unusual Success of

SCHUMACHER FEED AND BIG "Q" DAIRY RATION

is solely due to the fact that they supply dairy cows with the most ideal combination of carbohydrates and proteins. This means the right nutrients for bodily maintenance, health maintenance as well as for maximum milk flow. With Schumacher Feed as the carbohydrate or maintenance part of the ration and Big "Q" the high quality protein feed for milk production. you have a combination which is ideal and easily proportioned to suit each individual cow to the best advantage. No guesswork—no undue mixing, labor or waste of time. You not only get more milk, but better health and physical conditions.

Let the experience of the owners of 36 World's Champion cows be your guide in the selection of the feed for your cows — a trial will prove to you that Schumacher and Big "Q" are the "best feeds for any breed."

The Quaker Oats Company (D-6)

Address, CHICAGO, U. S. A.

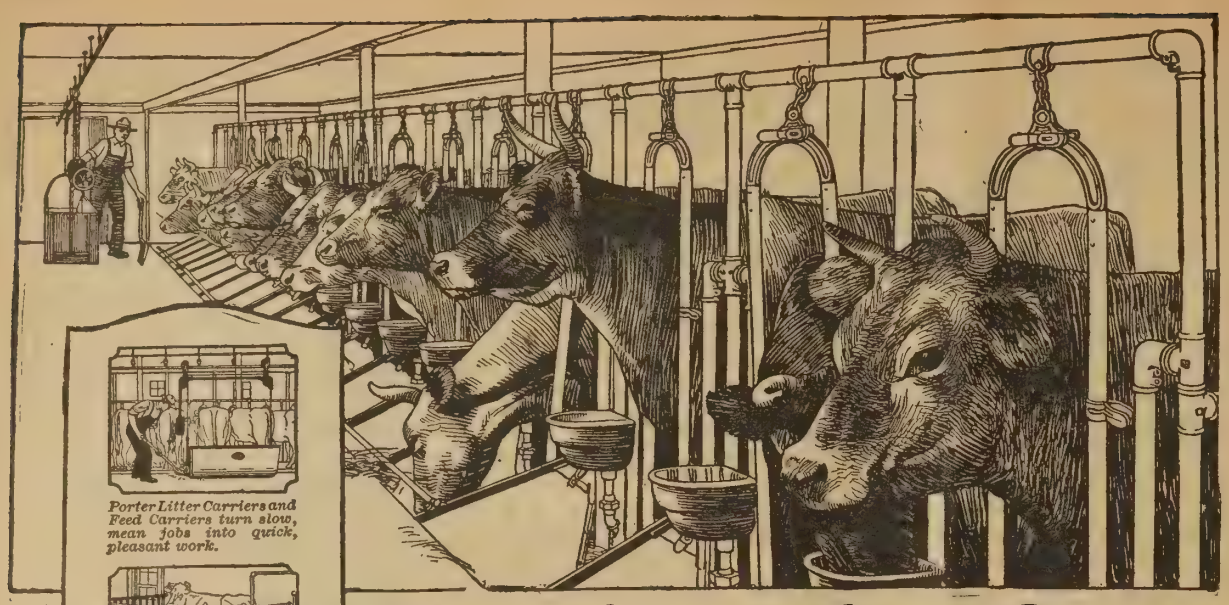
Cow Testing Eliminates Uncertainty

The favorite cow is not always the most profitable producer. In untested herds sentiment often plays a large part in the selection of cows for production and breeding purposes. Cow testing, however, does away with any uncertainty on this score. What the cow testing association has contributed toward the betterment of herds in the Grove City, Pa., community is shown by the United States Department of Agriculture exhibit at the National Dairy Show. Grove City district has one of the 467 cow testing associations now at work in the United States.

Still I am learning.—MICHAEL ANGELO.

Practical Low Cost **Sewage Disposal**

You can provide your home with all sanitary conveniences—baths, toilets, etc.—by use of HYDRO-KAUSTINE SEPTIC TANK and system. This most efficient device, with a little tiling, gives you a most effective sewage disposal outfit for home, school, factory, or other rural building. It is buried; no odors, no vermin; no attention; no cost. Design is government-approved; built of enameled Armco iron. Construction and operation both Guaranteed.



No Operating Cost

But see for yourself how easily, inexpensively sewage disposal can be secured. Ask for Free Booklet H. D-1.

PLUMBERS Get Interesting Selling and Installing Offer

Porter Litter Carriers and Feed Carriers turn slow, mean jobs into quick, pleasant work.

For cows, calves, bulls and hogs—light, airy, Porter Steel Pens.

Porter Door Hangers are storm-proof, bird-proof and sag-proof. They always work.

The tiniest tot can open and close the Porter-hung Garage Door—the "STRAIGHT-AWAY."

For quick, sure, dependable work in hay harvest, Porter Hay Tools "make good."

PORTER

Cutting the Cost of Milk Production

¶ There's real cow-comfort in a Porter Tubular Steel Stall—the kind of comfort that shows up in the milk pail and pushes your scale indicator across that little half inch or so of dial that represents *"net profit."*

This is plain equipment for a plain job, free from every "special feature" which cannot prove its worth to the practical farmer who is *"dairying for profit."*

PORTER

"Dependable Since Sixty-Eight"

Steel Stalls and Stanchions—fit for the finest show barn—are built first of all for utility; for cow-comfort and larger yields, for the convenience and contentment of your workmen, to increase your net profits by cutting the cost of milk production.

¶ It doesn't matter whether your barn is large or small, old or new; whether your cows are pure-breds or grades; whether you are a professional dairyman or a general purpose farmer—Porter Tubular Steel Stalls and Stanchions will help you realize a more satisfactory profit, at a net cost of about 50c or 75c per cow per year.

¶ *Ask us for the Porter Catalog and Barn Plan Book—and for the name of a dealer near you who can show you Porter products.*

When Writing to Advertisers, Mention Hoard's Dairyman

The Alfalfa Market

(Continued from page 425)

recently effective new tariff schedule amounts to as much as $6 a ton and in extreme cases even more. The increases in rates from producing districts of the Pacific Northwest across the country to the East and Southeast, which shipments are made on a large scale, amount to $8 to $9 and in extreme instances around $10 a ton on hay.

So it is not surprising that feeding interests took hold freely. Far greater quantities of alfalfa and clover could have been sold, or at least orders far greater in volume than the trade could fill were received. Many feeders at distant points even offered a premium for alfalfa where shipment was promised before the rate advances went into effect. The hay bought for shipment before August 26, the date when the new tariffs went into effect, represents the consumptive requirements thirty, sixty, and probably ninety days away, the trade already having on hand comparatively liberal stocks for prompt needs. Because of the accumulation of hay on hand, and the lack of an incentive to further buying, the market is feeling the weight of the absence of the usual early fall demand.

There is another influence in restricted buying of alfalfa in the West and Middle West by dairymen and other feeders of the East and surrounding sections. The advanced schedule of freight charges placed the net cost of hay on an abnormal basis, many points being forced to pay more than $50 a ton delivered. This figure is only a little less than the delivered cost of alfalfa in the East at the time alfalfa was selling on the Kansas City market around the record levels of $40 a ton. Buyers are very reluctant to take hold on this basis, and, while the argument is advanced that hay is bought only because it is needed, the high delivered cost of the forage will tend to reduce demand and increase so far as possible the consumption of native grasses. And the buying will be more evenly distributed, as dairymen will be unwilling to accumulate stocks at prices which they are now forced to pay, that is, including the higher freight costs.

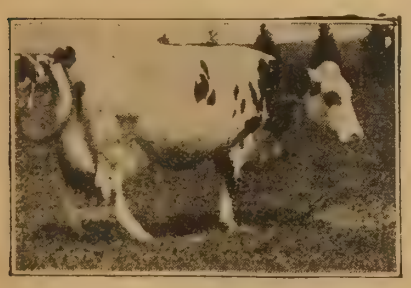
The freight rate increases, however, cannot be considered entirely from a bearish angle, though this is probably the case for the immediate future. Higher tariffs will play an important part in the movement of alfalfa from the Pacific Northwest and other western producing districts to the Middle West, Central States, East and Southeast, and some observers of market conditions hold to the theory that the effect of a reduced movement will be sufficient to offset the lessened demand, if not ultimately result in a net rise in prices. The smaller movement will be brought about by the almost prohibitive freight rates on shipments from the distant producing regions. For instance, the freight charge on alfalfa shipped to Kansas City from the irrigated growing sections of Idaho, Utah, Wyoming, Montana, and Nevada amounts to around $14 a ton, with the rate from some points above $15 a ton. On the basis of the prices prevailing in Kansas City, Omaha, and eastern markets, dealers are unable to draw alfalfa from the Pacific Northwest in competition with the local buyers in that territory. Reports indicate that alfalfa is selling in Idaho and the surrounding states around $18 to $20 a ton, track, which is more than $5 a ton above a parity with Kansas City, not even including handling charges and a small margin of profit to buyers. It is questionable, of course, whether the prices being paid by the local buyers in the Pacific Northwestern region will be maintained above a parity with the larger markets of the Middle West and East, but so long as this differential is maintained, little if any hay will be drawn eastward. A year ago comparatively little Northwestern alfalfa moved to Kansas City and the East, owing to the California and Northwest drouth conditions, the bids from that territory having been more attractive, but during the fall of previous years enormous quantities of alfalfa were shipped out for ultimate consumption by dairy herds east of the Mississippi river. The absence of large quantities of the irrigated hay from this territory will doubtless be felt in price fluctuations.

The effect of a restricted movement of the choice quality Pacific Northwestern alfalfa is further strained by recent damage to hay in Colorado by rains. Large quantities of choice pea-green alfalfa were damaged or browned by the rains in many sections of the state, and, so far as Colorado is concerned, feeders depending on that state will be forced to draw the bulk of their requirements of choice hay from the third and later cuttings. This places the burden of meeting consumptive

requirements upon Kansas, Nebraska, and surrounding states to a greater extent than any time in recent years.

Reduced prices for cattle, hogs, and sheep on markets are an important influence which will tend to hold down the price of alfalfa hay. Tight money is seriously restricting the purchases of stocker and feeder cattle and feeding sheep and lambs on markets, and this will tend to lessen the consumption of the legume in feeding sections. The fact that large quantities of roughage, far greater than a year ago, are available on farms also will tend to hold down the demand for alfalfa hay. The supplies in producing areas are comparatively large, the holdings being greater than a year ago and the quality considerably better on the whole.

On the Kansas City market choice alfalfa hay is selling around $30 to $31 a ton for carlots, No. 1 at $27.50 to $28.50, the standard grade at $24.50 to $27, No. 2 at $21.50 to $24, and No. 3 down to $17.50. These prices are practically the same as prevailed at this time a year ago. An influence which is exerting tremendous pressure on prices is the recent sensational decline in the cotton market. The South is one of the largest consuming outlets for alfalfa in the United States, and a reduction in its purchasing power as a result of the depression in its staple commodity will be felt in a lessened demand for the hay. On the past crop, during which time cotton soared to the highest levels on record, it was not particularly a question of price, but of quantity and quality. The southern planters bought feverishly and they demanded none but the best grades. Their buying was responsible to a considerable extent for the strength in prices. Unless cotton enjoys a rebound, and this is very improbable, the South will be a more careful buyer and will not discriminate so much against the cheaper quality offerings.



Alfalfa millers located at points away from producing sections have been heavy buyers of the "wonder plant" on markets, but their buying was based on the prospective rate increases and not on the prospects for any broad demand for their product, alfalfa meal. Sales of alfalfa meal thus far on the crop have been of a comparatively light volume, and the market price is below a parity with alfalfa hay, not affording the miller a sufficient margin to cover the manufacturing costs and other handling expenses. Absence of a broad demand for alfalfa meal is the result of a dearth of buying orders for alfalfa molasses and alfalfa grain molasses feeds. Alfalfa hay cannot share in any material upward price movements unless millers are more successful in the sale of their meal, and prospects for the immediate future are not encouraging. The enormous crop of corn now maturing, the abundance of oats and liberal production of other feed crops are holding down demand for alfalfa mixed feeds and thus restricting the sale of meal.

More or less attention is being given by market operators to the price movements in corn, cottonseed feed, and similar products. Cottonseed cake and meal, selling below $50 a ton for 43 per cent protein prime grades, basis Texas points, the lowest level for some years, already is considered well below a parity based on feeding values with alfalfa hay, and this is probably true, too, of corn. The generally downward tendency of prices for feedstuffs in recent weeks is being felt indirectly as a bearish factor in the alfalfa market.

The character of the late fall and winter weather will have much to do with the trend of values for alfalfa. Dairymen and other feeders also should not overlook the probable transportation situation as an influence on prices. Cars are freer in producing sections than at this time a year ago, and the view is almost generally expressed that the discontinuance of the government guarantee on railroad earnings and the advanced schedule of freight rates will have much to do in improving the traffic service of the nation. Cars, or the lack of cars, played a vital part in forcing alfalfa and other varieties of hay to the high levels on the past crop, while a more normal position of transportation, in prospect on this crop, will wield an opposite influence. Unless alfalfa undergoes a sharp setback soon, purchases on a large scale do not seem advisable. But hay will not go too low.

IDEAL-Arcola Radiator Boiler Farm Home Heating Outfit

(no cellar needed)

The outfit consists of an IDEAL-Arcola Radiator-Boiler and 4, 5 or 6 AMERICAN Radiators and Special Expansion Tank—everything except labor, pipe and fittings, which any local dealer will supply. See prices below for various sizes of outfits.

When the cost of your heating is figured on a yearly basis, the IDEAL-Arcola heating will be found to be the *cheapest heat* in the world, for it lasts forever—heats every room—uses no more coal than a stove, never needs repairs, is clean and easy to run. It gives you the same delightful warmth that city residences have.

Any dealer will furnish in sizes to suit rooms and climatic conditions.

For Soft Coal	No. 1-B Size IDEAL-Arcola with 100 sq. ft. of Radiation		$142
	" 2-B " " " " 150 " "		176
	" 3-B " " " " 200 " "		213
	" 4-B " " " " 250 " "		251
	" 5-B " " " " 300 " "		290
For Hard Coal	No. 1-A Size IDEAL-Arcola with 135 sq. ft. of Radiation		$163
	" 2-A " " " " 200 " "		206
	" 3-A " " " " 265 " "		251
	" 4-A " " " " 330 " "		299
	" 5-A " " " " 400 " "		349

Prices include Expansion Tank and Drain Valve. Prices do not include labor, pipe and fittings used in installation and which are supplied by the local dealer at extra charge. Radiation is of regular 38-in. height 3-column AMERICAN Peerless, in sizes as needed to suit your rooms. Outfits shipped complete f. o. b. our nearest warehouse, at Boston, Providence, Worcester, Springfield (Mass.), Albany, New York, Philadelphia, Harrisburg, Pittsburgh, Baltimore, Washington, Richmond, Buffalo, Cincinnati, Indianapolis, Birmingham, Detroit, Chicago, Milwaukee, Minneapolis, St. Paul, Des Moines, or St. Louis.

Shipped complete for immediate installation

The beauty of the IDEAL-Arcola method is that no cellar is needed. Everything is on one floor. The Arcola is placed in any room that has a chimney connection. No running to cellar. Same water is used over and over again for years. No fire risk.

Buy now at present attractive prices for outfits complete!

IDEAL-Arcola outfits consist of the boiler and radiators to heat various size houses. Write us your requirements! Unlike stoves, there are no coal-gas leaks in the living-rooms. The IDEAL-Arcola delivers the soft, radiant warmth of hot water—not the dry burnt-out atmosphere of stove heating. There is no fire risk to building—no danger to children—fire lasts for hours! The Arcola burns hard or soft coal

Catalog showing open views of houses, with the IDEAL-Arcola Boiler in position will be mailed (free). Write today

The Fox and the Poultry

The Application of an Old Fable to the New York Milk Crisis

H. H. LYON, NEW YORK

THERE is the old story of the fox which rolled stones down the hill amongst the poultry until they came to observe that it is perfectly natural for stones to roll down hill; then the old fox rolled down himself, gobbled up a fine bird or two and ran off. In the earlier part of the year the milk dealers, apparent now, rolled stones amongst the dairymen and quite considerably frightened them. Twice we got ready to handle our own milk only to have the conference board of the dealers come around at the last minute and take the milk just as though nothing had happened. We are still wondering whether they meant a word of what they said. A Solomon to analyze the ways and the words of the managers of that conference board could do a good business these days.

By the time this can be read on October first we may know whether the "old fox" is coming himself or is simply having a little amusement in anticipation of something later and to just see the worry, the annoyance, and the burden of expense and trouble that is causing the thousands of hard-working, burden-bearing men and women on the dairy farms of our territory.

There is such a thing as a gun to be used in the defense of the flock. There is ammunition that can be gotten together and the gun fired. When it is fired it is pretty safe to predict that good aim will be taken. The cautious farmer may hardly get up nerve to fire until the old rascal gets pretty close, maybe not until neighbors and friends have been caught and received some rather rough handling from the cunning deceiver. All the same, the closer he gets and the more he hurts the harder he will get it "in the neck".

The big new gun is well polished and is a sure fire. We dairymen are a little slow acting to get the ammunition together, and I suspect we will never do it until the real danger comes. It is surprising though with what speed we can work when we get woke up to it. Our big League Co-operative is incorporated and manned. In now and then a corner a little of the "stuff" that tells has been put together and the machinery works very well. A little experience is being gained in handling the "outfit". Some say that the pooling plan of handling the milk of our 85,000 farmers may not bring quite so much to certain individuals as the way the business has been handled the past year or two. Others say that the co-operative in manufacturing can not measure up to the fluid milk business in the cities. In saying this they do not look far enough ahead. That is short sightedness and temporary at best, and may not be true at all.

Just now the condensors, evaporators, and dry milk men are telling us that they have enormous quantities of products on hand made under conditions of falling prices, for sugar at least, and that they prefer the dairymen should keep their milk for a few months, bury it or store it in the cellar, I suppose, and let them sell this high priced stuff before putting any more on the market. It matters not that farmers have been producing under conditions of high costs for supplies and sell at falling prices later on. Why should that matter? They, manufacturers and dealers, made enormous profits for a long time and they do not propose to let a little matter like fairness to the farmer interfere with their making a lot of money on the accumulations of products that they have on hand now. That is good business. It is said that farmers ought to learn business methods.

The "fluid" milk handlers say that they will not pay more for October than they have for September while the League has advanced the price twenty cents a hundred or less than a half cent a quart, about four-tenths of a cent I believe. While we know not what to look for, it seems more reasonable that these dealers may come up to the price set than that the manufacturers will come on the market and buy at all. All the same, the experiences of earlier in the year may make dairymen feel that the whole affair is a bluff, as indeed it may be. Personally I believe the dealers will call a lock out on milk and its price unless they fear the pooling plan and the co-operative plant plan will be put through and that such action will interfere with their profits.

It can hardly be out of place to recite rumors that are floating about. There may be little or no truth in them yet they are not unbelievable. The Bordens are said to be willing and perhaps a little anxious to sell their country milk plants. They have sold some. Then there is another report that the Nestles would now like to retire gracefully back to their original haunts across the Atlantic. To precipitate a blockade in the sale of the product of the dairy farms would almost certainly consolidate dairymen in the co-operative association, lead to the pooling of all milk, and to the purchase of plants and equipment for handling co-operatively. If enough of the dealers want this to bring about the blockade they may get it in this way. Or, if they are shortsighted and believe they can break the League they may bring on the crisis. At any rate, from certain viewpoints it would seem as though neither side is entirely averse to a showdown on October first. There are many on both sides who will not endorse such a procedure and a prediction of its coming may be a little rash. No harm can come from looking at this side of the situation anyway. There will be other crises if the matter is not settled in 1920.

Now a word or two on the advisability of entering the pooling plan. If we don't do it we split and the League cannot help us more, at least it looks so. If we do, what then? Take a look at it this way. New York City will have milk and it will be sold there. The remainder of the milk will be manufactured. It will bring less money. In my own town the milk may realize by manufacturing around $2.50 a hundred pounds, for we cannot condense or evaporate. Butter is not high comparatively and most likely it will go lower. In the next town there is a shipping station. There the farmers will get perhaps the full $3.80 a hundred. These farmers are neighbors. If we are all in the pooling proposition all the money will go into the central hands for distribution and all the farmers will get the same price, somewhere between $2.50 and $3.80.

It will be seen that my own town will get more for their milk than if they sold for $2.50. In the case of my neighboring town they will not like to take a price lower than they might have received by keeping out of the pooling plan. Therefore it might seem that they will refuse to enter the pool.

If we look again it will be evident that the neighboring town cannot continue to sell independently for if they do our town will join in and sell milk the same as they do and then their market price will be down to ours rather than ours coming up to theirs. That means that we no longer have a League and they in common with ourselves are without protection. For the safety of the favored and the unfavored we must all join in.

Dairymen in the League territory are aroused. They are holding county and local meetings in all sections of the League territory. The first county meetings are in my own county of Chenango and in Orange County. The following week local meetings are to be held. Orange County promises through its officers, John Arfman being the president, to put that county in line with the new movement at the rate of 100 per cent. In our county meeting the enthusiasm was strong, one member proposing to make it 125 per cent. In 1916 Chenango County under the leadership of Mr. Kershaw took the lead and has the credit of bringing in about the stand that was then taken by the League. It is unlikely that this county is going to fall down now that we are facing a new crisis.

Our directors voted to enter into the project as soon as 50,000 of our members have signed the new contracts uniting us into the co-operative project, for the pooling plan is no less than that. If this can be done by the 30th of September then we begin on October first. If delayed beyond the 30th but is then brought about we will enter the month following.

There are something like 1,100 branches and we are said to have 85,000 members. It is impossible for our directors and county presidents to attend all the branch meetings, therefore the local men with the help of the farm bureau men will be obliged to work out the job of securing signatures, and very likely this is best.

Why Cheesemakers Should Exhibit at National Dairy Show

R. B. Stoltz, superintendent of the Products Department of the National Dairy Show, has issued an appeal that should be of interest to every cheesemaker in the country. He points to the fact that foreign countries, including Denmark and Argentine, will have big exhibits at the show and that American makers should not miss the chance of meeting their new commercial foes face to face, and should have there a representative exhibit of their product. Denmark alone manufactures 200,000,000 pounds of butter a year and will have a large exhibit of both cheese and butter at the show.

Here is the appeal of Superintendent Stoltz, which every dairyman should heed:

"Last year at the National Dairy Show only 25 states entered American cheese and 23 states went without medals because they failed to enter. Don't allow this to occur this year.

"Pick out the best cheese you have and send it to the National Dairy Show, in care of Beatrice Creamery Company, 1526 State Street, Chicago, Illinois. It should be sent so it will arrive not later than Saturday, October 2.

"Last year the Swiss cheese sold for 55c per lb., the American, Brick, and Limburger at 33c per lb. which was enough over the market price to well pay the cheesemaker the express charges and the extra work of sending in the cheese."

"Fort of Ill Health"

Milk wins the war, and the fort of ill health falls before the onset of milk bottle soldiers with their bombardment of milk bottle shells and milk bottle bombs. A poster telling this story is among the exhibits at the Dairy Division of the United States Department of Agriculture at the National Dairy Show. In many communities there is need of increased consumption of milk, as a means of combating undernourishment and improving health, especially among children. Community milk campaigns have been especially effective for this purpose; and many of the progressive cities and towns, including Boston, Detroit, Pittsburg, Seattle, Spokane, and others, have already held successful campaigns. An exhibit shows just how the urban and rural campaigns are organized, and what they can accomplish toward increasing the use of milk in the home.

Order seed, lime, fertilizers, and supplies early; railway facilities do not seem to be getting better fast.

Butter Prices for August

From the daily quotations of the United States Bureau of Markets, we have compiled the following table giving the monthly averages of the daily wholesale prices for August 1919 and 1920 on 92-score butter (extras) in the four principal markets, together with the total receipts of butter at these markets:

	Ave. price		Receipts	
	Aug. 1920	Aug. 1919	Aug. 1920	Aug. 1919
	Cents	Cents	Tubs	Tubs
Chicago	54.23	53.31	282,024	247,406
New York	55.48	55.31	246,712	203,467
Boston	56.73	56.00	124,793	101,457
Philadelphia	56.30	56.27	65,642	58,081
Total			719,171	610,411

Ninety-score butter averaged 51.7c for August on the Chicago market, with centralizer butter, to which it is comparable, selling for 53c. Jobbers' prices on extras sold to retailers during August were 55.56c in Chicago and 57.62c in New York.

Cheese Prices for August

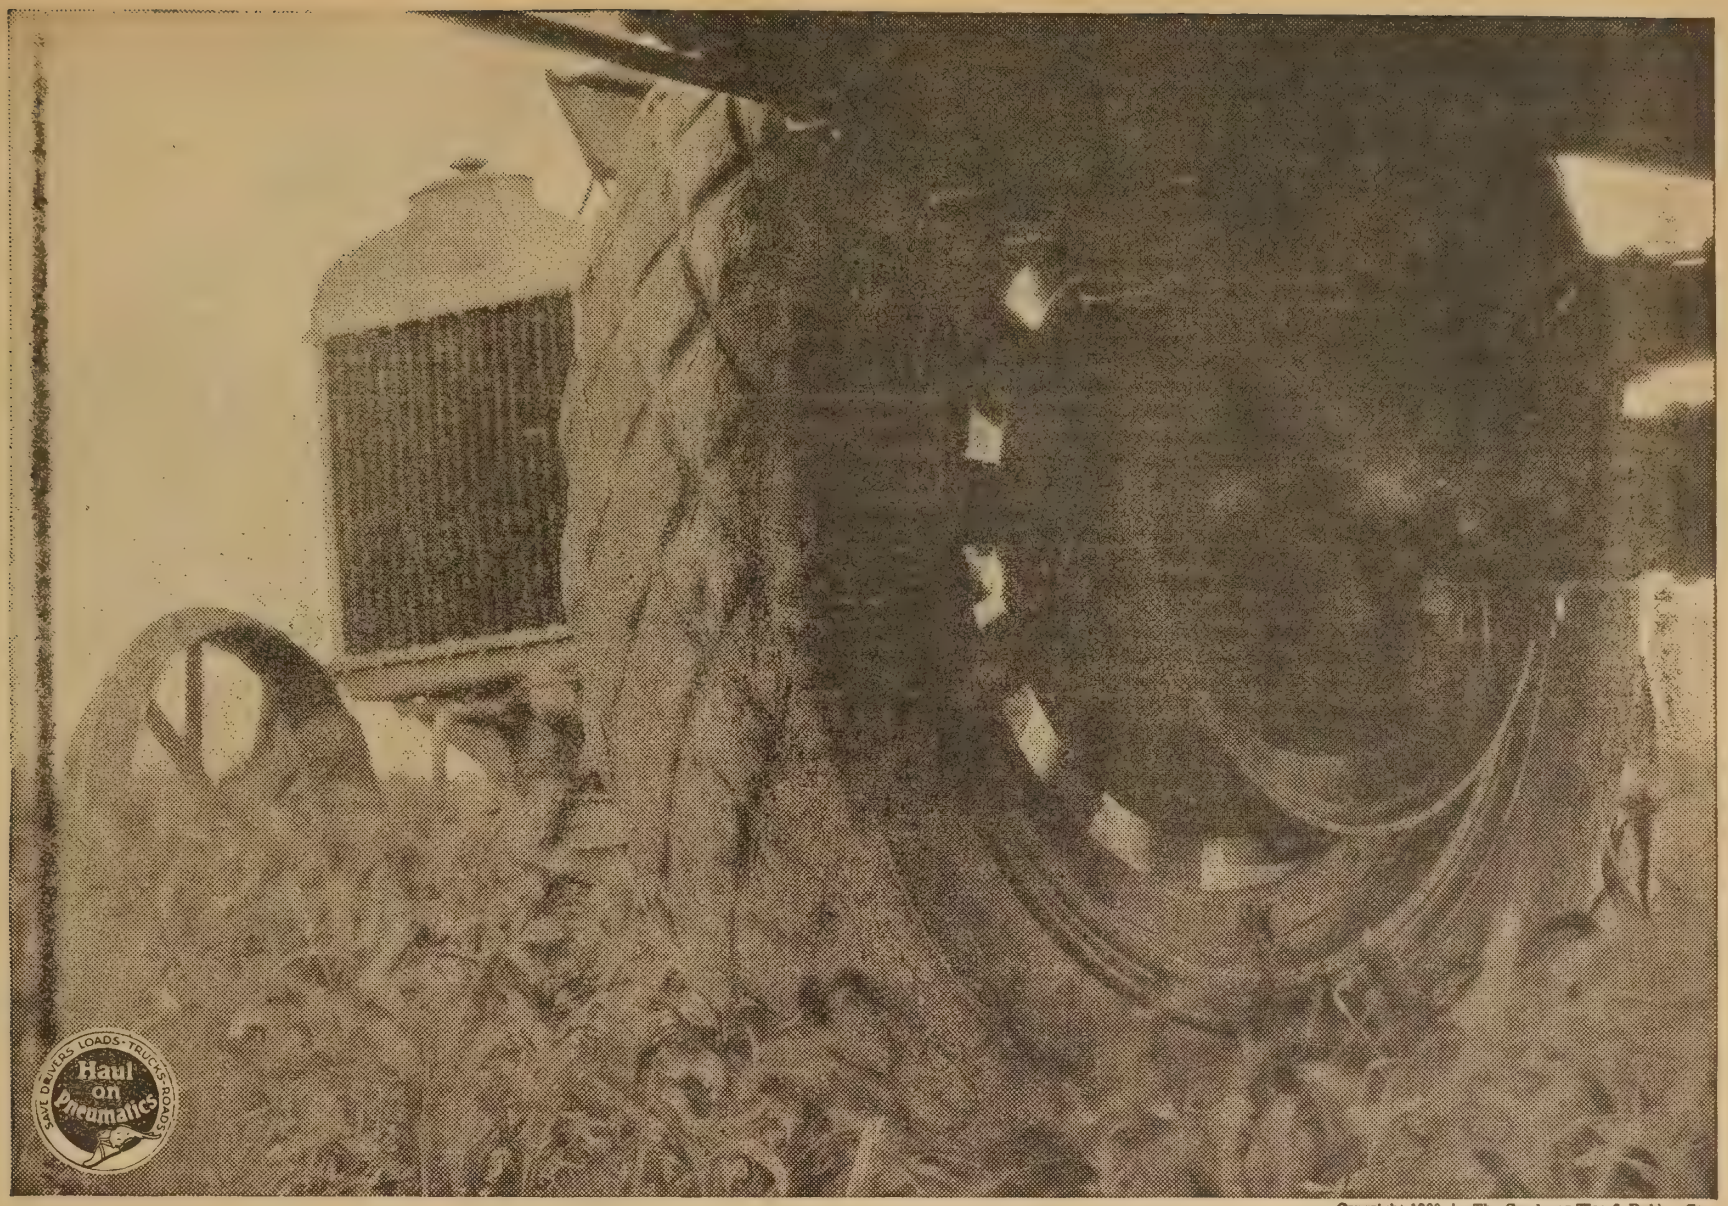
Cheese prices just about maintained their July average for the month of August. The daily quotations of the United States Bureau of Markets showed the following average quotations on cheese (style Twins) for three large markets in August 1919 and 1920:

	Average price	
	August, 1920	August, 1919
	Cents	Cents
Wisconsin boards	24.62	29.82
Chicago	24.45	30.14
New York	26.62	31.14

Longhorns averaged for August of this year 25.82c on the Wisconsin Board, which is slightly more than 1c above the price of Twins.

There would be more sympathy and understanding if every business man read a good farm paper, and if every farmer read a business journal.

Farmers must keep at work for good roads. The development of the motor truck makes them increasingly necessary.



Coming Events

National Dairy Show, Chicago, October 7—16. W. E. Skinner, Manager.

Ninth Annual Convention, International Association of Dairy and Milk Inspectors, National Dairy Show, Chicago, October 11, 12, and 13. Ivan C. Weld, Secretary, 1120 Connecticut Ave., Washington, D. C.

Oct. 18-22—Wisconsin Junior Live Stock Exposition, Madison, Wis.

Louisiana State Fair, Shreveport, La., October 28 to November 7. W. R. Hirsch, Secretary.

Copyright 1920, by The Goodyear Tire & Rubber Co.

"Soon after I got my truck I made a big improvement by chan ing quickly to Goodyear Cord Tires. The pneumatics save time, fuel, repairs an l shrinkage in livestock—they have increased my hauling radius by 35 miles an l go anywhere on the farm. I figure the one truck equal to six teams on my place. Motorization offsets the labor shortage and pneumatics help the farmer to motorize properly."—Frank B. Williams, General Farmer, Cedar Bluffs, Nebraska

MANY a resourceful farmer, like this one, now saves labor, time and money by doing his farm hauling and market hauling on Goodyear Cord Tires.

He hauls steadily through plowed fields, barnyard mud, sand trails and melting snow because these tractive pneumatics grip firmly as they go.

He hauls eggs, fresh vegetables, delicate fruit and shrinkable livestock with utmost safety because these are cushioned properly on the big Goodyear Cord Tires.

He hauls quickly to pumping, grinding, shelling, harvesting and wood-cutting machinery because of the easy-rolling qualities of these helpful pneumatics.

Developed with the manufacturing care that protects our good name, the hardy strength of their Goodyear construction is repeatedly expressed in mileages of exceptional length.

Detailed information, concerning pneumatic-tired farm trucks and general farm motorization, will be sent you promptly on request by The Goodyear Tire & Rubber Company, Akron, Ohio, or Los Angeles, California.

This label stands for
House Paint that *Endures*

You can still get a house paint made of pure zinc, pure lead and pure linseed oil. In spite of the scarcity of raw materials and the high cost of manufacture, SWP is made on the same formula, from the same materials, and in the same thorough way as in the past.

Sherwin-Williams House Paint is a high gloss, heavy-bodied paint which covers 360 square feet per gallon with two coats, and protects the wood it covers from three to five years. When you paint, paint for the future: Use SWP, the most economical in the end.

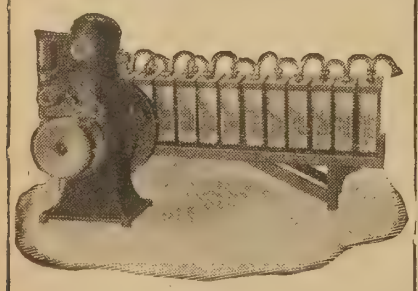
***S-W* Commonwealth Barn Paint** is a bright, handsome red or gray which dries with a fine appearance. Works easily with free flow, giving unusual cover even on rough lumber. Ammonia-proof, durable and very economical.

***S-W* PORCH AND DECK PAINT** protects just where home wear is hardest, on porch and steps. Prevents warping and splitting, is economical, easy to apply, attractive in colors, water-proof and almost wear-proof.

***S-W* Preservative Shingle Stain** is a powerful wood preservative of creosote base. Protects shingle roofs and sidings against warping, splitting and wear. All S-W Preservative Shingle Stain colors are permanent, and rich.

SHERWIN-WILLIAMS PRODUCTS

Go to the Sherwin-Williams Dealer in your town. If he cannot supply all your needs with S-W Products, write us for booklets, etc., on your requirements. Address—
The Sherwin-Williams Co., 606 Canal Road, N.W., Cleveland, O.



COVER THE EARTH

Paints and Varnishes
Wood Preservatives
Insecticides, Disinfectants and Cattle Dips

S-W Fly Spray protects cattle and horses from flies. Apply with spray or sponge.

KING SEGIS PATENT LOCK
Ear Tags, Bull Staff and Rings. Description and prices sent on application. 300,000 of these ear tags have been sold without adverse criticism. 500 of these BullStaffs are used by the best breeders in the business.

H. A. Moyer, Syracuse, N. Y.

The Improved Humane Stanchion

is the handiest, strongest, and most practical Stanchion on the market. Write to Humane stanchion Works, Baraboo, Wis., for literature on a complete line of barn equipment.

Nebraska State Fair

(Continued from page 425)

fair management will soon be able to give the state dairy interests a new building which shall be commensurate with the bigness of the dairy business in Nebraska.

The state university maintained a booth which displayed food charts showing the value of milk and milk products. It was considered one of the most interesting exhibits on the fair grounds besides its great educational value. On the big days of the fair the space in front of the booth was jammed with people. Three young women were in charge of a booth at which the food value of dairy products was demonstrated, featuring cottage cheese.

Booths were maintained by Jersey and Holstein-Friesian breeders. The creameries were well represented. Nebraska claims to rank fifth as a butter manufacturing state and thirteenth in the number of dairy cattle.

A million dollars' worth of machinery was on the grounds and it covered thirty-five acres of space, the largest in the history of the fair. The display of tractors exceeded all former years and this was true of devices for promoting the dairy interests. Nebraska raised the biggest grain, corn, and forage crops in many years and an immense quantity of vegtables and the display of agricultural products taxed the space in the immense building erected eight years ago. Western Nebraska counties comparatively a few years ago, merely cattle ranges or poor crop producers, rivaled and even excelled the eastern counties with their high priced land in the production of grain, corn, forage, and potatoes. Some of these western counties reported wheat running as high as 58 bushels to the acre and many fields producing from 40 to 50 bushels.

To stimulate and encourage the rural districts to build homes and farm buildings and to show the wives of farmers how they might be saved much drudgery, models of dwellings and barns were exhibited by an enterprising lumber company. The cost and the labor saving devices was featured. It was one of the best drawing cards at the fair.

Nearly two hundred Nebraska boys from all parts of the state assembled as members of a boys' club on the fair grounds. They were the wards of the state board of agriculture, and they ranged in ages from fifteen to twenty. The boys were furnished with a camp equipped with suitable buildings. Agricultural experts from the state university farm provided an educational course. They were taken over the fair grounds and were made acquainted with the exhibits. They were also taken to see the manufacturing and jobbing plants of Lincoln. The boys slept in barracks and were furnished with plenty of plain and nourishing food. At night before retiring they enjoyed gathering around a big campfire. The board of agriculture is preparing to give a larger number of Nebraska youngsters an opportunity to become members of the club. Much time was spent among the live stock, the boys expressing the keenest delight in inspecting the beef and dairy cattle and the pure-bred swine. The old cattle barn which was burned down was replaced with a more modern building costing approximately $100,000, and the dairy stock were exhibited on the second floor instead of being mixed in with the beef breeds.

The fair took on something of the character of an inter-state exposition by the presence of representatives from many of the middle western states. Canada was also represented by commissioners from several fairs.

The Red Cross featured the work of sanitation and the care of the sick in the rural communities. Practical demonstrations were given how to care for the sick and the injured and how rural homes might be made more sanitary and therefore more healthful than the homes of city people.

State Show at La Crosse

After nineteen consecutive years in the capital city, the management of the Wisconsin State Experiment Association has awarded the State Corn and Grain Show to the city of La Crosse for 1921.

The Agricultural Bureau of the Chamber of Commerce of La Crosse has been placed in charge of arrangements, and preparations are being made for accommodations and entertainment which it is hoped will make this the most notable event of its kind ever held in the state.

Communications regarding the show should be addressed to General Committee, Corn and Grain Show 1921, Care Chamber of Commerce, La Crosse, Wis.

The virtue lies in the struggle, not in the prize.—LORD HOUGHTON.

INTERNATIONAL FEEDS *are* Made To Your Requirements

There is no guesswork about International Feeds. When an International Feed is offered it is not an experiment with a pet theory. Every feed in the International line has a known record. Its daily feeding performance justifies an organization of experienced feeding men in staking their capital and reputations on it. Under the International trade mark you are told in figures the feeding value of every feed. These figures mean a lot. They are required by law to be accurate. The U. S. Government has O. K.'d them.

What Do These Figures Mean To You?

For instance, when we tell you tnat International Diamond Dairy Feed contains 24% Protein, 5% Fat, 42% Carbohydrates, and 10% Fiber, do you really grasp the full importance of these figures. To do so entails a broad study of the subject of scientific feeding as developed by leading experiment stations and our own laboratories. To you the main thing is results. That's what you pay for. So when we tell you that International Diamond Dairy Feed is *guaranteed to produce more milk than any other feed you have ever used*, you get our meaning in language you understand. *Every* International Feed is guaranteed to give you satisfaction—to be your money's worth. Our success has been built upon the success of our feeds over a period of years. International Feeds are *made to your requirements.* Keep that in mind.

In the International line are guaranteed feeds for every farm and dairy purpose. Ask your dealer for them. Write us for full information if your dealer cannot supply you.

LIVE AGENTS WANTED

New York State Fair

NEW YORK held its eightieth annual state fair September 13—18. In spite of two days of rain, attendance was heavy and the week a better than average success.

Keeping up with the average of past years is not enough. The New York State Fair is in danger of losing step in the forward movement of agriculture. It fails in its recognition and appreciation of the high character and magnitude of the farming interests of the Empire State. It needs to purge its management of politics and replace it with agriculturalism. Specifically, more attention should center in live stock and farm products exhibits. Farm trained men in charge and larger premium lists would improve the entries. The splendid cattle barn, now erected, half accomplishes the purpose which could be carried out with a suitable judging pavilion. A plea for more time finds few patient hearers among exhibitors, for this year's is the eightieth fair. Open air judging or using the inadequate space of the cattle barn aisles gives justice to the statement of one who this year acclaimed it the "biggest county fair in America". Also, a provision that only tuberculin tested cattle can be shown would be in keeping with the standard which should be sought in the cattle show.

Dairymen's League

The Dairymen's League put its case clearly before State Fair visitors, showing what the organization has done and what it may yet do through co-operation. It has grown from a membership in 1907 of 691 with 14,719 cows to 85,304 members on September 1 of this year, organized in 1,112 locals and owning 909,618 cows. It was claimed for the League that it has secured better milk prices, obtained better cows, promoted more scientific dairying, made the farmer an independent business man, and saved the dairy industry for the people.

Cornell's Space

Cornell made good use of its space in timely exhibits. A graphic illustration was given of the causes of bad milk with the results in the quality of the milk from each cause and the specific remedy. A plea was made for more accredited herd tuberculin testing. Information was given of the nature of tuberculosis, the methods of its dissemination, the cost of diagnosis, the control of the disease, and the method of procedure in accredited herd work. One thousand New York breeders have made application for accredited herd testing and 361 have already passed the first test.

Charts set forth the error in the present scale of paying for fat in market milk above the minimum requirement. It was shown that from 100 lbs. of 3 per cent milk, 3.6 lbs. of butter can be made while 5 per cent milk yields 6 lbs. One hundred pounds of 3 per cent milk is required for 8.3 lbs. of cheese while 12.9 lbs. can be made from the same quantity of milk testing 5 per cent. It was shown that on the basis of $3.65 for 3 per cent milk, the September price, a differential of 6.4 cents should be made. At this rate the farmer delivering 3.8 per cent milk should receive $4.16 instead of $3.97; $4.29 for 4 per cent milk instead of $4.05; and $4.93 for 5 per cent milk instead of $4.45.

State Department Big Feature

The State Department of Agriculture has a big part in making the fair valuable to every farmer who attends. An exhibit of nine cows from the St. Lawrence State Hospital herd contained animals whose productions varied from 4,931 lbs. milk to 19,666. Jabez Smith & Son, H. N. Noyes, and Harry Yates each offered a Holstein bull calf as a prize to those who made the best placings on the cows. In 1919 the number who guessed in a similar contest was 7,305. One-third failed to give a single animal a correct rating, twelve placed five right, and no one placed as many as six correctly. Among those who tried were prominent breeders and professors of dairying. Two of the cows interchanged in ratings made a difference of over 16,000 lbs. milk in production and $375 in profit in a year.

The Department showed that while feed costs have increased 121 per cent and labor 133 per cent since 1913, the cost of milk to the consumer has increased but 78 per cent.

Nearly $2,000,000 worth of New York farms were sold by the Department last year. An exhibit was shown to prove that while Empire land is selling for low prices, the products of the state have a higher cash value than those of any other state.

FAUVIC'S NIC NAC, SENIOR AND GRAND CHAMPION JERSEY COW AT NEW YORK STATE FAIR
OWNED BY A. V. BARNES, CONNECTICUT

The 12,000-lb. cheese, made by Horace Reese, veteran New York State cheesemaker, and described and illustrated in the issue of Hoard's Dairyman for September 10, was sold in pound lots to fair visitors for 40 cents per pound. Lieutenant Governor Walker said, when he officiated at the first cutting: "We don't eat enough of it. It's healthful, palatable, and strength-building. No better cheese is made anywhere than right here in our own state. New York state cheese sells in the market for a higher price than the cheese of any other state. We ought to consume a large part of it among ourselves. This is a sample of the best cheese in the world. Try it, and keep on eating it. It's good for you."

Dairy Products Excellent

A splendid exhibit of butter and cheese was made; 112 creamery butter, 27 dairy butter, and 375 cheese samples being judged. George Connell of New York City did the scoring, awarding the gold medal for best butter to A. F. Scott on a sample scoring 96 and the silver medal to W. V. Price, the score being 95. H. J. Richardson, judging the cheese, gave I. V. Fortune a gold medal on export cheese with a score of 97¾ and S. T. Brooks a gold medal on home trade cheese scoring 98¼.

Oleo Among Those Present

A late editorial in a dairy publication proved to be over-optimistic in its statement that the 1920 New York State Fair would struggle along without giving space to oleo vendors. The imitation held forth in full glory in three different exhibits, so that people of this great dairy state had full opportunity to try the virtues claimed for this "just-as-good-as" product.

Holsteins

Bob Haeger judged Holsteins at Syracuse. This is the first year in fourteen that the "Haeger string" is not on the circuit and the first since 1912 it has not "cleaned up at Syracuse". In acquiring Haeger as a judge, New York breeders not only insured themselves of careful, expert placings, but they also kept the prize money for their own division.

The black and whites led the breeds in numbers with 182 head but fell far short of the quality necessary for a fair representation of the Holstein in New York State. Most of the cattle shown were rough, for the most part unfitted, some being in less than good milking flesh. The few animals which were exceptions took the ribbons. Camp Bell Farm showed two animals and won both grand championships, E. A. Vandervort showed one and was awarded a junior championship, and A. A. Hartshorn with one entry took a blue.

McKinley Pietertje Beets, long bodied, straight, and showy, easily led the males. He has a tendency to carry plenty of covering and lacks snap but was a popular grand champion. S. S. Whitford won in the three-year-old class and A. A. Button with a two-year-old. Echo Bell Model King, Vandervort's entry, led the juniors. Twenty-five aged cows, with better fitting, would have furnished a strong ring. Johanna Ormsby Countess won for Camp Bell Farm. She is a bit small but has udder balance and type enough to remind the ringside of a famous cow which has taken the championship in years past. Jabez Smith & Son held Katy Pietertje Paul 5th in second place. This cow made 25,000 lbs. of milk in a testing association. She led the Advanced Registry Class. Oneida Community won junior championship. In the groups, Bonalevo Farms won with exhibitor's herd, Oneida Community with breeder's young herd, calf herd, and get, Frank Ostrander winning with produce, and Jabez Smith & Son had the best group of four cows.

Haeger's placings are here listed:

Bull 4 years or over—1, Camp Bell Farm on McKinley Pietertje Beets; 2, Ostrander on Wolkspring Pontiac Korndyke; 3, Bonalevo Farms on Colantha Johanna Lad 8th; 4, Smith & Son on ——; 5, Upham on Waconda Sir Cornucopia Korndyke. Bull 3 years and under 4—1, Whitford on Clothilde Dutchland Colantha; 2, Oneida Community on Colantha Aaggie Clothilde; 3, Doran on King Cornucopia De Kol Paul; 4, Syracuse University on ——. Bull 2 years and under 3—1, Button on King Segis Paul Elma Queen Korndyke; 2, Bonalevo on King of the Butter Girls; 3, Smith & Son on ——. Bull 12 months and under 18—1, Vandervort on Echo Belle Model King; 2, Syracuse Uni. on ——; 3, Paddeford on King Pontiac De Kol Hilldoll; 4, Powell on Prince Pontiac Korndyke Pet.

Cow 4 years or over—1, Camp Bell Farm on Johanna Ormsby Countess; 3, Everingham on Blanche Segis Netherland; 4, Bonalevo on Beets Johanna Korndyke. Cow 3 years and under 4—1 and 4, Oneida Community on Pearl Lockhart Reliance and Glen Mount Polly Posh; 2, Potter on Pines Brebe Segis; 3, Potter on Pines Lady Lyons. Cow 2 years and under 3—1, Hartshorn Holstein Co. on Johanna Celeste Pontiac Alcartra; 2, Smith & Son on ——; 3, Powell on Mrytis De Kol Pontiac; 4, Morris & Son on Nuway Paulus Korndyke. Heifer 18 months and under 2 years—1, Borden's Farm Products Co. on ——; 2, Oneida Com. on Oneida Princess Korndyke; 3, Powell on Seneca Clothilde De Kol; 4, Munro on Drumlin Princess Korndyke. Heifer 12 months and under 18—1, Everingham & Son on Alfacrest Maroon Segis; 2, Oneida Com. on Onyx Lilith; 3 and 4, Bonalevo on Lady Nellie Rag Apple and Colantha Quality Lassie. Heifer 6 months and under 12—1 and 2, Oneida Com. on ——; 3, White on Maplewood Sarah Lyons; 4, Tanner & Snitchler on Fertiland Hamilton Clothilde. Heifer under 6 months—1, Everingham & Son on Alfacrest Kate's Princess Segis; 2, Powell on Model Alice Segis Erica; 3, Smith & Son on ——; 4, Bonalevo on Colantha Babe.

Exhibitor's Herd—1, Bonalevo; 2, Smith & Son. Breeder's Young Herd—1, Oneida Com.; 2, Powell; 3, Bonalevo; 4, Smith & Son. Calf Herd—1, Oneida Com.; 2, Powell; 3, White; 4, Bonalevo. Get of Sire—1, Oneida Com.; 2, Potter; 3, Smith & Son; 4, Bonalevo. Produce of Cow—1, Ostrander; 2, Everingham & Son; 3, Oneida Com.; 4, Van Buskirk & Son. Best 4 cows over 3 years—1, Smith & Son; 2, Pickering Farm; 3, Bonalevo Farms; 4, Button.

Senior and Grand Champion Bull—McKinley Pietertje Beets. Junior champion bull—Echo Bell Model King. Senior and Grand Champion Cow—Johanna Ormsby Countess. Junior Champion Cow—Oneida Com. on daughter of Ormsby Lilith Clothilde.

Ayrshires

J. C. McNutt made the awards in the best Ayrshire classes seen at Syracuse in many years. Eighty-four head made a showing which drew a goodly ringside throughout the judging. Blue ribbons were distributed among five breeders, Middlesex Meadows Farm of Massachusetts securing seven; Weymouth Farms of Massachusetts, three; Lippitt Farm, three; Monstone Farm, Massachusetts, three; and J. H. Stewart of New York, two. Each of the first three farms won two championships.

Auchenbrain Toreador well deserved the grand champion ribbon he won for Middlesex Meadows. He is difficult to defeat, and was at his best. He stands up well, is straight, and a show bull of unusual excellence. His closest rival was Lessnessock Genis Good Gift shown by Monstone and placed fourth because of lameness. This bull's strength and pronounced masculinity with scale, lines, and dairy form rate him as one of the great bulls in America. Lippitt Farm's yearling, Cavalier's Model Champion, was an easy leader of the juniors.

A great cow class of twelve entries made the breed's best exhibition. Henderson's Betty had a clear title to the blue and later brought the grand championship to Weymouth Farms. She showed the best udder in the class and a trimness and quality not to be denied. Stewart's Bonnie Lee Girl of Elmwood stood second with a well filled udder and a milky conformation. There were cows of better Ayrshire type below her, Duchrae Jenny in third place and owned by Monstone Farm being one of them. Stewart had an easy winner in the three-year-olds in Dot of Elmwood. In the younger female classes good numbers of well fitted, typy animals were brought out. Lippitt Farm won the junior championship with a junior calf, Lippitt Lady Stuart.

The detailed winnings follow:

Bull 3 years or over—1, Middlesex Meadows Farm on Auchenbrain Toreador; 2, Wey-
